

IN THE FUTURE IT WILL GET ITS POWER FROM A PLUG OVERNIGHT INSTEAD OF A PUMP DURING THE DAY

It's not sci-fi. Electric cars will be on the road sooner than you think. They will get you where you're going during the day. Then they will refuel with electricity at night when you plug them in. And we all want that electricity to be cleaner. So where will we get that cleaner electricity? We'll get it from renewables like hydroelectric, wind and solar. And we'll get it from nuclear that runs day in and day out, rain or shine 365 days a year. We'll get most of it from Ontario Power Generation. Just as we always have.
