4. The MOL has the power to lay criminal charges therefore you have the same rights as when being questioned by the police. All reports for accidents involving a critical injury or fatality must be reviewed by Head Office prior to submission. Always remember to be polite and respectful of the Ministry of Labour representative at all times.
5. The MOL inspector has the right to remove any evidence that is in plain view and in contravention to the Occupational Health and Safety Act and regulations. When they take anything from your site you must be given a receipt.
10.1.4 Medical Aid Injury

Definition
A medical Aid situation is any injury that requires attention of a health care professional.

Medical Aid Procedures
1. Employee reports incident to supervisor
2. Supervisor documents report in daily diary, pursues the immediate possibility of Light Duties. (See Back to Work/ Duties Policy Section 1.11)
3. Immediately after noting incident in personal diary the supervisor fills out Table 8 and forwards Table to the Safety Co-ordinator.
4. The Safety Coordinator will use the Table 8 to complete the WSIB Form 7. This form can only be signed by the President, Secretary-Treasurer or a Vice-President.
5. If a person has a sudden illness/injury (i.e. heart attack, stroke, seizure, appendicitis, loss of consciousness etc) that occurs at the workplace, emergency medical aid is to be obtained. The incident with details on what happened is to be recorded in the foreman’s journal and the Health and Safety Co-ordinator is to be contacted immediately.

10.1.5 Incident (First aid only)

Definition
An Incident is any situation that does not require immediate attention from a health care professional. This also includes any complaint that an individual may have due to a work related task (i.e. back pain due to a slip or from lifting an item).

Incident Procedures
1. Employee reports incident or complaint to the supervisor
2. Supervisor documents this report in daily diary
3. When talking to the employee about the complaint or injury, the foreman must discuss our company “Back to Work Policy” and stress that should medical attention be sought concerning this issue that we require a Functional Abilities Form to be filled out by the doctor. (Foreman should make sure the employee has a form)
4. Supervisor is then to contact the Safety Coordinator with details of the report.

10.2 Back to Work/Light Duty Policy

McNally will make every reasonable effort to rehabilitate and maintain the injured worker’s income by providing an alternate comparable job, or suitable employment. An injured employee will be offered Light Duty work according to his/her abilities until the employee is completely capable to perform his/her original duties.

10.2.1 Program Principles
1. Effective management of a worker’s rehabilitation through a knowledgeable co-operative approach.
2. Ensure that a worker receives prompt, effective, timely access to services required to enhance and facilitate their rehabilitation.
3. Employees must be continually reminded of our back to work program. If they have an injury we will arrange for Light Duty work using their doctor’s guidelines as listed on the Functional Abilities.
4. Each supervisor will be responsible for accommodating the employee who is unable to perform his/her regular duties.

5. Where a supervisor is unable to provide suitable work, an attempt will be made to place the employee within some other division of the company. (Contact Safety Coordinator)

10.2.2 Functional Abilities Form

As part of the workplace return to work Policy and Program, the “Functional Abilities Form # 2647A” published by the WSIB will be used along with a cover letter from the company. Employees must be instructed of the company wide back to work policy during Employee Orientation. These forms must be kept readily available at all workplaces. Employees must be aware of these forms and the need to have them completed should they seek medical attention for a work related injury.

10.2.3 McNally Injured at Work Poster

Management at McNally has created an “Injured at work” poster (See Table 20). This poster was created to give an extra reminder of our back to work policy. It is expected that these posters will be posted around the workplace in several prominent locations. These forms can be obtained from the Safety Coordinator at head office. A few copies will be included in the Supervisors – job set up kit as well.

10.2.4 Absences while on Light Duty Work

Injury Related Absences

Employees performing light duty tasks will be excused from work for doctors appointments related to the injury. Employees will be paid full wages for the time missed due to these doctors appointments. It is expected that employees will inform the supervisor in advance of such appointments.

Where graduated hours are required as a part of the light duty McNally will pay a full day’s wages as long as the worker attends work for the required graduated hours.

Non-injury Related Absences

Once the injured worker has accepted Light Duty work it is their responsibility to attend work as outlined in the Light Duty agreement. Should the employee be sick or require to be absent for a reason that is non-injury related they must notify their immediate supervisor. Whatever rules were utilized for absences prior to the workers injury will be applicable for absences while on light duty work unless other arrangements have been made. Head Office will need a letter from the employee indicating that their absence was NOT injury related.

Should an employee sign a Light Duty offer indicating that he/she agrees to the terms of the offer and then misses three (3) days of work without notifying the supervisor and following the above procedures, McNally will take these absences as notification that the employee has quit our employment. The Record of Employment will be completed indicating the employee has quit.
11.0 INSPECTIONS AND HAZARD ASSESSMENTS

11.1 Job Hazard Analysis

11.1.1 Steps in Conducting a Job Hazard Analysis

11.2 Weekly Supervisory Inspections

11.3 Monthly Safety Inspections

11.2.1 McNally Inspection Requirements

11.2.2 Posting/Copies

11.2.3 Procedures for Conducting a Site Inspection

11.1 Job Hazard Analysis

The purpose of a Job Hazard Analysis is to identify, in each step of operations, hazards or potential causes of accidents and to develop solutions to eliminate, if possible, or control the identified hazards.

McNally Construction will conduct a Hazard Assessment of all work sites prior to starting work. This assessment will be completed by the Safety Co-ordinator and Job Superintendent or Project Manager. The methods to address the identified hazards will be reviewed with all those employees affected by the hazard.

Tables 14 and 15 will be used for completing the Pre-job Hazard Assessment and Table 15 will be used for completing monthly inspections by the Safety Co-ordinator. The Safety Co-ordinator’s inspections do not replace job site inspections in any way.

11.1.1 Steps in Conducting a Pre-Job Hazard Analysis

1. Define the job to be analyzed
2. Break the job into steps
3. Identify hazards or potential accidents
4. Identify high risk workers and tasks
5. Develop solutions
6. Establish a plan to implement solutions, train and educate workers as necessary

Suggested sources of information on potential hazards are:

1. Reported industry accidents
2. Near miss data
3. Compliance and legislative requirements
4. Behavioural based observations of work
5. Suggestions from the Joint Health and Safety Committee, the Health and Safety Representative and/or the Worker Trades Committee

Methods of Conducting a Job Hazard Analysis are Discussion, Observation and Reviewing past work experience.
11.2 Weekly Supervisory Inspections

The OHSA Construction Regulations in section 14 subsections (3) and (4) requires that a weekly inspection be completed by the project supervisor or a competent individual that is appointed for this task by the supervisor. This inspection is to include: “all machinery and equipment, including fire extinguishing equipment, magazines, electrical installations, communication systems, sanitation and medical facilities, buildings and other structures, temporary supports and means of access and egress at the project to ensure that they do not endanger any worker.”

Table 12: “Supervisor’s Weekly Jobsite Inspection Checklist” is provided to aid this weekly jobsite walk around and is a good tool for showing the supervisor’s Due Diligence on site. Copies of this report should be kept on the jobsite and sent to the Safety Co-ordinator for filing with the project records in Head Office.

11.3 Monthly Safety Inspections

The OHSA Construction Regulations require that a monthly inspection be completed on each jobsite by the Health and Safety Representative or Joint Health and Safety Committee. (Section 8(6))

11.3.1 McNally Inspection Requirements

Monthly workplace safety inspections will be completed at all McNally workplaces using Table 11.

Site inspections are to be completed by a minimum of two employees. These people should be either two members of JHSC (one worker and one supervisor) or the H&S Representative with a supervisor. If absolutely necessary competent substitutions can be made for these inspections.

All occupational health and safety concerns raised during the physical inspection will be recorded on the inspection reports and sent monthly to the Health and Safety Co-ordinator.

11.3.2 Posting/Copies

This site inspection is to be photocopied and posted/distributed as follows:

- The original is to be filed on site
- One copy is to be posted in a prominent location
- One copy is to be sent to the Safety Co-ordinator for filing and inclusion in the Monthly Management Meetings
- A copy should be given to each member of the Joint Health and Safety Committee (if applicable) and any person who needs follow-up on a concern raised by this inspection

Concerns raised during this inspection that require prompt action must be addressed and acted upon immediately.

11.3.3 Procedures for Conducting a Site Inspection

1. Review previous inspection records and note any previous reported hazards.
2. Familiarize yourself with the type of workplace and unique hazards
3. Use all of your physical senses (sight, hearing, smell etc) to identify actual or potential problems.
4. Use the tables provided to make comments and check off the various areas you inspect.
5. When unsafe conditions are noted requiring immediate attention, correct the situation immediately.
6. Look for basic causes of sub-standard conditions, practices and procedures.
7. Distribute copies as detailed above.
8. Review items at the Joint Health and Safety Committee meetings, Workers Trade Committee meetings, Management Health and Safety Meetings and Tool Box Safety Talks.
9. Remember that these inspections are supposed to be a helpful tool in identify and rectifying existing and potential hazardous situations.
12.0 HEALTH AND SAFETY REPRESENTATIVES

Information on Health and Safety Representatives can be located in the Construction Occupational Health and Safety Act in Section 8. The Policy below is in accordance with the Act.

12.1 When is a Representative Required?

12.2 Selection of the Health and Safety Representative

12.3 Health and Safety Representative Rights and Responsibilities

</tr>
</tbody>
</table>

12.1 When is a Representative Required?

A Health and Safety representative is required at any site where the typical number of employees at that site will be between 5-19 people and for construction projects the job will last more than 3 months.

12.2 Selection of the Health and Safety Representative

The representative will be a worker who is working at the site and does not exercise managerial functions. This worker is to be chosen by the other workers at the site. In a safety tool box meeting, employees will nominate their representatives and a small vote will take place by each worker writing on a piece of paper their choice for representative. The Foremen will privately review the ballots and inform the group who their representative will be. Should the chosen individual prefer not to be the representative, the second in line will take the position. The Foremen will destroy the ballots and inform head office who the Representative will be for that site. The Health and Safety Co-ordinator will contact the Representative to discuss duties and responsibilities and any training necessary.

12.3 Health and Safety Representative Rights and Responsibilities

The following are the rights and responsibilities for Health and Safety Representatives:

1. Obtain information from a constructor or employer regarding the testing of equipment, materials and/or chemicals in the workplace.
2. Inspect the workplace at least once a month.
3. Ask for and obtain information regarding existing or potential hazards at the workplace.
4. Make health and safety recommendations to a constructor or employer regarding existing and or potential hazards on site.
5. Investigate accidents as required.
13.0 JOINT HEALTH AND SAFETY COMMITTEES

Every Office/Shop and Job Site is to have either a Joint Health and Safety Committee or a Health and Safety Representative as required by the Occupational Health and Safety Act and applicable regulations.

13.1 Requirements for Offices and Shops

13.2 Joint Health and Safety Committee Composition for Offices and Shops

13.3 Health and Safety Representatives for Offices and Shops

13.4 Joint Health and Safety Committees for Job Sites

13.5 Health and Safety Representatives for Job Sites

13.6 Joint Health and Safety Committee Rights and Responsibilities

13.7 Worker Trades Committee

13.7.1 Worker Trades Committee Responsibilities

<table>

<td>Feb. 24, 2004</td>
<td>05</td>
<td>January 2006</td>
<td>Jennifer Carruthers (H&amp;S)</td>
</tr>
</tbody>
</table>

13.1 Requirements for Offices and Shops

McNally’s offices and shops are governed by the Industrial Regulations. Under these regulations a Joint Health and Safety Committee is required on a site where there are twenty (20) or more workers employed. A Health and Safety Representative is required (in place of a Joint Health and Safety Committee) where there are more than five (5) workers employed but less than twenty (20) workers.

13.2 Joint Health and Safety Committee Composition for Offices and Shops

This committee must consist of at least two persons for a workplace where fewer than fifty workers are regularly employed and at least four persons for a workplace where greater than fifty workers are regularly employed. At least half of this committee must be workers employed at the workplace who do not exercise managerial functions. The worker representative(s) must be elected by fellow workers and the management representative is to be chosen by the employer. At least one worker representative and one management representative are to be certified. (OHSA Sec. 9)

13.3 Health and Safety Representative for Offices and Shops

The Health and Safety Representative must be elected by the workers and be an employee that does not exercise any managerial functions. (OHSA Sec. 8) See Chapter 12 “Health and Safety Representatives” in this Program for additional information.

13.4 Joint Health and Safety Committees for Job Sites

Where there are 20-49 workers and the job will last for 3 months or longer a Joint Health and Safety Committee must be established for a project. This committee must consist of a minimum of two (2) members with at least one non-management worker at the project and one management representative (from the worksite if possible).

Where the project has 50 workers or more and the project is to last longer than 3 months there must be a minimum of four (4) members on this committee. Half of the committee must be non-management workers from the workplace with at least one member being certified. Half of the committee is to be management representatives from the project if possible and at least one of these members must be certified.
13.5 Health and Safety Representatives for Job Sites

For jobs that have less than 5 employees no health and safety representative will be required on site. This location will be covered by the nearest Office/Shop location. When a job has 6-19 workers and will last more than 3 months, a Health and Safety Representative is required on the Job Site. For additional information on Health and Safety Representatives please refer to chapter 12 in this Safety Program.

13.6 Joint Health & Safety Committee (JHSC) Rights and Responsibilities

Joint Health and Safety Committees are the prime party to ensure the workers right to participate, right to know, and the right to refuse unsafe work are being met. They are instrumental in identifying and eliminating hazards in the workplace.

Through the course of performing JHSC duties members may be privy to confidential company and employee information. It is a legal responsibility that members of the JHSC keep this information private.

Meetings of the Joint Health and Safety Committee must be held at least every three (3) months or more frequently if deemed necessary. For projects located in the province of Nova Scotia these meetings must be held once every month for the duration of the project. Meetings will be held during normal working hours and minutes received from contractors’ and subcontractors’ safety meetings shall be discussed. Minutes of all regular meetings and special meetings shall be recorded.

One copy of the minutes shall be kept on file with the committee and one copy shall be posted in the work place. The names of the committee members will also be posted in a prominent location at the work place (typically in the project office head office, shop and in the warehouse or lunchroom area).

The employer and worker members of a committee shall elect a co-chairman from their respective groups. The Term of position for each person on the Committee will be for the duration of employment at McNally’s unless management or the Committee Member feels that this position is no longer serving the benefit of the Committee and/or the company in general.

Duties of the Joint Health and Safety Committee will include the following:

1. Identify aspects of the workplace that may be unhealthy or unsafe;
2. Make recommendations to principal contractors, employers, workers, self-employed persons and the Director or an officer for the enforcement of standards to protect the health, safety and welfare of workers at the workplace;
3. Receive complaints from workers as to their concerns about the health and safety of the workplace and their welfare;
4. Establish and promote health and safety educational programs for workers;
5. Maintain records as to the receipt and disposition of complaints received from workers;
6. Co-operate with the Director or an officer who is exercising his duties under the Act.
7. Obtain information from a constructor or employer regarding the testing of equipment, materials and/or chemicals in the workplace,
8. Ask for or obtain information regarding existing or potential hazards at the workplace
9. Establish a Worker Trades Committee (if required)
10. Investigate Accidents and Incidents
11. Complete regular monthly site inspections and insure follow-up on hazards identified
12. Rights and Responsibilities of the Certified Members of the Joint Health and Safety Committee will be as outlined in the Occupational Health and Safety Act.
13. At all Committee meetings a minimum of (51%) of the members must be present and for all decisions all members present must agree. The number of management members can not be higher than the number of worker members on the committee.

14. A meeting agenda must be prepared by the committee chairperson a minimum of two (2) days prior to the meeting and distributed to each member for review, the agenda must be agreed upon by all members prior to the meeting commencing.

15. Items unresolved by the Joint Committee after two (2) regular schedule meetings will be referred to a committee of Senior Management appointed by the employer and the committee chairperson(s) to attempt to resolve the outstanding issue. A written response will be given to the Committee prior to the next scheduled meeting.

13.7 Worker Trades Committee

When a project has fifty (50) or more workers and is expected to last three (3) months or longer the Joint Health and Safety Committee for that project are required to create a “Worker Trades Committee”. This committee must have at least one (1) worker representative from each trade.

13.7.1 Worker Trades Committee Responsibilities

The Worker Trades Committee is required to advise the joint health and safety committee of the health and safety concerns of the workers in the trades at the workplace.
14.0 HAZARDOUS MATERIALS AND WASTE

14.1 Hazardous Materials and Waste

14.1.1 Storage of Hazardous Materials
14.1.2 Waste/Disposal

14.1 Hazardous Materials and Waste

In keeping with OSHA McNally’s will keep and maintain records of the handling, use and disposal of all chemical materials. Training on the handling, use and storage of these materials will be a part of the WHMIS program. The WHMIS program is explained in detail further in this chapter.

Prior to the start of any construction project it will be determined whether or not any designated substances will be utilized on that particular job and a list will be created if there are some to be used. In depth training of employees will take place prior to the handling and use of this designated substance.

14.1.1 Storage of hazardous materials

A site plan will be made of every yard and jobsite with the locations of hazardous materials clearly identified. The storage methods will follow Regulation guidelines. Storage areas will be maintained and double checked by the Safety Rep. or committee on their monthly walk around inspections.

14.1.2 Waste/Disposal

Law abiding disposal methods will be used to dispose of chemical waste material. A certified chemical waste company will be utilized for the disposal of liquid chemical waste.

14.2 WHMIS

More detailed information on WHMIS and the handling and storage of hazardous materials can be located in the Construction Occupational Health and Safety Act in Sections 36-42. The policy as outlined below is in accordance with the Act.

14.2.1 What is WHMIS?

Workplace Hazardous Materials Information Systems (WHMIS) is a material labelling system that addresses the worker’s “Right to know”.

WHMIS is a Canada-wide system designed to protect the health and safety of working Canadians through the provisions of information about the hazardous materials they work with on the job.

The Ontario Health and Safety Act requires that every worker receive WHMIS training. It will be the responsibility of the company to ensure that each worker has job specific WHMIS training.
The company shall make available hazard information on controlled products received from suppliers concerning the use, storage and handling of these products and inform workers at Tool Box Talks.

14.2.2 Training

The company will ensure that the worker has received WHMIS training as soon as practical which includes:

- Education in the content, purpose and significance of information on labels and Material Safety Data Sheets (MSDS).
- Education in the use of types of identification.
- Training in the procedures for the safe storage, handling, use and disposal of controlled products.
- Training in emergency procedures involving controlled products.

The joint health and safety committee or the health and safety representative may be consulted during the development, implementation and review of the job specific WHMIS training program. The company will ensure, as far as reasonably practical, that this WHMIS training program results in the worker being able to apply the information as needed.

14.2.3 Location of WHMIS Information

The location of the WHMIS book containing the Material Safety Data Sheets will be in the First aid Room when there is such a room on site or close by the primary first aid box at each location.

14.2.4 Responsibilities

The Company

Responsibilities for the company will include:

- All controlled products in containers have supplier labels.
- Workplace labels are provided.
- Material Safety Data Sheet (MSDS) are readily available in the workplace.
- A current MSDS is obtained on or before the date of the first shipment of every controlled product.
- The MSDS are kept updated, every 3 years.

The Worker

Responsibilities for the Worker will include:

- Learn the information on controlled products which the employer is required to provide.
- Inform the employer when information about a controlled product is not adequate to ensure the worker’s health and safety.

*Both the Company and workers are responsible to work together to ensure that no product that requires a Material Safety Data Sheet is permitted on the site unless the MSDS is readily available.

Appendix 5  ▶ Training and Tailgate Program

Appendix 6  ▶ Policies and Work Procedures

Appendix 7  ▶ Accident Reporting and Analysis
Safety is a key concern in all operations conducted by Dufferin Construction Company. No employee is required to perform a task that he or she considers unsafe, nor is any employee to knowingly commit an unsafe act. If you are in doubt as to the safety of a given task, discuss it with your management or with the Health & Safety Department before performing the task.

Dufferin Construction Company’s objective is to maximize safety by reducing risks. An optimum safe work environment can be achieved most effectively by early identification and understanding of safety issues; close interaction among managers, employees, and safety specialists; and adherence to the policy, requirements, and guidance in this Manual.

To ensure that the risks of Dufferin Construction activities are held to an acceptable level, employees must

- Understand the tasks they perform.
- Recognize and analyze the hazards.
- Develop and implement safety controls.
- Do work safely.
- Periodically assess and improve the performance of controls.

This Manual provides the policy and guidance necessary to meet these requirements.

As Dufferin Construction moves into new areas to meet national and global challenges, it must always be alert to new safety hazards that will be generated. New problem areas can be anticipated and eliminated only by careful work planning. There can be no substitute for complete understanding, clear thinking, careful preparation, and responsible action during the conduct of our activities. Our success is measured by our accomplishments. These must include the safety of every Dufferin Construction Company operation along with our operational results.

Jim LaFontaine  B.Tech., CRSP
Health, Safety and Environment Manager
HEALTH & SAFETY RESPONSIBILITIES

CONTENTS

1.0 Introduction
2.0 Health & Safety Responsibilities
• Appendix A “Dufferin Construction Company - Health and Safety Policy”

1.0 INTRODUCTION

This chapter identifies health and safety responsibilities of employees and all levels of management of Dufferin Construction Company (DCC). It also outlines the responsibilities and functions of Health & Safety Departmental personnel and describes their interactions with regulatory agencies.

1.1 Health & Safety Objectives

To implement health & safety policies, DCC has established the following objectives:

• Define health & safety responsibilities for all employees.
• Provide safe workplaces.
• Conduct work in a safe manner.
• Develop and maintain manuals to implement health & safety regulations.
• Interact with the general public with openness and integrity.
• Maintain effective internal oversight and cooperate with external oversight agencies.
• Hold managers and staff accountable for the implementation of health & safety policies.

2.0 HEALTH & SAFETY RESPONSIBILITIES

It is the responsibility of each employee to perform work safely and in accordance with the company's health & safety policy (Appendix A). Employees are accountable for their own safety and the safety of others who could be impacted by their activities.

Certain personnel have specific responsibilities for carrying out health & safety-related activities. Employees who perform management functions have increased health & safety obligations. Managers may delegate health & safety authority to others; however, the accountability for health & safety performance and assurance is not transferable.

2.1 EMPLOYEES

All employees are responsible for:

• Knowing and understanding the health & safety requirements of their assignments and the potential hazards in the work area.
• Participating in all required training, personnel assurance (see Supplements 1.14 and 1.15), and health monitoring programs.
• Performing work assignments in full compliance with applicable health & safety requirements defined in manuals, guidelines, and established safety procedures.
• Immediately correcting or informing the responsible manager of any health & safety-related problems.
• Warning fellow employees and visitors of hazards and defective equipment.
• Knowing emergency plans and procedures for the work area.
• Request that work be stopped if they observe others performing an operation (or are in a situation) that is perceived to be imminently dangerous to health, safety, or the environment.
• Reporting all work-related injuries and illnesses to their supervisor.

To ensure compliance with these requirements, employees should consult their supervisors for guidance as necessary.
2.2 SUPERVISORS

As it relates to health & safety, the term "supervisor" means anyone (e.g., Manager, Superintendent, Field Engineer and Foreman) who directs or supervises, operations, activities, or personnel.

Supervisors are responsible where applicable and to the extent of their authority for:

- Knowing the company's health & safety policies, and making sure applicable health & safety laws and regulations are appropriately implemented within their areas of responsibility.
- Understanding applicable health & safety responsibilities.
- Informing employees of all health and safety hazards and requirements in workplaces they manage, and providing training on how to work with identified hazards.
- Performing a health & safety evaluation when planning a new project activity or changing an existing one (see Chapter 2 for details).
- Making sure employees have the necessary hardware (equipment, materials, and facilities) to carry out specified tasks.
- Are trained, qualified, and fit for duty.
- Report all work-related injuries and illnesses.
- Ensuring employees' job descriptions reflect the work requirements.
- Training and certification records are maintained for all employees.
- Safety procedures, work procedures, maintenance plans, material safety data sheets (MSDSs), and permits are prepared or obtained prior to starting an activity.
- "Project Specific Safety Plans" and emergency response procedures are prepared for projects, operations and facilities assigned.
- Providing an adequate level of supervision to visitors, guests and vendors who perform health & safety-related activities.
- Implementing a self-assessment program in accordance with their General Manager's plans and procedures, and seeing that the necessary corrective actions are carried out.
- Notifying the cognizant senior manager of occurrences and incidents in accordance with notification and reporting requirements, and taking appropriate action to correct the situation and prevent a recurrence.

2.3 HEALTH & SAFETY MANAGEMENT

Health and Safety Management is responsible for:

- Assisting the General Manager by overseeing health & safety for all business, administrative, and operational activities.
- Verifying the satisfactory achievement of performance measurement goals.
- Approving Divisional health & safety policies.
- Assuring that health & safety concerns and priorities are communicated as a core value in interactions with government, management, and individual employees.
- Managing or coordinating DCC's responses to any audits related to the Workplace Safety and Insurance Board or Corporate insurance programs.
- Providing technical support and consultation to DCC personnel.
- Critically and independently performing health & safety surveillance of planned and ongoing operations, facilities, equipment, and procedures; and recommending corrective actions to the cognizant management. In critical situations, the Health & Safety Manager
HEALTH & SAFETY RESPONSIBILITIES

will request that management suspend operations until the problems are resolved.

- Bringing to the attention any concerns that have not been satisfactorily resolved by line management.
- Providing health & safety support during emergencies.
- Assisting line personnel in identifying and analyzing health and safety hazards and environmental compliance in their operations.
- Advising line personnel of appropriate controls to eliminate or minimize identified hazards and concerns and of applicable health & safety codes, standards, regulations, and orders in a manner consistent with policy.
- Assisting line personnel in meeting mandatory requirements.
- Monitoring the work environment to ensure compliance with the requirements outlined the Divisional Loss Control Manual, Environmental Compliance Manual, and environmental guidelines; and applicable safety procedures, codes, standards, regulations, and orders. (The teams will advise management on noncompliances.)
- Taking appropriate steps to ensure that any activity that presents an imminent, uncontrolled high-risk threat to human health, safety, and the environment is immediately stopped.
- Providing guidance to line management in the development and review of safety-related procedures and documents.
- Conducting independent accident and incident evaluations and assisting management in formal incident analyses.

2.4 GENERAL MANAGER

The General Manager is responsible for

- Making the environment, safety, and health a priority.
- Making sure that implementation and the overall effectiveness of the Divisional Loss Control Program comply with applicable health & safety laws and regulations.
- Fostering open communication health & safety matters with DCC personnel, the public, and external agencies.
- The General Manager may delegate health & safety authority to senior managers, and other DCC employees.

2.5 CONTRACTORS

Contractors are not relieved of any legal obligations with regard to health & safety. Contractors may augment DCC's health & safety policies with those of their company, but must follow DCC's policies as a minimum.

2.6 CONSTRUCTION SUBCONTRACTORS

All construction subcontracts shall contain the requirements and guidance necessary to extend DCC's health & safety policy to subcontractors. Before any contract or purchase order can be issued, DCC Contract Administration must:

- Have the Health & Safety Department evaluate the potential for injury or damage that may result from the subcontractor’s operation.
- Inform the subcontractor, through the appropriate contract administrator, of any unique hazards of the work environment and any special protective measures specified by DCC that is required for work.
- Include in the contract or purchase order a reference to DCC’s prescribed safety standards and applicable requirements.
- Additional requirements for construction subcontractors performing work for DCC can be found in Chapter 14 of this Manual.
DUFFERIN CONSTRUCTION COMPANY
HEALTH AND SAFETY POLICY

Dufferin Construction Company is committed to the protection from accidental injury and loss to its employees and property.

In fulfilling this commitment, we will provide and maintain a safe work environment and we will strive to eliminate hazards which may result in injury and property damage.

Accidental injury and loss can be controlled through good management in combination with active employee involvement.

Supervision and Management will take all necessary action to eliminate or control hazardous working conditions and work in compliance with laws pertaining to occupational health and safety.

All employees are responsible for their own personal safety and that of their co-workers. They are expected to use the safest work methods to carry out their job and point out sources of danger and suggest means to remedy them.

I trust that each of you will join me in a personal commitment to enforce this Health and Safety Policy as a way of life.

January 1, 2005

Lloyd Ferguson
General Manager
HEALTH, SAFETY AND ENVIRONMENT DEPARTMENT

Objective

The objective of the Department is to provide support in all aspects of health and safety relating to field and administrative operations. The Department is committed, in support of Dufferin Construction, to ensuring the health and well being of the public, the environment and all Dufferin’s employees, subcontractors and suppliers.

Health, Safety and Environment Manager

The Health, Safety and Environment Department is managed by Jim LaFontaine, B.Tech.,CRSP. A copy of Mr. LaFontaine’s CV and a job description summary of the Health, Safety and Environment Manager is included in Appendix 2. Mr. LaFontaine is responsible for the management of divisional health and safety departmental personnel; and to ensure the effective implementation of processes, programs, policies, people development and team integration with respect to health and safety.

Mr. LaFontaine has been instrumental in developing and implementing health and safety processes, programs, policies, procedures, and training packages for Dufferin Construction. He is continually updating such programs, policies, procedures, and training packages commensurate with changes in industry practices, Regulations, and laws.

Mr. LaFontaine is an active and respected member of numerous Associations and Labour-Management boards and committees for the province of Ontario. Mr. LaFontaine has been successful in initiating positive health and safety changes in the construction sector.

Health, Safety and Environment Coordinator

The position of Health, Safety and Environment Coordinator is held by Scott Winger. A copy of Mr. Winger’s CV, job description and a summary of the job responsibilities of the Health, Safety and Environment Coordinator is included in Appendix 2. Mr. Winger was reassigned to Dufferin Construction in June of 2004 after managing HR and Safety for St. Lawrence Cement’s Cayuga Construction and Materials Division for the past 12 years.

Safety Advisor(s)

The Safety Advisor program has been in effect at Dufferin Construction, since 1991. This one year rotating program immerses a Project Engineer from the Operations Department in all aspects of health and safety. At the end of the program, the Project Engineer returns to field operations with acquired skills in health and safety laws and regulations, how to manage and conduct work in a safe and productive manner, and develop and implement a health and safety program. The job description is included in Appendix 2. Mr. LaFontaine manages the activities of each Safety Advisor.
Claims Management & Administration

The Health, Safety and Environment Department is responsible for claims management and Workplace Safety & Insurance Board reporting and administration. Mrs. Denise Roach has been in the position of Safety and Claims Administrator since 1994.

SAFETY PROGRAM AND PLANNING ELEMENTS

Pre-Job Planning:

Prior to commencing a project, Dufferin management, the project team, and the Health and Safety Department personnel conduct a pre-job planning session. The pre-job planning meeting is intended to increase the communication between departments within Dufferin Construction. The meeting allows for the formal assignment of tasks required to start a project with the highest level of understanding and efficiency as possible for the members involved.

With regards to health and safety, the pre-job planning meeting identifies potential safety hazards, special requirements for compliance to regulations and training requirements for site personnel. From the meeting, a plan to mitigating risk and exposure to hazards is initiated.

Project Health and Safety Audits and Assessments

The Health Safety Department conducts two types of project health and safety audits; informal project safety assessment and formal project safety assessment.

Formal Project Safety Assessments:

Formal Project Safety Assessments are conducted by Health & Safety Department personnel. A copy of the Formal Assessment Evaluation Form is located in Appendix 3. The formal assessment is a tool used to measure the performance of the Project Superintendent with respect to health and safety. The Superintendent’s projects are evaluated with regards to compliance to Dufferin Policy and legislated regulations. The scores given on the Formal Assessment are calculated with consideration for risk and complexity factors to objectively evaluate Superintendents with respect to each other regardless of job market.

Informal Project Safety Assessments (IPSA):

Informal Project Safety Assessments are conducted by Health & Safety Department personnel. The objective of the informal assessment is to review the project activities for compliance to Dufferin Construction policy and/or regulations. Records are kept on the number of employees working on site, the activities being undertaken, and any issues regarding health and safety that need to be addressed with site management on the particular day of the assessment. A copy of the IPSA report is included in Appendix 3. Informal project safety assessments are scheduled on a monthly basis within the Department and cover the entire range of projects Dufferin Construction is contracted to. Informal assessments are scheduled more frequently depending on the complexity and duration of the project.
New Employee Orientation

The Superintendent of a Project is responsible to orient all new and reassigned workers with Dufferin Project personnel, safety issues, health issues and accident response and reporting procedures. It is imperative that all workers understand Dufferin Policies, the worker's responsibilities regarding health and safety and that Dufferin Construction is committed to their well being. A copy of the New Employee Orientation Review Sheet and Policy is included in Appendix 4.

As a part of the New Employee Orientation, the worker receives a Dufferin Construction Company Employee Health and Safety Policy and Reference Manual. The document is included in Appendix 4. The policy is written in various languages to increase understanding among employees of which English is a second language. The document outlines Dufferin's health and safety policies and procedures as well as worker rights and responsibilities with respect to the Occupational Health and Safety Act.

Health and Safety Policy and Reference Manual for Subcontractors

Included in Appendix 4 is the Health and Safety Policy and Reference Manual for Subcontractors. This document is included with all subcontract agreement forms sent out by Dufferin Construction. The manual is included in Appendix 4. The Manual is an extensive and comprehensive document covering all aspects of Dufferin Construction policies and other pertinent information respecting the Occupational Health and Safety Act and applicable Regulations.

Subcontractor Health and Safety Compliance Checklist

Prior to having a subcontractor commence work, the Project Superintendent schedules a meeting with the subcontractor to complete a Subcontractor Health and Safety Compliance Checklist. The checklist is included in Appendix 4. This checklist is site specific and identifies the subcontractor's supervisory personnel, health and safety representatives, contact numbers, the subcontractor's knowledge of health and safety regulations and laws, and programs and policies it has in place. From this checklist, Dufferin Construction can implement action to ensure the subcontractor works within industry accepted standards and in compliance to the Occupational Health and Safety Act and applicable Regulations.

Tailgate Safety Meetings

Included in Appendix 5 is a copy of Dufferin Construction's Policy on Weekly Tailgate Training Sessions. The Tailgate training sessions are conducted weekly by the various Foremen on site under the supervision of the Project Superintendent. The foreman conducts the session with his/her own crew and the topic relates to work the specific crew undertakes. A copy of the topic titles of all Dufferin Tailgate sessions is included in Appendix 5. All subcontractors with work having a duration of more than one week must also participate in the Tailgate program as included in the Subcontractor Health and Safety Manual. Tailgate training is not intended to replace formal training programs or take the place of proper work practices. An overview of the Policy and the objectives of the sessions is included in Appendix 5.
Training Programs

The Health and Safety Department oversees all training in health and safety for the company. The Department identifies areas not well covered by industry training programs and develops training programs in-house. The Department has developed and implemented various training programs including Back-Up Hazard Awareness, Fall Protection, and Traffic Control, etc. The outlines and objectives of these programs are included in Appendix 5.

Other programs Dufferin Construction trains its personnel in are (incl. in Appendix 5):
- Guidelines for training traffic control persons
- WHMIS in Construction
- Trench Safety
- etc.

Where more permanent facilities do not exist, Dufferin Construction transports its Training Trailer to the construction site to ensure the trainees have a proper facility and atmosphere in which to learn (see photo below). The trailer can accommodate up to 20 workers comfortably and is powered by an on-board generator.

Other Divisional Health and Safety Policies (not otherwise attached)

The remainder of the Divisional Health and Safety Policies are included in Appendix 6. These Policies include:
- Health & Safety Responsibilities
- Divisional & Project Specific Joint Health and Safety Committees
- Work Refusal Policy
- Project & Workplace Hazard Analysis
- Occupational Hygiene Testing & Monitoring
• Employee Discipline - Health and Safety Non-Compliance
• Working in Confined Spaces
  • Working in Confined Spaces - "Special Conditions", Low Hazard Confined Spaces
• Lockout and Tag Program
• Personal Protective Equipment (PPE)
• Designated Substances
• Performing Open Flame Operations
• Heavy equipment Maintenance
• Fleet Safety Requirements of Independent Operators
• Material Handling
  • Facilitated Return to Work
• Environmental Spill & site Remediation Management
  • Emergency Evacuation Procedures

Accident and Incident Reporting

Dufferin Construction has produced an Accident/Incident/Occurrence Response Flow Chart which outlines the activities the Project Personnel are to follow in the case of an accident or incident. A copy of the Chart is included in Appendix 7. The Health and Safety Department is notified of all occurrences. During notification, all pertinent information is recorded on an Accident/Occurrence/Incident Questionnaire. A copy of the Form is included in Appendix 7.

An Accident and Incident Report form is included in Appendix 7. Upon notification of an accident or incident or near miss, Dufferin supervisors will initiate an investigation into the occurrence and document their findings and analysis of the occurrence on the said report form. The Health and Safety Department receives the document within three days of the occurrence and evaluates the report for its content, clarity, analysis of causes and the prevention plan. A copy of the Evaluation of Investigation Reports is included in Appendix 7. The Project Superintendent is given a score for the report as part of his/her performance evaluation.
TITLE: HEALTH, SAFETY AND ENVIRONMENT MANAGER
UNIT: Dufferin Construction Company
DIVISION: Ontario - Construction
REPORTS TO: Divisional - General Manager
DATE: September 1, 2004

SUMMARY OF RESPONSIBILITIES

The Health, Safety and Environment Manager is accountable to the Divisional - General Manager. He ensures that health, safety and environmental activities are directed in accordance with established objectives and within company plans and policies. He is responsible to supervise subordinate staff, as well as foster the promotion of good health, safety and environmental practices.

OBJECTIVES

1. Monitor the effectiveness of company accident and loss control programs.
2. Identify and appraise all accident and/or loss producing circumstances that are found within the company's operations.
3. Systematically study the various elements of the work environment to ensure acceptable levels of employee exposure.
4. Analyze and interpret accident statistics and communicate this information to the various levels of supervision.
5. Provide resource assistance to all employees in respect to applicable statutes, regulations, standards and codes of good practice.
6. Develop internal policies and standards for a safe and efficient operation.
7. Develop accident prevention programs and loss control measures and procedures; and effectively communicate them to the various levels of supervision.
8. Participate in industry and professional associations to further the company's goals and enhance its image.
10. Be an active member of the Divisional Joint Health and Safety Committee.
12. Oversee the development of specialized education and training programs aimed at the upgrading of skills at all employee levels.
13. Provide advice and council employees on subjects relating to occupational health, safety and environmental matters.
14. Maintain professional competency through ongoing education and training.
CURRICULUM VITAE

JAMES LAFONTAINE, B. TECH., CRSP
Health, Safety and Environmental Manager

Education:

1981-1985 Ryerson Polytechnical Institute Toronto, ON

- Bachelor of Technology Survey Engineering

2001 University of Toronto – Rotman School of Management – SLC Development Program

Professional Experience: Dufferin Construction Company 1986 - present

Responsible for all functions relating to loss control, accident prevention, risk management, environmental compliance and quality programs for divisional operations. Specific areas of competency and accountability included:

- Health, safety and environmental program development and implementation addressing all construction, and fixed facility operations located throughout Ontario, Quebec, Nova Scotia, BC and Alberta;
- Conduct, review, analyze and report loss producing circumstances;
- Conduct and/or review safety and health audits;
- Administration of risk management services, including Workers’ Compensation, general liability and general risk insurance;
- Staff development and training;
- Responsible for the implementation and maintenance of ISO 9001:2000 registration

Professional Membership: Association for Canadian Registered Safety Professionals 2000
American Society of Safety Engineers (ASSE) 1999
International Society for Fall Protection 1998
Canadian Society of Safety Engineering 1999

Industry Associations:
- Chairman - Provincial Labour-Management Health and Safety Committee - 1999
- Chairman – Ontario Road Builders’ Association, Health and Safety Committee
- Management Representative – Hamilton Regional Labour-Management Health and Safety Committee
- Member of the Technical Advisory Committee – Manual for Uniform Traffic Control Book 7 and Training Advisory Committee
- Member of the Civil Safety Group Steering Committee- Ontario Road Builders Association and Ontario Sewer and Watermain Contractor’s Association

Industry Recognition
- Winner of the Construction Safety Association Gil Sampson Award honoring the Hamilton Regional Health and Safety Committee

Agency Certification:
- Certified Member - Completed Construction Sector Specifics Certification Program requirements of the Workplace Safety and Insurance Board under Section 9 (12) of the Occupational Health and Safety Act of Ontario.

Related Certificates:
- Certified Worksite Traffic Supervisor, ATSSA 1996;
- CSA Fall Protection Program;
- CSAO Train the Trainer-Propane; Advanced Health and Safety Rep program; Certificate Practical Loss Control Leadership; Confined Space; WHMIS Facilitator; 10 I.A.P.A. programs
- Internal Auditor ISO 9001; QMS Lead Auditor Training (RAB Accredited)
TITLE: HEALTH, SAFETY AND ENVIRONMENT COORDINATOR

UNIT: Dufferin Construction Company

DIVISION: Ontario - Construction

REPORTS TO: Health, Safety and Environmental Manager

DATE: June 1, 2005

SUMMARY OF RESPONSIBILITIES

The Health, Safety and Environment Coordinator is accountable to the Health, Safety and Environmental Manager. He/she ensures that health, safety and environmental activities are implemented in accordance with established laws, objectives and within company plans and policies. He/she is responsible to supervise subordinate staff; as well as foster the promotion of good health, safety and environmental practices. Additionally, he/she assists with the development, implementation and periodic assessment of the Company’s Better Cost Management (BCM) and ISO 9001:2000 objectives.

OBJECTIVES

2. Identify and appraise all loss producing circumstances that are found within the company’s operations.
3. Identify and appraise all elements of the work environment to ensure acceptable levels of employee exposure.
5. Advise employees in respect to applicable statutes, regulations, standards and codes of good practice and Company policy and procedures.
6. As directed, develop internal policies, standards and procedures to ensure the effective implementation of company loss control, Better Cost Management and ISO 9001:2000 initiatives.
7. As directed, participate in industry and professional associations to further the company’s goals and enhance its image.
9. Participate; coordinate and/or facilitate Divisional and Project Specific Joint Health and Safety Committee(s) meetings, Better Cost Management and ISO 9001:2000 forums and other required activities.
10. As directed, liaise with the Ministry of Labour, Ministry of Environment and Energy, Ministry of Transportation, Workplace Safety and Insurance Board and applicable health and safety delivery organizations.
11. Coordinate the development and facilitation of specialized education and training programs aimed at the upgrading of skills at all employee levels.
12. Provide advice and council employees on subjects relating to occupational health, safety and environmental matters.
13. Maintain professional competency through ongoing education and training.
Scott A. Winger

39 Kennedy Road
Simcoe, Ontario
N3Y 5B5
(519) 426 - 9573

Objective

To obtain a position in the Human Resources / Health & Safety field which allows me to apply my educational background and work related experiences and utilize my exceptional people skills.

Experience

Dufferin Construction Company – Oakville, ON
Health Safety & Environment Coordinator

Reporting to the Health Safety & Environment Manager.

- Responsible for the day to day health and safety of various projects throughout Ontario.
- Provide advice to site supervisors and staff relating to Occupational Health & Safety.
- Participate in the Joint Health & Safety Committee meetings as a co-chair and advisory member.
- Facilitate and develop staff training regarding Occupational Health & Safety.
- Responsible for and ensure compliance with various environmental programs.

Cayuga Materials & Construction Co. Limited – Cayuga, ON
Human Resources Generalist / Health Safety & Environment Coordinator

Reporting to the President of Cayuga Materials.

- Develop, review, revise, and implement, health and safety policies and procedures.
- Provide advice to management on health and safety and human resource matters.
- Responsible for day-to-day health and safety and human resource issues of the business units.
- Developed industry specific training programs and facilitated staff training sessions relating to Occupational Health & Safety and Environment.
- Administration of all Workplace Safety & Insurance Board issues and claims.
- Active participation in Workplace Safety & Insurance Board’s Safety Group program.
- Improved existing pension program and group benefit program for all employees.
- Act as a company liaison with various government agencies such as Ministry of Labour, Ministry of Environment and Ministry of Natural Resources.

Borg Warner Automotive Canada Limited – Simcoe, ON
Quality Assurance Met Lab Technician

Reported to the Quality Assurance Manager and Metallurgist,

- Responsible for the metallurgical testing of incoming steel shipments and Statistical process control

Continues. /2
Lake Erie Steel Company Ltd (Stelco) – Nanticoke, ON
Industrial Mechanic Assistant – Summer Student

Reported to and worked directly with Industrial mechanics on specified assignments.

- Responsible for assisting industrial mechanics and millwrights with mechanical repairs throughout the Blast Furnace and Coke Ovens areas.

Education

Industrial Labour Relations Certificate Program
Mohawk College, Hamilton, Ontario.

Human Resources Management Certificate Program
(Approved by the Human Resources Professional Association of Ontario)
Mohawk College, Hamilton, Ontario.

Industrial Engineering Quality Assurance Technicians Program
Mohawk College, Hamilton, Ontario.

Training and Development

- Certified Health and Safety Representative – Level 1 & 2.
- Duly Diligent Supervisor training – Mines & Aggregates Safety & Health Association.
- Successful completion of a 40-hour risk, responsibility & liability, Health & Safety Training, course, presented by Mr. Norman Keith, LLB (Gowlings, Lafleur & Henderson).
- Principles of Adult Learning – Train the Trainer program.
- St. John's Ambulance First Aid and CPR certified.

Professional Memberships & Volunteer Activities

- Member of the Human Resources Professionals Association of Ontario.
- Past Member of the Ontario Provincial Police Auxiliary Constable program.

Interests & Hobbies

- Woodworking,
- Skiing.

JOB DESCRIPTION

Job Title: Safety Advisor

Job Function: Immersion Training Program

Period of Employment: Twelve consecutive months

Department: Health, Safety and Environment

Supervisor(s): Health, Safety and Environment Manager

Job Grade: Varied

Typical Duties:

- Attend personal training programs as directed;
- Assist with the development of loss control programs;
- Monitor loss control initiatives;
- Recommend appropriate work practices;
- Promote loss control initiatives to all employees;
- Support line personnel in their duties with regard to loss control initiatives;
- Develop and facilitate training programs;
- Complete at least one major project;
- Other tasks may include one or more of the following:
  - Assist with the development of Better Cost Management and ISO 9001:2000 programs;
  - Promote Better Cost Management and ISO 9001:2000 initiatives to all employees;
  - Support line personnel in their duties with regard to Better Cost Management and ISO 9001:2000 initiatives;

Skill Factors:

Education: Civil Engineering Technology Diploma. Civil Engineering Degree preferred.

Experience: At least two years relevant construction experience in a staff or line function, preferably while employed by Dufferin Construction Company.

Communication: Oral and written skills should be at an advanced level. Fluency in a relevant second language (Italian, Portuguese, French) would be an asset.

Effort Factors:

Physical Demands: Varied physical demands, including extended sitting, standing, walking, climbing. This position requires the candidate to possess full and unrestricted physical mobility.

Mental Demands: Extended visual and cognitive attention is needed to observe project activities. Initiative and ingenuity are mandatory since the job receives only general supervision. Judgment must be frequently exercised in performing staff advisory function. Decision making discretion is frequently required.

Working Conditions: Vehicle travel is frequent and occasionally extensive. Travel to projects and facilities is required. Observing, collecting data and interacting with workers, supervisors and peers is required. The incumbent must work in office as well as outdoor settings.

Important Note: All employees are encouraged to apply. Employees who do not possess formal qualifications will be assessed on their personal merit.

Education

Civil Engineering, University of Ottawa
• Graduated with Cum Laude honours
• Focused studies on structural design and construction management aspects of civil engineering

Scholarships and Awards
• University of Ottawa Admission Scholarship
• Faculty of Engineering Entrance Award

Work Experience

Safety Advisor (April 2005 – Present)
Dufferin Construction Company, Oakville, Ontario
• Support line personnel in their duties with regard to theoretical and practical applications of loss control, productivity improvement and quality assurance
• Attend extensive training programs on Health, Safety, Law and Labour Relations
• Develop and facilitate safety training courses for internal and external personnel
• Develop personal confidence and professional credibility when dealing with the public, governmental agencies, managers, supervisors and peers
• Gain exposure to the full compliment of construction activities performed by the company and the associated cost, productivity, quality and safety challenges

Project Engineer (March 2003 – April 2005)
Dufferin Construction Company, Hamilton, Ontario
Commercial, Industrial and Land Development Markets
• Plan, coordinate and supervise construction activities including labour crews and equipment
• Maintain plans, specifications, cost, material estimates, subcontracts and reports
• Expedite progress payment certificates and extra work orders
• Maintain accurate cost control plans and calculated all productivity and material yields
• Maintain duties related to Occupational Health & Safety Act and Regulations for construction projects, including accident investigation and reporting

Project Engineer (May 2002 – December 2002)
Dufferin Construction Company, Laurier Bridge Reconstruction, Ottawa, Ontario
• Coordinated proper procurement of construction materials ensuring timely delivery and accuracy of purchase orders
• Worked in conjunction with clients, consulting engineers and project superintendent to effectively progress the construction schedule while documenting all correspondence
• Interpreted contract drawings to ensure proper material purchasing and to provide direction to project affiliates
• Continuously updated material, labour and equipment units to accurately portray the project status using a jobsite management software program

Environmental Specialist (Fall 2000 – Spring 2002)
AMEC Earth & Environmental Limited, Ottawa, Ontario
• Performed Phase I Environmental Site Assessments of various commercial, industrial and residential properties throughout Canada
• Responsibilities included site visits and evaluations, technical report writing, historical and regulatory reviews, geographical evaluations

Laboratory / Field Technician (Summer 2000)
AGRA Earth & Environmental Limited, St. Catharines, Ontario
• Responsible for performance of laboratory and construction site field tests on soils, asphalt and concrete in accordance with CSA regulations
• Worked independently in the field and in producing test results for client reports

Professional Skills
Interpersonal Skills
• Excellent communication skills in dealing with public relations and client liaison and strong creativity and problem-solving skills
• Ability to work both independently and in a collegial team environment

Technical Skills
• Skills include project management, technical report writing, construction materials testing and surveying
• Excellent knowledge of Microsoft Office Suite, Lotus Notes and in-house project management software
• Working knowledge of Autocad, C++ and Primavera

Additional Information
Training
• Successfully Completed Practical Loss Control Program
• Fall Protection, Confined Space, Lockout and Tag, Traffic Control, Hoisting and Rigging, Scaffold Erection, Hazard Analysis Training
• Participated in CAID documentation and internal audit
• Completed Surveying, Geotechnical and Water Resources Field Schools

Certification
• ISO 9001:2000 Internal Quality Systems Auditor
• Certified Joint Health and Safety Committee Member
• CSA Certified Concrete Testing Technician
• Workplace Hazardous Materials Information System Training
• First Aid and C.P.R.
• EIT Member, Professional Engineers of Ontario

Languages
• Able to work and communicate in French

1. PURPOSE

This section of the Divisional Loss Control Manual is provided in order to establish the structure of a project/workplace hazard analysis program.

The goals of a hazard analysis program are to establish that:

- Workers are protected from injury from accidents or from gradual harm as a result of long term, adverse working conditions;
- Workers are protected from acute and chronic health hazards; and
- The project/workplace and company are in compliance with all statutory and regulatory requirements.

2.0 ASSESSMENT OF SAFETY

2.1 COMPREHENSIVE DIVISIONAL HEALTH, SAFETY & ENVIRONMENTAL AUDITS

2.1.1 Purpose

The purpose of performing audits of DCC’s health, safety and environmental systems are to determine the status of the system and whether it is being maintained.

2.1.2 Scope

All health, safety and environmental systems procedures and all applicable supporting procedures shall be audited.

2.1.3 Responsibility

The Health, Safety and Environment Manager is responsible for coordinating health, safety and environmental systems audits and the audits of the supporting procedures. The Health, Safety and Environment Manager may conduct audits of the procedures for which he is not responsible and assign other members of the staff to audit the remaining procedures therefore maintaining independence (optional at this time).
2.1.4 Method
Audits are conducted and documented using Checklists (see Appendix A through D) appropriate for each system. The checklists are retained as a quality record. Audits are performed to a schedule that covers the complete quality system every 2 years, by individuals assigned by the Health, Safety and Environment Manager. These individuals are trained by an accredited training organization (IAPA, ILCI, etc.)(optional at this time). Staff members will not be assigned procedures or activities for which they are responsible. Audits are scheduled on the basis of status and importance of the audit subject (optional at this time).

Deficiencies that are found during an audit are recorded on the Audit Checklist. The results of the audit will be brought to the attention of the managers of the activity audited.

The Health, Safety and Environment Manager together with the audit team analyses the results of the audit to complete Corrective Action Reports (if required). The Corrective Action Reports are issued to the responsible individuals for corrective action.

The results of Corrective Action Requests are verified by a follow-up audit conducted by the originator of the Corrective Action.

The results of internal audits are used as input to the Management Review process.

2.2 PLANT & SHOP HEALTH AND SAFETY ASSESSMENTS

All plant facilities shall be subject to a safety audit semi-annually.

Plant Safety Audits shall consider:

1. Health & Safety Administration
2. Physical Hazards
   * Noise

* Vibration
* Heat and Cold Stress
* Electrical shock
* etc.
3. Chemical Hazards:
   * Particulate
   * Vapour, Gas
   * Liquid
4. Ergonomic Hazards
5. Environmental Hazards
6. Fall Hazards
7. Machine guarding

- Audits shall be conducted by senior Health and Safety Department personnel. Audit findings shall be evaluated in respect to recommendations and time table for corrective action.
- Plants and Equipment Department personnel shall be responsible for ensuring that remedial action is consistent with proposed recommendations and the implementation timetable.

2.3 PROJECT - FORMAL SAFETY ASSESSMENT

Formal Safety Assessments will be conducted at least tri-monthly.

Assessments will be conducted during three phases of project progression.

1. Estimating Stage - An assessment shall be conducted in order to establish and delineate hazard potential associated with a project. This will aid in establishing proactive safety standards prior to bidding on a project.
2. Pre-Job Stage - Employing information gathered during the initial stage, project supervision will re-evaluate project hazard potential and scheduling variations prior to commencing work. Upon completion of the second evaluation, project supervision will address all outstanding hazard conditions prior to commencing work.
3. Interim Stage - Supervisors will advise all employees and subcontractors about anticipated hazards and prescribed corrective measures throughout the progression of a project.

Formal project safety assessments shall be conducted by health and safety department personnel in conjunction with project supervision.

- Assessment forms covering the following general hazards areas shall be completed by the health and safety department personnel and confirmed by the Project superintendent.
- The Project Superintendent is responsible coordinating meetings with other project personnel, including:

  ⇒ Pre-Assessment Meeting: The Superintendent will hold a meeting at least 1 week prior to the formal assessment. Personnel in attendance shall include:

  * Assistant Superintendents
  * Estimator Co-Ordinators
  * Field Engineers
  * Foremen
  * Lead Hands
  * Other Supervisors
  * Worker Health & Safety Representative(s)

The pre-assessment meeting will be used as an opportunity to reflect on current and anticipated operational practices with regard to safety. The intent of the meeting is to foster “brain storming” by all project personnel for the purpose of recognizing, evaluating, and controlling anticipated project hazards. An action plan will be developed and implemented.
PROJECT & WORKPLACE HAZARD ANALYSIS

⇒ Post-Assessment Meeting: The Superintendent will hold a meeting at the conclusion of the formal assessment. Personnel in attendance shall include:

* Safety Department Personnel
* Assistant Superintendents
* Estimator Co-Ordinators
* Field Engineers
* Foremen
* Lead Hands
* Other Supervisors
* Worker Health & Safety Representative(s)
* Workers (Optional)

The post-assessment meeting will be used as an opportunity to reflect on the operational practices observed during the assessment. The intent of the meeting is to communicate the results of the assessment, stressing positive observations and items requiring improvement and other opportunities. An action plan to resolve observed non-conformances will be developed and implemented and implemented by the Project Superintendent.

- Project supervision shall be responsible for acknowledging noted deficiencies and providing remedial action and a timetable for implementation of corrective measures.
- Project supervision shall be provided with a copy of each page of the project formal assessment.

- Generalized hazard assessments shall address the following operations:

  1. Project health and safety administration.
  2. Excavating and trenching.
  3. Blasting Operations

  4. Work in Traffic/Traffic Control
  5. Basic Personal Protective Equipment
  6. Work Conducted at Heights
  7. Work Conducted Over Water
  8. Confined Space Work
  9. Utilities
  10. Cranes, Boomtrucks and Other Lifting Devices
  11. Tunnels and Shafts
  12. Security
  13. Environmental Concerns

2.4 INFORMAL SAFETY INSPECTIONS and MONTHLY JOB SITE INSPECTIONS

- Informal safety inspections shall be conducted at least weekly. Inspections conducted on an informal basis shall constitute the foundation for delineating and defining project safety status.
- Additionally, informal safety inspections shall be employed to confirm corrective actions developed in response to non-conformances identified during prior formal project safety assessments.
- Monthly job site inspections shall be completed by the Health and Safety Representative in conjunction with the Management representative using the standard form noted in Appendix G. Copies of the inspection are to be provided to the health and safety committee, the health and safety representative and posted on the job site health and safety bulletin board.

Health and Safety Profile
Section Summaries
and
Recommendations
**SECTION 1 Health and Safety Policy Statement**

<table>
<thead>
<tr>
<th>Comments/Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Comments:</strong></td>
</tr>
<tr>
<td>Dufferin Construction Company is to be commended on its effort in creating and maintaining a safe and healthy workplace. The Health and Safety Policy Statement clearly expresses the corporate commitment to safety and health. It is signed by senior management, dated and posted in each workplace. All employees are given copies of the policy and program as part of their orientation.</td>
</tr>
<tr>
<td><strong>Recommendations:</strong></td>
</tr>
<tr>
<td>To ensure that the policy is current and relevant, continue with your annual review of the policy and make amendments as may be required under the Occupational Health and Safety Act. Consider using information available through the Ministry of Labour and the Construction Safety Association of Ontario when reviewing your policy and program.</td>
</tr>
</tbody>
</table>
**SECTION 2 Responsibilities/Control**

<table>
<thead>
<tr>
<th>Comments/Recommendations</th>
</tr>
</thead>
</table>

**Comments:**

The Occupational Health and Safety Act and Regulations for Construction Projects rely on the “Internal Responsibility System” to achieve positive health and safety results. The Ministry of Labour’s primary goal is to have workplace parties within the construction industry understand and accept the following principles: self-reliance; the use of best practices; and continuous improvement.

Dufferin assigns specific health and safety responsibilities and duties to all workplace parties, and ensures that these responsibilities are understood and carried out at all times. These are stated in its policy and program which is provided to all employees on the first day on the job. The company has a designated health and safety coordinator who reports directly to the General Manager. Disciplinary procedures are followed and subsequently reviewed by the Joint Health and Safety Committee.

**Recommendations:**

- Continue using small group training opportunities such as job box talks to remind employees of their health and safety responsibilities. Ensure that new workers are aware of their hazard reporting duties.
SECTION 3 Documents, Procedures and Reports

Comments/Recommendations

Comments:

The Occupational Health and Safety Act, Regulations for Construction Projects, and Workplace Safety and Insurance Act require that certain documents be posted in the workplace. As part of the corporate appraisal system, Dufferin uses key performance indicators such as tracking manhours, Lost Time Injuries and Medaids and comparing them with the industry average. Dufferin’s goal is to achieve a 50% better result than the industry benchmark.

Recommendations:

Review documents annually or as changes occur to ensure that they are current with legislative requirements.
## SECTION 4: Project/Site Planning Documents

### Comments/Recommendations

**Comments:**

The company develops and provides planning documentation to their constructor and/or general contractor so that a comprehensive site plan may be implemented. Each set of documents is site specific, showing locations of facilities, material storage areas, parking areas etc. Dufferin employees are informed of these details when they arrive on the site. The company has a general housekeeping policy but site specific modifications are introduced if required. Dufferin utilizes a customized pre-startup inspection checklist to determine these requirements. A similar check is used at project close.

**Recommendation:**

Ensure that the site plan is implemented and followed by all employees, including sub-contractors. Inform employees and sub-contractors of any revisions to the plan in a timely fashion. Inspections by site management will ensure that corrections (if necessary) to the site plan are made in a timely fashion.
### SECTION 5: Health and Safety Training

#### Comments/Recommendations

**Comments:**

Dufferin has a comprehensive program in place to: review training requirements for their employees; implement training; and provide re-training when and where required by the applicable Acts and Regulations. Supervisors' performance is monitored to ensure that orientation for new workers is taking place. Joint Health and Safety Committee members, both divisional and site specific are trained in their health and safety responsibilities. Management also participates in safety training through the HHCA and its Safety Group. A number of employees have undergone certification training as required under The Workplace Safety and Insurance Act. To determine appropriate topics for safety talks, the work is discussed, hazards identified and a relevant topic selected.

**Recommendations:**

Encourage more worker participation in training sessions. Appoint a competent worker demonstrate safe work practice. Make use of other training opportunities such as CSAO's mobile classroom on larger sites.
**SECTION 5A: Hazard Analysis**

<table>
<thead>
<tr>
<th>Comments/Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Comments:</strong></td>
</tr>
<tr>
<td>Dufferin Construction Company initially identifies hazards, both common to construction and also site specific, as part of their pre-startup check. In this manner, they are able to determine controls to potential hazards. In the workplace, hazards are minimized by: inspections; training of workers; timely reporting of existing hazards; incident and accident reporting and investigation; and by enforcing proper safety practice by following discipline procedures for non-compliance.</td>
</tr>
<tr>
<td><strong>Recommendations:</strong></td>
</tr>
<tr>
<td>Continue use of project hazard reporting procedures to observe trends at particular sites or within specific trades or tasks. Implement appropriate controls to eliminate the hazards. Evaluate the controls frequently and conduct a detailed hazard analysis if the controls are not effective.</td>
</tr>
</tbody>
</table>
**SECTION 6: Health and Safety Representative/Joint Health and Safety Committee**

<table>
<thead>
<tr>
<th>Comments/Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Comments:</strong></td>
</tr>
<tr>
<td>The company has an active, effective Joint Health and Safety Committee in compliance with the requirements set out by the Occupational Health and Safety Act. Meetings are held monthly with recommendations being sent out to and promptly acted upon by management. Dufferin has a Divisional committee, as well as site specific committees.</td>
</tr>
<tr>
<td><strong>Recommendations:</strong></td>
</tr>
<tr>
<td>Ensure that the Joint Health and Safety Committee continues its participation in determining, implementing and evaluating worker training programs and health and safety issues. Ensure that the committees are actively involved in accident and incident investigations.</td>
</tr>
</tbody>
</table>
### SECTION 7: Corporate Site Inspections and Reports

**Comments/Recommendations**

**Comments:**

The company has a comprehensive inspection program which includes: planned and unplanned inspection by management; monthly or more frequent inspections by the Joint Health and Safety Committee; trained, competent workers inspecting their tools and equipment as required. To ensure consistency, checklists are provided for many types of inspection. The frequency and the scope of the various inspections comply with or exceed the requirements of the Occupational Health and Safety Act and applicable regulations and standards.

**Recommendations:**

Continue to train workers in thorough inspection procedures, possibly through toolbox talks. Communicate results of inspections to workers.
## SECTION 8: Tools, Equipment, and Vehicle Maintenance

### Comments/Recommendations

#### Comments:

Dufferin has a inspection program in which tools, equipment and vehicles are inspected regularly. Defective tools and equipment are tagged and removed from use. Workers are instructed in this procedure as part of their orientation. Vehicles and heavy equipment are maintained and repaired at the company shop by competent mechanics. Equipment operators are required to put details of their inspections on their daily time card.

#### Recommendations:

Continue to review with workers the types of equipment that require inspection, that proper methods of inspection for tools, equipment and personal protective equipment are used, and ensure that inspections are documented as required. Remind workers to tag faulty equipment and ensure that each site has an area for gathering equipment for repair.
SECTION 9: Accident/Incident Investigation and Reporting

Comments/Recommendations

Comments:

Dufferin requires that all accidents be reported within one hour of occurrence. The company and Joint Health and Safety Committee reviews all incidents. Supervisors communicate the outcomes of these meetings to the workers on site. Workers, as well as management are solicited for their input on controls of hazards to ensure that safe work practices and appropriate controls are implemented. Outside agencies, such as HHCA, CSAO or the Hamilton Safety Group may be called upon to provide alternate solutions in hazard control and accident prevention. The regional safety co-ordinators for Dufferin personally investigate all accidents within their jurisdictions. Accident summary reports are used as topics for safety talks. Safety alerts and shop bulletins are provided as supplemental safety talks.

Recommendations:

Train workers, in addition to management, in accident investigation techniques. Ensure that workers are well informed on proper procedures to follow in the event of an emergency.
### SECTION 10: First Aid Requirements

#### Comments/Recommendations

**Comments:**

The company exceeds its obligations under the Workplace Safety and Insurance Act to have available properly trained first aid providers in the workplace. All superintendents undergo training yearly. First aid kits are in appropriate locations in the workplace. A personal injury flowchart provides details on emergency response and is available on all sites.

**Recommendations:**

No recommendations at this time.
SECTION 11: Health and Safety Program Promotion and Communication

Comments/Recommendations

Comments:
Senior management actively promotes, communicates and demonstrates the need for an effective safety program in the workplace. This is reflected by acknowledging positive safety behaviour, as well as, dealing with poor health and safety performance promptly. Employees are made aware of poor performance through the publishing of accident and incident summaries and safety alerts. The CEO personally participates in the corporate accident prevention programs. Safety is included as a performance item in management performance reviews. Management meetings are held every month with safety being the first item on the agenda. Dufferin Construction Company participates in several Health and Safety audits yearly in order to maintain its high standard for health and safety. Workers are encouraged to participate in wellness programs initiated within the company.

Recommendations:
Continue development and managing your program. Acknowledge and encourage every employee’s participation in your company health and safety program.

Sites Evaluation:

Comments:
All sites visited were generally clean, well organized and properly set up. Workers were wearing and using proper safety equipment that was also well maintained and clean. Job boxes and trailers were tidy, and contained necessary documentation. Containers were properly stored and labeled. Workers generally used safe work practice while performing their jobs.

Recommendations:
Ensure workers follow safe work practice at all times and report any hazards in a timely fashion. This includes reporting hazards created by other companies on site. Evaluate sites through more frequent spot inspections to ensure a safe environment for workers. Pay particular attention to fall prevention and electrical hazards. A review of inspection procedures for electrical tools and extension cords is recommended. Consideration should be given to a coding system to recognize that a monthly inspection of tools, cords etc. has been completed. Provide follow-up inspections to check for compliance. Review unsafe work practice immediately with workers and their supervisors.
# Formal - Project Safety Assessment

Approved by: H S Dept.

8B - Revision Number - 1, June 6, 2005

Please forward a copy of this form to the H S Department following completion of the inspection.
CONTENTS

1.0 Purpose
2.0 Policy

- Appendix A “Dufferin Construction Company - New Employee Orientation Review Sheet”

1.0 PURPOSE

To provide direction for the provision of safety orientation to all new employees in order to ensure that workers have a basic understanding of the project management structure, the nature of the work, hazards and preventive measures.

2.0 POLICY

Superintendents are responsible for ensuring that their respective new employees are familiarized with:

- Project management structure
- Other project personnel
- Project hazards
- Preventive safe work procedures
- Personal protective equipment requirements
- Workplace Hazardous Materials Information System (WHMIS) procedures
- Hazard and accident reporting procedures

Furthermore, superintendents are responsible to ensure that each new employee receives a copy of an “Employee Health & Safety Policy and Reference Manual” Additionally, each employee shall read and sign the tear-out sheet acknowledging they have received and agree to abide by the policies and procedures contained in the manual.

2.1 Responsibilities

Superintendents shall utilize and fully complete a Dufferin Construction Company - New Employee Orientation Review Sheet as prescribed by the directions contained on the sheet.
Divisional - Loss Control Manual

NEW & REASSIGNED EMPLOYEE ORIENTATION

Appendix A
Items to be reviewed with each new employee by Superintendent or designated competent supervisor. Where the new employee is incapable of understanding the orientation due to a language difficulty, seek assistance. Fill in or check off items as applicable as they discussed with the new employee. Provide the new employee with a copy of this orientation review sheet.

Employee Name: __________________________ Date: __________________________

Position: __________________________

Project Personnel
Identify and/or introduce the following personnel:

1. The Project Superintendent is:
2. The Assistant Superintendent is:
3. The Project Engineer is:
4. The Foreman to whom I report is:
5. The person responsible for distributing the paycheck is:
6. The person responsible for the co-ordination of MSDS at the project level is:
7. The Worker Representative or Committee Member of the Project Joint Health and Safety Committee is:
8. Dufferin Construction Company's Head Office phone number is:

Safety
1. Identify previous worker training including dates, who conducted the training and evidence of participation in the training:

   ____________________________________________

2. Review applicable general hazards and safe work procedures associated with the project:

   | Work at heights | Lifting devices | Trenching and excavating |
   | Work near water | Work in traffic | Tunnel/Shafts/Caissons/Cofferdams |
   | Work adjacent to utilities | Blasting | Confined spaces |

   The worker has been given applicable personal protective equipment and received a review on their use.
   The worker has received a copy of the "Employee Health & Safety Manual".
   The worker has been requested to read and apply the information in the manual.
   The worker has been requested to complete, sign, and submit the acknowledgement sheet.
   The worker has been given a review on the WHMIS program and how to obtain MSDS's.

Health
1. The location of the first aid kit and eyewash station is:
2. The certified first aider on site is:
3. The location(s) of the fire extinguisher(s) is/are:
4. The location of the emergency contact list is:

Accident Response and Reporting
The worker has been informed to advise his Foreman immediately in the event of an injury.
Accident/incident reporting procedures have been reviewed.
Definition of Critical Injury and preservation of site has been reviewed.

Employee and Project Superintendent (or assigned Competent Supervisor) agree that this orientation has been carried out completely.

Revision: 7, January 2005
DUFFERIN CONSTRUCTION COMPANY
HEALTH AND SAFETY POLICY

Dufferin Construction Company is committed to the protection from accidental injury and loss to its employees and property.

In fulfilling this commitment, we will provide and maintain a safe work environment and we will strive to eliminate hazards which may result in injury and property damage.

Accidental injury and loss can be controlled through good management in combination with active employee involvement.

Supervision and Management will take all necessary action to eliminate or control hazardous working conditions and work in compliance with laws pertaining to occupational health and safety.

All employees are responsible for their own personal safety and that of their co-workers. They are expected to use the safest work methods to carry out their job and point out sources of danger and suggest means to remedy them.

I trust that each of you will join me in a personal commitment to enforce this Health and Safety Policy as a way of life.

Lloyd Ferguson
General Manager
INTRODUCTION

This manual is intended to be a general overview of safety policies and procedures which should be followed by all employees and subcontractors of Dufferin Construction Company. Employees and subcontractors should not rely on this manual exclusively. Reference must be made to the Occupational Health and Safety Act and the Regulations passed pursuant thereto for Construction Projects and Industrial Establishments, as well as to Dufferin Construction Company’s Divisional Health and Safety Policy and Reference Manual in order to ensure compliance.

The information contained in this manual is designed to provide assistance to all employees of Dufferin Construction Company in maintaining a safe working environment.

In addition, each and every employee should be aware of his or her responsibilities, as required by the Occupational Health and Safety Act, Section 28:

1. Work in compliance with the provisions of this Act and all health and safety regulations.
2. Use or wear the equipment, protective devices or clothing required by the employer.
3. Report to the Company defective or dangerous equipment and hazards.
4. Do not remove any protective devices.
5. Do not operate equipment or machinery in a dangerous manner.
6. Do not engage in any horseplay or pranks in the workplace.
7. Report all accidents immediately.

At the back of this manual is a ‘tear-off’ slip which you will be required to sign as acknowledgement that you have received the Company’s Health & Safety Policy and Reference Manual and agree to abide by the rules and policies contained therein.

This record will be retained on file at our Head Office.

WORKER RIGHTS

The Occupational Health and Safety Act includes three fundamental rights of workers:

0. the right to know about workplace health and safety hazards;
0. the right to participate in health and safety recommendations, through their representation on the joint health and safety committee(s);
0. the right to refuse work if it endangers health or safety.
RESPONSIBILITIES

It is the responsibility of every Manager, Supervisor and Foreman to ensure:
1. The implementation of the requirements of all applicable Federal and Provincial Health & Safety Acts, together with any associated regulations.
3. Suitable and adequate safety equipment is available and used.
4. The operations under their control are, so far as is reasonably practicable, conducted without detriment to the health and safety of employees or others who may be affected by their activities.

It is the responsibility of each and every employee to cooperate in implementing the requirements of all health and safety legislation and related regulations; to refrain from doing anything which constitutes a danger to themselves or others; and to bring to the attention of management any situation or practice that may lead to injury or ill-health.

YOUR WELFARE AT WORK

Dufferin Construction Company is vitally concerned with accident prevention and for your overall welfare and safety. We need your help in preventing accidents that may result in personal injury or damage to property and equipment. All injuries must be reported immediately to your Supervisor or Foreman, as failure to do so can result in the delay of proper first-aid or medical treatment and any potential compensation benefits.

All defective tools and equipment must be brought to the attention of your Supervisor or Foreman for immediate correction.

*Any accident that occurs while carrying out the company's business will be regarded as a serious matter and will be thoroughly investigated and acted on to prevent recurrence.*

Site management is responsible for immediately contacting and notifying Health and Safety Department personnel in the event of an accident or loss.

Site management is also responsible for completing an internal accident investigation report form in all cases of accident, incident or loss. Completed reports must be forwarded to the Health and Safety Department at the Head Office immediately.

In addition and where appropriate, the information required under Sections 51, 52 & 53 of the Act (see Sections 8 through 12 of the Regulations for Construction Projects) must also be forwarded to Head Office.
FIRST-AID

First-Aid kits are provided on all project sites and in many company vehicles. Know where the closest first-aid kit is located in the event of an emergency. All employees are encouraged to take first-aid training. In all cases of injury, take necessary action to obtain prompt first-aid and prevent further complications. Report all accidents and injuries to your supervisor immediately.

ALCOHOL/UNAUTHORISED DRUGS

Consumption of alcohol and unauthorised drugs are prohibited on Dufferin Construction Company property and work sites. Any person under the influence of alcohol or illegal drugs will be refused entry or removed from the premises or project. Personnel using a medically prescribed drug which may impair performance or judgement must inform their supervisor.

PERSONAL PROTECTIVE EQUIPMENT

It is a condition of employment that all employees provide their own safety boots. All other personal protective equipment will be supplied and must be worn as required without exception. Hard hats and safety boots must be worn at all times on all work sites by all employees. This includes drivers when they leave their vehicles and visitors to the job site. Hard hats must be approved by the Company and footwear must be CSA Certified Grade 1 with heavy duty toe and sole protection. Personal protective equipment must be worn as your job requires, such as:

a) Suitable eye protection when cutting, grinding or hammering; or when working in areas where material may fall or blow into your eyes; or where dust particles are whipped up by the wind.

b) Hearing protection (earmuffs, plugs) when working with or near noisy tools or equipment. (audio headsets such as portable radios are not permitted while working on the job site.)

c) Reflective fluorescent vests when controlling traffic or working on a project where workers are exposed to the hazards of vehicular traffic.

d) Appropriate protective gloves when handling hazardous products and sharp or abrasive materials.

e) Respirators when working in conditions that may cause inhalation of particles, vapour, mist or gas.

f) Short sleeve shirts and long pants as a minimum are mandatory.
g) Life jackets must be worn by workers exposed to the danger of drowning in water deep enough for the life jacket to be effective.

In addition to the above, specially designed protective clothing must be worn under certain hazardous working conditions.

**FALL PROTECTION MEASURES**

A worker at risk of falling more than 2.4 meters (8 feet) must be protected by a guardrail, travel restraint system or fall-arrest system.

**GUARDRAILS**

Guardrails are required to protect workers from:
- open edges of scaffolds, platforms and ramps;
- edges of bridge surfaces;
- edges of slab formwork; openings in floors, roofs and other working surfaces not otherwise covered or protected;
- locations where a worker may fall into water, onto operating machinery or hazardous substances or objects.

Guardrails should have a top rail between 3 and 3.5 feet above surface level, in addition to a mid-rail and toeboard secured to vertical posts situated no more than 8 feet apart.

**TRAVEL-RESTRAINT AND FALL-ARREST SYSTEMS**

A travel-restraint or fall-arrest system must be employed when a worker is exposed to any of the previously noted hazards and a guardrail or other suitable means of protection are not present. Travel-restraint and fall-arrest systems consist of the following components:
- a full body harness;
- a lanyard including shock absorber;
- a locking snap hook;

A suitable anchorage; including a lifeline and suitable hardware when appropriate. Only Company approved components are permitted as part of a travel-restraint or fall-arrest system.

100% fall protection is required at all times.

**EQUIPMENT OPERATION**

Only authorised personnel are permitted to operate, adjust and repair Dufferin Construction Company vehicles and equipment.

When operating a company vehicle, you are required to be the holder of a valid driving license; to know and obey all traffic regulations and to observe all the rules of safe driving. Become familiar with the operation of any vehicle assigned
to you. Keep your vehicle properly serviced and report unsafe conditions and be sure to have them corrected at once.

All vehicle and equipment operators are responsible for circling their vehicle or equipment before starting to ensure that there are no obstructions in the direction of travel. When starting up, sound warning.

All operators must ensure that their path is clear before backing up the vehicle or equipment. A signal person must be used when the view is obstructed and when the equipment is driven in an area where the operator or other persons may be endangered.

Always be alert when operating equipment around overhead hydro lines. Before mounting equipment, ensure that boot soles are clean to avoid slips and falls. Climb up and down equipment maintaining a 3 point contact at all times (two hands one foot, or two feet one hand).

All mounting facilities (ladders, platforms) must be maintained in a safe and clean condition. It is the responsibility of all operators to ensure that their equipment is in safe working order at all times and that all problems are reported and acted on immediately.

MACHINE GUARDS

Machine guards must be installed and maintained at all times to prevent hands, arms, or any other part of a worker's body from making contact with dangerous moving parts. Guards and devices must be made of appropriate durable material (including woven wire, perforated or expanded metal) that will withstand the conditions of normal use. They must be secured to the machine.

Replacement guards or modified guards should be designed by an engineer. Where machine guards, safeguard devices or safety controls are not present, barriers, and warning signs must be established to prevent access to the hazard area.

LOCKOUT AND TAGOUT PROCEDURES

When maintenance and servicing are required on equipment and machines, the energy sources must be isolated and lockout/tagout procedures implemented. Only personnel trained in lockout/tagout procedures should perform maintenance and servicing of equipment and machines. Strict adherence to the Company’s - Divisional Health and Safety Policy and Reference Manual is necessary to comply with lockout/tagout procedural requirements.

SERVICING MOBILE EQUIPMENT

Disengage power, stop the engine and remove and retain the ignition key before servicing equipment.
Never oil or grease machinery while it is running. Dozer and grader blades, backhoe and loader buckets and scraper pans must be lowered to the ground when the machine is stopped. Follow all recommendations in operating, service and maintenance manuals which have been provided to you. Service personnel must notify a supervisor of their locations at all times and mechanics are not to work in the field alone without notifying a supervisor of their location.

**ELECTRICAL**

All work activities and material must be kept at a safe distance from any electrical power source in order to prevent contact or arcing. A ground fault circuit interrupter (GFCI) must be installed at the receptacle of a generator or other power source when portable electrical tools are used outdoors or in wet locations.

**TRENCHES AND EXCAVATIONS**

Where personnel are required to enter a trench or excavation, it must be properly sloped or a trench support system used where required. A ladder or ramp must be provided to enable access or egress from the work area. Excavated materials should be kept well away from the trench edge in all cases. Be extremely cautious when working to expose underground utilities such as gas, hydro, water mains, etc. Be certain that all necessary precautions have been taken before commencing work. All underground utilities must be hand located prior to commencing mechanical excavation. All equipment must be kept a safe distance from overhead power lines. All activities adjacent to existing utilities must conform to the provisions of the Occupational Health and Safety Act and Regulations for Construction Projects.

**CONFINED SPACE ENTRY**

Entering a tank, vessel or manhole for any purpose is not permitted unless the interior conditions have been tested by a qualified person and the necessary safe work permit issued. All confined space entries must be made in accordance with Regulations for Construction Projects.

**MATERIAL HANDLING & GENERAL HOUSEKEEPING**

Whenever practical, heavy lifts should be done with mechanical lifting devices. When manual handling is required, lift correctly, bending at the knees and moving your feet when turning, rather than swinging at the waist. GET HELP WITH HEAVY LOADS.
When working on sewer and watermain installation, keep fingers and hands clear when joining pipes, fitting manholes, etc. Use care in connecting lifting cables and avoid trapping fingers. Watch out for 'pinch' points. Never permit any portion of your body to get into a position where 'jamming' could occur. Guard against getting in an off-balance position when pushing or prying. Keep work areas free of loose material and debris, particularly lumber and timbers with nails. Watch your footing to avoid slips and falls. Never leave tools or materials at locations where they can be knocked off and fall on someone working below.

**FIRE PROTECTION**

Precautions must be taken to prevent the outbreak of fire, especially where welding or cutting operations are being carried out.
Fire extinguishers must be readily accessible, properly maintained, regularly inspected and promptly refilled after use.
Be familiar with the location of all fire fighting equipment on site.

**WORKPLACE HAZARDOUS MATERIALS INFORMATION SYSTEM (WHMIS)**

All hazardous materials found in the workplace must be identified in accordance with the Workplace Hazardous Materials Information System (WHMIS) requirements of the Occupational Health & Safety Act.
Material Safety Data Sheets will be provided and maintained in each site office trailer for reference, to assist all employees in how to handle, store and dispose of these materials.
All employees who work with or in close proximity to hazardous materials must have had formal training under the WHMIS regulation.
The WHMIS hazard symbols are shown below for your information.
CHEMICAL SPILLS

The release or discharge of a chemical which may pose a hazard to people or the environment is prohibited.

In the event of a spill:
1. Find and identify the substance and source.
2. Ensure safety of self and others.
3. If possible, stop the process or shut off the source.
4. Inform the Ministry of Environment, and the applicable Municipality and local Conservation Authority (spills must be reported forthwith). If local Ministry office is not open, Spills Hotline: 1-(800) 268-6060.
5. Contain the spill.
7. Carry out clean-up activities
IMPORTANT

This Health & Safety Policy and Reference Manual has been prepared to inform you of the basic requirements expected of you as an employee of Dufferin Construction Company. It is your responsibility to read this manual and abide by all specified policies.

It is the responsibility of your Foreman or the office staff at the site office where you were hired, to provide you with this manual and to ensure that you complete and sign the declaration below along with your Foreman or the person issuing you this manual.

I hereby declare that I have received a copy of Dufferin Construction Company’s Health & Safety Policy and Reference Manual and agree to abide by the rules and policies contained therein.

DUFFERIN CONSTRUCTION COMPANY
RÈGLES DE SÉCURITÉ ET DE PROTECTION DE LA SANTÉ

Dufferin Construction Company a pris des engagements à l'égard de la protection de ses employés et de leurs biens contre les blessures et les pertes par accident.

Pour remplir ces engagements, nous fournirons et maintiendrons un environnement de travail sûr, et nous travaillerons à l'élimination des risques susceptibles de provoquer des dommages corporels ou matériels.

Il est possible de minimiser les accidents provoquant des dommages corporels et matériels au moyen d'une saine gestion, en conjonction avec la participation active des employés.

Les personnels de supervision et de direction prendront toutes les mesures nécessaires pour l'élimination ou le contrôle des conditions de travail dangereuses, et agiront en conformité avec les lois relatives à la sécurité et la protection de la santé au travail.

Chaque employé est responsable de sa propre sécurité et de celle de ses collègues. On attend d'eux qu'ils utilisent les méthodes de travail les plus sûres pour exécuter leurs tâches, qu'ils signalent les sources de danger qu'ils remarquent et qu'ils suggèrent des moyens d'y remédier.

Je veux croire que chacun d'entre vous s'engagera personnellement avec moi à adopter ces règles de sécurité et de protection de la santé pour en faire un mode de vie.

Lloyd Ferguson
Directeur général
**INTRODUCTION**

Ce manuel a pour objet de présenter les grandes lignes des politiques et mesures de sécurité que doivent observer les employés et sous-traitants de Dufferin Construction Company. Les employés et sous-traitants ne doivent cependant pas se fier exclusivement à l'information de ce manuel. Pour garantir le respect de toutes les prescriptions en vigueur, on doit également tenir compte de la Loi sur la santé et la sécurité au travail et des règlements connexes adoptés en vertu de cette loi pour les projets de construction et établissements industriels, ainsi que du manuel de références et règles de sécurité/protection de la santé de la division concernée de Dufferin Construction Company.

L'information présentée dans ce manuel a pour but d'aider tous les employés de Dufferin Construction Company à maintenir un environnement de travail sûr. De plus, chacun des employés doit être parfaitement conscient de ses propres responsabilités, comme l'exige la section 28 de la Loi sur la santé et la sécurité au travail:

1. Travailler en conformité avec les prescriptions de cette loi et de tous les règlements concernant la sécurité et la protection de la santé.
2. Utiliser ou porter l'équipement ou les accessoires de protection exigés par l'employeur.
3. Signaler à la compagnie les situations de risque et équipements dangereux ou défectueux.
4. N'enlever aucun équipement de protection.
5. Ne pas faire fonctionner un équipement ou une machine d'une manière dangereuse.
6. Ne jamais participer à des chahuts ou blagues sur les lieux de travail.
7. Signaler immédiatement tout accident qui survient.

On trouve à la fin de ce manuel une carte détachable que l'on vous demandera de signer pour attester de la remise de ce manuel de Références et règles de sécurité et de protection de la santé; en la signant, vous vous engagez également à respecter les règles et politiques présentées dans cette brochure.

*Ce document sera conservé en dossier à notre siège social.*

**LES DROITS DES TRAVAILLEURS**

La Loi sur la santé et la sécurité au travail définit trois droits fondamentaux des travailleurs:

- le droit d'avoir connaissance des risques pour la sécurité et la santé qui existent sur les lieux de travail;
- le droit de participer à la formulation des recommandations de protection de la sécurité et de la santé, par représentation au(x) comité(s) mixte(s) santé/sécurité;
• le droit de refuser toute tâche mettant en danger leur santé ou leur sécurité.

**RESPONSABILITÉS**

Chaque cadre, superviseur et contremaitre se voit imposer la responsabilité de :

1. L'application et le respect des exigences de toutes les lois fédérales et provinciales applicables sur la santé et la sécurité au travail, et de tout règlement connexe.

2. La mise en œuvre des dispositions du manuel de références et règles de sécurité/protection de la santé de la division concernée de la compagnie.

3. La disponibilité et l'utilisation des équipements de sécurité appropriés.

4. L'exécution des opérations placées sous leur contrôle, autant que c'est raisonnablement possible, sans effet néfaste sur la sécurité ou la santé des employés ou d'autres personnes susceptibles d'être affectées par ces activités.

Chaque employé se voit imposer la responsabilité:

• de coopérer dans la mise en œuvre et le respect des prescriptions de toute législation santé/sécurité et des règlements connexes;

• d'éviter toute action constituant un danger pour lui-même ou pour d'autres, et

• de signaler à la direction toute situation ou pratique susceptible de provoquer des blessures ou une dégradation de la santé.

**VOTRE BIEN-ÊTRE AU TRAVAIL**

Chez Dufferin Construction Company, la prévention des accidents et la protection de votre sécurité et de votre bien-être général constituent une priorité fondamentale. Nous avons besoin de votre aide pour la prévention des accidents susceptibles de provoquer des blessures ou la destruction de biens ou équipements. Toute blessure doit être immédiatement signalée au superviseur ou contremaitre; toute négligence à cet effet peut susciter un retard dans l'administration des premiers soins ou d'un traitement médical, et un refus d'indemnisation par les organismes concernés.

Toute défectuosité d'un outil ou d'un équipement doit être signalée au superviseur ou contremaitre, pour correction immédiate.

*Tout accident survenant dans le cadre des activités de la compagnie sera considéré comme une question sérieuse, et fera l’objet d’une enquête approfondie et d’initiatives destinées à en empêcher la répétition.*

La direction de chantier a pour responsabilité de contacter et aviser immédiatement le personnel du département santé/sécurité à l'occasion d'un accident ou d'une perte matérielle. La direction de chantier a également pour responsabilité de remplir un rapport d'enquête sur accident, sur le formulaire interne, à l'occasion de tout accident, incident ou perte matérielle. Les rapports remplis doivent être envoyés immédiatement au département santé/sécurité du siège social.
De plus, lorsque c'est approprié, l'information exigée en vertu des sections 51, 52 et 53 de la loi (voir les sections 8 à 12 des règlements concernant les projets de construction) doit être également communiquée au siège social.

**PREMIERS SOINS**

On trouve des troupes de premiers soins sur tous les chantiers, et dans de nombreux véhicules de la compagnie. Chacun doit prendre connaissance de l'endroit le plus proche où se trouve une trousse de premiers soins, pour pouvoir l'utiliser en cas d'urgence.

Nous incitons chaque employé à recevoir une formation aux premiers soins. Dans tous les cas de blessures, agir selon le besoin pour obtenir sans retard les premiers soins appropriés, et pour éviter toute complication. Faire immédiatement rapport de chaque accident et blessure au superviseur.

**ALCOOL ET DROGUES ILLICITES**

La consommation d'alcool et de drogues illicites est prohibée sur les propriétés et chantiers de Dufferin Construction Company. Toute personne qui se trouve sous l'influence de l'alcool ou de drogues illicites se verra refuser l'accès aux lieux de travail ou au site du projet, ou en sera expulsée. Les personnes utilisant sur prescription médicale des médicaments susceptibles d'affecter leur performance ou leur jugement doivent en aviser leur superviseur.

**ÉQUIPEMENT DE PROTECTION INDIVIDUELLE**

Chaque employé doit posséder ses propres chaussures de sécurité; il s'agit d'une condition d'emploi. Tous les autres équipements de protection individuelle seront fournis; ils doivent être portés/utilisés conformément aux exigences, sans exception. Sur un chantier, toute personne doit porter un casque et des chaussures de sécurité. Les conducteurs qui quittent leur véhicule et les visiteurs du chantier sont également assujettis à cette règle.

Les casques utilisés doivent être approuvés par la compagnie; les chaussures utilisées doivent comporter l'homologation CSA Catégorie 1 pour service rigoureux, avec protection de la semelle et des orteils.

Des équipements de protection individuelle doivent être portés selon le besoin, comme par exemple :

a) Accessoires appropriés de protection des yeux : pour les opérations de coupe, meulage ou martelage; lors des activités en un lieu où des matériaux peuvent tomber ou être projetés vers les yeux; ou lorsque le vent peut projeter des particules de poussière.

b) Protection de l'ouïe (sor-ère-abruit ou bouchons d'oreille): lors des travaux avec ou au voisinage d'équipements ou outils bruyants (l'utilisation d'appareils
audio à écouteurs, comme radio portative, n'est pas permise pendant les activités sur les lieux de travail).

c) Gilets réflecteurs fluorescents: lors du contrôle de la circulation ou des activités sur un projet où les employés travaillent au voisinage de la circulation de véhicules.

d) Gants de protection appropriés : pour la manipulation de produits dangereux et de matériaux acérés ou abrasiifs.

e) Appareils respiratoires : lors des activités dans un environnement favorisant l'inhalation de particules, vapeur, brouillard ou gaz. La tenue vestimentaire obligatoire comprend au moins chemise à manches courtes et pantalon long.

f) Les gilets de sauvetage doivent être portés par tous les travailleurs travaillant au voisinage d'une masse d'eau suffisamment profonde pour provoquer une noyade. En plus des exemples ci-dessus, des vêtements de protection de conception spéciale devront être portés pour certaines activités de travail dangereuses.

PROTECTION CONTRE LES CHUTES

Tout employé exposé à un risque de chute d'une hauteur de plus de 2,4 mètres (8 pieds) doit être protégé par un garde-corps, un système de restriction des déplacements, ou un système d'arrêt de chute.

GARDE-CORPS

L'emploi de garde-corps est exigé pour la protection des travailleurs dans les situations suivantes:

- à la limite des échafaudages, plates-formes et plans inclinés;
- à la limite des surfaces d'un pont;
- aux limites des dalles : ouvertures dans les planchers, toitures et autres surfaces de travail qui ne sont pas autrement couvertes ou protégées;
- aux endroits où un travailleur pourrait tomber dans de l'eau, dans une machine en fonctionnement, ou sur des objets ou substances dangereux.

Un garde-corps doit comporter une traverse supérieure située à 3 - 3,5 pieds au-dessus de la surface horizontale, en plus d'une traverse intermédiaire et d'une planche de plinthe, fixées à des poteaux verticaux placés à intervalles ne dépassant pas 8 pieds.

SYSTÈMES DE RESTRICTION DES DÉPLACEMENTS ET D'ARRÊT DE CHUTE

On doit utiliser un système de restriction des déplacements ou d'arrêt de chute lorsqu'un travailleur est exposé à l'un des dangers déjà signalés, lorsqu'aucun garde-corps ou autre moyen de protection approprié n'est installé. Les systèmes de
restriction de déplacement et d'arrêt de chute doivent comporter les composants suivants:
- harnais complet fixé au corps;
- filin de sécurité, avec amortisseur de choc;
- mousqueton verrouillable;
- ancrage approprié; et également filin de sécurité et organes de fixation appropriés, selon le besoin.
Les systèmes de restriction de déplacement et d'arrêt de chute utilisés ne doivent comporter que des composants approuvés par la compagnie.

**Une protection à 100 % contre les chutes est exigée en tout temps.**

**UTILISATION DES ÉQUIPEMENTS**

Seules les personnes habilitées sont autorisées à faire fonctionner, régler ou réparer des véhicules ou équipements de Dufferin Construction Company.

Lors de l'utilisation d'un véhicule de la compagnie, les conducteurs doivent être détenteurs d'un permis de conduire valide; le conducteur doit connaître et respecter tous les règlements régissant la circulation, et respecter toutes les règles de conduite en sécurité. Chaque conducteur doit se familiariser avec le fonctionnement de tout véhicule qui lui est affecté. Veiller à ce que le véhicule reçoive l'entretien approprié, signaler toute situation affectant la sécurité, et veiller à l'application des mesures correctives appropriées.

Chaque conducteur de véhicule ou d'équipement doit effectuer avant la mise en marche une inspection périphérique de son véhicule ou équipement, pour vérifier l'absence de toute obstruction dans la direction de déplacement. Lors de la mise en marche, émettre un signal avec l'avertisseur.

Tout conducteur doit vérifier que la voie est totalement libre avant de faire reculer son véhicule ou équipement. Lorsque le champ de vision est restreint ou lorsque l'équipement est utilisé dans une zone où le conducteur ou toute autre personne pourrait être exposé à un danger, on doit faire intervenir une autre personne responsable de la signalisation. Veiller à demeurer toujours alerte lors de l'utilisation d'un équipement au voisinage de lignes électriques.

Avant de grimper sur un équipement, vérifier la propreté des semelles des chaussures afin d'éviter tout risque de glissade et chute. Pour grimper sur un équipement ou en descendre, maintenir en tout temps un contact sur 3 points (deux mains et un pied, ou deux pieds et une main).

Veiller à l'entretien de la propreté et de la sécurité des accessoires d'escalade (échelles, plates-formes etc.). Les conducteurs et opérateurs doivent veiller à ce que leur équipement soit toujours en parfait état de sécurité, et signaler et faire corriger immédiatement toute anomalie.
CARTERS DES MACHINES

Les carters des machines doivent toujours être installés et être maintenus en bon état en tout temps, pour la prévention de l'introduction des mains, bras et autres parties du corps des travailleurs au voisinage des pièces mobiles dangereuses. Les carters et accessoires de protection doivent être faits de matériaux durables appropriés (grillage, métal perforé ou déployé) capables de résister aux conditions de service normales. Ces accessoires doivent être solidement fixés à la machine.

Il convient que les carters de protection de remplacement ou modifiés soient conçus par un ingénieur. En l'absence sur la machine de carters de sécurité ou autres accessoires de protection ou de sécurité, on doit toujours installer des barrières ou affiches d'avertissement pour empêcher l'accès à la zone dangereuse.

MESURES D'ÉTIQUETAGE ET VERROUILLAGE

Lors de l'exécution de travaux d'entretien ou réparation sur un équipement ou une machine, on doit isoler les sources d'énergie et appliquer les mesures de verrouillage/étiquetage. Seules les personnes qui ont reçu la formation appropriée sur les mesures de verrouillage et d'étiquetage sont habilitées à exécuter des travaux d'entretien et de réparation sur les équipements et machines. L'application des exigences de verrouillage et d'étiquetage implique le strict respect des mesures décrites dans le manuel de références et règles de sécurité/protection de la santé de la division concernée de la compagnie.

ENTRETIEN DES ÉQUIPEMENTS MOBILES

Interrompre l'alimentation en énergie; arrêter la machine; retirer et conserver la clé de contact avant d'entreprendre le travail.

Ne jamais entreprendre de lubrifier/graisser une machine en fonctionnement. Les lames des bulldozers et des niveleuses, et les godets et bennes des pelleteuses et chargeurs doivent être mis en appui sur le sol lors de l'arrêt de la machine. Respecter toutes les recommandations présentées dans le manuel d'utilisation, entretien et réparation mis à la disposition du personnel.

Les personnels chargés des travaux d'entretien doivent toujours indiquer au superviseur où ils se trouvent; les mécaniciens ne doivent jamais travailler seuls sur un chantier sans indiquer au superviseur où ils se trouvent.

ÉLECTRICITÉ

On doit conserver tous les matériaux et exécuter toutes les activités à une distance appropriée des lignes électriques, pour éviter tout contact ou la formation d'arcs.
Un disjoncteur différentiel doit être installé sur la prise de courant d'un générateur ou de toute autre source d'énergie lors de l'utilisation d'outils électriques portatifs à l'extérieur ou sur un terrain humide.

**TRANCHÉES ET EXCAVATIONS**

Lorsque des employés doivent pénétrer dans une tranchée ou excavation, il faut que ses flancs soient convenablement inclinés et/ou étayés. On doit mettre en place une échelle ou un plan incliné permettant d'accéder à la zone de travail et d'en sortir. Dans tous les cas, il faut que les matériaux excavés soient entreposés à bonne distance des bords de la tranchée. Travailler très prudemment pour exposer les canalisations souterraines (gaz, eau, câbles électriques, etc.). Veiller à l'application de toutes les précautions nécessaires avant d'entreprendre le travail. On doit travailler à la main pour identifier toutes les canalisations enterrées avant d'entreprendre l'extraction par moyens mécaniques. Tout équipement doit être maintenu à bonne distance des lignes électriques aériennes. Toutes les activités au voisinage immédiat des canalisations de service doivent respecter les prescriptions concernant les projets de construction des règlements et de la Loi sur la santé et la sécurité au travail.

**ENTRÉE DANS UN ESPACE CONFINÉ**

L'accès à l'intérieur d'un réservoir, récipient ou regard, quelle qu'en soit la raison, n'est permis que lorsqu'une personne qualifiée a testé l'atmosphère intérieure et émis le permis approprié de travail en sécurité. Toute entrée dans un espace confiné doit être effectuée en conformité avec les règlements applicables aux projets de construction.

**MANUTENTIONS ET TENUE DES LIEUX DE TRAVAIL**

Chaque fois que c'est possible, les levages d'objets lourds doivent être effectués au moyen d'équipements mécaniques. Lorsque des opérations de levage manuel sont nécessaires, veiller à soulever correctement la charge : fléchir les genoux, et effectuer les rotations par mouvement des pieds plutôt que par pivotement au niveau de la taille.

**OBTENIR L'AIDE APPROPRIÉE POUR LES MANIPULATIONS DE CHARGES LOURDES.**

Dans les travaux sur des canalisations d'égout et d'adduction d'eau, maintenir les doigts et mains à bonne distance lors des opérations d'embrochement des tuyauteries, ajustement des regards, etc. Travailler prudemment lors de la mise en place des câbles de levage, et éviter de se coincer les doigts. Surveiller particulièrement les zones de «coincement». Veiller à ne jamais placer une partie du corps à une
position où un coincement serait possible. Veiller toujours à éviter une position de déséquilibre en exerçant une poussée ou un effet de levier. Veiller à maintenir les lieux de travail exempts de débris et matériaux dispersés (particulièrement les morceaux de bois comportant de clous). Veiller à toujours conserver un bon appui, pour éviter les glissades et chutes. Ne jamais laisser des outils ou matériaux aux endroits où une personne pourrait buter dessus ou les faire tomber sur d'autres personnes travaillant plus bas.

PRÉVENTION DES INCENDIES

On doit appliquer certaines précautions pour empêcher le déclenchement d'un incendie, particulièrement lors de l'exécution d'opérations de soudage ou découpage. Veiller à ce que des extincteurs soient facilement accessibles; veiller à ce qu'ils soient convenablement entretenus et régulièrement inspectés, et à ce qu'ils soient remplis de nouveau après toute utilisation. Chacun doit prendre connaissance de l'emplacement de tous les équipements de lutte contre l'incendie du chantier.

SYSTÈME D'INFORMATION SUR LES MATIÈRES DANGEREUSES UTILISÉES AU TRAVAIL (SIMDUT)

Toute matière potentiellement dangereuse utilisée au travail doit être identifiée conformément au système SIMDUT de la Loi sur la santé et la sécurité au travail. Des fiches signalétiques seront fournies, et seront conservées pour référence à chaque bureau mobile de chantier; l'information des fiches signalétiques explique aux employés comment manipuler, remiser et éliminer les matériaux et produits dangereux. Tout employé qui travaille avec des matières potentiellement dangereuses ou à leur proximité, doit bénéficier d'une formation formelle conformément à la réglementation SIMDUT. Pour information, on présente ci-dessous les symboles de danger de la réglementation SIMDUT.

Classe A
Gaz comprimé

Classe D
division 1 Matière toxique et infectieuse, effets toxiques immédiats et graves
RENVERSEMENTS DE PRODUITS CHIMIQUES

La libération ou le rejet d'un produit chimique susceptible de présenter un risque pour les humains ou l'environnement est prohibé.

En cas de renversement :
1. Identifier la substance et la source de libération.
2. Chacun doit veiller à sa propre sécurité et à celle des autres.
3. Si c'est possible, interrompre le processus, ou fermer la source de libération.
4. Informer le ministère de l'Environnement, la municipalité concernée et l'autorité locale responsable de l'environnement (tout renversement/rejet doit immédiatement faire l'objet d'un rapport). Si le bureau local du ministère n'est pas ouvert, téléphoner au 1-(800) 268-6060.
5. Endiguer le renversement.
6. Aviser la direction de la compagnie.
7. Exécuter les opérations de nettoyage.
IMPORTANT

Nous avons préparé ce manuel de références et règles de sécurité et de protection de la santé pour vous communiquer les exigences fondamentales auxquelles vous êtes assujetti en tant qu'employé de Dufferin Construction Company. Vous avez la responsabilité de lire ce manuel et de vous conformer aux politiques et règles qui y sont présentées.

La responsabilité de vous remettre ce manuel et de veiller à ce que vous complétiez et signiez la déclaration ci-dessous (avec également signature du contremaître ou de la personne qui vous remet ce manuel) incombe à votre contremaître ou au personnel du bureau du chantier où vous êtes embauché.

Par la présente, je déclare avoir reçu un exemplaire du manuel de références et règles de sécurité et de protection de la santé de Dufferin Construction Company, et je m'engage à respecter les règles et politiques qui y sont présentées.

DUFFERIN CONSTRUCTION COMPANY
REGOLE SULLA SANITA' E LA SICUREZZA

La ditta Dufferin Construction Company si impegna a proteggere operai e proprietà da incidenti causanti infortuni e perdite.

Nel mantenere tale impegno, provvederemo a mantenere un ambiente lavorativo sicuro e lotteremo per eliminare i pericoli che possono condurre ad infortuni e danni alla proprietà.

Inforni e perdite possono essere controllati attraverso una buona amministrazione ed al coinvolgimento attivo degli operai.

La supervisione e la direzione prenderanno tutti i provvedimenti necessari al fine di eliminare o controllare condizioni di lavoro pericolose ed operare in conformità alle leggi concernenti la sicurezza e la sanità sul posto di lavoro.

Tutti gli operai sono responsabili della propria sicurezza personale e di quella dei loro compagni di lavoro. Da essi ci si aspetta che usino i metodi più sicuri per portare a termine il proprio lavoro ed che indichino fonti di pericolo suggerendo rimedi.

Pongo la mia fiducia nel fatto che ciascuno di voi si unira' a me in questo impegno personale ad applicare le regole sulla sicurezza e sanità con serietà e consistenza.

Lloyd Ferguson
Direttore Generale
INTRODUZIONE

Questo libretto si propone di dare una visione globale delle procedure e regole in merito alla sicurezza, che dovrebbero essere seguite da tutti gli operai e subappaltatori della Dufferin Construction Co. Tuttavia non basta che operai e subappaltatori facciano assegnamento su questo manuale. Essi devono consultare il decreto relativo alla sanità e sicurezza sul lavoro (Occupational Health and Safety Act) e le regole in esso contenute attinenti a progetti edili e complessi industriali, oltre che alle regole sulla sanità e sicurezza ed al manuale consultivo della Dufferin Construction Co. (per assicurarsi di essere conformi).

Le informazioni contenute in questo manuale sono intese a fornire assistenza a tutti i dipendenti della Dufferin Construction Co. nel mantenimento di un ambiente di lavoro sicuro.

In aggiunta, ciascun dipendente dovrebbe essere a conoscenza delle proprie responsabilità, come richiesto dall'Occupational Health and Safety Act, Art. 28:
1. Laborare nell'osservanza delle previsioni della presente legge e delle presenti norme;
2. Usare o indossare l'equipaggiamento, le apparecchiature protettive o l'abbigliamento richiesti dal datore di lavoro;
3. Riferire in merito a equipaggiamento difettoso o pericoloso e fonti di pericolo;
4. Non rimuovere alcuna apparecchiatura protettiva;
5. Non impiegare equipaggiamento o macchinario in modo pericoloso;
6. Astenersi dal fare scherzi o condurre attività scherzose di tipo fisico sul posto di lavoro;
7. Notificare immediatamente qualsiasi incidente.

Sul retro del presente manuale troverete uno staccando che vi sarà richiesto di firmare quale presa d'atto che avete letto e comprendete la politica aziendale in materia di sicurezza e che aderirete a tale politica nel corso del vostro rapporto di lavoro.

_Tale presa d'atto verrà conservata in pratica presso la nostra Sede Centrale._

RESPONSABILITA'

E' responsabilità di ogni direttore, superiore diretto o caporeparto assicurare:
1. L'attuazione pratica di quanto previsto nell'ambito di qualsiasi legislazione federale, provinciale e in materia di sanità e sicurezza aziendali, unitamente a qualsiasi regolamento ivi riferito;
2. La disponibilità e l'uso di equipaggiamento di sicurezza adatto e adeguato;
3. La conduzione delle operazione, sotto il loro controllo, per quanto sia ragionevolmente fattibile, senza danno alla sanità e sicurezza dei dipendenti o di altri che possano venire interessanti dalle loro attività.
E' responsabilità di ciascuno dei dipendenti cooperare nell'attuazione di quanto previsto da tutte la disposizioni di legge riguardanti la sanità e sicurezza e regolamenti relativi; astenersi dal fare alcunché che costituisca pericolo per se stessi o altri; e portare all'attenzione della direzione qualsiasi situazione o pratica da cui possa derivare infortunio o danno alla salute.

**IL VOSTRO BENESESSERE SUL POSTO DI LAVORO**

La nostra azienda è interessata in modo vitale all'aspetto della prevenzione degli infortuni e al vostro benessere e sicurezza in generale. Abbiamo bisogno del vostro aiuto nella prevenzione degli incidenti da cui possono risultare infortuni personali o danni alla proprietà e alle apparecchiature.

Tutti i casi di infortunio devono essere notificati immediatamente al vostro superiore o al capo reparto, in quanto il non conformarsi a questa direttiva può risultare in un ritardo nella prestazione di cure di pronto soccorso o trattamento medico appropriati e di qualsiasi potenziale indennizzo.

Tutti gli attrezzi e le apparecchiature difettosi devono essere portati all'attenzione del vostro superiore o del capo reporto per l' immediata rettifica.

*Qualsiasi incidente che occorra quando l'azienda stia conducendo la propria attività verrà considerato come materia di particolare gravità e verrà investigato e verrà adottata azione immediata in medito per evitarno il ripetersi.*

La direzione del cantierie e' responsabile per mettersi immediatamente in contatto e notificare il personale del dipartimento per la sanità e sicurezza qualora si verificasse un serio incidente o una perdita. La direzione del cantierie e' inoltre responsabile per compilare un rapporto d'investigazione interna su tutti i casi di incidenti o perdite. Tali rapporti devono essere consegnati alla sede della ditta immediatamente.

In aggiunta e qualora sia appropriato, le informazioni richieste dagli articole 51, 52 e 53 della legge (vedi articoli 8 - 12 dei Regolamenti per la costruzione) devono pure essere rimesse alla Sede Centrale.

**PRONTO SOCCORSO**

In tutti i cantieri e in molti dei veicoli aziendali vengono messe a disposizione cassette per il pronto soccorso. Sappiate sempre dove è localizzata la cassetta per il pronto soccorso più vicina nel caso di un'emergenza.

A tutti i dipendenti viene consigliato un corso di addestramento in pronto soccorso. In tutti i casi di infortunio fate quanto necessario per ottener rapidamente le cure di pronto soccorso e impedire ulteriori complicazioni. Riferite immediatamente al vostro superiore circa qualsiasi incidente e infortunio.
ALCOOL E STUPEFACENTI

Il consumo di alcool e stupefacenti è proibito sulla proprietà e sui posti di lavoro della Dufferin Construction Co. Chiunque si trovi sotto l'effetto di alcool o droga non sarà fatto entrare o verrà allontanato dagli stabili o dai cantieri. I dipendenti che prendano medicine prescritte da un dottore, che possano indebolire le capacità di lavorare e di giudizio devono informare il proprio supervisore.

EQUIPAGGIAMENTO PROTETTIVO PERSONALE

E' condizione per l'assunzione il fatto che tutti i dipendenti acquistino per proprio conto i propri stivali di sicurezza. Tutto il rimanente equipaggiamento protettivo personale verrà fornito e dovrà essere indossato senza eccezione. Elmetti e stivali di sicurezza devono essere indossati sempre in tutti i cantieri e stabilimenti da tutti i dipendenti, ivi compresi gli autisti quando lasciano i propri veicoli e chiunque sia in visita presso cantieri e stabilimenti.

Gli elmetti devono essere elmetti di sicurezza certificati CSA Classe "B" e le calzature devono essere certificate CSA Grado 1 con punte ad alta resistenza e protezione della suola.

Abbigliamento protettivo appropriato dovrebbe essere indossato secondo quanto previsto dalla vostra mansione, come:

a) Occhiali di sicurezza quando vengano effettuate operazione di taglio, macinazione o martellamento; o quando si lavori in aree dove del materiale può cadere o essere soffiato negli occhi; o dove particelle di polvere vengano sollevate dal vento;

b) Protezioni per gli orecchi (copriorecchi o tappeti) quando si lavori con o vicino ad attrezzi o equipaggiamento rumorosi. (Non sono permesses cuffie auditive come radio portatili durante il lavoro in cantiere);

c) Giubotti fluorescenti rifrangenti quando si controlli il traffico o si lavori su o vicino a strade principali o strade dove il traffico può diventare un pericolo per la sicurezza;

d) Guanti, quando si maneggi materiali affilati o abrasivi;

e) Respiratori, quando si lavori in condizioni che possono comportare l'inalazione di particelle, vapore, soluzioni sospese o gas.

f) Cinture di salvataggio devono essere indossate dagli operai esposti al pericolo di annegare in acque abbastanza profonde da rendere necessarie le cinture di salvataggio.

g) Cinture di sicurezza (typo paracadute) o cinghie di sicurezza con il cordoncino assicurato a un supporto fisso devono essere indossate sempre quando il lavoratore si trovi 3 (tre) metri o 10 (dieci) piedi o più al di sopra del suolo.
In aggiunta a quanto sopra, dispositivi per l'arresto delle cadute o abbigliamento protettivo di speciale concezione devono essere indossati quando si operi in determinate condizioni pericolose di lavoro.

**USO DELL'Equipaggiamento**

Solo al personale autorizzato e' permesso di operare, regolare ed aggiustare veicoli ed equipaggiamento della Dufferin Construction Co.

Nell'uso di un automezzo aziendale vi è richiesto il possesso di una patente di guida valida; di essere a conoscenza di e obbedire a tutte le norme del traffico e di osservare tutte le regole per una guida sicura. Familiarizzatevi con l'uso di qualsiasi veicolo che vi viene assegnato. Mantenete il servizio sul vostro veicolo a un livello appropriato, riferite circa condizioni non sicure e assicuratevi che vengano rettificate immediatamente.

Tutti gli operatori di veicole ed equipaggiamento sono responsabili dell'ispezione da effettuare tutt'intorno a essi prima di partire per assicurarsi che non vi siano ostruzioni nella direzione di marcia. Al momento di partire suonate il clacson quale avvertimento.

Tutti gli operatori devono assicurarsi che il proprio percorso sia libero prima di fare retromarcia con il proprio veicolo o macchinario. Dovrebbe essere sempre impiegata una persona che faccia segnalazioni quando la visuale sia ostruita o quando la macchina venga guidata in un'area dove l'operatore o altre persone possano venire a trovarsi in situazione di pericolo.

Fate sempre particolare attenzione nel manovrare equipaggiamenti intorno a fili elettrici sospesi.

Prima di montare macchinari assicurarsi che lo suolo degli stivali siano pulite per evitare scivoloni e cadute. Arrampicatevi su e discendete dai macchinari mantenendo sempre tre punti di contatto (due mani e un piede o due piedi e una mano).

Tutte le structure per il montaggio devono essere mantenute pulite e in condizioni di sicurezza. E' responsabilità di tutti gli operatori assicurarsi che il proprio equipaggiamento sia sempre in condizioni operative sicure e che tutti i problemi vengano notificati immediatamente e si agisca con prontezza in merito.

**MANUTENZIONE DELL'Equipaggiamento**

Disattivare l'erogazione di energia e fermare i motori prima di effettuare la manutenzione. Non oliare mai o mai applicare grasso sui macchinari mentre essi siano in funzione. Lame di bulldozer e livellatrici, zappe posteriori e caricatrici di benne e battez raschiatrici devono essere abbassate al suolo quando la macchina viene fermata.
Seguire tutte le raccomandazioni contenute nei manuali per l'uso, il servizio e la manutenzione che vi vengono forniti.
I membri del personale addetti al servizio devono sempre notificare a un superiore dove possono essere reperibili e i meccanici non devono lavorare sul posto da soli senza rendere noto a un superiore il luogo in cui essi si trovano.

ELETTRICITA'

Tutte le attività lavorative ed il materiale devono essere mantenuti ad una distanza di sicurezza da qualsiasi fonte di elettricità per prevenire contatto ed incidenti.
Un interruttore di circuito per difetto di massa (GFCI) deve essere installato nel ricettacolo di un generatore o altra fonte di elettricità quando attrezzi elettrici portabili vengono usati all'aperto o in luoghi umidi.

FOSSATI O ESCAVAZIONI

Quando al personale viene richiesto di entrare in fossati o escavazioni, questi devono avere un'inclinazione appropriata o, laddove richiesto, devono avere un sistema di sostegno del fossato. Una scala o una rampa devono essere messe in opera per permettere l'accesso o l'uscita dall'area di lavoro. I materiali di scavo dovrebbero essere tenuti in ogni caso ben lontani dall'orlo del fassato.

Prestate estrema attenzione quando lavorate nell'esporre all'aperto fonti di erogazione sotterranee quali gas, elettricità, condutture dell'acqua, ecc. Siate certi che tutte le necessarie precauzioni siano state prese prima di iniziare il lavoro.
Tutto l'equipaggiamento deve essere tenuto a distanza di sicurezza da linee elettriche aeree. Tutte le attività condotte vicino a fonti di erogazione esistenti devono conformarsi all'Occupational Health and Safety Act e alle Regulations for Construction Projects (Legge sulla Sanità e Sicurezza sul Lavoro e Regolamenti Relativi ai Progetti di Costruzione).

INGRESSO IN LUOGHI STRETTI E CHIUSI

L'ingresso in una cisterna, serbatoio o tombino, per qualsiasi ragione, non e' permesso a meno che le condizioni interiori non siano state esaminate da un esperto ed il permesso di lavoro necessario che ne garantisce la sicurezza non sia stato rilasciato. Tutte le entrate in luoghi stretti e chiusi devono essere effettuate in conformita' alle regole attinenti ai cantieri edili.

MANEGGIAMENTO DEI MATERIALI E GESTIONE GENERALE

Ogni volta che sia di pratica utilità, il sollevamento di pesi notevoli dovrà essere effettuato impiegando congegni meccanici per il sollevamento. Quando sia richiesta l'operazione manuale, effettuate il sollevamento in modo corretto.
piegando le ginocchia e muovendo i piedi nel girarvi anziché effettuare la torsione della vita. CHIEDETE AIUTO NEL CAS DI CARICHI PESANTI.

Quando lavorate sull'installazione di fognature e bocchette d'acqua, tenete dita e mani libere nel congiungere condotte, botele a incastro, ecc. Usate cura nel congiungere cavi da innalzamento ed evitate di intrappolare le dita. Fate attenzione a punti di "aggrappamento". Non consentite mai ad alcuna parte del vostro corpo di venirsi a trovare in posizione tale da restare "impigliata". Attenzione a non trovarvi in posizione fuori equilibrio quando spingete o usate una leva.

Mantene te le aree di lavoro libere da materiali sciolti o detriti, in modo particolare legname e tavole di legno con chiodi. Fate attenzione ai vostri passi per evitare scivoloni e cadute. Non lasciate mai attrezzi o materiali in luoghi dove possono essere urtati accidentalmente e fatti cadere su persone che lavorano in ambienti sottostanti.

Intorno alle piattaforme destinate ad attività lavorativa su tutte le impalcature, aperture nei pavimenti, rampe e aree aperte dove un lavoratore può cadere da un livello all'altro, devono essere sistemate ringhiere.

**PROTEZIONE ANTINCENDIO**

Devono essere prese precauzioni per prevenire scoppi di incendi, specialmente quando si svolgano operazioni di saldatura o taglio. Gli estintori devono essere facilmente raggiungibili, propriamente mantenuti, regolarmente ispezionati e prontamente riempite di nuovo dopo l'uso.

Tenetevi al corrente circa la dislocazione di tutto l'equipaggiamento antincendio sul cantiere o stabilimento.

**SISTEMA DI INFORMAZIONI SUI MATERIALI PERICOLOSI SUL LUGO DI LAVORO (WORKPLACE HAZARDOUS MATERIALS INFORMATION SYSTEM, O WHMIS)**

Schede Dati sulla Sicurezza dei materiali verranno fornite e tenute nella roulotte adibita a ufficio presso ogni cantiere per riferimento, al fine di assistere tutti i dipendenti in merito a come maneggiare, immagazzinare ed eliminare tali materiali.

Tutti i dipendenti che lavorano con o in prossimità di materiali pericolosi devono avere ricevuto un corso di addestramento formale nell'ambito dei regolamenti previsti dal WHMIS.
I simboli di pericolo WHMIS vengono riprodotti qui sotto per vostra informazione.

Class A
Gas compressi

Class B
Combustibili, materiali infiammabili

Class C
Materiali ossidanti

Class E
Materiali corrosivi

Class D
Gruppo 1 Materiali venefici e infettivi: effetti tossici immediati e gravi

Class D
Gruppo 2 Materiali venefici e infettivi: altri effetti tossici

Class D, gruppo 3
Materiali venefici e infettivi: materiali infettivi e pericolosi a livello biologico

Class F
Materiali dalle reazioni pericolose

ROVESCIAMENTI DI PRODOTTI CHIMICI

La liberazione o lo scarico di un prodotto chimico che costituisca un pericolo per la gente o l'ambiente è proibita. Nel caso di un rovesciamento:

1. Trovare e identificare la sostanza e la fonte.
2. Garantire la propria sicurezza e quella degli altri.
3. Se possibile, bloccare il processo o chiudere la fonte.
4. Notificare il ministero dell'ambiente e, se applicabile, la municipalità e le autorità locali sulla conservazione (i rovesciamenti devono essere riportati immediatamente). Se l'ufficio locale del ministero non è aperto, il numero di emergenza è: 1-800-268-6060.
5. Contenere il rovesciamento.
7. Procedere con le operazioni di pulitura.
IMPORTANTE

Il presente manuale sulla politica in materia di sanità e sicurezza è stato preparato per informarla sulle esigenze di base la cui osservanza viene da Lei attesa quale dipendente dell'Azienda. E' Sua responsabilità comprendere e conformarsi alla politica aziendale specificata.

E' responsabilità del Suo caporeparto o del personale impiegatizio presso l'ufficio del cantiere o stabilimento dove Ella è stata assunta fornirLe il presente manuale e assicurarsi che Ella completi e firmi la dichiarazione sottostante insieme al Suo caporeparto o alla persona che Le consegna il presente manuale.

Con la presente scrittura dichiaro di avere ricevuto il Manuale sulla Politica Aziendale in Materia di Sanità e Sicurezza e aderisco a conformarmi alle norme e politiche in esso contenute.

A Dufferin Construction Company é responsável pela protecção de acidentes de trabalho, bem como da perda dos seus empregados e propriedades.

Para cumprir com esta responsabilidade, nós procuramos manter e garantir que o ambiente de trabalho seja o mais seguro possível e que continuaremos a lutar para a eliminação de todos os perigos que possam prejudicar a vida dos empregados, bem como no arrvinamento de propriedades.

Ferimentos e mortes acidentais, podem ser controlados através de uma boa gerência em conjunto com o envolvimento activo de todos os empregados.

A Supervisão e gerência, tomará todas as medidas necessárias para a eliminação e o controlo de todas condições precárias de trabalho e bem como, em colaborar com os estatutos pertencentes a saúde e segurança.

Todos os empregados são responsáveis pela própria segurança e a dos seus colegas e trabalho. Todos são sempre obrigados a usar os métodos de segurança e também de alertar todos os indícios de perigo, bem como o de mostrar e sugerir, quais os melhores métodos de os poder evitar.

Eu confio, que cada um de nós, se sentirá na obrigação de fazer com que este estatuto de saúde e segurança seja fortalecido e empregado como um meio indispensável de vida.

Lloyd Ferguson
Gerente Geral
INTRODUÇÃO

Pretende-se com este manual dar uma ideia geral e clara, sobre o Estatuto e o Processo de Segurança, do qual, deverá ser aplicado por todos os empregados e Subcontratados da Dufferin Construction Company. Os empregados e Subcontratados não derem depender exclusivamente deste manual; Devem também referir-se as Cláusulas da Saúde e Segurança e aos regulamentos introduzidos para todos os projectos da construção e estabelecimentos industriais, bem como, para a Divisão dos Estatutos para a Saúde e Segurança da Dufferin Construction Company, na ordem de assegurar a sua submissão.

A informação deste manual destina-se a dar assistência a todos os empregados da Dufferin Construction Company para manterem um ambiente de trabalho seguro.

Além disso, todos os empregados deveriam ter conhecimento das suas responsabilidades, tal como é exigido pela Lei de Saúde Ocupacional e Segurança (Occupational Health and Safety Act), Artigo 28:
1. Trabalhar de acordo com as cláusulas desta Lei e regulamentos.
2. Usar o equipamento, aparelhos de protecção ou vestuário, como for exigido pela firma.
3. Informar de equipamento defeituoso ou perigoso e outros perigos.
5. Não trabalhar com equipamento ou maquinaria de uma maneira perigosa.
6. Não andar com brincadeiras no local de trabalho.
7. Comunicar imediatamente quaisquer acidentes.

Na parte de trás deste manual há um talão destacável que você deverá assinar para confirmar que leu e compreendeu o Estatuto segurança da Companhia e que você cumprirá com este regulamento durante o tempo aqui trabalhar.

Este registo ficará no seu processo na nossa Sede.

RESPONSABILIDADES

Cada Gerente, Supervisor e Capataz têm a responsabilidade de garantir:
1. O cumprimento prático de todas as cláusulas de qualquer Legislação Federal, Provincial e de Saúde e Segurança da Companhia, assim como quaisquer outros.
2. A existência e o uso de equipamento de protecção adequado.
3. Que as operações debaixo do seu controlo são, tanto quanto possível, conduzidas sem qualquer risco quanto à saúde ou segurança dos empregados ou outros que possam ser afetados pelas suas actividades.

Todos os empregados têm a responsabilidade de colaborar para que se cumpram as cláusulas da Legislação de saúde e segurança e outros regulamentos afins; de evitarem fazer qualquer coisa que constitua perigo para si próprios ou para outros;
e de chamar a atenção da administração para qualquer situação ou da prática que possa a vir causar acidentes ou doenças.

O SEU BEM-ESTAR NO TRABALHO

Esta Companhia está sinceramente preocupada com a prevenção de acidentes e com o seu bem-estar geral e segurança. Nós precisamos da sua ajuda para evitar acidentes que possam resultar em ferimentos pessoais ou danos em propriedade ou equipamento. Todos os acidentes devem ser imediatamente comunicados ao seu Supervisor porque, se o não fizer, pode causar demora na prestação de primeiros socorros adequados ou tratamento médico e qualquer potencial compensação de benefícios. O seu Supervisor ou Capataz deverá ser informado imediatamente da existência de quaisquer ferramentas ou equipamento defeituosos, para correção imediata.

Qualquer acidente que ocorra enquanto está a trabalhar nesta companhia será considerado um assunto muito sério e será imediatamente investigado e tomadas as medidas para evitar que torne a acontecer.

A gerência do local de trabalho é responsável de contactar de imediato o pessoal do departamento de Saúde e Segurança, no caso de um sério acidente ou morte. A gerência do local de trabalho é também, responsável por completar o formulário interno sobre a investigação de acidentes, isto, em todos os casos de acidentes, incidentes ou mortes. Esta reportagem deverá ser enviada imediatamente para o Escritório Central.

Além disso e quando for esse o caso, a informação requerida de acordo com as Secções 51, 52 e 53 da Lei (ver Secções 8 - 12 dos Regulamentos de Reconstrução de Projectos) deve também ser enviada para a Sede.

PRIMEIROS SOCORROS

Há conjuntos de primeiros Socorros (First Aid Kits) em todos os locais onde há projectos e em muitos veículos da Companhia. Saiba onde os conjuntos de Primeiros Socorros estão localizados no caso de uma emergência.

Todos os empregados deveriam tirar cursos de primeiros socorros. Em Todos os casos de ferimento, tome as medidas necessárias para obter primeiros socorros rápidos e evitar mais complicações. Comunique imediatamente quaisquer acidentes ou ferimentos ao seu Supervisor.

ÁLCOOL E DROGAS NÃO AUTORIZADAS

O consumo do álcool e de drogas não autorizadas é expressamente proibido em propriedades e em locais de trabalho, da Dufferin Construction Company. Qualquer pessoa sob a influência de álcool e drogas ilegais, será recusada a sua entrada ou mesmo obrigado a abandonar os edifícios ou projectos da Companhia.
O pessoal que esteja a usar medicamentos prescritos pelo médico e que estejam a causar uma alteração do seu julgamento ou na execução do seu julgamento ou na execução do seu trabalho, deverão informar o seu chefe sobre o tal.

**EQUIPAMENTO DE PROTECÇÃO PESSOAL**

É condição de emprego que todos os empregados comprem as suas próprias botas de segurança. Todo o outro equipamento de protecção pessoal será fornecido e deverá ser usado sem excepções.

Cápetes e Botas de Segurança devem ser usados sempre em todos os locais de trabalho por todos os empregados. Isto também inclui os motoristas quando saírem dos seus veículos e visitantes.

Os Capacetes devem ser certificados como capacetes de segurança da Classe 'B' CSA e o calçado deve ser Certificado como Grade 1 CSA com biqueira reforçada e protecção da sola.

Vestuário próprio de protecção deverá ser usado de acordo com as necessidades do seu trabalho, tal como:

a) Óculos de protecção quando cortar, desgastar material ou estiver a martelar: ou quando trabalhar em sitios onde possa cair material ou ser-lhe soprado para os olhos; ou onde o vento possa levantar partículas de pó.

b) Protecção dos ouvidos (tampões) quando trabalhar com ferramentas ou equipamento ruidoso ou estiver perto deles. (Quando trabalhar nos locais de construção, não é permitido usar auscultadores tais como rádios portáteis).

c) Quando controlar o tráfego ou trabalhar em ou próximo de auto-estradas ou estradas onde o tráfego pode ser um perigo, deverá usar coletes fluorescentes.

d) Luvas, quando manusear materiais abrasivos ou com arestas cortantes.

e) Respiradores, quando trabalhar em condições que possam causar a inalação de partículas, vapor, neblina ou gás.

f) É mandatório que se use no mínimo uma camisa de mangas curtas e calças.

g) Coletes de salva vidas, deve ser usado pelos trabalhadores expostos ao perigo de afogamento em águas profundas, pois, nessas circunstâncias os coletes têm uma acção efectiva.

h) Quando o trabalhador estiver a trabalhar a três (3) metros ou des (10) pés ou mais acima do solo, deverá usar uma cinta segurança (do género da cinta de pára-quadas) com a extremidade atada a um apoio fixo.

Além do que fica dito acima, deverá usar-se vestuário especial de protecção ou aparelhos para evitar quedas em certas condições perigosas de trabalho.
TRABALHANDO COM EQUIPAMENTO

Só o pessoal autorizado pela Dufferin Construction Company pode trabalhar, ajustar e reparar veículos e equipamentos da Companhia. Quando trabalhar com um veículo da Companhia, você deverá ter uma licença válida de condução; deverá saber e obedecer a todos os regulamentos de tráfego e observar todas as regras de condução segura. Familiarizar-se com a operação de qualquer veículo devidamente assistido e informe quaisquer condições menos seguras para que sejam corrigidas imediatamente.

Todos os operadores de veículos e equipamento são responsáveis por darem a volta aos veículos ou equipamento antes de o porem a trabalhar para se certificarem que não há obstruções na direcção em que vão sair. Quando os puser a trabalhar, apite a buzina.

Todos os operadores devem certificar-se que o caminho está livre antes de fazerem marcha atrás com os veículos ou com equipamento. Deverá sempre haver uma pessoa para sinalização quando a vista estiver obstruída ou quando o equipamento seja movido numa área onde o operador ou outras pessoas possam correr perigo. Esteja sempre alerta quando trabalhar com equipamento debaixo de linhas elétricas.

Antes de subir para equipamento certifique-se que as solas das botas estão limpas para evitar escorregar e cair. Para subir e descer do equipamento, mantenha sempre contacto em 3 pontos (duas mãos e um pé, ou dois pés uma mão).

Todas as facilidades para montar devem ser mantidas em condições seguras e limpas. Os operadores têm a responsabilidade de garantirem que o seu equipamento Esteja sempre em condições seguras de trabalho e que todos os problemas são comunicados e resolvidos imediatamente.

PRESTANDO ASSISTÊNCIA AO EQUIPAMENTO

Desligue a electricidade e páre os motores antes de prestar assistência. Nunca ponha óleo ou lubrifíque máquinas quando estão a trabalhar. Os "Dozer", "grader blades", "backhoe", "Loader buckets" e "scraper pans" devem ser postas no chão quando as máquinas estão paradas.

Cumpra com todas as recomendações de manuais de operação, assistência e manutenção que lhe tenham sido dados.

O pessoal de assistência deverá informar o supervisor dos locais onde se encontram sempre e os mecânicos não devem trabalhar fora sóis sem terem informado o seu supervisor do local onde se encontram.
SERVIÇOS ELECTRICÕES

Todo o material e utensílios de trabalho devem ser guardados à uma distância segura de qualquer fonte de energia elétrica, para prevenir o contacto ou atração.
Um falso interruptor de circuito de Terra (GFCI) Deve ser instalado no receptáculo do gerador ou mesmo de uma outra fonte de energia, quando ferramentas portáteis (electricas) estiverem em uso em áreas não abrigadas ou em locais molhados.

FOSSAS E ESCAVAÇÕES

Quando os empregados tenham de entrar em fossas ou em escavações, deverá sempre haver um sistema próprio de inclinação ou de apoio quando for exigido. Deverá sempre haver uma escada ou rampa para acessos a ou regresso da área de trabalho. Os materiais retirados de escavação deverão ser mantidos longe da beira do fosso em todos os casos.
Tenha sempre muito cuidado quando trabalhar e estiver exposto aos artigos subterrâneos, tais como o gás, luz, ou canos de água, etc. Certifique-se sempre que tomou todas as medidas de precaução antes de começar a trabalhar.
Todo o equipamento deve estar sempre a uma distância segura de linhas elétricas aéreas. Todas as actividades adjacentes a "utilities" existentes deverão ser feitas de acordo a Lei de Saúde Ocupacional e Segurança e Regulamentos de Reconstução de Projectos.

ENTRADA EM Zonas PROIBIDAS

Não é permitida a entrada em tanques, canalizações e esgotos sem qualquer finalidade, a não ser, que as condições interiores tenham sido previamente inspecionados por uma pessoa qualificada e que a necessária licença tenha sido passada. Todas as entradas para as zonas restritas deverá ser feitas de acordo com os regulamentos dos projectos da Construção.

MANUSEAMENTO DE MATERIAIS E INSTRUÇÕES GERAIS

Sempre que seja possível, as cargas pesadas devem ser manuseadas com equipamento mecânico de levantamento. Quando for preciso manusear manualmente, levante a carga correctamente, dobrando os joelhos e movendo os pés quando se voltar, em vez de girar em volta pela cintura. PEÇA AJUDA COM CARGAS PESADAS.
Quando trabalhar em esgotos ou instalação de canos de água, tenha os dedos e as mãos limpas quando ligar canos ou acertar as coberturas, etc. Tenha cuidado ao juntar cabos de elevação e evite ficar com os dedos apanhados. Tenha cuidado com os pontos de "pinch". Nunca permita que qualquer parte do seu corpo fique
numa posição em que se arrisque a ficar em obstrução. Quando trabalhar com a alavanca ou empurrar, evite ficar numa posição de desequilíbrio.
Mantenha as áreas de trabalho livres de materiais soltos ou de lixo, especialmente bocados de madeira e pregos. Veja onde põe os pés para evitar escorregar e cair. Nunca deixe ferramentas ou materiais em sitios onde possam cair em cima de alguém que trabalhe por baixo. À volta de plataformas de trabalho e andaimes, aberturas no chão, rampas e áreas abertas onde um trabalhador possa cair de um nível para outro, deverá sempre haver corrimão de guarda.

**PROTECÇÃO CONTRA INCÊNDIOS**
Deverão tomar-se medidas de precaução para evitar que haja fogos, especialmente quando se está a soldar ou a cortar. Os extintores de fogo deverão estar facilmente acessíveis, deverão ser mantidos adequadamente, ser inspecionados regularmente e cheios depois de serem usados.
Familiarize-se com a localização de todo o equipamento de combate a incêndios no local de trabalho.

**SISTEMA DE INFORMAÇÃO DE MATERIAIS PERIGOSOS DE TRABALHO (WHMIS)**
Todos os materiais perigosos encontrados no local de trabalho, devem ser identificados de acordo com as exigências do Sistema de Informação de Materiais Perigosos no Local de Trabalho (WHMIS) da Lei de Saúde Ocupacional e Segurança.
Folhas de Informação de Segurança de Materiais serão fornecidas e mantidas em cada trela-escritório no local de trabalho para ajudar os empregados a saberem como manusear, armazenar e dispôr destes materiais.
Todos os empregados que trabalham com ou na proximidade de materiais perigosos devem ser formalmente treinados de acordo com os regulamentos WHMIS.
Os símbolos perigosos QHMIS estão em baixo para sua informação.
DERRAME DE PRODUTOS QUÍMICOS

O despejo ou descarregamento de produtos químicos que possam prejudicar as pessoas e ao meio ambiente, é expressamente proibido pela Lei.

Em caso de derrames:
1. Descobrir as origens do derrame e tentar identificar as suas substâncias.
2. Assegure a sua segurança e a dos outros.
3. Se possível, pare com o processo ou tente reter ou fechar a fuga dos químicos.
5. Reter o derrame.
7. Continue com as actividades da limpeza.
IMPORTANTE

Este Manual de Saúde e Estatuto de Segurança foi preparado para o informar dos requisitos básicos que se esperam de si como empregado da Companhia. É sua a responsabilidade de compreender e cumprir com os Estatutos especificados pela Companhia.

É responsabilidade do seu Capataz ou do pessoal do escritório no seu local de trabalho onde você foi admitido fornecerem-lhe este manual e certificarem-se que você complete e assine a declaração juntamente com o seu Capataz ou a pessoa que lhe deu este manual.

Declaro que recebi o Manual dos Estatutos para a Saúde e Segurança da Companhia e concordo cumprir com as regras e regulamentos nele contidas.

DUFFERIN CONSTRUCTION COMPANY
A Division of St. Lawrence Cement Inc.

HEALTH AND SAFETY POLICY

Dufferin Construction Company is committed to the protection from accidental injury and loss to its employees and property.

In fulfilling this commitment, we will provide and maintain a safe work environment and we will strive to eliminate hazards which may result in injury and property damage.

Accidental injury and loss can be controlled through good management in combination with active employee involvement.

Supervision and Management will take all necessary action to eliminate or control hazardous working conditions and work in compliance with laws pertaining to occupational health and safety.

All employees are responsible for their own personal safety and that of their co-workers. They are expected to use the safest work methods to carry out their job and point out sources of danger and suggest means to remedy them.

I trust that each of you will join me in a personal commitment to enforce this Health and Safety Policy as a way of life.

January 2005

Lloyd Ferguson
General Manager
BASIC BELIEFS

Dufferin Construction Company considers the safety and health of workers on our projects to be as important a factor in our success as quality, production and cost. Our construction management team is committed to continuing improvements for the safety of our workers, clients, contractors and the environment in which we work. To this end, we commit ourselves to the following beliefs:

- Site wide consistency on safety is essential.
- All identifiable risks can be managed to prevent incidents.
- All persons share a responsibility as good workers to maintain a safe and healthy workplace and to work safely.
- It is our policy to meet or exceed the requirements set out in the Occupational Health and Safety Act and all pertinent legislation.
- Hazards resulting in injuries and property damage can be controlled and further reduced.
- Safety is a condition of employment. Every contractor, subcontractor, worker, vendor and visitor must comply with the company safety policies, rules, procedures and exercise good judgment and common sense in each assignment.
- The safety and health of fellow workers, the community and the environment is the responsibility of every worker and contractor, subcontractor and vendor. Contractors, subcontractors and vendors will be evaluated on their safety performance.
- Line management (contractors, subcontractors, vendors) are responsible and accountable for providing a safe work environment.
- We expect excellence in health and safety performance.
- Safety is cost effective. A safe site is an effectively managed site.
- Our loss control program is an integral part of our company operations.

I INTRODUCTION

This manual is provided as a general overview of safety policies and procedures which must be followed by all workers, contractors, subcontractors and vendors of Dufferin Construction Company.

Workers, contractors, subcontractors and vendors should not rely solely on this manual exclusively, it is intended to draw attention to methods to prevent injury, illness or loss within our industry and promote good communication on our project.

For specific compliance with statutory requirements, please refer to all applicable Federal and/or Provincial statutes that establish health and safety requirements, including the Canada Labour Code and/or any applicable Provincial - Occupational Health and Safety Act(s), and regulations or codes, enacted thereunder, standards or recognized industry guidelines. Reference must also be made to the Dufferin Construction Company, Divisional - Loss Control Manual. Where the requirements of our policies or procedures exceed legislated requirements, they will take precedence.

This booklet is a summary of the most important accident prevention procedures and guidelines which apply to all employees and Subcontractors working on Dufferin Construction Company Project Sites.

These Guidelines are designed to prevent accidents and injuries. They are based upon contemporary loss control management practices, health and safety legislation and input from Joint Health and Safety Committee members.

Dufferin Construction Company requires workers, contractors, subcontractors and vendors to place the highest importance and priority on safety. Contractors, subcontractors and vendors shall be responsible and accountable for safety including, but not limited to, the safety of its employees, agents, subcontractors, the public and other persons, facilities, property of Dufferin Construction Company and the property of third parties. These requirements are in addition to all applicable laws, regulations, ordinances and orders of any proper authority having jurisdiction over the performance of the work.

Reference to workers, supervisors and managers shall mean those associated with the contractor, subcontractor or vendor. Reference to the constructor or contractor and facilities are implicit with the contractor's name.

Dufferin Construction Company believes that all accidents can be prevented by making safety an integral part of every job and task. Safety rules do not guarantee freedom from risk or hazard. They do not cover every job situation. Good judgment will dictate that additional precautions may be required.

II ACCIDENT PREVENTION RESPONSIBILITIES

All personnel must understand and comply with all applicable Federal, Provincial and Municipal Acts, Standards and Regulations. A key requirement in all safety legislation is that each person is responsible for working safely with equal concern for the safety of co-workers.

Employees, supervisors and management have specific safety responsibilities. Accident investigations have demonstrated that a failure of any person to adequately fulfill their obligations will lead to situations where an accident may occur.

WORKPLACE RESPONSIBILITIES

Health and safety activities are based on specific individual responsibilities, most of which can be found in the Occupational Health and Safety Act and the Regulations enacted thereunder. Outlined are details of specific responsibilities in the workplace to assist in implementing health and safety functions. This outline is not intended to be all-inclusive, but to help all parties better understand their responsibilities.
All individuals in the company, at all levels and functions are responsible for understanding and carrying out the responsibilities and duties outlined below.

Responsibilities are Assigned to the following parties

- Owner
- Constructor
- Employer
- Director
- Officer
- Supervisor
- Workers
- Contractors
- Subcontractors
- Health and Safety Representative
- Joint Health and Safety Committee
- Certified Members of the Joint Health and Safety Committee

OWNER

"owner" includes a trustee, receiver, mortgage in possession, tenant, lessee, or occupier of any lands or premises used as a workplace, and a person who acts for or on behalf of an owner as his agent or delegate;

- Before a project begins, the owner shall determine whether any designated substances are present at the project site and shall prepare a list of all designated substances that are present at the site.
- The tenderer of the project shall include the list of designated substances with the tender, and ensure that the constructor has received the total list prior to entering into a binding contract.

CONSTRUCTOR

"constructor" means a person (or company) who undertakes a project for an owner and includes an owner who undertakes all or part of a project by himself or by more than one employer;

- Ensure that all appropriate documentation for the start up of a project has been processed.
- Ensure that the measures and procedures required by the current Occupational Health and Safety Act and Regulations for Construction Projects and the Constructor's own Health and Safety Program are carried out on the project.
- Ensure that employers and workers on the project comply with the Act and Regulations and the Constructor's Health and Safety Program.
- Ensure that the health and safety of workers on the project is protected.
- Monitor subcontractors and vendors for compliance with the Occupational Health and Safety Act and Regulations for Construction Projects.
- Ensure that subcontractors and vendors are obliged by contract to comply with the Constructor's health and safety program.
- Monitor safety performance and take corrective action.

EMPLOYER

"employer" means a person (or company) who employs one or more workers or contracts for the services of one or more workers and includes a contractor or subcontractor who performs work or supplies services and a contractor or subcontractor who undertakes with an owner, constructor, contractor or subcontractor to perform work or supply services;

- Ensure that the Health and Safety Policy has been communicated to all staff;
- Take every reasonable precaution in the circumstances for the protection of a worker;
- Provide a safe and healthy workplace;

Approved by: H&S Dept. 14G1 - Revision Number: 8  January 6, 2005
• Establish, maintain, and review at least annually a health and safety program;
• Establish and maintain Worker Profile, Safety and Training Records;
• Report accidents and injuries to authorities as required by law;
• Provide first aid and medical care;
• Provide workers with health and safety information;
• Inspect projects and meet regularly with supervisors to monitor the program and take corrective action where required;
• Conduct Company safety meetings at regular intervals;
• Consider accident prevention and safety performance when evaluating Supervisors and Workers.

DIRECTOR AND OFFICER

• take all reasonable care that the corporation complies with the Occupational Health and Safety Act and Regulations.
• take all reasonable care that the corporation complies with orders and requirements of inspectors and Directors.
• take all reasonable care that the corporation complies with orders of the Minister.

SUPERVISOR

"supervisor" means a person who has charge of a workplace or authority over a worker;
A Supervisor must also be a competent person (Act S I. -(1)).

competent person means a person who,

I. is qualified because of his knowledge, training and experience to organize the work and its performance;
II. is familiar with the provisions of the Act and the Regulations that apply to the work; and
III. has knowledge of any potential or actual danger to health or safety in the work place;

• Be responsible for on-site accident prevention;
• Review safe work procedures for the site;
• Monitor the health and safety performance of subcontractors;
• Report accidents and injuries to management as required by the program and regulations;
• Investigate accidents and take actions to prevent reoccurrence;
• Ensure that the Company's Health and Safety Program is followed at the work level;
• Enforce disciplinary actions for violations of the Company's Health and Safety Program;
• Ensure that protective equipment required by law and by the program is provided, accessible, used and maintained properly by workers and that workers understand the reasons for its use;
• Instruct personnel in proper work practices and update instructions as needed;
• Check work practices and work areas for hazards and take corrective action where required;
• Consult and co-operate with the Health and Safety Representative/Committee where appropriate;
• Acquaint the new worker with hazards and safe work procedures;

WORKER

"worker" means a person who performs work or supplies services for monetary compensation;

• Comply with the Occupational Health and Safety Act and all relevant regulations;
• Take every reasonable precaution necessary to prevent accidents;
• Work in accordance with the health and safety program;
• Work in a manner that will not endanger anyone;
• Report unsafe situations immediately to your supervisor;
• Report injury or illness immediately to your supervisor;
• Help new workers recognize job hazards and follow proper procedures;
• Participate in joint health and safety committees where applicable;
• Must be aware that workers are subject to disciplinary action where either Company Safety rules or government regulations are violated;
SUBCONTRACTOR OR VENDOR (i.e. EMPLOYER)

- Maintain a health and safety program as required under the Act;
- Adhere to the Subcontractor's Health and Safety program;
- Monitor site conditions in their work area and take corrective action;
- Report accidents, incidents, lost-time injuries and any hazards immediately to the Constructor.

HEALTH AND SAFETY REPRESENTATIVE

- (required where the number of workers regularly exceeds five - Section 8 of the Act);
- Inspect the workplace;
- Identify situations that may be a source of danger;
- Relay concerns from workers and make recommendations to the Supervisor;
- Assist in accident investigations;
- Assist in resolving work refusals and reports of dangerous circumstances.

JOINT HEALTH AND SAFETY COMMITTEE

- (required where the number of workers regularly exceeds 19 for more than 3 months Section 9 of the Act);
- Inspect the workplace;
- Attend Joint Health and Safety Committee meetings;
- Review health and safety reports;
- Identify situations that may be a source of danger;
- Relay concerns from workers and make recommendations to the Employer;
- Assist in accident investigations;
- Assist in resolving work refusals and reports of dangerous circumstances.

CERTIFIED MEMBER OF JOINT HEALTH AND SAFETY COMMITTEE

- (required where the number of workers at a project regularly exceeds 49 for more than 3 months - Section 45 and 47 of the Act);
- Same duties as Joint Health and Safety Committee Health and Safety Representative but with additional rights to initiate bilateral and unilateral work stoppage;
- For further information on the effective functioning of the Joint Health and Safety Committee, reference may be made to the CSAO Guidelines for the Structure and Function of a Joint Health and Safety Committee.
- It is emphasized that all workers must read and become familiar with the Occupational Health and Safety Act and all applicable regulations, along with the requirements of the Company’s Health and Safety Program. They must know what their responsibilities are and have the required ability and training to fulfill them.

ENFORCEMENT POLICY

- All workers are required to comply with all statutory requirements concerning the health and safety of workers in the workplace, as well as the Safe Work Procedures and any other requirements of the Company’s Health and Safety Program. The Company will not condone any breach of any statutory requirements or our health and safety program. The Company has implemented the following disciplinary actions for violations:

VERBAL WARNING

- Given where in the opinion of the supervisor, the violation is of a minor nature and which does not directly endanger the well-being of any person at the workplace.
- Disciplinary action will consist of a mandatory safety talk regarding the violation.

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005
FIRST DISCIPLINE STEP

- A written Notice of Infraction will be issued where in the opinion of the supervisor, the violation is of a major nature which will directly endanger the health and wellbeing of any person at the workplace.
- Disciplinary action will consist of a mandatory safety talk regarding the violation and possible suspension.
- Repetitive violations of this nature will lead to suspension and possible termination.

SECOND DISCIPLINE STEP

- A written Notice of Infraction will be issued where, in the opinion of the supervisor the violation is life threatening to one or more individuals on site.
- Disciplinary action will consist of a mandatory safety talk regarding the violation and mandatory suspension or termination.

WORKPLACE INSPECTIONS & HAZARD REPORTING

- Workplace inspections of construction projects are vital in maintaining a safe workplace and identifying existing or potential hazards in order that appropriate corrective action can be taken.
- An assessment should be made by the Health and Safety Representative in conjunction with the Supervisor of the frequency of inspections required based on the potential dangers at the project. These inspections must be conducted on a monthly basis as a minimum. Reports should be forwarded to management.
- It is important to observe both conditions and procedures during the inspection. If a hazard poses an immediate threat, take immediate action to eliminate the hazard.
- A follow-up of all reports and action taken to eliminate hazards must be completed in a timely manner.
- Subsequent workplace inspection will review the items from previous inspections to ensure that remedial action has resolved the concern.

REPORTING AND INVESTIGATING ACCIDENTS

- All accidents and injuries must be reported to the supervisor immediately who will in turn inform management. All accidents and injuries will be investigated once the occurrence has been attended to and further risks have been eliminated.
- The prime objective of reporting and investigating accidents is to prevent recurrence. Knowing how to identify accidents and following the procedures and forms set ourhereafter will help prevent the recurrence of accidents. These procedures include the following:
  - Accidents and Incidents.
  - Investigation Required.
  - Investigation.
  - Action of the Investigation.
    - Forms.
    - Records.
    - Follow-up.

ACCIDENTS AND INCIDENTS

- Accidents and incidents vary in severity. The reporting requirements of accidents and incidents by management to the Ministry of Labour, the Health and Safety Committee/Representative and trade union, if any, vary in time. Accidents, incidents and reporting requirements are outlined in the following table:
<table>
<thead>
<tr>
<th>Circumstances</th>
<th>Action Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) Fatality or Critical Injury</td>
<td>Management is immediately to contact the Ministry of Labour followed by a written report within 48 hours with information outlined in the Regulations for Construction Projects. All reports for accidents involving a critical injury or fatality must be reviewed by the Company's legal counsel prior to submission to the Ministry of Labour.</td>
</tr>
<tr>
<td>Critical injury is defined in the Act as follows:</td>
<td></td>
</tr>
<tr>
<td>• Places life in jeopardy.</td>
<td></td>
</tr>
<tr>
<td>• Produces unconsciousness.</td>
<td></td>
</tr>
<tr>
<td>• Results in a substantial loss of blood.</td>
<td></td>
</tr>
<tr>
<td>• Involves a fracture of a leg or arm, but not a finger or toe.</td>
<td></td>
</tr>
<tr>
<td>• Involves the amputation of a leg, arm, hand or foot.</td>
<td></td>
</tr>
<tr>
<td>• Consists of burns to a major portion of the body.</td>
<td></td>
</tr>
<tr>
<td>• Causes the loss of sight in an eye.</td>
<td></td>
</tr>
<tr>
<td>2) When a person requires medical aid, misses next shift, or is disabled from doing his or her usual work.</td>
<td>Report to the Ministry of Labour in writing within four days.</td>
</tr>
<tr>
<td>3) When an accident or occurrence involves:</td>
<td>Report to the Ministry of Labour in writing within four days.</td>
</tr>
<tr>
<td>• A worker falling a vertical distance of 3 metres or more.</td>
<td></td>
</tr>
<tr>
<td>• A worker whose fall is arrested by a fall-arrest system.</td>
<td></td>
</tr>
<tr>
<td>• Overtwining or structural failure or a crane or similar hoisting device.</td>
<td></td>
</tr>
<tr>
<td>• Structural failure of falsework designed by, or legally required to be designed by, a professional engineer.</td>
<td></td>
</tr>
<tr>
<td>• Structural failure of scaffold supports.</td>
<td></td>
</tr>
<tr>
<td>• Structural failure of supporting member such as a column, beam, wall or truss.</td>
<td></td>
</tr>
<tr>
<td>• Failure of an earth-or-water retaining structure such as trench, shaft, tunnel, caisson, or cofferdam.</td>
<td></td>
</tr>
<tr>
<td>• Failure of excavation wall cut and trimmed to a slope which a professional engineer has specified in writing that will not endanger workers.</td>
<td></td>
</tr>
<tr>
<td>• Worker becoming unconscious for any reason.</td>
<td></td>
</tr>
<tr>
<td>• Contact by backhoe, shovel, crane, similar device, or its load with a live powerline of more than 750 volts.</td>
<td></td>
</tr>
</tbody>
</table>

**INVESTIGATION REQUIRED**

- An investigation is required as soon as an accident has been attended to and the risk of further damage is eliminated.
INVESTIGATOR

- The investigation will be performed by management with the assistance of the health and safety committee representative as stipulated in Section 15 of the Act.

ACTIONS OF THE INVESTIGATION

- The key actions to be taken by the investigation are:
  - Secure the scene.
  - Identify witnesses.
  - Survey the scene.
  - Gather evidence.
  - Interview witnesses.
  - Analyse the facts.
  - Prepare a report.

- As an aid when conducting an accident investigation, keep in mind the five W's (who? what? where? when? and why?).

RECORDS

- Keep all records of the investigation and subsequent report of any accidents on file for future reference.

FOLLOW UP

- The results of the investigation should be circulated to all Company work sites for the awareness and education of all workers. A review of the accident reports and recommendations should be conducted at Company health and safety meetings. All recommendations for further action should be followed up.

MINISTRY OF LABOUR INSPECTORS, ORDERS AND APPEALS

- The Occupational Health and Safety Act is enforced by Ministry of Labour inspectors and other officials of the Government of Ontario Ministry of Labour. Inspectors are trained in the law regarding the Occupational Health and Safety Act and the Construction Regulations. Inspectors have broad authority under the law and may inspect workplaces, conduct investigations where there has been an accident or occurrence, and perform routine review of employer’s health and safety procedures and programs.

- Inspectors are authorised under the Occupational Health and Safety Act to issue Orders where they determine that a provision of the Act or a regulation is being contravened. It is critical to note that an Order is a legal determination by an inspector that the contractor/employer is breaking the law and must rectify the situation.

- A number of different types of orders may be issued by inspectors. There are compliance orders where certain changes to the workplace must be made within a specific time period. There are stop work orders where all work on a project must stop until the safety issue has been resolved. There are also orders that are issued even after a safety issue has been resolved, to merely confirm that there was a problem that is now resolved or to satisfy the personal interests of the inspector to confirm his presence on the job site that day.

- When an order is received, there are only two lawful responses to the order. First, comply with the order. Second, appeal the order. If the contractor or employer receiving the order disputes its correctness, fairness, or time period for compliance, then the order should be appealed. Appeal should be directed to the office of Adjudication. It is the office of the tribunal that hears the appeals of inspectors orders. An appeal must be commenced within 14 days of the date of the issuance of the order.

- The appeal of an order is in the form of a hearing. Legal counsel is recommended when there is an appeal. Witnesses are called and legal argument is made to the adjudicator. The adjudicator will make a decision that is final and binding on the parties to the appeal. The adjudicator may rescind the order, affirm the order, or vary the order. The decision of the adjudicator is final and binding on the parties.
WORKER'S RIGHT TO REFUSE TO DO UNSAFE WORK

UNSAFE WORK REFUSAL PROCEDURE

BASIS FOR REFUSAL

- At the first stage of the refusal, the worker must have a "reason to believe" that either some machinery he operates or his actual work situation is "likely to endanger" himself or a fellow worker. This requires a subjective, personal belief by the refusing worker that his job or workplace is unsafe for himself or others, or both.

REPORTING REFUSAL TO SUPERVISOR

- Work refusals are permitted under the O.H.S.A. to protect the health and safety of workers in the workplace. To facilitate this objective, the work refusal must be promptly reported to the worker's supervisor or employer. It is essential that the refusing worker both base and communicate the refusal on health and, safety concerns; otherwise, management may misinterpret the intentions of the worker.

FIRST INVESTIGATION

- Once the worker has reported the work refusal to his employer or supervisor, the O.H.S.A. requires an investigation to be conducted. The investigation shall be conducted by the supervisor or employer, the refusing worker, and a health and safety representative or someone with safety experience who is selected by the union that represents the refusing worker.

RETURN TO WORK OR CONTINUING REFUSAL

- The first investigation may either resolve the refusal to work or result in a continuing refusal by the same worker. In the case of the former, the worker will either return to work or remain in a safe place near his work station until the necessary changes have been made to the unsafe working condition that gave rise to the work refusal and then return to work. The worker's continuing refusal may result in a further investigation, the involvement of a Ministry of Labour inspector and possibly, disciplinary action against the worker.

SECOND INVESTIGATION AND ROLE OF MINISTRY OF LABOUR INSPECTOR

- If a worker believes that there are reasonable grounds to continue to refuse to do the work assigned by the employer, and continues to refuse to do the unsafe work, the worker, supervisor or employer must notify a Ministry of Labour inspector. The inspector will attend at the workplace and conduct a second investigation of the circumstances surrounding the continuing work refusal. The second investigation must be conducted in the presence of the employer, the refusing worker and a health representative or a person experienced in health and safety chosen by the union that represents the worker. The Ministry of Labour inspector who conducts the second investigation must make a decision in writing with respect to the basis for the continuing work refusal.

WORKER'S RIGHT TO REFUSE TO DO UNSAFE WORK

- DEFINITION: Where a worker has reason to believe that:
  - the use or operation of a machine or equipment, or other thing would likely endanger himself/herself, or another worker; or;
  - the physical condition of the workplace in which he/she works is likely to endanger himself/herself;
  - the use or operation of a machine, equipment or other thing he or she is to use or operate is in contravention of the Act or regulations, and it is likely to endanger a worker; a worker may refuse to work.
STEPS TO BE TAKEN

1. Refusing worker immediately notifies employer or supervisor of the reasons.
3. Worker remains in a safe place near work station while all attempts are made to resolve the perceived problem to the satisfaction of all parties.
4. If problem is resolved to the workers satisfaction, he/she returns to work.
5. If not resolved and worker continues to refuse work, NOTIFY THE MINISTRY OF LABOUR.
6. NOTE: Another worker may be asked to perform the job, only if that worker is advised of the refusal to work and the surrounding circumstances, in the presence of the worker Health & Safety Representative or by a worker who because of his knowledge, experience and training is selected by the trade union that represents the worker.
7. A Ministry of Labour Inspector investigates the work refusal in the presence of the worker, employer and the worker representative of the JHSC.
8. Pending the outcome of the investigation, the worker may NOT be sent home or disciplined for his/her actions.
9. A decision will be made in writing and provided to all parties. This decision must be adhered to whether in favor of the worker or employer.
10. An investigation report must be completed by the supervisor of the worker refusing work and the worker representative present and provided to the Joint Health & Safety Committee (JHSC).
11. All attempts should be made to resolve the problem before it necessitates Ministry of Labour involvement.

ACCIDENT PREVENTION RESPONSIBILITIES

All personnel must understand and comply with all applicable Federal, Provincial and Municipal Acts, Standards and Regulations. A key requirement in all safety legislation is that each person is responsible for working safely with equal concern for the safety of co-workers.

All workers, supervisors and management have specific safety responsibilities. Accident investigations have demonstrated that a failure of any person to adequately fulfill their obligations will lead to situations where an accident may occur.

WORKERS:

- Use protective devices or clothing as required by the task.
- Maintain equipment and tools in good condition.
- Use equipment in a manner that will not endanger themselves or others.
- Report to their supervisor the absence of, or defect in any equipment or protective device of which they are aware and which may endanger themselves or another worker.
- Report unsafe work conditions, practices and hazards ensuring that appropriate interim action is taken to prevent exposure to other personnel.
- Advise any individual to stop if they are working unsafely or ignoring safety rules or practices. If the individual does not stop when advised, his/her supervisor should then be notified.
- Exercise the right to refuse unsafe work.

SUPERVISORS:

- Analyze all work to ensure that work is correctly planned to avoid risk of injury or accident and executed in an effective manner.
- Provide safe job instructions. Ensure each employee understands the hazards, the correct procedures and applicable regulations pertaining to the task.
- Ensure that safety regulations, safe practices and operating instructions are correctly applied.
- Ensure tools and equipment provided are safe and suitable for the job.
• Ensure that employees perform their work in accordance with correct procedures, protective devices and measures prescribed by the Occupational Health and Safety Act, and any Regulation enacted thereunder; the subcontractor's own safety program (where applicable) and supplementary requirements of Dufferin Construction Company.

• Follow up as prescribed by legislation when a worker refuses unsafe work.

**MANAGEMENT:**

• Promote and manage accident prevention programs.
• Provide safety and job instruction training.
• Supply proper tools and equipment.
• Supply protective clothing and equipment.
• The Subcontractor is responsible for all employees working for him and for all other persons calling on him or doing business with his firm while on a Dufferin Construction Company project or property. The Subcontractor is responsible for training and advising his respective employees of all site specific hazards, safe work practices, procedures and requirements.
• Ensuring the safe conduct of the visitor(s) or calling person(s).
• Securing compliance with all safety standards, procedures and contracted obligations to Dufferin Construction Company.

A Subcontractor is responsible for explaining and securing compliance with Dufferin Construction Company's rules and practices by any subcontractor engaged by him for work on a Dufferin Construction Company site as if the subcontractor was a direct employee of the principal subcontractor.

### III CONTRIBUTING CAUSES OF ACCIDENTS

Accident investigations have clearly shown that accidents do not just happen, they are caused. It is rare that an accident is simply an Act of God. Most accidents are caused by some form of substandard practices and/or conditions. The most common immediate causes of accidents are:

**SUBSTANDARD PRACTICES**

1. Operating equipment without authority
2. Failure to warn
3. Failure to secure
4. Operating at improper speed
5. Making safety devices inoperable
6. Removing safety devices
7. Using defective equipment
8. Using equipment improperly
9. Failing to use personal protective equipment properly
10. Improper loading
11. Improper placement
12. Improper lifting
13. Improper position for task
14. Servicing equipment in operation
15. Horseplay
16. Under influence of alcohol and/or other drugs

**SUBSTANDARD CONDITIONS**

1. Inadequate guards or barriers
2. Inadequate or improper protective equipment
3. Defective tools, equipment or materials
4. Congestion or restricted action
5. Inadequate warning systems
6. Fire and explosion hazards

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005
7. Poor housekeeping; disorderly workplace
8. Hazardous environmental conditions: gases, dusts, smokes, fumes, vapours
9. Noise exposures
10. Radiation exposures
11. High or low temperature exposures
12. Inadequate or excessive illumination
13. Inadequate ventilation

Substandard practices and conditions are almost invariably a result of inadequate project management or planning, as well as supervisory and/or employee error.

IV  PREVENTING ACCIDENTS

Accident prevention is best achieved by being alert, ensuring the safe way to accomplish each task is understood and that everyone is ever mindful of changing conditions and situations which may compromise safety.

BEFORE STARTING ANY JOB, ASK YOURSELF...

- What are the hazards associated with the job (heat, toxic products, electrical, tools, environmental, etc.)?
- What can be done (and should be done) to eliminate these hazards?
- If the hazard cannot be eliminated, what protective equipment or procedure is necessary to effectively manage the hazard or risk?
- What could go wrong and what contingency action should be taken to minimize the consequences?
- Have all these questions, and the answers, been discussed with everyone involved on the job?

BEFORE CARRYING OUT ANY TASKS, ASK YOURSELF...

- Do I understand what is required and the safe way to do this task?
- Is there a written procedure? (If not, should there be?)
- Is this a deviation from a standard procedure? (If so, exactly what is the deviation?)
- What effect could the deviation have on normal operation? (Is a new job plan necessary?)
- What could go wrong if the operation is carried out this way?
- What contingency actions are available if it goes wrong?
- Has everything above been discussed with those involved in the operation?

You are the one most responsible for safety. This can only be accomplished by accepting that responsibility and doing the right things at the right time in a safe manner. Remember:

NO JOB IS SO URGENT THAT IT CANNOT BE PERFORMED SAFELY
V. SAFETY GUIDELINES FOR ALL EMPLOYEES, CONTRACTORS, SUBCONTRACTORS, VENDORS AND THEIR EMPLOYEES

ACCIDENTS/INCIDENTS

- Any employee witnessing an accident or incident (near miss) is expected to offer assistance in reporting all details to his supervisor.
- All accidents shall be reported to the subcontractor's supervisor who will in turn advise the Dufferin Construction Company Project Superintendent and the Health and Safety Department.
- Reports are to be prepared for all accidents or incidents (near misses) and forwarded to the Project Superintendent and the Health and Safety Department.

ACCESS

- All entrances, exists, and access/egress to equipment, platforms, ladders, stairs, and buildings shall be continuously maintained free of all obstructions, slippery conditions, overhead danger, etc.

ACCOUNTABILITY

- Each contractor, subcontractor and vendor and its respective workers are required to comply with all applicable health and safety legislation and with established standards, regulations and procedures.
- Contravention of a safety regulation could result in the issuance of orders and a penalty prescribed and enforced under the Occupational Health and Safety Act.
- **Contravention of a Dufferin Construction Company policy or procedure could result in the subcontractor or its employee(s) being removed from the project, at the discretion of the Project Superintendent.**

ADJUDICATION

- Where a conflict occurs in the application of the Divisional - Loss Control Manual or any other manual or reference document produced by Dufferin Construction, consensus will be established by a third party adjudicator mutually agreed upon by the contractor, subcontractor or vendor and Dufferin Construction Company. The adjudicator will assess the validity of the claims. Wherein an agreement cannot be reached in the selection of an adjudicator, Dufferin Construction Company will appoint a third party professional adjudicator. In all cases, the subcontractor/vendor will be required to pay all reasonable costs associated with the third party adjudicator. The judgment of the adjudicator in all cases will be deemed final and binding.

AGE OF WORKERS (minimum)

- All Dufferin Construction Company Employees, Contractors, subcontractors and vendors shall ensure that workers are at least 16 years of age.

ALCOHOL/UNAUTHORIZED DRUGS

- Alcohol and unauthorized drugs are prohibited on Dufferin Construction Company property and work sites. Any person under the influence of alcohol or illegal drugs will be refused entry or removed from the premises.
- Personnel using a medically prescribed drug which may impair performance or judgment must inform their respective supervisor and/or the Project Superintendent.

ASBESTOS

- Prior to commencing operations involving asbestos, contractors, subcontractors and vendors shall complete a written **Project Specific Health & Safety Plan** and submit the completed plan to the Project Superintendent.
- **Project Specific Health & Safety Plans** shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.

(See - Project Specific Health & Safety Plans)

Approved by: H&S Dept. 14G1 - Revision Number: 8   January 6, 2005
• Asbestos insulation may be present in some locations. If asbestos insulation is suspected, all work affected is to be suspended and the Dufferin Construction Company Project Superintendent immediately notified.
• Special procedures are required when working with or around asbestos. Furthermore the above mentioned special procedures apply to work involving man made mineral fibres (MMM) e.g. fibrous glass- ceramic fibre - rock wool - and slag wool.

AUTHORIZED

• Defined as any employee who by reason of training and experience has been judged competent by the employer, Subcontractor and regulating authorities to perform specific tasks in a safe manner consistent with his job responsibility and in accordance with established standards, regulations and procedures.

BARRICADING

• All open excavations, trenches, open manholes, temporary ground or floor openings, where there could be a hazard presented to any person through trips or falls, must be adequately and properly barricaded in accordance with the Occupational Health and Safety Act and any Regulation enacted thereunder.

BEARDS/HAIR

• Employees must be clean shaven when the nature of the work requires or may require the effective use of personal respiratory protection.
• Long hair which may catch in equipment or other facilities must be appropriately covered by a hard hat or cut to prevent entanglement.

BLASTING & DRILLING OPERATIONS

• Prior to commencing drilling and/or blasting operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
• Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
(See - Project Specific Health & Safety Plans)

CAMERAS

• Cameras are not permitted on Dufferin Construction Company projects or property unless authorized by the Project Superintendent.

CHAINSAW USE

• Every chainsaw that is used on a project must be stopped when not being used to cut.
• Chainsaws must be equipped with a chain that minimizes kickback and have a device to stop the chain in the event of a kickback.
• No worker shall use a chain saw unless he or she has been adequately trained in its use.
• Chainsaws must be held firmly when starting the chainsaw. Chainsaws must be held with two hands at all times while in use.
• No worker shall use a chain saw unless he or she is wearing adequate PPE and clothing including gloves and adequate eye and hearing protection.

CLEANING

• Approved cleaning agents are to be used.
• Ensure Material Safety Data Sheets are available.
• The use of gasoline or similar materials capable of giving off hazardous vapours at normal atmospheric temperatures are prohibited for cleaning clothing, carpets, floors, motors, engines or other equipment.
COMPANY

- Company is defined as Dufferin Construction Company and its associates and affiliates. DCC is the abbreviated designation for Dufferin Construction Company.

COMPANY FACILITIES

- Contractor, subcontractor or vendor workers are not permitted to use any Dufferin Construction Company facilities, tools or equipment unless permission is granted by a Dufferin Construction Company supervisory representative.
- Subcontractor's employees are not permitted to use any lunchroom, locker room or sanitary facilities provided by the Dufferin Construction Company for its employees unless required by contract or when permission is granted, by a Dufferin Construction Company supervisory representative.

COMPRESSED AIR

- Compressed air must not be used for cleaning clothes or directed towards any part of the body.
- Air hoses should not be placed on a sidewalk or roadway unless precautions have been taken to minimize tripping, entanglement or damage to the hose.
- Verify the source of supply before connecting air-powered tools. Be sure it is industrial air, not natural gas, etc.

COMPRESSED GAS CYLINDERS

- Compressed gas cylinders must be secured in an upright position.
- Compressed gas cylinders (full or empty) must be disconnected, cylinder caps installed and secured in an upright position when not in use or during transportation.
- Compressed gas cylinders must be stored in a safe place away from hazardous work areas when not in use.

CONFINED SPACES ENTRY

- Prior to commencing confined spaces entry operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
- Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
(See - Project Specific Health & Safety Plans)
- Entering a tank or vessel for any purpose is not permitted unless the interior conditions have been tested by a qualified person and the necessary safe work permit issued.
- Tank, vessel or any confined space entry must be made in accordance with the Occupational Health and Safety Act and Regulations for Construction Projects.
- A stand-by person shall be located immediately outside of the confined space work area to render assistance in the event of an unsafe or emergency condition.
- All personnel working inside a confined space must wear a safety lifeline where a harmful atmosphere exists or may develop. An appropriate communications system must be developed and enforced between the stand-by person and the inside workers.
- Specific confined spaces entry procedures may be requested at the discretion of Dufferin Construction Company

CONTACT LENSES

- Contact lenses shall not be worn during any work which would expose the wearer to chemicals, gases, vapours, dust or other materials that may harm the eyes or cause irritation.
- Contact lenses must not be worn when wearing self contained breathing apparatus (S.C.B.A.).
DIVING OPERATIONS

- Prior to commencing diving operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
- Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
(See - Project Specific Health & Safety Plans)

DRILLING & BLASTING OPERATIONS

- Prior to commencing drilling and/or blasting operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
- Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
(See - Project Specific Health & Safety Plans)

DRINKING WATER

- Approved containers used to store drinking water shall be clearly marked and shall not be used for any other purpose.
- Potable water and disposable cups must be available in the immediate vicinity of all work areas.

DYNAMITE

- Dynamite or other explosives are prohibited on Company property unless written permission is granted by the Company representative.
- Contractors or subcontractors employing explosives on the project must appoint a competent person to oversee all blasting operations; and the name of the competent person must be conspicuously posted at the project.
- Contractors or subcontractors must employ and enforce all D.C.C. blasting and handling procedures.

ELECTRICAL HAZARDS

- Prior to commencing electrical maintenance and/or repair operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
- Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
(See - Project Specific Health & Safety Plans)
- No work shall be performed, no material piled, sorted or handled, no scaffolding erected or dismantled, nor any tools, machinery or equipment operated in close proximity to electrical power sources where contact or arcing may occur.
- All electrical systems shall be de-energized and the controls locked out in accordance with Occupational Health and Safety Act or any Regulations enacted thereunder.
- Electrical systems shall not be energized except when permission is granted by the person in charge and then, only by a qualified electrician.
- All electrical panels and generators must be equipped with a functional ground fault circuit interrupter (GFCI)
- Ground fault circuit interrupters shall be inspected and tested daily in a manner consistent with the manufacturer’s instructions.
A signal person shall assist an operator if any part of the load may approach the minimum distance noted as follows:

<table>
<thead>
<tr>
<th>Nominal Phase to Phase Voltage Rating</th>
<th>Minimum Distance</th>
</tr>
</thead>
<tbody>
<tr>
<td>750 to 150,000 volts</td>
<td>3 metres</td>
</tr>
<tr>
<td>150,000 to 250,000 volts</td>
<td>4.5 metres</td>
</tr>
<tr>
<td>more than 250,000 volts</td>
<td>6 metres</td>
</tr>
</tbody>
</table>

**EMERGENCIES**

- An emergency response plan will be developed at each site prior to commencing work.
- Report all emergencies (fire, spill, serious injury, serious illness, etc.) to the project superintendent and Dufferin Construction Company's Health and safety Department.
- Emergency telephone numbers shall be posted at each job site adjacent to the phone.

**EMERGENCY ACTION**

- All personnel must be familiar with the emergency procedures established for the work site and their required response.
- In the event of a fire or serious injury to a fellow worker, all qualified employees are expected to take prompt action to render assistance in addition to making the emergency call. Use the available fire fighting equipment provided to extinguish a fire if possible. Once the fire fighting personnel, and/or ambulance arrive, proceed with your normal or emergency duties depending on the nature of the emergency situation.
- Personnel not involved in the emergency action shall leave the area and proceed to their designated safe location and report to their supervisor on arrival.
- Personnel must remain at the designated safe location until an "All Clear" is announced, or alternate instructions are received from the Site Superintendent.

**EMERGENCY VEHICLES**

- All vehicles and personnel shall give emergency vehicles and response crews the right of way.
- Fire and ambulance routes must be maintained clear and emergency vehicles should be directed by knowledgeable personnel.

**EQUIPMENT**

- Contractor's equipment, such as trucks, cranes, welding machines, etc. must be maintained in good working condition in accordance with manufacturers specifications.
- All equipment must be identified to the Project Superintendent prior to use on site.
- All equipment and tools used by the Subcontractor and his employees must be suitable for the work and the work area environment.
- No equipment shall be modified or altered to perform differently than intended unless written agreement by the manufacturer or certification from a Professional Engineer is obtained.
- Defective equipment shall not be used on a Dufferin Construction project.
- Defective equipment shall be turned off and sufficient measures taken to prevent the equipment from being operated and warning signs posted.
- All mobile equipment and similar vehicles shall be equipped with a functional back up warning device.

**EQUIPMENT OPERATION**

- Only authorized personnel are permitted to operate, adjust and repair D.C.C. equipment.
- No equipment shall be left running unattended.
EQUIPMENT/VEHICLE BACKUP PROCEDURES

- Prior to commencing equipment and vehicle backup procedures, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent. All subcontractors must complete a Backing up Permit and submit this to the Project Superintendent prior to beginning any construction operations.
- Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
  (See - Project Specific Health & Safety Plans)
- Every project shall be planned and organized so that vehicles and machines and equipment are not operated in reverse or are operated in reverse as little as possible. Vehicles, machines and equipment at a project shall not be operated in reverse unless there is no practical alternative to doing so.
- Where vehicles and equipment must operate in reverse, signs shall be posted at the project in conspicuous places warning workers of the danger.
- Workers on foot should be kept to a minimum in the vicinity of moving vehicles and equipment.
- Workers in the vicinity of moving vehicles and equipment must wear a reflective safety vest or an equivalent T-shirt.
- Wherever possible, a barricade should be erected in order to separate workers on foot from vehicles and equipment in motion within the job site.
- When vehicles and equipment must travel in reverse within the construction area and the vicinity of workers who may be endangered, it is necessary for the supervisor to appoint a signal person or "spotter". The spotter shall assist drivers/operators while vehicles or equipment are traveling in reverse.
- The signal person or spotter must:
  - not perform other tasks while acting as a signal person.
    - be trained or instructed to perform the task
    - know and understand proper signals
    - know driver/operator blind spots
    - remain out of the path of the vehicle
    - remain in full view of the operator/driver
    - maintain full view of workers and obstructions in the path of the vehicle.
- All vehicles and equipment must be equipped with an automatic audible alarm that signals when the vehicle or equipment is being operated in reverse. All dump trucks, must have back up alarm in accordance with Section 105 of the Regulations for Construction Projects.
- All vehicle/equipment operators, signal persons and workers on foot within the construction area must be provided with instructions specific to the conditions and procedures to be employed on the construction site.
- All vehicle and equipment operators, supervisors, signal persons and workers on foot shall be provided with instructions specific to the hazards, conditions and procedures appropriate for the circumstances.

EXCAVATIONS

- Prior to commencing trenching, excavating and boring operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent. Subcontractors must also complete an approved Trenching and Excavation Permit and submit the permit for review to the Project Superintendent.
- Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
  (See - Project Specific Health & Safety Plans)
- All excavations and trenches shall be prepared in accordance with the Occupational Health and Safety Act and Regulations for Construction Projects.
- All excavations must be regularly inspected by a competent person in order to ensure the integrity of site conditions and the protective measures employed within or around an open excavation.
- All excavations must have appropriate entrance and exit routes in accordance with the nature of the excavation.
- All open excavations or trenches which pose a hazard must be properly guarded by a substantial railing or barricade. Flashing warning lights, appropriate to the area classification, must be installed when necessary.
- All open manholes, removed gratings or floor openings must be guarded with proper barricades or appropriate covers.

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005
• See Underground Facilities.
• No worker shall enter an excavation or trench unless properly excavated or shored to ensure their safety.

FACILITIES - CONTRACTOR/SUBCONTRACTOR/VENDOR

• Subcontractor’s temporary buildings such as, field offices and similar structures may only be placed in areas approved by Owner’s representative.
• Open electric or flame heaters are not allowed without the specific approval of the Project Superintendent.

FALL ARREST SYSTEMS

• Prior to commencing operations which may expose a worker to the risk of falling, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent. The plan shall include a Working at Heights Permit to be submitted to the Project Superintendent prior to work proceeding at heights where workers are exposed to falls greater than 2.4 m.
• Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
• All workers who may use a fall protection system are adequately trained in its use and given adequate oral and written instructions by a competent person. A record of training and instruction shall be available to Dufferin Construction Company’s Superintendent and the Ministry of Labour.

(See - Project Specific Health & Safety Plans)
• Appropriately secured body harnesses and lifelines must be worn by employees:
  ♦ To ensure that workers are continuously protected at all times from the hazards of falling.
  ♦ when working at heights greater than 10 feet above grade or floor level where it is impractical to provide adequate work platforms or staging with guard rails.
  ♦ When working over an operating machinery, open space or hazardous substance which cannot be guarded.
  ♦ When occupying an elevated or aerial work platform.
  ♦ When entering a confined space where a harmful atmosphere exists or may develop.
• Body harnesses will provide better fall protection against injury (extensive research and testing support this statement). A safety net shall be used when safety harnesses and adequate work platforms are not possible.
• The use of a safety belt as an alternative to a full body safety harness is unacceptable and will not be permitted on Dufferin Construction projects.
• Before any use of a fall arrest system or a safety net by a worker at a project, the worker’s employer must develop written procedures for rescuing the worker after his or her fall has been arrested.

FALLING MATERIALS

• When there is a danger of material falling onto work areas or where the public might be endangered, it is required that such areas be barricaded against entry and warning signs prominently displayed on all sides and approaches or protective canopies installed.

FENCING

• Where applicable, construction site perimeters should be fenced off in such a manner and using such temporary fencing materials that will provide high levels of warning and protection to all persons on or attending the work site. Fencing should be erected so as to enhance the overall appearance of the project.

FIREARMS

• Possession of firearms by any person except police officers is prohibited on Dufferin Construction Company property or projects.
FIRE EXTINGUISHERS

- Contractor, subcontractor and vendor employees shall be trained in the proper use of fire extinguisher equipment.
- A 4A40BC dry chemical fire extinguisher shall be placed at the point of welding, grinding or cutting.
- The contractor, subcontractor or vendor shall supply sufficient fire extinguishing equipment to handle any anticipated emergency in the contractor’s, subcontractor’s or vendor’s respective work area and ensure that the extinguishers charge is confirmed at an appropriate frequency.
- All Welding machines are to be equipped with a 4A40BC dry chemical fire extinguisher.
- Discharged fire extinguishers must be reported and recharged.

FIRE FIGHTING EQUIPMENT

- Know the location of fire fighting equipment in your area.
- Fire fighting equipment must be used only for its intended purpose and not removed from its place of storage.
- Do not block access to fire fighting equipment.
- Every worker who may be required to use fire extinguishing equipment shall be trained in its use.

FIRST AID/EMERGENCY RESPONSE DEVICES AND PERSONNEL

- All contractors, subcontractors and vendors must ensure the provision of trained first aid and emergency response personnel, facilities and adequate supplies as required by the Workplace Safety and Insurance Board First Aid Regulations as well as the Occupational Health and Safety Act and any Regulation enacted thereunder.
- Emergency telephone numbers are to be posted beside telephones in all subcontractor trailers.

FORMWORK AND FALSEWORK

- Prior to commencing formwork, falsework and concrete placement operations, contractors subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
- Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
  (See - Project Specific Health & Safety Plans)
- Prior to the placement of concrete, formwork and falsework shall be inspected by a professional engineer (or a competent worker appointed by the engineer) to examine and verify in writing that the form and falsework has been erected in accordance with engineered drawings.

FUELING

- All gasoline, diesel and propane powered engines must be shut off when refueling.
- Fuels must be dispensed with a pump and hose.
- Fuels must be stored in approved safety containers and appropriately labeled.
- Material Safety Data Sheets must be available at the area of dispensing.

GRINDERS

- Hand grinders must not be altered and used as a bench grinder.
- Proper grinding wheels matched to the grinder speed must be used.
- Safety glasses and face shields must be worn when grinding.
- Do not remove or make guards inoperative.

GUARDS

- All protective guards for equipment and portable tools must be used as intended by the manufacturer unless a specific procedure deviation request is approved by DCC's Project Engineer.
- All openings and excavations must be appropriately guarded.

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005
• All stairs having more than four risers must have handrails.

GUARDRAILS

• All guardrails shall be construction assembled and maintained in accordance with the Occupational Health & Safety Act and Regulations for Construction Projects also the Regulations for Industrial.
• A guardrail shall be provided in locations as prescribed in the Occupational Health & Safety Act and Regulations for Construction Projects.
• For guidance on Construction and Assembly of Construction Guardrail, refer to document DS021 as provided by Construction Safety Association of Ontario titled “Guardrails”.

GUY WIRES

• Guy wires erected by the contractor, subcontractor or vendor must be identified by hanging a sign from the wire, warning of low clearance.

HAND TOOLS

• Avoid hand tool injuries by:
  ♦ using the right tool for the job
  ♦ maintaining tools in clean and good condition
  ♦ using tools in the intended way
  ♦ carry pointed or sharp edged tools in pouches or sheath
  ♦ hammer head, screwdriver and etc., should be ground periodically to remove mushrooming and rounding.
  ♦ do not hold the work in one hand while directing a screwdriver or chisel with the other. The tools will most likely injure the holding hand when they slip.

HOISTING OPERATIONS

• Prior to commencing hoisting operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
• Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
  (See - Project Specific Health & Safety Plans)
• Boomtrucks, mobile and stationary cranes shall be operated by a competent worker.
• Crane operators shall retain their Certificate of Qualification on the project at all times while performing hoisting operations and shall provide the certificate to the contractor on demand.
• Boomtrucks and cranes shall be inspected monthly or more often as required.
• Mobile Crane Logs shall be completed monthly for each crane on the project; and the log shall be available for review by the contractor on demand.

HORSEPLAY

• Startling, scaring, pushing, distracting, fighting, etc. is strictly forbidden and will result in immediate termination and/or removal from the project.

HOUSEKEEPING

• The work site is to be kept clean and free from slip and trip hazards.
• All equipment, tools and unused materials at a job site must be returned to their proper storage area when not in use.
• All waste material must be appropriately disposed of in a designated location.
• Keep all walkways, stairs and platforms free of obstructions.
• Clean up all spills immediately.
• Observe good housekeeping practices at all times and maintain the work area free of combustible/flammable materials and tripping hazards.

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005
Health & Safety Policy and Reference Manual - Ontario

- Store all waste or rags in closed metal containers.
- Ensure waste containers are emptied when full.
- Nails shall be removed from all lumber prior to storage or disposal.
- Remove scrap and waste materials regularly during each shift to maintain access/egress routes and at least daily for all other work areas.

**JOINT HEALTH AND SAFETY COMMITTEE**

- A Joint Health and Safety Committee will be established at all projects where the number of employees regularly exceeds 20 and the expected duration of the project will exceed 3 months; or as prescribed by the Occupational Health and Safety Act.
- Subcontractors and vendors shall participate, cooperate and provide supervisory and/or employee representation on the committee, at the request and discretion of Dufferin Construction Company.
- A Worker Trade Committee will be established where the number of employees regularly exceeds 50 and the expected duration of the project will exceed 3 months.
- The trade unions shall be actively involved in selection of worker representatives.

**KNIVES**

- A knife shall be used carefully and not as a screwdriver or pry bar.

**LADDERS**

- Metal or wire reinforced ladders shall not be used in close proximity to electrical equipment.
- All ladders must be inspected and found to be free of defects prior to use. Unacceptable ladders shall be removed immediately from the site.
- Ladders must be equipped with non-slip devices or safety shoes at the foot.
- Ladders must be secured at the top or held by a second person to prevent movement during use.
- The base of an inclined portable ladder shall be no further from the base of the wall or structure than 1/4 the length of the ladder, measured from the point at which the ladder contacts the wall or structure.
- When sections of an extension ladder are extended, the overlap between ladder sections must not be less than 3'0" for ladders up to 36'.
- Do not stand on, or work from, the top two rungs of a ladder.
- Step ladders must be fully extended when in use.
- Face the ladder and use both hands while climbing or descending.
- Tools must be carried in a pouch or lifted by a handling or lifting device when ascending or descending ladders.
- Ladders must be appropriately stored and made secure.
- Ladder jack scaffolds are prohibited.
- The area around the ladder base must be free from slippery substances and tripping hazards.
- Landings at the top and bottom of ladders must be free from slippery substances, obstructions and trip hazards.

**LANGUAGE**

- Where a contractor's, subcontractor's or vendor's employee cannot read or understand English, his supervisor is responsible for ensuring that he thoroughly understands the safety standards and regulations and all other pertinent safety requirements.
- Where a contractor's, subcontractor's or vendor's employee has a communication problem, special procedures, must be developed by the employer to ensure he/she can perform the work in a safe manner and that he or she can be made aware of emergency situations.

**LIFTING & MATERIAL HANDLING**

- Appropriate signs and warning devices must be posted at the perimeter of all areas where hoisting operations are performed.
- Do not lift more than can be safely handled. Get help.

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005

Page: 25 of 35
• When manually lifting a heavy object, bend the knees, keep a straight back and use your legs to lift the load.
• Use mechanical equipment wherever practical for heavy objects.
• Only authorized personnel are permitted to operate material hoisting equipment.
• Safe lifting loads marked on lifting devices must not be exceeded.
• All hooks on lifting or hoisting equipment shall comply with safety standards and regulations. See additional regulations for precautions for lifts near energized power lines.
• Persons must not stand or pass under any suspended load.
• The use of a crane, forklift or other equipment as a personnel lift device and/or work platform is prohibited unless it is designed and intended for that purpose.
• Cranes shall be regularly inspected by a competent person and a report detailing the findings of the inspection shall be kept with the crane for review by the contractor.

LIGHTING

• All electrical facilities temporary or permanent must comply with the requirements of the applicable Federal, Provincial or Local Electrical Code and applicable Safety Standards and Regulations.
• Temporary lighting shall be suitable for the work being conducted with cords and cables suitably strung to prevent tripping or entanglement.
• All temporary lighting must be equipped with proper guards to prevent accidental contact with the bulb.

MACHINE GUARDING

• An effective machine guard should have certain characteristics in design and construction. Such a guard should:
  ♦ Be considered a permanent part of the machine or equipment.
  ♦ Afford maximum protection.
  ♦ Prevent access to the danger zone during operation.
  ♦ Be convenient; it must not interfere with efficient operation.
  ♦ Be designed for the specific job and specific machine, with provisions made for oiling, inspecting, adjusting, and repairing machine parts.
  ♦ Be durable and constructed strongly enough to resist normal wear.
  ♦ Not present a hazard in itself.

• Machine guards manufactured and/or provided by the equipment manufacturer shall meet or exceed the requirements of the Occupational Health and Safety Act or any applicable Regulation(s) enacted thereunder. Modified or replacement machine guards from other than the original equipment manufacturer shall be designed, manufactured and installed consistent with CSA Z432-94 Safeguarding of Machinery or shall be designed by a licensed Professional Engineer.

MACHINERY

• Guards must be placed on machinery to prevent contact with moving parts.
• Guards must not be removed except when the machine is shutdown and locked out. Guards must be replaced before machinery is put in operation.
• Machines must be shut down, locked out and tagged before any repair work is done. This includes electrical, air, steam or other driven equipment.
• Safe operating procedures for machinery must be followed.
• Work over moving machinery is prohibited unless adequate protection is provided.
• Be aware of pinch points where hands/fingers could be caught or trapped.

MARINE OPERATIONS

• Prior to commencing marine operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
• Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.

(See - Project Specific Health & Safety Plans)

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005
• As a minimum, contractors, subcontractors and vendors shall comply with recommendations outlined in the Construction Safety Association of Ontario publication, entitled *Construction Safety Over and Around Water and Ice.*

**MARKING PHYSICAL HAZARDS**

• Hazards shall be appropriately identified, guarded and where appropriate, warning signs should be posted (falling material, noise protection, overhead electrical power lines).
• See Excavations.

**NAILS**

• Exposed nails and spikes must be removed or bent flat.
• Discarded nails must be properly disposed of and not left on the ground or other surfaces.

**NEW OR INFREQUENTLY PERFORMED JOBS**

• All new or infrequently performed jobs should have a pre-job review and approved procedures developed when warranted.
• Workers must be oriented to these procedures.

**NOISE PROTECTION**

• Suitable ear protection devices such as muffs or plugs must be worn while working in areas posted with hearing protection signs or when required by the nature of the work being performed.
• Judgment may be required as to the noise level in areas not posted.
• If there is any uncertainty, hearing protection must be worn.

**OCCUPATIONAL HEALTH AND SAFETY ACT AND REGULATION FOR CONSTRUCTION PROJECTS**

• As a minimum, a copy of the Occupational Health and Safety Act and Regulations for Construction Projects or amendments must be retained at each work site and made available to all contractor, subcontractor or vendor employees.

**ORIENTATION**

• All contractors, subcontractors and vendors must provide their respective employee(s) with adequate and appropriate safety orientation prior to commencing work.
• Visitors must be briefed by the applicable contractor, subcontractor or vendor responsible for the visitor.

**OVERHEAD ELECTRICAL POWER LINES**

• Before any work is begun, the contractor, subcontractor or vendor and its applicable employees must investigate and be aware of any overhead electrical power or telephone lines and maintain a safe distance at all times in accordance with the Regulation for Construction Projects.
• Warning signs must be posted where appropriate and applicable.
• A signal person shall assist an operator if any part of the load may approach the minimum distance noted as follows:

<table>
<thead>
<tr>
<th>Nominal Phase to Phase Voltage Rating</th>
<th>Minimum Distance</th>
</tr>
</thead>
<tbody>
<tr>
<td>750 to 150,000 volts</td>
<td>3 metres</td>
</tr>
<tr>
<td>150,000 to 250,000 volts</td>
<td>4.5 metres</td>
</tr>
<tr>
<td>more than 250,000 volts</td>
<td>6 metres</td>
</tr>
</tbody>
</table>
PARKING AND JOB ACCESS

- Contractor’s, subcontractor’s and vendor’s employees will use proper entrances and travel routes when proceeding to their respective work area in order to avoid passing through other operating locations.
- Parking shall occur only in designated areas as assigned by the Project Superintendent.

PERSONAL PROTECTIVE CLOTHING

- Wear appropriate protective clothing suitable for the task to cover and protect the body.
- Wear goggles, face shield, rubber gloves, rubber suits when a worker may be exposed to an acid, caustic or other similar hazardous material.
- Sleeved shirts and long pants are mandatory.
- Do not wear neckties, loose sleeves, loose clothing, jewelry, rings, bracelets and necklaces which may be caught in machinery or other devices.

PERSONAL PROTECTIVE EQUIPMENT

- Ensure all personal protective equipment is in good working order prior to use.
- Appropriate personal respiratory protection must be worn when handling any hazardous materials/substances, which poses an inhalation hazard.
- Self-contained breathing apparatus (SCBA) or other approved means of supplied air and breathing protection, must be worn whenever prescribed to protect an employee from exposure to harmful gases, vapours or oxygen deficiency. Each employee required to wear such equipment, must be instructed and qualified in its use.
- Life jackets must be worn by workers exposed to the danger of drowning in water deep enough for the life jacket to be effective.
- Foot and leg guards must be worn for all work where the lower part of the body is exposed to injury. Such work include the use of chain saws, jackhammers, tamps, etc.
- Refer to Sections: Safety Glasses/Goggles, Safety Hard Hats, Safety Footwear and Fall Arrest Systems.

PORTABLE FLAMMABLE/COMBUSTIBLE LIQUID CONTAINERS

- Only approved safety containers may be used to store gasoline and other flammable or combustible liquids.
- Only working quantities of flammable or combustible liquids may be present in working areas. Bulk or reserve quantities of such substances shall not be present in working areas.
- Portable containers must be adequately labeled as to contents and hazards.

POWER TOOLS

- Tools must be suitable for the job being performed, in good condition and appropriate to the hazardous conditions which may exist during their use.
- All electrical tools must be either three prong grounded, double insulated or rechargeable.
- Keep guards in place on all power tools.
- Air hoses and electric cords should not be placed on walk and roadways unless precautions have been taken to prevent tripping entanglement and wear.
- Inspect couplings, hose and hose connections of pneumatic tools prior to use.
- Verify the source of supply before connecting air-powered tools. Be sure it is industrial air, not natural gas, nitrogen, etc.
- Ensure air hose is connected to the equipment prior to turning on the air supply.
- The air supply must be shut off when changing pneumatic tools. Air supply must not be shut off by kinking the air hose.
- Disconnect power tools from power source before making repairs or adjustments.
- Explosive actuated fastening tools must only be operated by authorized personnel who have received adequate training to ensure competence.
POWERED ELEVATING WORK PLATFORMS

- Ensure powered elevating work platforms are operated in accordance with the manufacturer's specifications.
- Platforms must be level and stable.
- Platforms should be selected in consideration of load requirements, project conditions and equipment limitations.
- Contractors, subcontractors and vendors must ensure that their respective personnel using a powered elevating work platform have received adequate written and oral training to operate the platform safely.
- Do not travel in an elevated position.
- A full body harness shall be worn when moving.

PROJECT SAFETY ASSESSMENTS

- Project Safety Assessments will be conducted periodically by the Dufferin Construction Company Health and Safety Department to assess site conditions and compliance to safe work requirements.
- Subcontractors shall participate and cooperate with the efforts and recommendations prescribed as a result of all Project Safety Assessments.

PROJECT SPECIFIC HEALTH AND SAFETY PLANS

- Prior to commencing work, subcontractors and vendors shall complete a Project Specific Health & Safety Plan and submit the completed legibly printed or typed written plan to the Project Superintendent.
- Completion of a Project Specific Health & Safety Plan shall as a minimum require the following steps:
  - Assessment of the nature and scope of the work to be performed
  - Assess and identify the operations involved and potential hazards that may result from each operation
  - Develop specific strategies to address each potential hazard scenario
  - Identify workers who may be affected by potential hazards and develop strategies to address worker requirements
  - Identify worker skill sets require to perform all tasks and evaluate workers to identify and address skill deficiencies.
  - Identify the time frame in which the potentially hazardous operation will be performed, and when remedial and preventive measures will be in place to mitigate the potential hazard
- Complete and submit the Project Specific Health & Safety Plan to the Project Superintendent.
- Communicate to all applicable workers the details of the completed Project Specific Health & Safety Plan.
- Implement all recommendations as prescribed in the plan.
- Monitor the effectiveness of the Project Specific Health & Safety Plan.
- Modify the plan as required to address required changes.
- Changes to the plan must be approved by the Project Superintendent.

RADIOS

- All communication radios are to be carried with an approved belt and holster.
- AM/FM radios or portable cassettes are prohibited from use in the work areas except when approved by Owner’s Project Representative.
- Permission must be obtained from the Project Superintendent prior to using radios or cellular telephones on or near a project where blasting operations are being conducted.

RAILROADS

- Do not climb through, over, under or between railroad cars whether they are standing or moving. Keep a safe distance from the ends of cars and be alert for unexpected movement.
- Do not pile materials, build scaffolds, park vehicles or erect any structure closer than 8’ from the centre line of any railroad track.
REPORTING VEHICLE ACCIDENTS

- Any contractor, subcontractor or vendor employee involved in a motor vehicle accident on a Dufferin Construction Company project must report the accident at once to his supervisor who will in turn be expected to advise the Project Superintendent.
- A Dufferin Construction Company accident report must be prepared and submitted to the Project Superintendent.
- Only essential vehicles are allowed on Dufferin Construction Company projects.

RESPIRATORY PROTECTION

- Contractors, subcontractors and vendors shall arrange and supply suitable respiratory protective equipment when required by the hazards of the job being performed.
- Contractors, subcontractors and vendors shall ensure all personnel using respiratory protective equipment are appropriately trained and fit tested to the equipment.

RIGGING

- Know the weight of the load to be lifted.
- Ensure loads are properly rigged and stable during the lift.
- Use tag lines to control loads unless such use will create a hazard.
- Inspect all hardware, slings, cable and equipment before using.
- Replace worn equipment.
- Never rig or hoist any load if weather conditions are such that hazards to personnel or property are created, e.g. high wind velocity, low visibility, etc.
- Specific procedures must be prepared and submitted to the contractor prior to performing an unusual or complex hoisting operation.

ROLL-OVER PROTECTIVE STRUCTURES (ROPS) AND RESTRAINING SYSTEMS

- Roll-over protective structures and restraining systems are required on all mobile equipment except:
  - rated by the manufacturer at 15 kilowatts or less and has a tare mass of 700kg or less;
  - was manufactured before 1980 and is not factory-equipped with adapters to accept a roll-over protective structure.
- Mobile equipment not equipped with a roll-over protective structure shall be restricted to locations and operations where the risk of overturning is minimal.

RUNNING

- Running is not allowed on Dufferin Construction Company projects or property.

SAFETY GLASSES/GOOGLES/FACE SHIELDS

- Wear safety glasses with side shield or goggles whenever the nature of the job presents an eye hazard
- Some areas of the project may require the compulsory use of safety glasses, chemical goggles or face shields. Observe signs indicating this requirement.
- Wearing of safety glasses is strongly recommended as a general practice for those areas and tasks where safety glasses are not mandatory.

SAFETY HARD HATS

- Approved safety hard hats must be worn by all personnel in all work areas.
SAFETY INSPECTIONS

- All contractors, subcontractors and vendors are required to conduct regular safety inspections for all areas for which they are responsible.
- Dufferin Construction Company will perform additional project safety assessments.

SAFETY FOOTWEAR

- Appropriate CSA approved “green patch” safety boots must be worn in all work areas.

SAFETY SHOWERS/EYE WASH STATIONS

- Emergency eye wash stations will be provided by the contractor, subcontractor or vendor for areas not having safety showers and eye wash stations when required by the nature of the work and inherent hazards.

SCAFFOLDS

- Scaffolds, swing stages or other temporary work platforms used for maintenance, installation or removal of equipment must be constructed, maintained and used in compliance with Regulations for Construction Projects.
- Scaffolds must be erected, maintained and dismantled under the direction of a competent worker.
- Ladder jack scaffolds are prohibited from use.

SIGNAL PERSON

- (See - Equipment/Vehicle Backup Procedures, Electrical Hazards and Overhead Electrical Power Lines)

SMOKING

- Obey all no smoking signs.

SPILLS

- Clean up all spills or slippery surfaces which would create a slipping or environmental hazard.
- Report all significant spills to the Project Superintendent and call the emergency number provided by the Project Superintendent (where applicable).

SUBCONTRACTOR OR VENDOR SUPPLIED MATERIALS

- All vehicles arriving on the project shall first report to the project office trailer and/or Project Superintendent.
- Contractors, subcontractors and vendors shall provide sufficient notice and information to permit Dufferin Construction Company to assess the circumstances, identify potential hazards or productivity interruptions and implement corrective measures.

TRAFFIC

- Speed Limits must be obeyed.
- Where no speed limit is posted, travel with caution and according to the terrain, job conditions, adjacent work activities and weather conditions.
- All street, railroad stop and warning signs must be obeyed.
- Passengers must never leave or board a vehicle in motion.
- Workers are not permitted to ride in the back of a pickup truck
- Vehicles parked on a Dufferin Construction project or property must be left with the engine shut off and parking brake set.
- All vehicle accidents occurring on a Dufferin Construction Company project or property must be reported and an Accident Report prepared.
TRAFFIC CONTROL

- Traffic control measures must be employed in order to meet the requirements of the Ontario Traffic Manual - Book 7, Section 67-69 of the Regulations for Construction Projects and the following objectives:
  - To protect construction crews and the motoring public by regulating traffic flow.
  - To stop traffic whenever required by the progress of work.
  - Otherwise to keep traffic moving at reduced speeds to avoid tie-ups and delays.
  - To allow construction to proceed safely and efficiently.
  - To ensure that public traffic has priority over construction equipment.

- Equipment used for traffic control including, but not limited to signs, delineators, cones, barricades, flashers, barriers, markers, crash trucks and drums must meet all applicable Federal, Provincial or local requirements.

- Where required, the contractor, subcontractor or vendor is responsible for appointing a competent traffic control person who shall not perform any other work while setting up or removing the measures and shall develop in writing a traffic protection plan specifying the vehicular hazards and the measures described to protect workers.

- The contractor, subcontractor or vendor must ensure that the traffic protection plan is kept at the project and made available for review by a worker on request.

- All signs shall be in accordance with the latest reflectivity standards of Book 7 and workers shall wear CSA approved safety vests with 360 degree visibility.

- Workers directing traffic shall receive training and deemed competent, shall not direct vehicular traffic for more than one lane in the same direction and not direct traffic if the posted speed is greater than 90km/h.

UNDERGROUND UTILITIES

- Locations of all underground utilities must be requested by the contractor, subcontractor or vendor.

- The contractor, subcontractor or vendor shall thoroughly review locate information with the utility company’s representatives before excavations are begun.

- Extreme caution must be exercised during excavations as supplied underground drawings may not be accurate.

- The contractor subcontractor or vendor shall comply with the procedures outlined in the Technical Standards and Safety Authority’s - “Guidelines for Excavations in the Vicinity of Gas Lines” when excavating in the vicinity of pipes, conduits and cables for gas electrical and other services.

- Piping and other underground services must not be damaged during excavation.

- The Project Superintendent must be advised of any damage.

VEHICLES AND MOBILE EQUIPMENT (also - see Equipment/Vehicle Backup Procedures)

- Vehicle operators must have a valid operators license.

- All vehicles must be maintained in proper working order and inspected prior to use.

- All dump trucks, trucks and mobile equipment used at the work site area are to be equipped with working automatic back-up audible warning alarms.

- It is unacceptable to transport workers in the back of a pickup truck or mobile equipment not equipped with a seat and seat belt.

VENTILATION

- Effective ventilation shall be maintained to ensure a proper air supply free of contaminants and impurities which would exceed safe exposures.

- Forced ventilation systems will be required depending on the nature of the work, work environment and atmospheric condition.

- An inadequate air supply will require the use of appropriate personal protective equipment.

VISITORS

- Contractors, subcontractors and vendors are responsible for the safe conduct of visitors at the work site and must provide orientation to safety requirements during their visit.
• The Project Superintendent must be advised of all anticipated visitors, new workers, vendors and other workers prior to their arrival.

WEEKLY, TAILGATE TRAINING MEETINGS

• Each contractor, subcontractor and vendor shall conduct a tool box safety meeting at least bi-weekly with all respective personnel in attendance.
• Topics to be addressed at tool box safety meetings will be decided in consultation with the Project Superintendent.
• Weekly tailgate training meetings will be properly documented and the document submitted to the Project Superintendent.

WELDING

• Prior to commencing welding operations, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
• Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
(See - Project Specific Health & Safety Plans)
• Inspect all welding or burning equipment before use for leaks and the presence of oil or grease.
• Flash back preventers must be installed on the fuel and oxygen lines at the torch and regulators.
• Safety glasses and face shields must be worn when cutting, chipping or grinding.
• Suitable eye protection must be worn by anyone assisting or working near a cutting, welding, chipping or grinding operation.
• A fire hose or extinguisher must be readily available at the work area.
• Welding machines must be shut down prior to fueling.
• Remove all combustible materials to a safe distance from the welding area.
• Suitable shielding must be placed around welding and grinding areas to protect personnel in adjacent areas from flashing and flying particles.

WORK PERMITS - HOT WORK

• Prior to commencing operations requiring a hot work permit, contractors, subcontractors and vendors shall complete a written Project Specific Health & Safety Plan and submit the completed plan to the Project Superintendent.
• Project Specific Health & Safety Plans shall follow the format prescribed in Dufferin Construction Company’s Divisional - Loss Control Manual.
(See - Project Specific Health & Safety Plans)
• The following operations are specifically classified as "hot work": welding, burning, hot riveting, hot forging, use of electric hot plate, open fires of any kind, grinding, soldering, the use of any electrical arc or sparking device, etc.
• Procedures must be submitted to the Project Superintendent prior to commencing hot work.

WORKER TRAINING

• Contractors, subcontractors and vendors must provide their respective workers with adequate training to ensure workers are familiar with their work tasks, the hazards and the application of the Act and all applicable Regulations.
• Proof of training is required whenever a task is required to be performed which necessitates a competent person and/or competent worker as prescribed by the Occupational Health and Safety Act and any Regulation enacted thereunder.
• All contractors, subcontractors and vendors shall ensure their respective workers are trained in the following areas, where applicable:
  ♦ Accident/Incident Investigating
  ♦ Back-Up Hazard Awareness
  ♦ Controlling Traffic Safety
  ♦ Equipment Lock-out Procedures
  ♦ Fall Protection
  ♦ Manbasket Operation

Approved by: H&S Dept. 14G1 - Revision Number: 8 January 6, 2005
♦ Project Site Security
♦ Safe Work Practices Near Underground and Overhead Utilities
♦ Site Remediation
♦ Train the Trainer - Tailgate Safety Meetings
♦ Working with Concrete

• Contractors, subcontractors and vendors are responsible for the training of their personnel.
• Training may be available through various health and safety delivery organizations, including but not limited to, the Construction Safety Association of Ontario, the Industrial Accident Prevention Association, Natural Resource Safety Association.
• Additionally, training may be available from unions or private consulting organizations.
• Dufferin Construction Company reserves the right to evaluate the veracity of training claimed by the contractor, subcontractor or vendor.
• The contractor, subcontractor or vendor shall immediately furnish to the Project Superintendent any information relating to claimed training, including but not limited to:
  ♦ training course outline
  ♦ course curriculum
  ♦ representative training materials
  ♦ details relating to facilitation format
  ♦ name and details of the instructor(s)
  ♦ documents confirming worker attendance
• contractor shall be provided on request
• Remedial training shall be provided and paid for by the respective contractor, subcontractor or vendor when training is assessed and deemed insufficient, in the opinion of the Project Superintendent or DCC Health and Safety Department.

WORKING AROUND WATER

• See - Marine Operations

WORKING HOURS

• Normal working hours are from 7:00 am to 5:30 p.m. Monday to Friday excluding statutory holidays unless otherwise prescribed in the tender or contract documents.
• Unless otherwise permitted, the contractor, subcontractor or vendor shall submit a written request 48 hours in advance of its intent to work other than normal working hours.
• The contractor, subcontractor or vendor is responsible for all reasonable costs when a Dufferin Construction Company employee is required to attend the project as a direct consequence of the contractor’s, subcontractor’s or vendor’s request to work other than normal working hours.

WORKPLACE HAZARDOUS MATERIALS INFORMATION SYSTEM (WHMIS)

• The purpose of the Workplace Hazardous Materials Information System is to ensure that the hazards of all chemicals produced or employed are evaluated, and that information concerning their hazards is transmitted to employers and employees. This transmittal of information is to be accomplished by means of a comprehensive WHMIS program, which must include container labeling and other forms of warning, material safety data sheets and employee training.
• Subcontractors shall develop, implement and maintain at the project, a written WHMIS program for the nature of work to be performed. Subcontractors must inform their employees of the availability of the program, including the required list(s) of hazardous chemicals, and material safety data sheets required.
• The subcontractor shall ensure that each container of hazardous chemicals on the project is labeled, tagged or marked with the identity of the hazardous chemical(s) contained therein; and must show hazard warnings appropriate for employee protection.
• Subcontractors shall have a material safety data sheet for each hazardous chemical which they use.
• The subcontractor shall provide employees with information and training on hazardous chemicals in their work area at the time of their initial assignment, and whenever a new hazard is introduced into their work area. Subcontractors shall also provide employees with information on any operations in their work area where hazardous chemicals are
present; and the location and availability of the written WHMIS program, including the required list(s) of hazardous chemicals, and material safety data sheets required by the standard.

- The Project Superintendent will advise subcontractors of any chemical hazard that may be encountered in the normal course of their work on the premises, the labeling system in use, the protective measure to be taken, and the safe handling procedures to be used.
- In addition, the Project Superintendent will notify all subcontractors of the location and availability of MSDSs.
- Each subcontractor bringing chemicals on-site must provide the Project Superintendent with the appropriate hazard information on these substances, including the labels used and the precautionary measures to be taken in working with these chemicals.

VI IN CONCLUSION

Think - Plan - Decide - Act Effectively and Safely

Think about the task before you start doing the work.

Plan ahead, layout your work in a safe and logical sequence.

Decide upon the best and safest way to achieve your objective.

Act Proceed with your plan in the safest manner possible considering yourself and those working with or around you.

"SAFETY IS EVERYONE'S RESPONSIBILITY"
Dufferin Construction Company
PreConstruction - Subcontractor Safety Compliance Review
(Ontario)

Project Description: ____________________________________________________________

Name of subcontractor: ____________________________________________________________
Scope of Subcontractor work: _______________________________________________________

Important Note: Where specified in the contract, Dufferin Construction Company reserves the right to verify any statement, procedure, document or other representation made as a result of this review. Completion of this review, subsequent verification or periodic safety audits performed by Dufferin Construction Company does not absolve the subcontractor of the responsibility to ensure a safe and healthful work environment, with full consideration of the nature of the work and the hazards involved, so that human and financial losses are minimized. The use of the term "Subcontractor" refers to a "Contractor" where appropriate and meaningful.

20) Does the subcontractor provide their employees with:
   • hard hats
   • safety footwear (rubber boots)
   • protective clothing
   • eye protection
   • hearing protection
   • respiratory protection

21) Does the subcontractor ensure the availability where required:
   • fire extinguishers
   • fall arrest/travel restraint equipment
   • confined spaces monitoring devices and protective equipment
   • barricades

22) Are subcontractor employees trained to use the following:
   • equipment/vehicle lockout & tagout procedures
   • fall arrest/travel restraint systems
   • fire extinguishers
   • confined spaces atmospheric monitoring devices
   • SCBA systems
   • personnel protective equipment
   • hearing protective devices
   • respiratory protective devices
   • cranes & lifting devices

23) Are trucks and mobile equipment equipped with operational backup warning beepers?

24) Is the subcontractor aware of DCC accident/incident/occurrence response, investigation and reporting requirements?

25) Is the subcontractor aware of the various signs which may be required by the subcontractor to post on the site:
   • fall hazard area, do not enter
   • authorized personnel only
   • no parking
   • open excavation
   • confined space - no entry

DUFFERIN CONSTRUCTION
MOBILE EQUIPMENT/TRUCK SAFETY POLICY

Dufferin Construction is vitally interested in the occupational health and safety of all of its employees, independent brokers/contractors and members of the public. Our company is committed to meeting or exceeding all of the legal minimum requirements, duties, and the standards set by the applicable provincial health and safety legislation and highway traffic legislation.

We encourage every employee and, independent broker/contractor and hourly rental, to be concerned not only about his or her own health and safety, but also to ensure healthy and safe work practices of others around them.

Health and safety is everyone's business. Ensuring full compliance with the applicable provincial health and safety legislation and highway traffic legislation, will not only make our company a healthier and safer workplace, but also improve employee morale and encourage other good business practices.

Dufferin Construction adopts and will enforce the following rules:

➢ All workers must read and become familiar with; the Dufferin Construction Mobile Equipment/Truck Safety Policy, the Ontario Occupational Health and Safety Act, and the Highway Traffic Act and its regulations, and adhere to the safe work procedures as detailed therein.

➢ Dufferin Construction mandates that all dump trucks and mobile equipment entering or operating on Dufferin sites must be equipped with an audible automatic back-up alarm that signals when the truck or mobile equipment is being operated in reverse.

➢ All drivers and operators are to adhere to the Company’s policy for safely backing up and obey the signal person at all times. Signs are posted on Dufferin job sites that “Drivers must obey a signal person”. At no time is a truck or mobile equipment allowed to reverse unless a signal person is present and providing clear hand signals.

Approved by: H&S Department January 13, 2005
to assist the operator. All drivers and operators are to immediately stop if the signal person is not in full view of the operator at all times.

- Hard hats, safety vests and safety footwear is mandatory when operators exit their vehicles and equipment at all Dufferin yards and job sites.

- All drivers and operators must obey all speed limit, stop, and yield signs at all Dufferin locations and surrounding areas. Truck drivers are not allowed to exit their vehicles while being loaded at the Company’s Plants and Yards.

- All truck drivers and mobile equipment operators must have and supply Dufferin Construction with the following information:

1. Valid Drivers’ License and MTCU hoisting license matching the type of vehicle driven where applicable.
2. Ministry of Transportation Registered Gross Weight Papers
3. Proof of Insurance coverage; minimum 2 million dollars ($2,000,000)
4. Proof of ownership
5. Proof that the driver has received a copy of Dufferin Construction Truck Safety Policy and signed acknowledgement sheet.
6. Valid W.S.I.B. Clearance Certificate or Waiver of Coverage, renewed every sixty days
7. Proof of valid C.V.O.R. certificate, maintaining an acceptable violation rate in accordance with criteria set out by the Ministry of Transportation
8. Proof of a current valid Annual Inspection Sticker and Certificate

- Dufferin Construction will NOT accept, tolerate or condone any breach of any statutory requirements of Dufferin’s Mobile Equipment/Truck Safety Policy, the Ontario Occupational Health and Safety Act, and the Highway Traffic Act.

Definitions

**Boundary Limits** means the volume of soil contained by vertical planes placed 1 metre each side of the centre line of the pipeline.

**Contractor or Excavator** means the individual, partnership, corporation, public agency or other entity that dig, bore, trench, grade, excavate or break ground with mechanical equipment or explosives in the vicinity of a pipeline.

**Gas Company** means the individual, partnership, corporation, public agency, or other entity that operates the pipeline system.

**Gas line or Pipeline** means those facilities operated by a Gas Company through which gas is conveyed and includes pipe, components, and appurtenances attached to the pipe such as valves and fittings.

**Locate** means identification on the ground of the position of the pipeline based on records or electronic locating equipment.

**Mechanical Equipment** means any powered excavator, earth mover, earth piercing equipment or any other device that may damage the pipeline.

1.0  General Conditions

1.1 All work shall be carried out in accordance with:

(a) the Occupational Health and Safety Act (OHSA) and Regulations which apply under this Act, including regulations for construction projects; and

(b) the Technical Standards and Safety Act and Regulations which apply under this Act.

1.2 The procedures described herein are prepared in the interest of safety to the general public, the workers carrying out the excavation, and the prevention of damage to gas lines and property.

2.0  Notification

2.1 a) Prior to excavation the contractor responsible for the work shall contact the “Ontario One Call” at the telephone or facsimile numbers listed in Table 1 below, or local Gas Company or the equivalent in the service area, as the case may be, and request locates of the gas lines in the areas where excavation will be taking place. The contractor must receive the locates as described in Section 3.0 prior to commencing any excavation.

b) If removing asphalt but not road base, or removing sidewalk but not curb, a locate is not required.

Call Two Working Days Before You Dig

(Aylmer area, south of London)

(South of Brantford area)

Note: If you are planning to excavate in an area not serviced by any of the above gas utilities please contact the local municipality before excavating.

2.2 The notification shall provide the location where the work will take place, the expected time when the work will begin, the scope of the work, the expected duration, the name, address and telephone number of the contractor, and the name of the contractor's site representative.

2.3 Except in emergency situations, requests for stakeouts or locate information should be made at least 48 hours in advance (two working days).

2.4 Except in cases of emergency, or where the response for the location request has been agreed with the excavator or in extremely remote rural areas, Gas Companies will make every reasonable effort to respond to notification requests and provide locates where applicable within 48 hours (two working days) of the notification.

3.0 Locates

3.1 The locate, using labelled stakes, flags, and/or high visible paint marks, should indicate the centre line of the gas line in the defined area of the proposed excavation.

3.2 When requested, a diagram describing the locate information in 3.1 should be provided to the contractor's site representative if present at the time of locate; otherwise, sent to the person who requested the locate. The diagram should indicate in clear legible terms the locate information and may be qualified by words regarding scale or orientation.

3.3 Where no gas lines are in the defined area of the proposed excavation a verbal confirmation may be provided to the contractor by the Gas Company. Written confirmation will be provided on request.

4.0 Locate Boundaries/Accuracy

4.1 The excavator must not work outside of the area covered by the "Stakeout Information" without obtaining a further stakeout.

4.2 Locate accuracy should be considered to be 1 metre on either side of the surface centre line locate unless the locate instructions specifically indicate other boundary limits.

4.3 Gas lines are usually found within 1.5 metres of the surface. Where the Gas Company knows that the gas line is deeper than 1.5 metres, the Gas Company must so indicate to the excavator. However, this information does not permit the excavator to use mechanical equipment to dig within the boundary limits to locate the gas line.

4.4 Where the gas line cannot be located using the procedures described in Section 6.0, the contractor must contact the Gas Company and the Gas Company must assist with the locate.

5.0 Duration

5.1 Stakes or markings may disappear or be displaced. Old stakeouts should not be used. Where delays occur beyond the specified period stated in 5.2 or where the stakeout markings become unclear, a new locate must be requested by the contractor.

5.2 Where a locate is valid for a specified period of time the deadline must be indicated on the locate form or diagram.

6.0 Initial Exposure

6.1 At no time, with the exception of 2.1 (b), should a contractor or their sub-contractors use mechanical equipment within the boundary limits of the locate without first digging hole(s) to determine the gas line's exact centre line and depth of cover.

6.2 Test holes should in general be excavated by one of the following methods:

a) mechanical equipment could be used immediately outside
of the boundary limits and then hand dug laterally until the gas line is found; or

b) i) hand excavation between the boundary limits of the locate in cuts of at least 0.3 metre (1 foot) in depth,

ii) mechanical equipment could then be used to widen the hand dug trench to within 0.3 metre (1 foot) of the depth of the hand excavation,

iii) repeat step (i) and (ii) until the pipeline is located,

iv) with prior agreement of the Gas Company, machines using vacuum, water or air as the cutting method may be used to locate and expose pipelines as an alternative to hand digging.

6.3 a) concrete saws, jackhammers, hand tools or other similar equipment may be used to break concrete or asphalt on a road or sidewalk surface.

b) With the exception of 2.1 (b), 6.2 (a) and (b), mechanical equipment should only be used to remove broken asphalt or concrete.

c) Concrete below the road surface layers should not be removed without consultation with the Gas Company which may have gas lines encased therein.

6.4 Additional test holes should be dug where:

a) alignment changes are identified by Gas Company representatives, or

b) changes in elevation are identified by Gas Company representatives.

7.0 Excavating After Test Holes Are Completed

7.1 Where test holes in an area have been completed and the gas line located excavation using mechanical equipment may take place provided the following procedures are used:

a) wherever possible, mechanical excavating equipment should be operated parallel to the direction of the gas line when the excavation is within 1 metre of the gas line; and

b) mechanical equipment must not be used closer that 0.3 metre (1 foot) to the gas line;

c) excavation within 0.3 metre (1 foot) of the gas line must be carried out by hand equipment and tools;

d) where the proposed excavation is closer than 0.3 metre (1 foot) to the gas line, the line shall be exposed:

i) by mechanical equipment up to 0.3 metre (1 foot) above the gas line,

ii) by hand equipment and tools within 0.3 metre (1 foot) of the top of the line.

e) as an alternative to hand equipment and tools, with prior agreement of the Gas Company, machines using vacuum, water or air systems as the cutting method may be used to locate and expose the pipeline.

7.2 Guidelines for blasting close to gas pipelines must be obtained from the local Gas Company.

7.3 Guidelines for pipelines needing support must be obtained from the local Gas Company.

8.0 Backfilling

8.1 Where trenches are to be backfilled, the following requirements should be followed:

a) backfilling should be performed in such a manner as to provide firm support under the pipe; and

b) trench must be backfilled with clean fill or granular material free of material injurious to the pipe coating and pipe; the Gas Company must be contacted for the selection of other backfill material; and

c) where flooding of trenches is done to consolidate the backfill, care must be exercised so that the pipe is not floated from its firm bearing on the ditch bottom.

9.0 Abandoned Gas Lines

9.1 Where a line is found during excavation that was not located by the Gas Company, but within the area covered by the locate, never assume the line is abandoned. The Gas Company should be notified immediately to determine if the line is abandoned.

9.2 Abandoned gas lines are defined as lines which have been disconnected and purged in accordance with the CSA Z662 Standard. Excavations in the vicinity of abandoned gas lines shall not be subject to the guidelines in Section 7.0.
10.0 Colour Coding

10.1 Markings on stakes, streets and sidewalks must be yellow.

11.0 Procedure Where Damage Occurs

11.1 If damage to the coating or pipe occurs and no gas is escaping, leave the pipe exposed and contact the Gas Company. In most cases, utilities will not charge excavators for coating repairs.

11.2 If gas is escaping, shut off vehicles or equipment, remove or extinguish all ignition sources, barricade the area off, keep public and workers away. No attempt should be made to control the escaping gas.

11.3 Notify the Fire Department, Police and Gas Company.

12.0 Acts and Regulations

A copy of the relevant sections of the Technical Standards and Safety Act and the Ontario Regulation on Oil and Gas Pipeline Systems are attached as Appendix 1.

Appendix 1

Sections of the Technical Standards and Safety Act:

Offences

37. (1) Every person who,

(a) contraveses or fails to comply with any provision of this Act, the regulations or a Minister’s order;

(b) knowingly makes a false statement or furnishes false information under this Act, the regulations or a Minister’s order;

(c) contraveses or fails to comply with a term or condition of an authorization;

(d) contraveses or fails to comply with an order or requirement of an inspector or obstructs an inspector,

is guilty of an offence and on conviction is liable to a fine of not more than $50,000 or to imprisonment for a term of not more than one year, or to both, or, if the person is a body corporate, to a fine of not more than $1,000,000. 2000, c. 16, s. 37 (1).

Duty of director or officer

(2) Every director or officer of a body corporate has a duty to take all reasonable care to prevent the body corporate from committing an offence under subsection (1). 2000, c. 16, s. 37 (2).

Offence

(3) Every director or officer of the body corporate who has a duty under subsection (2) and who fails to carry out that duty is guilty of an offence and on conviction is liable to a fine of not more than $50,000 or to imprisonment for a term of not more than one year, or to both. 2000, c. 16, s. 37 (3).

Separate offence

(4) Where a person contraveses any of the provisions of this Act, the regulations, a Minister’s order or any notice or order made under them on more than one day, the continuance of the contravention on each day shall be deemed to constitute a separate offence. 2000, c. 16, s. 37 (4).

Administrative penalty

(5) A person against whom an administrative penalty has been levied by a designated administrative authority or, in the absence of such authority, by the Minister does not preclude a person from being charged with, and convicted of, an offence under this Act for the same matter. 2000, c. 16, s. 37 (5).

Time limit

(6) No proceeding in respect of an alleged offence under this Act may be commenced after two years following the date on which the facts that gave rise to the alleged offence were discovered. 2000, c. 16, s. 37 (6).

41. Every contractor and employer shall take all reasonable precautions to ensure that they and their agents and employees comply with this Act, the regulations or a Minister’s order.

Sections of the Oil and Gas Pipeline Systems Regulation:

Ascertaining pipeline locations

9. (1) No person shall dig, bore, trench, grade, excavate or break ground with mechanical equipment or explosives without first ascertaining from the licence holder the location of any pipeline that may be interfered with.

(2) The licence holder shall provide as accurate information as possible on the location of any pipeline within a reasonable time in all the circumstances.

No interference with pipeline

10. No person shall interfere with or damage any pipeline without authority to do so.
Appendix 2

Procedures for using hydro-excavation machines to locate and expose pipelines as an alternative to hand digg...
WEEKLY SAFETY MEETING

Purpose

To provide a uniform company wide policy for holding a reporting "tailgate safety meetings" as required.

Policy

1. Short tailgate safety meetings shall be held at least every ten working days by all crews.
2. A written record of these tailgate meetings shall be made on the attached "Employee Registration Form - Weekly Safety Meeting"

Procedure

- Supervisors of crews shall hold a tailgate safety meeting with their crews at least every ten working days.
- As a minimum, a record of the safety topic(s) discussed shall be made by the person in charge, using the Weekly Safety Meeting form. The form shall be completed by the end of each meeting. The original shall be posted in the crew area until the next tailgate meeting and then retained in the supervisor's files. A copy shall be sent to the Foreman for review.
- Any work-related safety matter may be discussed at tailgate safety meetings. It is recommended that the discussion be limited to one or two topics at each meeting.

Responsibility

- Superintendent are responsible for ensure that tailgate meetings are held and recorded, and retained for five years.
- Foremen shall review tailgate reports and take any necessary action to correct safety deficiencies which cannot be resolved by the Superintendent.

Superintendents shall :

1. Hold tailgate safety meetings at least every ten working days, and when there is a significant change in the type of work activity.
2. Record and report the meeting on the required form.
3. Take any action necessary to correct safety deficiencies or request assistance where the action necessary is beyond their control.

Health & Safety Department Personnel shall :

1. Make spot review of the tailgate safety meeting report for content.
2. Respond to suggestions and issues where appropriate.
Tailgate Meeting Safety Topics
Overview of the Company's Policy Regarding Weekly 'Tailgate' Safety Sessions

Dufferin construction's policy regarding weekly 'tailgate' safety sessions is as follows:

- meetings ideally should be held weekly, but at least as often as once every 10 working days

- meeting topics should be selected in consultation with the project Superintendent and should be relevant to the work, conditions, or hazards present or anticipated on the project

- Weekly 'tailgate' safety sessions must be properly documented and all records maintained at the project
Objectives of Weekly 'Tailgate' Training Sessions

Weekly 'tailgate' training sessions are intended to provide workers with a better understanding of...

- your role as a supportive and concerned Supervisor
- the proper equipment, materials and techniques necessary to perform tasks effectively and above all, safely

Training sessions are not intended to.....

- replace formal training programs
- take the place of proper work practices
- nor permit your crew to perform work that they would not ordinarily perform

Details of the Training Program

Purpose:

Past and present experience within the construction industry shows evidence of high frequency and even higher loss potential accidents resulting from vehicles and equipment travelling in reverse. Both the financial losses and more importantly the tragic deaths and injuries caused by vehicles and equipment backing up unsafely, have raised major concerns in the Construction Industry. This training program is designed to raise awareness of vehicle and equipment back up hazards to workers, equipment operators, truck drivers and supervisors, including foremen and field engineers. Methods of preventing vehicle and equipment back up accidents will be presented and discussed so that the participants can safeguard themselves against this very common hazard.

Description:

This training program consists of 58 slides (PowerPoint), detailed instructor guide notes, a participant questionnaire and a training log.

Target Audience:

The program is targeted towards all workers, equipment operators, truck drivers and supervisors who are working in the Construction Industry and are at risk of exposure to vehicle and equipment back up hazards.

Suggested Procedure:

Following the presentation of the introductory section, 6 further sections relating to methods of preventing back up accidents are to be covered and then summarized in the final slide. The entire presentation should last between 45 minutes to an hour and concludes with a short participant’s questionnaire (10 questions). After completion of the questionnaire, the Instructor should review the answers to the questions with the participants to ensure that they have understood the key topics discussed. The participants are then required to print their names and sign both the questionnaire and the Training Log for record keeping purposes.
Description of the Training Program

Section

1. *Introduction to the Vehicle Backup Safety awareness Program.* – This section introduces the training program and states its objective to raise awareness of the hazards associated with vehicles and equipment travelling in reverse. Emphasis is put on the high frequency and loss potential of back up accidents (average of two per year since 1981).

2. *Methods of Preventing Vehicle & Equipment Back up Accidents.* – This section very briefly presents the 6 methods of preventing back up accidents and stresses the fact that the methods must be practiced in unison if the back up accident prevention program is to be effective.

3. *Warning Devises on Equipment.* – This section describes the advantages and limitations of using back up beepers on construction equipment.

4. *Site Planning.* – This section is directed towards the supervisors or foremen and describes how they can organize site conditions and traffic patterns to best control back up hazards. Topics discussed are: drive-through operations, coordinating workers on foot away from mobile equipment and the use of signs and barricades.

5. *Backup Signal Person or Spotter.* - This section describes where a signal person is required and the responsibilities of the signal person and operator under the Occupational Health & Safety Act & Regulation. Also described are: requirements for backing trucks a through long distances, Personal Protective Equipment, standard traffic control hand signals and how the signal person should be positioned.

6. *Operator Blind Spot Awareness.* - This section illustrates the blind spot areas for typical construction equipment and advises the worker to avoid entering or standing near these operator blind spots.

7. *What Operators Should Do.* – This section points out to equipment operators and truck drivers that they must obey the signal person while backing up. Emphasis is put on the general rule when no signal person is available; the equipment operator should get out and quickly walk around the vehicle (circle check).

8. *What Workers Should Do.* – This section describes the precautions a worker on foot should take when working around mobile equipment.
This manual has been reviewed and endorsed by the Provincial Labour-Management Health and Safety Committee and is fully a document of accord between labour and management authorities.

In the past, members of the public have used printed information that was outdated by subsequent improvements in knowledge and technology. We therefore make the following statement for their protection in future.

The information presented here was, to the best of our knowledge, current at time of printing and is intended for general application. This publication is not a definitive guide to government regulations or to practices and procedures wholly applicable under every circumstance. The appropriate regulations and statutes should be consulted. Although the Construction Safety Association of Ontario cannot guarantee the accuracy of, nor assume liability for, the information presented here, we are pleased to answer individual requests for counselling and advice.

How to prevent injuries and fatalities caused by construction vehicles and equipment operating in reverse

BACKGROUND

Reversing vehicles and equipment on construction projects pose a serious problem for personnel on foot.

Fatal accidents resulting from workers being backed over by dump trucks and other equipment occur all too frequently.

Anyone on foot in the vicinity of reversing vehicles and equipment is at risk. Table 1 summarizes information regarding 22 deaths that occurred on construction sites over a ten-year period.

**BLIND SPOTS**

The main problem with reversing vehicles and equipment is the driver or operator's lack of visibility. Around dump trucks and heavy equipment such as bulldozers and graders there are blind spots where the operator has no view or only a very limited view.

The operator may not see someone standing in these blind spots. Anyone kneeling or bending over in these areas would be even harder to see.

Consequently the driver or operator must rely on mirrors or signallers to back up without running over someone or into something. Figure 1 shows the blind spots for common types of construction equipment.
Figure 1. Dark areas indicate operator blind spots.
ACCIDENT PREVENTION

To prevent injuries and deaths caused by vehicles and equipment backing up, there are four basic approaches:

1) site planning
2) signallers
3) training
4) electronic devices.

SITE PLANNING

Wherever possible, site planners should arrange for drive-through operations to reduce the need for vehicles to back up (Figure 2).

Foot traffic should be minimized where trucks and equipment operate in congested areas such as excavations. Where feasible, a barricade can help to protect workers: for example, by keeping excavation work separate from forming operations (Figure 3).

The hazards of reversing vehicles can also be reduced through separate access for workers on foot. Where possible, for instance, a scaffold stair system should be provided for worker access to deep excavations (Figure 4).

Near loading and unloading areas, separate pedestrian walkways can be roped off or barricaded.
SIGNALLERS

On some projects, you cannot avoid having reversing vehicles or equipment on site. Often, they must share an area with other vehicles and operating equipment – as well as workers on foot.

You must have a signaler or spotter when
a) a vehicle or equipment operator’s view of the intended path of travel is obstructed
b) a person could be endangered by the operation of the vehicle or equipment, or by its load.

A signaler must be a competent worker and must not have any other duties to fulfill while acting as a signaler.

Before a worker can act as a signaler, the employer must ensure that the worker has been given adequate oral and written instructions in a language that he or she understands. The employer must keep, on site, a copy of the written instructions and a record of the training.

A signaler must wear a garment – usually a nylon vest – that is fluorescent blaze or international orange, with 2 vertical 5-centimetre-wide yellow stripes on the front and 2 similar stripes forming a diagonal “X” pattern on the back. These stripes must be retro-reflective and fluorescent. The vest must have an adjustable fit and have a front and side tear-away feature.

If a signaler has to work during the night, he or she must wear retro-reflective silver stripes around each arm and leg.

The signaler must maintain a clear view of the path that the vehicle, machine, or load will be travelling and must be able to watch those parts of the vehicle, equipment, or load that the operator cannot see. The signaler must maintain clear and continuous visual contact with the operator at all times while the vehicle or equipment is moving (Figure 5), and must be able to communicate with the operator using clearly understood, standard hand signals (Figure 6). The signaler must warn other workers on foot of the approaching vehicle or equipment, and must alert the operator to any hazards along the route.
TRAINING

Instruction for drivers, operators, signallers, and workers on foot is essential to reduce the hazards created by reversing vehicles and equipment.

All construction personnel must be made familiar, for example, with blind spots—the areas around every vehicle that are partly or completely invisible to the operator or driver, even with the help of mirrors (Figure 1).

Specific training can then focus on the following points.

Workers on Foot

• Know how to work safely around trucks and operating equipment.
• Understand the effect of blind spots (Figure 7).
• Avoid entering or standing in blind spots.

• Make eye contact with the driver or operator before approaching equipment.
• Signal intentions to the driver or operator.
• Where available, use separate access rather than vehicle ramps to enter and exit the site.
• Avoid standing and talking near vehicle paths, grading operations, and other activities where heavy equipment is moving back and forth.

Drivers and Operators

• Always obey the signaler or spotter. If more than one person is signalling, stop your vehicle and determine which one to obey.
• Remain in the cab if possible in areas where other equipment is likely to be backing up.
• Make sure that all mirrors are intact, functional, and properly adjusted for the best view.

Figure 7. This illustration shows how some personnel on foot are visible to the driver while others are not. The driver cannot see the dark figures because they are passing through blind spots at the front and rear of the truck. The other figures are visible to the driver.
• Blow the horn twice before backing up.

• When no spotter is present, get out and quickly walk around your vehicle. If the way is clear, back up at once (Figure 8).

• Stop the vehicle when a spotter, worker, or anyone else disappears from view.

**Signallers**

• Stay alert to recognize and deal with dangerous situations.

• Know and use the standard signals for on-site traffic (Figure 6).

![Figure 8](image)

• Wear a reflective fluorescent blaze orange vest and bright hard hat for high visibility.

• Use a signalling device such as a bullhorn in congested excavation areas.

• Understand the maneuvering limitations of vehicles and equipment.

• Know driver and operator blind spots.

• Stand where you can see and be seen by the driver or operator.

• Make eye contact with driver or operator before signalling or changing location.

**ELECTRONIC EQUIPMENT**

Since 2000, automatic audible alarms that signal when a vehicle is being operated in reverse have been required on dump trucks.

Alarms offer the greatest benefit when traffic is limited to only one or two vehicles. The warning effect of the alarm is greatly reduced, however, when it simply becomes part of the background noise on-site.

This is a common shortcoming with devices that sound continuously when the transmission is put in reverse, especially in areas where several vehicles are operating at once.

Newer devices using a type of radar to sense objects or people within a pre-set radius appear to be more effective but are not readily available or widely used.

Other technologies such as infrared or heat sensors and closed-circuit television are limited by the effects of vibration, dust, and dirt—conditions all too common on construction sites.

**SUMMARY**

Several different approaches are required to reduce the injuries and deaths caused by backing vehicles and equipment on construction projects.

You need a sensible site layout, sound work practices, signallers, and traffic control in order to reduce or eliminate hazards.

Even more important is training in hazard awareness and in the safeguards outlined by this manual.
DUFFERIN CONSTRUCTION COMPANY

FALL PROTECTION
TRAINING PROGRAM

INSTRUCTOR'S GUIDE

A DIVISION OF ST. LAWRENCE CEMENT INC.
Details of the Training Program

Purpose:

Past experience within the construction industry shows evidence of extremely high loss potential accidents resulting from workers who fall from heights. Both the financial losses and more importantly the tragic deaths and injuries caused by workers falling from heights have raised major concerns in the construction industry. This training program is designed to educate workers and supervisors in the area of fall protection with specific emphasis on equipment and applications.

Description:

This training program consists of 220 colour slides, detailed instructor’s guide notes, a participant questionnaire, a training log and a participant handout. The handout is available in three languages (i.e.: English, Italian and Portuguese).

Target Audience:

The program is targeted toward all workers and supervisors who are working in the construction industry and are at risk of exposure to falls from heights.

Suggested Procedure:

The program is comprised of six sections. Following the presentation of the introduction, the next four sections will cover Equipment, Inspection and Maintenance of Equipment, Applications and lastly, Rescue Procedures. The presentation will conclude with the Summary section. The slide presentation should last between 50 and 70 minutes and concludes with a short participant questionnaire. After completion of the questionnaire, the instructor should review the answers to the questions with the participants to ensure that they have understood the key topics discussed. The participants are then required to print their names and sign both the questionnaire and the training log for the instructors record keeping purposes.
Description of the Course

Section

I Introduction to Fall Protection - This section introduces the training program by listing the three generic types of fall protection and briefly discusses each.

II Travel Restraint and Fall Arrest Equipment - This section covers in detail the different pieces of equipment used by Dufferin Construction Company. It also addresses the reasons why Dufferin has selected these pieces of equipment. Lastly, government approval of the equipment is addressed.

III Inspection and Maintenance of Fall Arrest Equipment - This section instructs the participants on the procedures of inspecting and maintaining the various pieces of equipment. Additionally, it emphasizes the fact that each worker is responsible for inspecting and maintaining their own equipment each time it is used. Lastly, this section explains what to do with equipment that fails inspection or arrests a worker's fall.

IV Applications - This section discusses travel restraint systems and fall arrest systems and explains the difference between these two types of fall protection. The area of fall arrest systems is further broken down into horizontal lifelines, vertical lifelines, and static lines. This section shows specific examples of the above applications and provides step-by-step instruction on the set-up of each of these systems.

V Rescue Procedures for Fall Arrest Systems - This section emphasizes the fact that preplanned rescue procedures are an important part of a fall arrest system. This section also informs the participant that rescue procedures will be covered in a separate training module.

VI Summary - This section summarizes the key points of the training program.
ST. LAWRENCE CEMENT

GUIDELINES FOR THE SAFE CONTROL OF TRAFFIC
I. PERSONAL PROTECTIVE EQUIPMENT

- Required at all times: approved hard hat, safety boots, and a fluorescent blaze orange vest with yellow retro-reflective striping.
- During nightwork, retro-reflective silver stripes are required for each arm and leg.
- Visibility may be further improved by:
  A) Wearing white or light coloured clothing.
  B) Wearing blaze orange coveralls with reflective striping.
  C) Applying red and silver reflective tape to hard hats.

II. PLANNING THE TRAFFIC CONTROL OPERATION

The following steps should be followed when planning the traffic control operation:

1) The superintendent or project engineer arranges to close a lane or roadway with the proper authority. All parties who will be working within the traffic-controlled zone must be notified of the date and time. It is important that no one enters the zone while it is being set-up, other than those performing the work.

2) The Traffic Control Specialist under the direction of the superintendent or project engineer will determine the typical plan to be implemented, based on the contract and road authority requirements (e.g. M.U.T.C.D. and Book 7).

3) The Traffic Control Specialist, project engineer and/or superintendent will meet to review the typical plan. Details such as times, locations, sequencing, pace vehicles, and police requirements should be discussed.

4) The Traffic Control Specialist should drive through the area where the traffic control is required, to identify any possible hazards and/or problem areas that may require changes to the typical plan.

5) When necessary changes have been made to the plan, the foreman completes a TRAFFIC CONTROL DEVICE INVENTORY SHEET (APPENDIX B). This involves counting the devices that are available on-site, compared to that which is required, and ordering additional devices. The Inventory Sheet also acts as a good checklist during set-up, to ensure all required devices have been used.

6) The Traffic Control Specialist instructs his crew on the traffic control requirements and assigns tasks to workers based on their experience working in traffic.

7) Crews load traffic control devices into the trucks. Devices must be loaded in a manner so that the first device required is the last to be loaded.

8) If paid duty police officers are being used; they must be given instructions by the Traffic Control Specialist, regarding their responsibilities on site. The foreman will take the police officers on a tour of the job-site to acquaint them with the environment and make them aware of dangers and potential hazards.
III. DESCRIPTION OF WORK

3.1 DURATION OF WORK

Determining the quantity and type of devices and signs required in a temporary workzone, and the appropriate channeling to be used will be influenced by the duration of work category. Four categories are outlined:

1. MOBILE OPERATIONS
   - Refers to work conducted while moving continuously at a low rate of speed (25 km/hr).
   - Or, to work that is conducted with periodic stopping not exceeding a few minutes.
   - A buffer vehicle equipped with a flashing arrow board must follow the mobile operation on high volume/high speed freeways.

2. VERY SHORT DURATION WORK (VSD)
   - Very Short Duration work refers to work which occupies a fixed location for up to 30 minutes (this includes the set-up and takedown times).
   - The work site may be moved along the roadway and make short stops.
   - Active devices such as flashing lights and TC-12 flashing arrow boards are used to ensure adequate traffic control, notify travelling public and reduce worker exposure to traffic.

3. SHORT DURATION WORK (SD)
   - Short Duration Work requires traffic control for more than 30 minutes and less than one 24-hour period.
   - Be aware that Short Duration work conducted during the nighttime must address certain requirements that during daylight hours are optional.

4. LONG DURATION WORK (LD)
   - Long Duration Work requires a separate work area, for longer than one 24-hour period.
   - Temporary roadways and barriers may be required, and temporary markings might be necessary.

3.2 COMPONENTS OF THE WORKZONE (APPENDIX G)

There are six components necessary for a well designed workzone: Advanced Warning Area Approach Area Transition Area Longitudinal Buffer Area Work Area Termination Area

If physical spacing is permitted, each of these components should be present in most work zones. During the layout of workzone components, attention must be given to allowing for safe access to and egress from the workzone for all construction and supply vehicles.
IV. DEVICE SUPPORT REQUIREMENTS

Traffic control devices must be adequately supported and weighted down. When devices are permitted to fall over, two major problems arise:

1) Important information concerning the workzone is not transmitted to motorists.

2) Fallen signs and other devices become hazardous obstacles.

Both problems can lead to accidents between motorists and between motorists and workers.

4.1 BALLAST

- Sandbags are commonly used as a form of ballast. In winter months the sand may be mixed with salt to prevent freezing.
- TC-54 traffic control delineators use a tire base as ballast. It is important than an adequate number of tire rings be used to ensure the delineator is not easily blown over by passing vehicles and windy conditions.
- NEVER use concrete, rocks, asphalt, or other solid objects as ballast.
- NEVER place ballast on top of delineators. The ballast could easily fall off or become a projectile if the delineator is struck.
- The size of the device will dictate the amount of ballast required. For example, a large sign (120cm x 120cm) will require more sandbags than a smaller sign (75cm x 75cm).
- A minimum of 4 sandbags should be used as ballast for small signs. Larger signs should use 6 sandbags.
- Barricades such as the TC-53A also require ballast. Sandbags may be placed on the crossbar and propped against each leg.

4.2 SUPPORTS

- Sign supports must not be split, cracked, rotten, or damaged in any other way.
- Sign bases must also be maintained in a good condition.
- Signs must be securely fastened to the sign supports. Preferably bolts should be used, for both ease of removal and preservation of the device.

V. SET-UP AND REMOVAL OF TRAFFIC CONTROL DEVICES

5.1 GENERAL PROCEDURES (APPENDIX C)

5.1-a) Definitions

- **Upstream:** with reference to work location, is the direction from which traffic is approaching.
- **Downstream:** is the direction to which the traffic is travelling.
- **Taper:** is the beginning portion of a lane closure, which consists of delineators positioned at an angle across the lane being closed.

- **Tangent:** is the portion of a lane closure which follows the taper, and consists of delineators positioned along the lane line.

### 5.1-b) Direction of Set-up and Removal

- Closures must be set-up in the direction of traffic flow. In this manner, workers are protected by the devices that are upstream from their position.

- Devices must be removed from the roadway in the direction opposite to traffic flow. In this manner workers will be protected while removing the devices.

### 5.1-c) Worker Positioning

- Workers MUST ALWAYS face traffic, whether setting up or removing traffic control devices.

### 5.1-d) Buffer Vehicles

- A Buffer Vehicle is a vehicle that is placed in the workzone or used in mobile operations to provide protection to workers and equipment downstream.

- A Buffer vehicle serves as a warning to motorists that work is taking place ahead while also providing a buffer between workers and errant vehicles intruding into the workzone.

- There are two types of Buffer Vehicle, they are commonly known as a Blocker Truck and Crash Truck.

- A Blocker Truck, is a Buffer Vehicle with a minimum mass of 6800kg but not equipped with a TMA (truck mounted attenuator). The Blocker Truck must be equipped with a TC-12 arrow board and a 360-degree flashing amber light.

- A Crash Truck, is a Blocker Truck equipped with a Truck-Mounted Attenuator (TMA).

- When stationary or moving, the Buffer Vehicle must maintain a safe distance upstream from the workers. This is to prevent workers being injured by the Buffer Vehicle when impacted by an errant vehicle. However, the distance must not be so far that vehicles can easily intrude into the workzone laterally. Recommended distances for the LIDG (Lateral Intrusion Deterrence Gap) are:
  
  a) Freeway Conditions - 70 m
  
  b) Urban Conditions - 50 m

- These distances are guidelines only, and should be adjusted accordingly depending on weather, actual traffic speed, and site conditions.

### 5.1-e) Shadow Vehicles

- A Shadow Vehicle is a vehicle that provides protection to workers downstream.
• Shadow Vehicles are usually pick-up trucks with a TC-12 arrow board.

5.1-f) Improper Procedures

• NEVER “leap-frog” or pass other construction vehicles during traffic control operations, especially if it requires entering and exiting live traffic.

• During nighttime operations, never park or drive within a closure facing traffic with headlights turned on. This may confuse and/or startle motorists. Use beacon lights and hazard lights only, or “block out” headlights with manufacturer approved blinders.

5.2 FREEWAY CONDITIONS – LANE CLOSURE PROCEDURES

5.2-a) Pre-set-up of Devices (APPENDIX C)

• Pre-set-up involves the placement of devices such as signs and TC-54s on the shoulder or off the roadway, so that they may be moved into position quickly when a lane reduction or closure is required.

• A Crash Truck is required to protect workers during the pre-set-up operation. When working along the freeway shoulder the arrowboard must be in CAUTION mode.

5.2-b) Taper Set-up (APPENDIX C)

• Setting-up a taper is the most dangerous part of closing down or reducing a lane of traffic.

• A Crash Truck must be suitably positioned upstream of the operation with the truck mounted arrowboard engaged and indicating the proper arrow mode to warn motorists of the work ahead.

• A Paid Duty Police cruiser should be used to slow or stop traffic upstream of the start of the taper. The cruiser would travel in the lane being closed with lights activated.

• A Dufferin truck should NOT attempt to slow or stop traffic unless it is being used in conjunction with other vehicles as part of a Rolling Closure.

• A Dufferin truck with a trailer mounted arrowboard should follow the installers inside the lane closure until the taper in complete.

• An appropriate taper length for a 100km/hr freeway is 300m with a TC-54 delineator spacing of approximately 18-24m. These distances are a guide only and may vary depending on weather and site conditions.

• If there is no shoulder available for the Crash Truck to work from when setting up the taper section of a lane closure, a Rolling Closure is an acceptable means of worker protection (REF. 5.2-f).

5.2-c) Tangent Set-up (APPENDIX C)

• Once the taper has been completed, the Dufferin vehicle will set the TC-12 arrowboard in position at the end of the taper and ensure that all lights are functioning properly.

• The Dufferin vehicle may continue to act as a shadow vehicle within the closure as the installers continue to place the TC-54 delineators along the tangent section.
• The Crash Truck will continue to follow the installers inside the closure and maintain a LIDG (Linear Intrusion Deterrence Gap) of 70m.

• If traffic speed continues to be a concern, a Paid Duty Police cruiser may be used to slow the traffic in the adjacent “live lane”.

5.2-d) Additional Lanes

• To close additional lanes, the procedure for the taper and tangent set-up should be repeated.

• Each lane should have a Dufferin vehicle acting as shadow vehicle. The vehicle in the lane closest to traffic must be a Crash Truck.

• The police cruiser should remain during the set-up of the tangents if the travelling speed of the traffic is a concern.

5.2-e) Ramp and Transfer Lane Closures (APPENDIX C)

• A Crash Truck must be positioned in the exit/transfer lane as protection for the workers installing the signage and TC-54 delineators.

• Motorists may attempt to exit, cutting in front of the workers installing the delineators. To avoid this problem, a Paid Duty Police cruiser should be used in the adjacent lane to make it more difficult for motorists to exit.

• After the closure is completed, the ramp should be barricaded using TC-53As and a “ROAD CLOSED” sign. The police cruiser could also be left stationary in the closed lane with lights flashing.

5.2-f) Rolling Closure Set-up (APPENDIX E)

• The most effective way to ensure the safety of workers when performing traffic control operations or making changes to traffic control configurations is to perform a Rolling Closure upstream of the operation.

• The Rolling Closure requires a vehicle for each traveled lane of the freeway. Although not required, one of these vehicles should be a Paid Duty Police cruiser.

• Once each company vehicle participating in the Rolling Closure has successfully entered the freeway and is travelling with the flow of traffic, they should begin to move so that one vehicle is travelling in each live lane.

• When a company vehicle or police cruiser has successfully filled each live lane and they are travelling adjacent to one another, the traffic should be brought under control and slowed down gradually.

• All vehicles participating in the Rolling Closure must have 360-degree amber beacon lights and four-way flashers engaged. Crash Trucks must have the truck mounted arrowboard engaged in “Caution Mode”.
5.3 FREEWAY CONDITIONS – LANE OPENING PROCEDURES

5.3-a) Tangent Removal (APPENDIX D)

- Tapers must be removed from the downstream end of the closure, proceeding against traffic.
- Each closed lane should have a shadow vehicle, which reverses through the closure while workers remove delineators. Ensure that 360-degree beacon lights and four-way flashers are on.
- A Crash Truck is required for the closed lane nearest to the live traffic lane. The truck mounted arrowboard must be operating and flashing in “Arrow Mode”.

5.3-b) Taper Removal (APPENDIX D)

- Before tapers are removed, a Paid Duty Police cruiser should stop or slow the flow of traffic upstream of the start of the taper in the lane being opened.
- As the delineators are being removed, the Crash Truck must continue to reverse up the shoulder to provide protection for the workers removing the TC-54s and the TC-12 arrowboard.
- If shoulders are narrow or unavailable, a Rolling Closure is an acceptable means of protecting workers while the taper is being disassembled.
- The above procedures for tangents and tapers may be repeated when multiple lane closures are being disassembled.

5.3-c) Ramp Closure Removal (APPENDIX D)

- A crash Truck must be used to protect the workers as signs, barricades, and TC-54 delineators are removed.
- Barricades and “ROAD CLOSED” signs must be removed first while delineator protection is still in place.
- If the speed of adjacent traffic or vehicles “cutting in” is a concern, a police cruiser should be used to assist with the removal of the closure.

5.4 FREEWAY CONDITIONS – SWITCHING LANE CLOSURES

5.4-a) Procedure (APPENDIX F)

- Switching a lane closure involves changing a right lane closure configuration to a left lane closure configuration, or vice versa.
- A Rolling Closure must be used to perform this type of operation.
- One of the vehicles participating in the Rolling Closure should be a police cruiser, although this is not a requirement.
- Dufferin vehicles must also be positioned on all applicable on-ramps, in order to prevent motorists from entering the freeway during the lane switching procedure.
- Ensure appropriate signs have been changed (i.e. LANE CLOSED and TC-12 Arrowboards).
Once the delineators have been moved and the closure has been re-configured, the Traffic Control Specialist must inspect the site to ensure the closure will not be hazardous or confusing to motorists.

VI. MAINTENANCE OF TRAFFIC CONTROL DEVICES

6.1-a) Items Requiring Care

- Devices must be kept clean from dust, snow, and mud. This requires that delineators, signs, reflectors, and lights are washed regularly.
- Badly damaged and/or non-reflective TC-54 barrels must be replaced.
- Repair or replace damages sign supports and bases.
- Badly scratched, faded, damaged or illegible signs must be replaced immediately.
- Burst sandbags used as ballast on sign bases, must be replaced.
- Burnt out lights on TC-12 arrowboards and Crash Trucks must be replaced immediately.
- Arrowboards require maintenance, batteries on solar boards should be tested regularly, and diesel powered TC-12’s must have regular servicing.
- Delineator spacing on the project is crucial to provide adequate channeling for motorists entering the construction zone, spacing will be verified periodically.
- Site conditions and/or Book 7 will determine delineator spacing, unless otherwise dictated by the contract.

6.1-b) When To Perform Inspection and Maintenance

- Maintenance inspections must be performed prior to commencing traffic control procedures.
- Periodic inspections should be performed throughout the duration of the shift. The number of inspections will be dependent upon the specific job and location.
- During adverse conditions such as wind and rain inspections will be required more frequently.
- Extremely muddy or dusty sites will require cleaning of devices on a regular basis.
- Inspections and maintenance may be required during weekends and holidays, when dangerous conditions are present.
- Replacement of damaged signs and bases should be performed during non-peak traffic periods.
- A final maintenance inspection must be performed before daily shut down, to ensure nothing has been overlooked that might cause confusion to motorists.
6.1-c) Methods and Techniques

- Maintenance of traffic control devices if performed within 3m of traffic must be conducted under the protection of a Crash Truck, if no other approved protection is available.

- The maintenance route must be planned out in advance. Planning will help determine the fastest and safest route, minimizing the worker's exposure to traffic.

- The maintenance route should be planned to minimize the number of times the worker must exit and enter live traffic.

- The "Traffic Control Specialist" on the project will select workers to be responsible for the maintenance and inspection of the traffic control devices. The same workers should always conduct maintenance, as they will become familiar with the route and recurring problems.

- Repairs must NEVER be conducted adjacent to live traffic; instead the damaged device must be replaced and removed to a safe location for repair.

- When replacing TC-54's, the workers must ensure that he is always facing traffic.

- If a delineator is missing, the maintenance workers must replace it immediately, gaps in a lane closure is an invitation for motorists to enter.

- NEVER attempt to retrieve a delineator that has fallen into a traveled lane of traffic on a freeway. The device will eventually be blown off to the shoulder where it can be retrieved safety at a later time.

VII. IMPROVING DEVICE VISIBILITY

- The most important aspect of ensuring device visibility is keeping the devices clean.

- As of June 12, 2000, certain devices will be required to conform to Type III "Hi-Intensity" reflectivity (REF. MTO Temporary Conditions Manual Sec.3/Subsection.2/Page 30). This will significantly increase night visibility.

- As of January 01, 2003, certain devices will be required to conform to Type VII "Diamond Grade" reflectivity (REF. MTO Temporary Conditions Manual Sec.3/Subsection. 2/Page 31). This will further increase visibility for certain vital traffic control signs.

- On freeway construction projects oversize signage is required (i.e. TC-104 instead of TC-4).

- Reflective inserts or TC-54 saddle markers should be attached to concrete barriers that are being used to channel traffic.

- Delineator spacing along curves and tapers should be reduced. Reduction of delineator spacing will provide more visible and effective channeling.

- Additional warning signage may be advantageous in certain circumstances. However, the use of too many signs may cause motorists to be come confused and overwhelmed with information.
VIII. DOCUMENTATION OF TRAFFIC CONTROL WORK

- It is important to keep all records of traffic control activities pertaining to set-up, inspection, maintenance, and removal. Traffic control affects the general public, so if an accident occurs, we must be able to prove that all traffic control procedures were conducted in accordance with the appropriate standards.

- The Traffic Control Specialist should keep a diary on a daily basis, outlining the specifics of the traffic control operation from start to finish. Important points to include are taper lengths, stations, duration of closures, and devices used.

- As an aid to the Traffic Control Specialist and workers, a Traffic Control Report Form (APPENDIX A) should be used.

- If changes to the original traffic control plan are made during set-up, these changes must be noted on the report and/or traffic diary. The reason for the change should be explained and signed by the Traffic Control Specialist who authorized the change.

- All maintenance records should be kept and noted, even if no problems were identified.

- Have the contract inspector review your notes and sign that he is in agreement with the information. If possible, the Traffic Control Specialist should review any notes that the contract inspector has made regarding the traffic control operation.

- At the end of each traffic control operation the Traffic Control Specialist must file all reports in the site office.
WHMIS in Construction

Workplace Hazardous Materials Information System

Construction Safety Association of Ontario
74 Victoria Street, Toronto, Ontario, Canada M5C 2A5
Telephone: (416) 366-1501
MINIMUM AGE OF WORKERS

Purpose

To provide a uniform company wide policy for hiring young workers.

Policy

1. Minimum age of workers on Ontario construction projects is 16 under the current OH&SA and Regulations for Construction Projects.
2. A minimum age of 18 must be attained by those individuals wishing to seek employment with Dufferin Construction Company and work in the field as a unionized labourer or summer student performing duties such as traffic control person, back-up signal person, or other tasks exposing the worker to the hazards associated with a construction project.
3. A minimum age of 16 must be attained by those individuals wishing to seek employment with Dufferin Construction Company and work away from the hazards associated with a construction project such as QCT lab assistant, office clerk, scale house attendant or yard clerk.
4. Senior Management will make the final decision on new worker placement and ensure that new workers are not placed with their father or mother who is the acting supervisor.

Procedure

- No new hires under 18 years of age working in the field.
- No new hires under 16 years of age for non-field related areas of operation.
- This applies to all union and non-union positions.
- The Health, Safety and Environmental Manager must meet with the potential candidate and provide the necessary training courses specific to each jobsite location prior to the young worker starting their first shift.
- All young workers will receive and wear a blue hard hat identifying them as summer students. Whenever possible, a young worker will be paired with an experienced worker who will act as a mentor.

Responsibility

- Superintendents are responsible to ensure that all new hires meet the minimum age requirement as outlined in this policy.

Superintendents shall:

1. Provide a request to the Human Resources Manager or District Manager outlining the number of young workers required for the upcoming construction season.
2. Provide the young worker with the required New Worker Orientation training program either personally or delegating this task to the Project Engineer on the project. The training will be site-specific detailing the potential hazards on the project and safe work procedures to be implemented to ensure worker safety.
3. Ensure that formal training programs are provided to young workers where required under OH&SA legislation. IE – traffic control, back up awareness, fall arrest and others.

Health & Safety Department Personnel shall:

1. Make spot reviews of the new hire listing produced by the Payroll Department to ensure compliance for training and minimum age requirements.
2. Meet with all new workers prior to arriving on the site to verify understanding of Company policies, rules and procedures.
3. Ensure required training programs are conducted in a timely manner as new young workers are hired.
EMPLOYEE PERSONAL CELLULAR PHONE AND OTHER ELECTRONIC EQUIPMENT USE ON PROJECTS

CONTENTS

1.0 Purpose
2.0 Hazard Analysis and Responsibilities

- Appendix A - "Cell Phone Safety" tailgate topic 1.20 and 14.9 DCC Tailgate Training Binder

1. PURPOSE

This section of the Divisional Loss Control Manual is provided in order to establish the control measures necessary to limit the exposure to workers who carry personal cellular phones and other electronic equipment while at the workplace. This may include pagers, blackberries, palm pilots, hand held game units and personal music devices or any type of CD/MP3/Radio units.

The goals of the policy are to ensure:
- Workers are protected from injury or harm as a result of distraction while talking on cell phones or other electronic equipment during working hours;
- Workers are protected from the dangers of moving equipment and other hazards while using a cell phone or other electronic equipment; and
- The project/workplace and Company are in compliance with all statutory and regulatory requirements.

2.0 HAZARD ANALYSIS

2.1 RESTRICTED CELLPHONE and OTHER ELECTRONIC EQUIPMENT USE BY EMPLOYEES ON DCC PROJECTS, YARDS AND PLANTS

2.1.1 Purpose
The purpose of the policy is to reduce workers' risk to the hazards associated with unauthorized use of personal cell phones and other electronic equipment while performing work on DCC projects, yards and plants. Unauthorized use of cell phones and other electronic equipment can contribute to inattention and cause accidents and incidents.

2.1.2 Scope
All health, safety and environmental systems procedures shall be affected by this policy. The policy will cover all hourly Dufferin Construction employees, subcontractors' employees, hourly rental employers and/or independent operators.

2.1.3 Responsibility
The site superintendent is responsible for communicating the policy to all subcontractors, supervisors and workers on the project. The superintendent will ensure the policy is delivered during a weekly safety meeting and monitor compliance with all personnel on the site. Senior Management and the Health and Safety Department will monitor compliance during routine site visits and inspections. Disciplinary action will be brought against any person failing to abide by the policy. The disciplinary action will be as follows:

The first offence will require the Superintendent to give a verbal warning to the worker and ensure this action is documented with copies to the District Manager. The second offence will be in the form of a written warning advising the worker of the non-compliance with Company policy. The third offence will be an automatic one day suspension without pay. The fourth offence will be a three day suspension. The fifth and final offence is termination. The disciplinary action covers the employee's entire work term while employed with Dufferin Construction Company, A business unit of St. Lawrence Cement Inc.
2.1.4 Procedure for Receiving and Making Cellular Calls

Workers are permitted to bring their personal cell phone to the workplace. Cell phones must be turned off during working hours. Permission must be granted by the worker’s immediate supervisor prior to any personal calls being made or received during normal working hours. Personal calls can be made during scheduled breaks or prior to the worker beginning his shift. However, if there is an urgent call needed to be made by the worker, the worker must request permission from his supervisor prior to making any call. The worker will be granted permission on a case by case basis and requested to exit the immediate work area. A safe zone will be identified by the supervisor to ensure the worker’s safety and allow the call to be made without placing the worker in danger or undue harm.

2.1.5 Company Issued Cell Phones and MIKE Units

Supervisors and Lead Hands who have been assigned a Company issued cell phone or MIKE unit are excluded from this policy. Supervisors and Lead Hands using a cell phone at the project must be aware of their surroundings and only utilize the phone when it is safe to do so. The Company has made every effort to install in-car kits to allow operators of vehicles “hands-free” access. It is highly recommended that drivers let the cell phone ring and allow the message center to take the call. See tailgate topic 1.20 for additional safety measures for Safe Use of Cell Phones.
Tailgate Topic No: 1.20
Safe Use of Cell Phone

This tailgate topic is based on recommendations from Traffic Safety magazine. The following tips on cell phone use are meant to protect you, your family and everyone else on the road. Cell phones are a great tool when used properly.

- Only use your cell phone when parked or let your passenger use it
- Never dial the phone or take notes while driving
- If your phone rings while driving, let your voice mail take the call and listen to your message later, when you are parked
- If you must answer a call while driving, let the person you are speaking to know you’re driving; SUSPEND the call until you can pull over

Summary:

'OW, TALK LATER!
Tailgate Topic No: 14.9
Refueling Vehicles and Electrostatic Discharge/Cell Phone Use

Static charges can be generated when refueling your vehicle, locking the nozzle and leaving the gasoline running while returning to the vehicle could produce a static charge that may ignite the gasoline fumes. Never leave the nozzle when fueling your vehicle and never open the vehicle door when fueling your vehicle.

The use of cell phones is prohibited while fueling your vehicle because they may produce a spark; turning the phone on or off and changing the battery have been associated to service center fires. The “Mike” phone/two-way radio systems have mechanical switches that can cause sparks. The Gasoline Handling Code states that no gas will be dispensed when an ignition source is within 3 meters.
DIVISIONAL & PROJECT SPECIFIC,
JOINT HEALTH AND SAFETY COMMITTEES

PURPOSE

This chapter contains policies and procedures for the administration of a Project Joint Health and Safety Committee.

POLICY

Establishment of The Joint Health and Safety Committee

A Joint Health & Safety Committee should be established on all construction projects where the numbers regularly employed exceeds twenty (20) and where the expected duration of the project is to exceed three (3) months.

Structure of the Joint Health & Safety Committee

The Joint Health and Safety Committee shall consist of equal numbers of members representing employers and workers. Worker members shall be selected by the workers, or, if there is a trade union representing the workers, by the trade union.

The Joint Health and Safety Committee have a minimum of two (2) members on projects employing twenty (20) or more workers or a minimum of four (4) members on projects employing fifty (50) or more workers.

The membership of the Joint Health and Safety Committee shall be ideally made up of workers from the different trades employed on the project. Management members shall ideally represent the different employers on the project, as well as, a designate from the constructor.

Worker members shall be employed on the project and not be in a supervisory capacity. Efforts should also be made to encourage attendance of management members of the Joint Health and Safety Committee who are regularly employed on the project.

There shall be two Co-chair persons appointed, one (1) representing management and one (1) representing workers on the project, who shall alternate the chair at the Joint Health and safety Committee meetings.

The names and locations of the Joint Health and Safety Committee members shall be posted in conspicuous locations.

The Joint Health and Safety Committee shall have a minimum of two certified members, one representing workers and one representing management. Certified members are required on projects with 50 or more regularly employed persons and with an expected duration of at least three (3) months.

Note: The section of the Occupational Health and Safety Act will not be applicable until training program and requirements are established and approved by the Workplace Health and Safety Agency.

Frequency of the Joint Health and Safety Committee Meetings

The Joint Health and Safety Committee shall meet at least once every three months.

Meetings of the Joint Health and Safety Committee shall be held at a designated place on the project.

Meeting Agenda

An agenda will be prepared and will contain the minutes of the previous meeting for approval, and other item(s) pertaining to the occupational health and safety on the project including new business.
All items raised from the agenda will be dealt with on the basis of consensus. Formal motions will not be used.

Minutes of the Joint Health and Safety Committee

The Joint Health and Safety Committee shall maintain and keep minutes as a record of its proceedings and make the minutes available for review an examination by a Ministry of Labour inspector and/or post as required for personnel on a project to read.

A recording secretary shall be designated by the Joint Health and Safety Committee to record, prepare and distribute the minutes.

Meeting minutes will represent business transacted at the Joint Health and Safety Committee meeting. Minutes shall record situations and issues discussed, and identify corrective action and recommendations to the constructor if any.

Quorum

A Quorum for the Joint Health and Safety Committee meeting shall consist of at least one (1) member representing management and one (1) member representing workers. One Co-chair person must be in attendance in order to conduct business.

Functions of the Joint Health and Safety Committee

The Joint Health and Safety Committee shall identify, evaluate and recommend resolutions with respect to matters pertaining to occupational health and safety in the workplace to the constructor and/or appropriate contractor.

The Joint Health and Safety Committee members representing workers shall designate a member or members to, in the accompaniment of a management representative(s) inspect the physical condition of the workplace if practical, or a part of the workplace, at least monthly. Where possible the worker representative should be a certified member.

Accidents and Accompaniment

The Joint Health and Safety Committee may designate equally from labour and management two members and/or their alternates if required, to investigate an accident where a worker is killed, or critically injured.

Reporting Procedures

Any individual on-site who discovers a safety-related problem shall immediately report it to their supervisor; or correct it if in their power to do so and if the safety-related problem poses an immediate danger to the health and safety of a worker.

The supervisor shall take action if necessary to correct the safety-related problem or inform the constructors' superintendent if assistance or direction is required.

The constructor who receives written recommendation from a committee shall respond to the Joint Health and Safety Committee within twenty days.

All employees will discuss occupational health and safety concerns with their immediate supervisor before raising it with a member of the Joint Health and Safety Committee.

Payment for Attendance at the Joint Health and Safety Committee Meetings

Time spent by the Joint Health and Safety Committee members attending meetings and otherwise engaged in activities related to the Joint Health and Safety Committee shall be deemed work time and payable at the member's current rate of pay by the member's employer.

The Joint Health and Safety Committee members shall be allowed one (1) hour preparation time prior
to each meeting or longer if the Committee determines it necessary.

**GENERAL**

All members of the Joint Health and Safety Committee will carry-out their duties and responsibilities under the Occupational Health and Safety Act R.S.O. 1980, in good faith and in accordance with the spirit of this Act.

Any amendments to these guidelines must be approved by consensus of the Joint Health and Safety Committee for recommendation to the constructor.

All employees are encourage to discuss their health and safety problems with their immediate supervisor before bringing it to the attention of the Committee.

All problems brought to the attention of the Joint Health and Safety Committee shall be dealt with on the basis of fact. All problem resolutions will be reported in the minutes.
CONTENTS

1.0 Purpose
2.0 Policy
3.0 Procedures for a Safety Related Work Refusal
4.0 Employer Reprisal Prohibited

- Appendix A DCC, Report of Safety Related Work Refusal

1.0 PURPOSE

To establish policy and procedure regarding employee communications relating to unsafe working conditions. This policy will be used only for addressing safety and health problems.

2.0 POLICY

It is the department's policy to provide a place of employment which is safe and healthful. Employees are encouraged to report unsafe conditions so that they can be corrected before an accident occurs.

2.1 UNSAFE CONDITIONS

Each employee has a moral obligation to protect him/herself and co-workers by immediately reporting safety problems.

Unsafe conditions may be reported through:
1. Communication with the immediate supervisor (e.g., informal discussions, tailgate safety meetings, work planning sessions, etc.). This is the first communication contact the employee should make since the supervisor is in the best position to take corrective action. Other secondary communication channels would include the local safety committee or safety and health officer.
2. Use of the Health and Safety Grievance Process which speeds response time.

2.2 HEALTH AND SAFETY GRIEVANCE

- If an employee believes that he/she is working in an unsafe condition (e.g., violation of a safety law, policy, or practice, etc.) the employee shall notify his or her supervisor of the unsafe condition.
- If, after investigation, the supervisor disagrees that it is an unsafe condition, the employee shall identify the unsafe condition(s) in writing and deliver the statement to the supervisor for further consideration by higher level management.
- If the supervisor determines the alleged hazardous condition is safe, the employee will continue to work unless he/she exercises the option to refuse to work, which is described in the following , and his/her request will continue through the Health and Safety Grievance Process.

3.0 PROCEDURES FOR A SAFETY-RELATED WORK REFUSAL

- Under the Occupational Health and Safety Act, a worker may refuse to work or do particular work if he or she has reason to believe that:
  - Any equipment, machine, device or thing he or she is to use or operate is likely to endanger himself/herself or another worker.
  - The physical condition of the workplace in which he or she works or is to work is likely to endanger himself/herself.
  - Any equipment, machine, device, or thing he or she is to operate or the physical condition of the workplace in which he or she works is in contravention of the Act and such contravention is likely to endanger himself/herself or another worker.

3.1 PROCEDURES
WORK REFusal POLICY

1. Upon refusing to do unsafe work, the worker must immediately report the circumstances of the refusal to the employer or supervisor.

2. The employer or supervisor must immediately investigate the report in the presence of the worker and a worker representative. The worker representative must be made available and must attend the investigation without delay; time spent by this representative is deemed to be work time, for which the person shall be paid at his/her regular or premium rate, as may be proper. The worker representative should be a member of the health and safety committee who represents workers, the workplace health and safety representative or a worker selected by the workers because of his or her knowledge, experience and training.

3. Until the investigation is completed, the worker must remain in a safe place near the work station.

4. During the investigation, supervisors must record as many details as possible regarding the refusal. They should include:
   - Date and time of refusal
   - Name and position of refusing worker(s).
   - Specific hazard alleged by the worker, including his/her concerns and when the condition was first noticed.
   - Decision of the employer and when it was given to the worker.
   - Any remedial action taken.

5. If the worker is dissatisfied with the results of the investigation and has reasonable grounds to believe that the circumstances are still such that the work is dangerous, then he/she may continue to refuse work.

6. Upon the continuance of the worker's refusal to work, the supervisor or employer's representative must immediately notify a Ministry of Labour Inspector. Until the ministry is notified, the work cannot be reassigned to another worker and the worker must remain near the work station.

7. The Ministry of Labour Inspector will investigate the work refusal in the presence of the employer, the worker and the worker's representative.

8. Pending the investigation and decision of the inspector,

9. The worker must continue to remain at a safe place near the work station during his/her normal working hours unless:

10. The employer assigns the worker reasonable alternative work during those hours.

11. If such an assignment is not practicable, gives the worker other directions (which may include being sent home).

12. No other worker shall be assigned to the work that is being investigated unless that worker has been advised of the other worker's refusal and the reasons for it.

13. Supervisors must take great care that they do not intentionally penalize any worker for exercising, or seeking to exercise their rights under the Act.

14. After the investigation, the inspector will decide whether the machine, device, thing or workplace is likely to endanger the worker or another person. This decision will be given in writing, as soon as practical, to the employer, the worker and the worker's representative.

15. If the inspector does not consider the refusal to be based on reasonable grounds, the worker is expected to return to work. If, however, the worker maintains he/she has reasonable grounds for refusing such work, the inspector cannot order a return to work. If, however, no reasonable grounds exist for such further refusal, the worker may be subject to disciplinary action by the employer.
WORK REFUSAL POLICY

4.0 EMPLOYER REPRISALS
PROHIBITED

If a worker has acted in compliance with the Act, its regulations or an order made under them, the employer (or any person acting on its behalf) may not, because the worker so acted,

- Dismiss or threaten to dismiss the worker.
- Discipline or threaten to discipline the worker.
- Impose any penalty on the worker.
- Intimidate or coerce a worker.

If a worker complains that the employer (or a person acting on its behalf) has improperly taken any of these actions, he or she may file a grievance or make a complaint to the Ontario Labour Relations Board.

Time ministry inspector contacted (include office contacted, what advised):

Alternative work or other directions given refusing employee(s) (include results):

Ministry inspection details (full details of ministry findings – attach report or orders issued, and any remedial action taken):

Other employee offered the same work (attach the worker's signed statement of being advised of the refusal):

Details of any continuing refusal (include reason given):

Details of any discipline imposed:

- Employee Name:

- Discipline imposed (attach any letters or notes):

- Reasons for discipline:

Note: Copy to be placed in employee's file.
No disciplinary action to be taken without approval of Operations Manager/Health & Safety Administrator
PURPOSE

The purpose of this policy is to establish that reasonable standards and methodology are employed during industrial hygiene surveys; and that the Joint Health and Safety Committee is appropriately consulted and appraised of the results.

POLICY

• All occupational hygiene tests shall be conducted in consultation with the company Joint Health and Safety Committee.

• Occupational hygiene tests will be conducted, recorded, interpreted and reported by or under the supervision of the Health, Safety and Environment Manager.

• Equipment shall be appropriate in consideration of the circumstance being monitored or measured; and testing equipment shall be calibrated and properly maintained.

• Records of all occupational hygiene test shall be kept in a central location and made available

• (within reason) upon request.
Divisional - Loss Control Manual

EMPLOYEE DISCIPLINE - HEALTH & SAFETY
NON-COMPLIANCE

PURPOSE

This section of the Divisional Loss Control Manual is provided in order to establish a standardised, progressive disciplinary policy.

POLICY

Request Sequence

An evaluation to determine the appropriate level of discipline action will be undertaken upon the request of a Superintendent or Manager.

Investigation Sequence

An investigation will be conducted upon receipt of a valid recommendation to initiate discipline action. An investigative review will not be conducted when the recommended level of disciplinary action warrants a verbal correction.

Subsequently, the information shall be employed to establish the appropriate level of discipline (if any), consistent with the two disciplinary assessment factors and any prior occurrences which resulted in discipline action, as prescribed by this policy.

A formal recommendation to initiate disciplinary action shall be submitted to senior management for review, modification or endorsement subsequent to an investigation which confirm:

a) that disciplinary action is warranted; and
b) establishes the appropriate level of discipline action.

Administration and Implementation

Administration of the employee discipline program with reference to health & safety non-compliance shall be performed by the Health and Safety Department. Implementation and discharge of appropriate disciplinary action shall be undertaken by the Operations or Plants & Equipment Department.

Disciplinary Assessment Factors

As a general guide, disciplinary action will be determined with reference to the following two factors:

Factor 1

The extent to which the employee knowingly performed, permitted or contributed to cause a substandard practice and/or condition. The applied definitions of a substandard practice or condition as well as employee knowledge is stated in the appendix to this policy.

Factor 1 determinants are characterised as:

i) Unwitting: This subfactor shall be applied when it is established that an employee without knowledge performed, permitted or contributed to cause a substandard practice or condition.

ii) Inadvertent: This subfactor shall be applied when it is established that an employee with knowledge, but as a result of momentary inattention or oversight performed, permitted or contributed to cause a substandard practice or condition.

iii) Wanton: This subfactor shall be applied when it is established that an employee with knowledge and not as a result of momentary inattention or oversight performed, permitted or contributed to cause a substandard practice or condition.
Factor 2

The actual, potential or probable outcome or severity of an accident, incident, occurrence or loss resulting from a substandard practice and/or condition. The applied definitions of incident and loss are stated in the appendix to this policy. Factor 2 determinants are established with reference to Figure 1a (Factor 2 Assessment Chart.) Individual component point rating scores are summated to establish the total points. Total point ranges and their corresponding Factor 2 Severity Ratings are indicated in Figure 1b.

Levels of Disciplinary Action (Minimum)

An assessment of the two factors shall be used to establish relative position within the discipline matrix. (See Figure 2) Numbers contained within the matrix corresponds to the minimum level of disciplinary action commensurate with consideration of the two factors.

Level and Corresponding Disciplinary Action

1. Verbal Correction. The superintendent will provide a verbal correction to the employee. A written record of this correction will be placed in the employee's personnel file and the employee advised accordingly. An extensive investigation is not required at this level.

2. Written Correction. A written correction notice will be prepared and presented to the employee. The employee will be asked to sign, indicating receipt of a copy of the written correction, and a copy will be placed in the employee's personnel file. A copy of a written correction notice will be forwarded to the employee's Union Business Agent, if applicable.

3. Suspension Without Pay. An employee will be suspended without pay for a minimum of 3-, and a maximum of 10-working days.

The specific duration of suspension shall be established by evaluating the total pint score obtained from the Factor 2 Assessment Chart, prorated to the relative position within the applicable total range (figure 1b). The upper and lower limit of each range shall correspond with the upper and lower duration of suspension respectively. The employee will be asked to sign an acknowledgement of suspension, specifying the reason for this level of disciplinary action. A copy of a written suspension notice shall be forwarded to the employee's Union Business Agent, if applicable.

4. Termination. A request to terminate an employee, will be thoroughly investigated and reviewed to determine if termination is warranted. An employee shall be suspended without pay pending the investigation, evaluation and review of circumstances which have warranted the request for termination of employment. This period of time shall not exceed 3 working days. Upon senior management endorsement of a resolution to terminate, the employee shall be asked to sign an acknowledgement of termination of employment, which shall specify the reason(s) for this level of discipline action. A copy of a written termination notice shall be forwarded to the employee's Union Business Agent, if applicable.

Prior Occurrences Warranting Disciplinary Action

Increasing levels of discipline shall be applied in the event that additional occurrences warranting discipline take place within 2 years from the anniversary date of a prior occurrence.
EMPLOYEE DISCIPLINE - HEALTH & SAFETY
NON-COMPLIANCE

* Important Note: Successive occurrences resulting in disciplinary action within 2 years shall have a cumulative effect. e.g. First incident resulting level “1” disciplinary action; a second incident within 2 years warranting level “2” disciplinary action would result in a cumulative (additive) effect necessitating the imposition of level “3” disciplinary action for the second occurrence.

Additional Disciplinary Provisions

Management reserves the right to enter into any level of discipline action including termination based upon the severity of the occurrence requiring disciplinary action, prior occurrences and the employee’s employment history.

Furthermore, management reserves the right to unilaterally reduce the duration of a suspension without pay as prescribed by policy when the reduction is combined with other appropriate disciplinary sanctions. Sanctions will be considered on their rehabilitative merit.

The level of discipline action (if any) will be discretionary when it is directed at an employee who has suffered an injury as a result of an accident warranting discipline.

Appendix

Definitions:

Substandard Practice or Condition: A substandard practice or condition is any deviation from an accepted standard or practice. The deviation could involve both acts of people and conditions related to physical things.

Employee Knowledge: The confirmation of prior training, licenser, certification, signed receipt of policy or instruction which had or should have addressed the issues related to the substandard practice or condition.

Incident: An undesired event which, under slightly different circumstances, could have resulted in harm to people, damage to property or loss to process.

Loss: An undesirable event that may result in one or more of the following affects:

- harm to people
- harm to property or processes
- performance interruptions
- profit reduction

Details of the occurrence warranting disciplinary action:

Management Acknowledgment of Undertaking

In response to the recommendation of the above noted Supervisor(s) and/or Management members, St. Lawrence Cement has investigated the details of the occurrence warranting disciplinary action; and applied the procedures prescribed in the attached chapter of the Divisional Health & Safety Manual, Employee Discipline-Health and Safety Noncompliance.

Assessment Factor 1
As a result of the investigation, it was established that the above noted employee performed, permitted or contributed to cause a substandard practice and/or condition, with knowledge characterized as:

Assessment Factor 2
Additionally, it was established that the actual, potential, or probable outcome or severity of the accident, incident, occurrence or loss resulting from a substandard practice or condition was:

As a result of the application of this policy and in consideration of any prior occurrence(s) resulting in disciplinary action, Management of St. Lawrence Cement has resolved to impose the following disciplinary action toward the above noted employee.

EMPLOYEE DISCIPLINE - HEALTH & SAFETY
NON-COMPLIANCE

Employee Acknowledgment

...Continuation of previous page.

I, the undersigned employee, acknowledge having been advised of the intent of St. Lawrence Cement to undertake the following level of disciplinary action against me:

I further acknowledge the following:

- that a representative of St. Lawrence Cement has thoroughly reviewed the details relating to the occurrence which has warranted disciplinary action being undertaken against me.
- receipt of a copy of the Company's Divisional Health & Safety Manual with reference to Employee Discipline - Health and Safety Noncompliance (June 2003) and that the policy has been thoroughly explained to me.
- that a representative of St. Lawrence Cement has reviewed the policy with reference to any prior discipline within the past two years, as well as the methods and procedures employed to determine the level of discipline deemed appropriate with regard to the assessment factors prescribed by policy.
- that except in the event of termination of my employment, increasing levels of disciplinary action shall be applied against me in the event that an additional occurrence warranting discipline occurs within 2 years of this date, as prescribed by policy.
- that St. Lawrence Cement reserves the right to enter into any level of disciplinary action against me, including termination of my employment based on the severity of the occurrence or any prior occurrence(s), as well as my work performance and employment history.
- a copy of this letter of disciplinary action shall be retained in my personnel file and except in the case of a verbal correction, a copy of this letter along with the attached policy will be sent by registered mail to my union business agent, if applicable.

Objective

Provide Supervisors, including Superintendents, Project Engineers and Foremen with guidelines to enable them to identify confined space work for which they can act as the competent worker, implement the appropriate control measures and document pertinent information regarding the confined space work.

Outline

1. Definition of Confined Space
2. Examples of Confined Spaces in construction.
3. Confined space work in which Operations personnel (Superintendent, Project Engineer, Foreman) may act as the Competent Worker.
4. Confined Space Work in which the Health and Safety Department MUST be involved prior to allowing work to commence.

1. Confined Space Defined:

A confined space is any area that is not designed for continuous human occupancy. It has limited access and ventilation. It is also susceptible to hazards such as in-flow of water, gas, or solid particulate. A confined space may have sloping sides such as a bin or hopper that lead to a crusher, auger or restriction. Other hazards include, but are not limited to, bridging of material, electrical hazards, oxygen deficiency, falling from heights, radiation, toxic gas or vapour, and fire or explosion.

The definition of “Confined Space” as per the Occupational Health and Safety Act and Regulations for Construction Projects, is as follows:

- means a space to which or from which access or egress is restricted and in which, because of its construction, location or contents or the work activity therein, a hazardous gas, vapour, dust or fume or an oxygen-deficient atmosphere may occur

2. Examples of “Confined Spaces” in Construction:

The following are a few examples of typical “confined spaces” in construction. There are numerous other “confined spaces” in construction; always consult with the Health and Safety Department if you are unsure whether a work area should be considered a confined space.

- new and existing manholes or maintenance holes
- sewer or watermain pipe in which a worker can enter
- culverts in which a worker may enter
- voids of a bridge in which a worker may enter, i.e., tubs, box beam etc.
- formwork in which a worker may enter
- concrete drum mixer on concrete plant
- silos for cement or other material storage
WORKING IN CONFINED SPACES - "Special Conditions"
Low Hazard Confined Spaces

- bins and hoppers of an asphalt plant, concrete plant, paving equipment or aggregate crushing plant
- a concrete mold in which a worker may enter

3. Allowable "Confined Space" Work (without consulting with H&S Dept.):

Work may occur in a confined space under the supervision of a competent worker without the involvement of the Health and Safety Department in the following circumstances when the conditions and procedures set out in this section are followed:

General Requirements:
- there is a means of egress from the parts of the confined space that are accessible to workers
- all mechanical equipment in the confined space is disconnected from its power source and locked out
- all pipes and other supply lines in the confined space whose contents are likely to create a hazard are locked out, blanked off and tagged appropriately.
- a competent worker tests and documents the air quality in an open space to ensure the gas monitor is working properly. Immediately thereafter, the competent worker tests and evaluates the confined space before a worker enters it to confirm the space is free from hazard to a worker while the worker is present in it and as often as necessary to ensure that it remains free from hazard.
- the competent worker completes a Confined Space Entry Permit on which the results of the tests are documented, special requirements are stipulated, and any other instruction for confined space entry are noted and communicated to the workers who will conduct the work in the confined space. The competent worker and workers entering the confined space sign the Confined Space Entry Permit confirming acknowledgment of the criteria to enter. A copy of the document must be retained on the site files.
- No entry allowed in confined space where there is or is likely to be a hazardous gas, vapour, dust, mist, smoke or fume, an oxygen content of less that 18 or more than 23 per cent; or contains or likely to contain explosive or flammable gas, dust, mist, or vapour; the Health and Safety Department must be notified and will supervise the work.

Specific Requirements and Procedures:

The following procedures are specific to the confined space. These procedures must be used in addition to the GENERAL CONDITIONS outlined above.

a) Manholes and Sewers (new and existing):
- gas monitor to be used to test open air outside of manhole for oxygen level, gas and explosives levels as indicated on the monitor for control
purposes and documented on the Confined Space Entry Permit. Subsequently, the Gas Monitor is to be lowered to the work level, or a sampling tube is to be lowered and air pumped into the monitor; and all levels are to be recorded on Confined Space Entry Permit form.

- identify any other potential sources of hazards to be controlled such as fall hazards, deficient lighting, etc.
- if all factors indicated are within acceptable limits, competent worker to complete and sign Entry Permit allowing workers to enter.

b) **hoppers and bins of equipment:**
- power source for operating mechanisms to be locked and tagged out prior to workers entering equipment as per specific equipment procedures.
- if working in bins or hoppers, signs are posted to warn the operator normally feeding the bins that work is being conducted
- all material stored to fill bins or hoppers are to be emptied or locked out or blanked to prevent material from entering the bin or hopper (if a hatch opens accidentally)
- adequate ventilation and illumination be provided for the workers

c) **drum mixer for concrete plant:**
- power to equipment is turned off, locked out and tagged out
- drum is equipped with appropriate ventilation and lighting
- adequate access and egress from the mixer is provided i.e., portable ladder or work platform.
- worker to use appropriate personal protective equipment dependent on the activity to be undertaken; for cleaning and chipping concrete, respiratory protection, hearing protection, metatarsal protection, eye protection (possibly shield) and skin protection
- NO WELDING in drum without prior approval by the Health and Safety Dept.

- **culverts:**
  - air quality test must be conducted using air monitor as stipulated above in New and Existing Sewers/Maintenance holes
  - adequate ventilation and lighting to be provided
  - if motorized equipment used and ventilation is not adequate, scrubbers may have to be used on equipment to reduce hazards associated with carbon monoxide
  - there must be no hazard of deep water or sudden in-rush of water into culvert.

e) **bridge tuns and voids:**
- air quality must be verified as per procedure outlined in (a) above.
- adequate ventilation and lighting to be provided
- identification and control of potential hazards with task to be undertaken inside bridge, i.e. chipping or patching of concrete presenting nuisance to skin or, more severely, burns to skin
- adequate access and egress from the bridge voids or tuns i.e., ladder, suspended scaffold etc.
WORKING IN CONFINED SPACES - "Special Conditions"
Low Hazard Confined Spaces

- plan for escape or extraction of workers communicated to workers.
f) formwork

- concrete molds

4. Confined Space Work in which Health and Safety Department Personnel must be notified and involved in:

a) confined space in which the air sampling/testing indicates a hazardous environment such as low or high oxygen level, toxic gas, or high explosives level.
b) confined space where there is or is likely to be a hazardous gas, vapour, dust, mist, smoke or fume, an oxygen content of less than 18 or more than 23 per cent; or contains or likely to contain explosive or flammable gas, dust, mist, or vapour
c) confined space in which welding is to be conducted
d) confined space in which there exists or likely to exist high water levels or sudden in-rush of water or other liquid
e) confined spaces in which solvents or other chemicals may be used
f) confined spaces in which mechanical equipment introduces hazardous gases.
LOCKOUT AND TAG PROGRAM

- Appendix A Terms and Definitions
- Appendix B Lockout and Tag Procedure Self-Assessment Checklist, and Lockout and Tag Inspection Form

1.0 INTRODUCTION

1.1 PURPOSE

This policy describes St. Lawrence Cement (SLC) Lockout and Tag Program. The Program establishes minimum requirements for the lockout and tag of energy-isolating devices whenever servicing and maintenance activities are performed on equipment. Where "unexpected" energization or startup of the equipment or the release of stored energy could occur and possibly result in injury, these requirements shall be applied to ensure that the equipment is stopped, isolated from all potentially hazardous energy sources, and locked out and tagged before employees begin servicing and maintenance activities. Note that the term "equipment" as used in this policy to refer to machines, facilities, equipment, and equipment components.

- Appendix A of this policy contains terms and definitions;
- Appendix B contains a Lockout and Tag Procedure Self-Assessment Checklist and a Lockout and Tag Inspection Form.

Supervisors shall use the checklist to ensure compliance with the requirements of the SLC Lockout and Tag Program. The form shall be used to document the equipment on which lockout and tag procedures (described in Section 4 of this policy) were performed and to identify any discrepancies uncovered.

1.2 COMPLIANCE

All personnel shall comply with the requirements of the Lockout and Tag Program. Failure to comply with this program may result in disciplinary action, as described in Chapter 10 of the Divisional - Loss Control Manual.

2.0 APPLICABILITY

The Lockout and Tag Program applies to all SLC personnel (see Appendix A for definition). It also applies to contractor and subcontractor personnel who do not have an equivalent lockout and tag program that satisfies regulatory requirements and St. Lawrence Cement. Section 4.4.4 provides further details on contractor/subcontractor personnel.

In addition, the program applies to servicing and maintenance activities (including lock out and tag) that are part of a facility or program's normal operations. These include:

- The removal or bypass of a guard or other safety device.
- Activities that require a person to place his/her body into an area of the equipment where work is being performed on material (point of operation) or where an associated danger zone exists during a machine-operating cycle.

The Lockout and Tag Program does not apply to:

- Minor tool changes, adjustments, and other minor servicing activities that take place during normal operations provided that such activities are routine, repetitive, and integral to the use of the equipment.
and the work is performed using alternative measures that provide effective personnel protection.

- Work on cord and plug-connected electric equipment if exposure to the hazards of unexpected energization or start up of the equipment is controlled by unplugging the equipment from the energy source or if the plug is under the exclusive control of the employee performing the servicing or maintenance activity. Pneumatic tools may also fall into this category provided that they can be completely isolated from their energy source.

- Hot tap operations that involve transmission and distribution systems for electricity or substances (e.g., gas, steam, water, or petroleum products) when these activities are performed on energized electrical systems or pressurized pipelines, provided that the supervisor can demonstrate:

  ⇒ Continuity of service is essential.
  ⇒ Shutdown of the system is impractical.
  ⇒ Documented procedures are followed and special equipment that will provide proven, effective protection for employees is used.

A wide variety of energy sources that may need to be locked out and tagged during servicing or maintenance of the equipment is covered under this Program. These include, but are not limited to:

- Electrical
- Hydraulic
- Pneumatic
- Mechanical
- Gravity
- Thermal
- Chemical
- Fluids and gases
- Water under pressure
- Steam

3.0 REGULATORY SUMMARY

The SLC Lockout and Tag Program meets regulatory requirements of the OHSA and safety regulations.

4.0 LOCKOUT AND TAG PROCEDURES

This section contains procedures to properly lock out and tag equipment when performing servicing and maintenance activities. Section 4.3 describes the procedure for equipment that does not require written lockout and tag procedures. Section 4.4 describes activities that require written procedures. The other sections provide supporting information.

A lockable energy-isolating device shall be installed on equipment before personnel begin any servicing or maintenance activity that might result in the unexpected release of hazardous energy. Non-lockable energy-isolating devices shall be designed or modified to accept a lockout device whenever equipment is replaced, new equipment is installed, or a major modification is performed. In addition, personnel must use personal protective equipment (PPE) when performing these activities. See Appendix A for the definition of PPE.

4.1 REQUIRED DOCUMENTATION

No written procedure is required if the equipment meets all the criteria in Section 4.3, "Single-Point Lockout and Tag." If the equipment does not meet these requirements, however, a written lockout and tag procedure will be required as described in Section 4.4. The procedure shall describe controls for potentially hazardous energy when personnel are engaged in the activities covered by the...
LOCKOUT AND TAG PROGRAM

Lockout and Tag Program. It shall also include:

- A specific statement of the intended use of the procedure.
- Specific steps for shutting down, isolating, blocking, and securing machines or equipment to control hazardous energy.
- Specific steps for the placement, removal, and transfer of lockout devices and associated tags and the person responsible for these devices.
- Specific requirements for testing the equipment to determine and verify the effectiveness of the lockout and tag, and other energy control measures.

The procedure may be included in an OSP or FSP or may be a separate procedure maintained by the equipment supervisor. The procedure shall be readily available to any authorized employee and for periodic inspection.

A single, generic procedure may be developed for facilities that have more than one example of a specific type of equipment (e.g. water pumps, air conditioning units) provided that each of the following elements is clearly identified:

- Types and locations of equipment operating controls.
- Types and locations of energy-isolating devices.
- Types of stored/residual energies and methods to dissipate or block those energies.
- Method of verifying isolation of the equipment.

4.2 PROTECTIVE MATERIALS AND HARDWARE

The functional supervisor or the equipment supervisor shall provide authorized employee(s) the appropriate PPE, including locks and tags. The functional supervisor shall also provide any additional locks and tags that other authorized SLC employees may need while working in a facility. The equipment supervisor normally shall provide any special chains, wedges, key blocks, adapter pins, self-locking fasteners, or other hardware required for isolating, securing, or blocking the equipment from energy sources.

The lockout devices and associated tags shall be singularly identified, durable, standardized, and substantial. To meet this requirement, only the following locks and tags shall be used at St. Lawrence Cement:

- Standard Master keyed locks. These locks shall be the only device used to lock out and tag equipment; when labeled with "Danger" stickers, they shall not be used for any other purpose. The locks shall have approved "Danger" stickers. Use of the "name" and "department" sections of these stickers is optional.

Lockout tags. These tags are to be used for all personnel safety-related lockouts. They shall have the name of the employee applying them. All other applicable information on the tag shall be supplied by that authorized employee. Each tag shall be used only once.

NOTE: Equipment may be locked for administrative or operational purposes. A lock of suitable size (with no danger sticker attached) shall be used with the yellow CAUTION tag if appropriate.

4.3 SINGLE-POINT LOCKOUT AND TAG

When performing servicing and maintenance on equipment that meets the criteria below, a written procedure is not required. A laminated sign, painted sign, or
similar durable device shall be placed next to the equipment indicating the location of the single energy-isolating device, so long as:

- The equipment has no potential for stored or residual energy or re-accumulation of stored energy after shutdown that could endanger employees.
- The equipment has a single energy source that can be readily identified and isolated.
- The isolation, lockout, and tagging of the energy source will completely de-energize and deactivate the equipment.
- The equipment is isolated from the energy source and locked out and tagged during servicing or maintenance.
- A single lockout device and tag will achieve a locked out and tagged condition.
- The lock is under exclusive control of the authorized employee performing the servicing or maintenance activities. If the lock has two keys, the second key shall be under the positive control of the authorized employee. At the discretion of the authorized employee, the functional supervisor may have custody of the second key. Under no circumstances shall there be more than two keys for a lock.
- Servicing or maintenance does not create hazards for other personnel.
- The equipment has no record of incidents involving unexpected activation or re-energization of the equipment during servicing or maintenance.

4.4 GENERAL LOCKOUT AND TAG PROCEDURES

NOTE: The process of locking out and tagging complicated electrical systems is considered work on energized equipment and is therefore classified as a Class 3 or Class 4 hazard until the sequence of lockout and tag described in Section 4.4.1 is complete. As a minimum, such operations require an authorized employee and a co-worker to perform the work.

4.4.1 Sequence of Applying Lockout and Tag

The following procedure shall be used to lock out or tag equipment during servicing or maintenance activities:

1. The equipment supervisor shall notify all affected employees that servicing or maintenance is required on the equipment and that it must be shut down, locked out, and tagged.
2. The authorized employee shall refer to the equipment supervisor's procedure to identify the type and magnitude of the energy that the equipment utilizes, understand the hazards of the energy, and know the methods for controlling the energy sources.
3. If the equipment is operating, shut it down using the normal shutdown procedure (e.g., depress the stop button; open the switch; and close valve).
4. De-activate the energy-isolating device(s) to isolate the equipment from the energy source(s).
5. Lock out the energy-isolating device(s) with the authorized employee's lock(s) and attach a completed tag to each lock.
6. Stored or residual energy (such as that in capacitors, springs, elevated machine members, rotating flywheels, hydraulic systems, and air, gas, steam, or water pressure) must be dissipated or restrained by methods such as grounding, repositioning, blocking, or bleeding down.
7. Ensure that the equipment is disconnected from the energy source(s). First check that no one is exposed, then verify that the equipment is isolated by pressing the push button or operating other normal control(s), or by testing the equipment to make certain it will not
operate. Use of appropriate test equipment may be required to verify that the equipment is de-energized. Whenever the authorized employee will be working near normally energized equipment or parts, these must be verified as de-energized using appropriate test equipment. Test equipment shall be verified as operational prior to use.

CAUTION: Return operating control(s) to the neutral ("off") position after verifying that the equipment is isolated.

CAUTION: Ensure the integrity of the lockout and tag procedure following any extended absence of the authorized employee.

4.4.2 Group Lockout and Tag Procedures

When servicing or maintenance activities are performed by a crew, department, or other group, the procedures used shall afford these personnel a level of protection equivalent to that provided by the implementation of a personal lockout device and associated tag. Group lockout and tag procedures must include, but are not necessarily limited to the following specific requirements:

- One authorized employee, designated by the group's supervisor, shall have primary responsibility for a defined number of other personnel working under the protection of a group lockout and tag;

OR

- One authorized employee shall be designated to ascertain the exposure status of individual group personnel with regard to the lockout and tag procedure for the equipment. When more than one crew, craft, or department is involved, that designated authorized employee shall be responsible for the overall job-associated lockout and tag procedure and shall coordinate the affected work forces and ensure continuity of protection. Each authorized employee shall affix a personal lockout device and associated tag to the group's lockout device, lock box, or comparable mechanism when he/she begins work and shall remove those devices when he/she completes work.

4.4.3 Lockout and Tag During Shift or Personnel Changes

To maintain continuity in the protection provided for those involved in the lockout and tag procedure, and for the orderly transfer of the lockout and tag device, the steps below are necessary when personnel or shifts change:

- **Personnel Change** - The arriving authorized employee's lock and tag shall be applied before the departing authorized employee's lock and tag are removed.

- **Shift Change** - The lock and tag of at least one authorized employee on the arriving shift shall be applied before any locks and tags of the departing shift are removed. The departing crew will inform the arriving crew of the status of the equipment and the work in progress.

4.4.4 Outside Contractor's & Subcontractor's Lockout and Tag Procedures

Whenever outside servicing personnel (i.e., independent contractors, subcontractors, service vendors) are to be engaged in activities covered by the scope and application of the SLC Lockout and Tag program, the on-site supervisor and the outside contractor/subcontractor supervisor shall inform each other of their respective lockout and tag procedures. The on-site
equipment supervisor shall ensure that his/her employees understand and comply with the requirements of the outside supervisor's procedures. Note that this may include the use of locks and tags that are similar but not identical to those used with the SLC Lockout and Tag Program. Outside contractors/subcontractors who do not have a lockout and tag program shall be required, by terms added to the (sub)contract, to comply with SLC's program. In such cases, the SLC department using the contractor or subcontractor shall furnish the required locks and tags.

4.5 ENERGY-ISOLATING DEVICE LIMITATIONS

If the energy-isolating devices cannot be locked out:

- Have a qualified person install a suitable lockout attachment on the energy-isolating device, then proceed with the lockout and tag procedure in Section 4.4.1.

OR

- If approved by the equipment supervisor and facility management, locate a lockable energy-isolating device (e.g., a panel board or switch board feeding the unlockable device) that will effectively isolate the device. Properly isolate, lock, and tag the device.

OR

- Have a qualified person open (or close) the energy-isolating device (i.e., circuit breaker or valve), disconnect the wiring or piping (or insert a blank flange) from the device, tag the wiring or piping (or blank flange), tag the energy-isolating device, then proceed with the lockout and tag procedure in Section 4.4.1.

- NOTE: Any tag used with disconnected wiring, as described above, or any tag used with a blank flange or physically disconnected piping shall indicate the point of disconnect or the location of the blank flange.

OR

- Open (or close) and tag the energy-isolating device. Assign a person as a safety watch to ensure that the energy remains isolated for the duration of servicing or maintenance, then proceed with the lockout and tag procedure in Section 4.4.1.

4.6 SEQUENCE OF REMOVING LOCKOUT DEVICES AND ASSOCIATED TAGS

4.6.1 Removal of Lockout Devices and Associated Tags by Authorized Supervision

Lockout devices and their associated tags shall be removed from each energy-isolating device only by the authorized employee who applied them.

Exception: When the authorized employee who applied the lockout devices and associated tags is not available to remove them, the lockout devices and associated tags may be removed by the authorized employee's functional supervisor in coordination with the equipment supervisor if:

- The authorized employee's functional supervisor and the equipment supervisor verify that the authorized employee who applied the lockout devices and associated tags is not at the workplace.
- All reasonable efforts have been made to contact the authorized employee to inform him/her that the lockout devices and associated tags have been removed.
- The functional supervisor determines that the equipment or area is safe before the lock is removed.
- The authorized employee is informed that the lockout devices and associated
tags were removed before he/she resumes work.

4.6.2 Requirements for Testing or Repositioning Equipment

If the lockout devices and associated tags must be temporarily removed from the energy-isolating device and the equipment that is energized to test or position any of its components, follow the sequence of actions below:

- Clear the equipment of tools and materials and have employees leave the equipment area.
- Remove the lockout devices and associated tags from the energy-isolating devices in accordance with Section 4.7.
- Energize the equipment, then proceed with testing or positioning the equipment.
- De-energize all systems and reapply the energy control measures in accordance with Section 4.4.1. Continue servicing and/or maintenance activities.

4.7 SEQUENCE OF RESTORING THE EQUIPMENT TO SERVICE

When servicing or maintenance is completed and the equipment is ready to be returned to a normal operating condition, follow the sequence of actions below:

1. Check the equipment and the immediate area to ensure that nonessential items have been removed, that all components are operationally intact, and that all guards or other protective features are restored.
2. Check the work area to ensure that all personnel are safely positioned away from the equipment.
3. Verify that the controls are in the neutral position.
4. Remove the lockout devices and associated tags, then re-energize the equipment. Note that removal of some forms of blocking devices may require re-energizing the machine before the blocking device can be safely removed.
5. Notify affected employees that servicing or maintenance is completed and the equipment is ready for use.
6. Complete the lockout and tag log entry.

4.8 PERIODIC INSPECTIONS

Functional supervisors shall periodically (at least annually) inspect the lockout and tag procedures conducted by authorized employees to ensure that these procedures and the requirements of the SLC Lockout and Tag Program are being followed. Periodic inspections shall include a review of the responsibilities (as defined in the lockout and tag procedures being inspected) of the authorized employees assigned to work on the equipment.

Functional supervisors shall perform periodic inspections or they may designate an authorized employee (other than the employee being inspected) to perform the inspections. If another authorized employee performs the inspection, the functional supervisor shall accompany him/her and observe the procedures.

The functional supervisor shall certify that the inspection was performed by identifying on the Lockout and Tag Inspection Form (Appendix B) the equipment for which the lockout and tag procedure was being utilized, the date of the inspection, the names of the employees included in the inspection, and that of the person who performed the inspection. Any deviations or inadequacies identified during the inspection shall be corrected before further lockouts are performed.

4.9 MAINTAINING LOCKOUT AND TAG LOGS
Lockout and tag logs shall be maintained in accordance with SLC administrative procedures. As a minimum, lockout and tag logs shall include the name of the authorized employee, the name of the equipment, the date the lock(s) and tag(s) were installed, and the date when they were removed. The functional supervisor is responsible for ensuring that authorized employees complete the required logs and records.

4.10 DEACTIVATION AND MOTHBALLING

During de-activation or mothballing of a plant, facility or building, it may be necessary to secure, lock, and tag electrical, compressed air, water, or other utility or programmatic services but no maintenance is to be performed. Locks and tags may be installed by the facility manager, building coordinator, or by someone designated by facility management if that individual is an authorized employee.

5.0 RESPONSIBILITIES

5.1 SUPERVISORS

5.1.1 Equipment Supervisors

Equipment supervisors are responsible for:

- Notifying affected employees when the equipment will be locked out for maintenance or other purposes. Notification may include methods such as:
  - Contacting each affected employee on a list of those involved with specific equipment.
  - Posting notices at the entrances to work areas.
  - Making announcements at meetings, over building address systems, or through electronic distribution.
  - Fixed status boards.

- Maintaining specific steps for shutting down, isolating, locking, tagging, blocking, or relieving stored energy for the equipment in their area of responsibility.

- Ensuring that procedures clearly and specifically outline the scope, purpose, authorization, rules, and techniques to be utilized to lock out and tag sources of hazardous energy for equipment in their area of responsibility, and for making these procedures available for periodic inspection.

- Exchanging information with outside contractor and subcontractor supervisors about their respective lockout and tag procedures.

- Ensuring that their personnel understand and comply with the requirements of outside subcontractors’ lockout and tag procedures.

- Ensuring that appropriate training has been conducted for those affected employees working in the facility.

- Providing PPE (including locks and tags) for authorized employees if it is not provided by the functional supervisor.

- Providing any special chains, wedges, blank flanges, key blocks, adapter pins, self-locking fasteners, or other hardware required for isolating, securing, or blocking energy sources.

5.1.2 Functional Supervisors

Functional supervisors are responsible for:

- Ensuring and certifying that periodic inspections of the lockout and tag procedures used by authorized employees are conducted.

- Providing PPE, including locks and tags, to authorized employees.

- Removing lockout and tag devices, in accordance with the procedure in Section 4.6, when the authorized employee who applied them is not available.

Approved by: H&S Dept. 12A- Revision Number: 4 January 6, 2005
Lockout and Tag Program

- Ensuring that authorized employees complete the required logs and records.
- Ensuring that personnel understand the purpose of the SLC Lockout and Tag Program and that they have the knowledge and skills required for the safe application, usage, and removal of energy controls.

5.2 Employees

5.2.1 Affected Employees

Affected employees are responsible for:

- Obtaining the training and retraining specified in Section 6.0 of this policy.
- Complying with all requirements of the SLC Lockout and Tag Program. In particular, affected employees shall not attempt to start or energize equipment or systems that are locked out and tagged.

5.2.2 Authorized Employees

Authorized employees are responsible for:

- Performing lockout and tag procedures in accordance with the SLC Lockout and Tag Program.
- Coordinating with other authorized employees when using the procedures in Section 4.4.2 for groups and during personnel and shift changes.
- Referring to the equipment supervisor's procedure to identify the type and magnitude of the energy that the machine or equipment utilizes, understanding the hazards of the energy, and knowing the methods to control the energy.
- Performing periodic inspections of the lockout and tag procedures in use when designated by the functional supervisor.
- Obtaining the training and retraining specified in Section 6.0 of this policy.

5.3 Health & Safety Department

Health & Safety Departmental personnel are responsible for providing or recommending appropriate "Lock and Tag Program" training.

6.0 Training

6.1 Employee Training

6.1.1 Authorized Employees

Each authorized employee shall receive training in the recognition of applicable hazardous energy sources, the type and magnitude of the energy available in the workplace, and the methods and means necessary for energy isolation and control. This training shall include a combination of formal training offered by the Health & Safety Department and on-the-job training (OJT) for the specific equipment.

In addition, the functional supervisor shall ensure authorized employees understand the purpose of the SLC Lockout and Tag Program and that they have the knowledge and skills required for the safe application, use, and removal of energy controls.

6.1.2 Affected Employees

The equipment supervisor is responsible for ensuring that each affected employee working in the area is instructed in the purpose and use of lockout and tag procedures, including test procedures. The equipment supervisors shall ensure the training is completed prior to authorizing lockout and tag procedures for their equipment.
6.1.3 Others

All other employees whose work operations are or may be in an area where energy control procedures may be utilized shall be informed of the SLC Lockout and Tag Program, and that they shall not attempt to restart equipment that is locked out and tagged.

6.2 RETRAINING

Retraining shall be provided as necessary for all authorized and affected employees whenever there is a change in job assignments, when a change in the equipment or processes present a new hazard, or when there is a change in the energy control procedures.

Additional retraining shall be conducted whenever a periodic inspection reveals, or the supervisor has reason to believe that there are deviations from the lockout and tag procedures or inadequacies in the employee's knowledge. Retraining shall re-establish personnel proficiency and introduce new or revised control methods and procedures, as necessary.

6.3 TRAINING RECORDS

Training records shall be maintained in accordance with DCC administrative procedures. Some training records may be entered into a SLC Health & Safety training data base. Other training records are maintained locally (i.e., in the employee's department).

Appendix A

Terms and Definitions

affected employee - A person whose job requires him/her to operate or use a machine or equipment on which servicing or maintenance is to be performed under lockout and tag, or whose job requires him/her to work in an area in which such servicing or maintenance is being performed.

authorized employee - A person who locks out and tags machines or equipment to perform servicing or maintenance. An affected employee becomes an authorized employee when that employee's duties include performing servicing or maintenance covered under the Lockout and Tag Program.

capable of being locked out - An energy-isolating device is capable of being locked out if it has a hasp or other means of attachment to which, or through which, a lock can be affixed or if it has a locking mechanism built into it. Energy-isolating devices are capable of being locked out if lockout can be achieved without having to dismantle, rebuild, or replace the energy-isolating device or permanently alter its energy control capability.

energized - Connected to an energy source, or containing residual or stored energy.

energy-isolating device - A mechanical device that physically prevents the transmission or release of energy, including but not limited to a manually operated electrical circuit breaker, a disconnect switch, a manually operated switch by which the conductors of a circuit can be disconnected from all ungrounded supply conductors and no pole can be operated independently, a line valve, a block, and any similar device used to block or isolate energy. Push buttons, selector switches, interlocks, and other control circuit-type devices are not energy-isolating devices.

energy source - Any source of electrical, mechanical, hydraulic, pneumatic, chemical, thermal, or other energy.
hot tap - A procedure used during repair, maintenance, and servicing activities that involves welding on a piece of equipment (pipelines, vessels or tanks) under pressure, or tapping into an energized electrical circuit, in order to install connections or appurtenances. It is commonly used to replace or add sections of pipeline without the interruption of service for air, gas, water, steam, and petrochemical distribution systems; or to obtain electrical service from an energized electrical distribution system.

installed real property - Equipment including building air conditioners, substations, and building power and distribution systems.

SLC personnel - The term includes all personnel, including full and part time employees.

single point lockout and tag - A specific procedure for a machine tool or other piece of equipment with only one energy-isolating device that can be readily identified and isolated. For some equipment with only one energy-isolating device, a detailed written lockout and tag procedure is not required. For a detailed discussion, see Section 4.3.

lockout and tag - The placement of a lockout device and associated identifying tag on an energy-isolating device, in accordance with an established procedure, to ensure that this device and the equipment being controlled cannot be operated until the lockout device and associated tag is removed.

lockout device - A device that utilizes a positive means such as a lock to hold an energy-isolating device in a safe position and prevent a machine or equipment from energizing. Included are blank flanges and bolted slip blinds.

normal production operations - Utilization of a machine or equipment to perform its intended production function.

outside contractor/subcontractor - Service and maintenance contractors, construction contractors, salvage contractors, and labor-only contractors.

other employees - Personnel other than authorized or affected employees whose work is or may be in an area where lockout and tag procedures may be used.

personal protective equipment (PPE) - Appropriate protective equipment, including personal protective equipment for eyes, face, head, and extremities; protective clothing; respiratory devices; and protective shields and barriers. Such equipment shall be provided, used, and maintained in a sanitary and reliable condition wherever it is necessary by reason of hazards of processes or environment, chemical hazards, electrical hazards, radiological hazards, or mechanical irritants encountered in a manner capable of causing injury or impairment in the function of any part of the body through adsorption, inhalation or physical contact.

safety watch - A person designated and assigned by the functional supervisor to assist an authorized employee in performing maintenance or servicing on equipment that has no lockout attachment. This person shall be posted at an unlocked energy-isolating device to ensure that the device is not operated for the duration of the operation. The safety watch shall have no other duties.

servicing and/or maintenance - Workplace activities such as constructing, installing, setting up, adjusting, inspecting, modifying, and maintaining and/or servicing machines or equipment. These activities include lubricating, cleaning, or unjamming machines or equipment and making adjustments or tool changes where
personnel may be exposed to the unexpected energization or startup of the equipment or release of hazardous energy.

setting up - Any work performed to prepare a machine or equipment for its normal production operation.

supervisor, equipment - The person designated by line management to be in charge of a piece of equipment. This person may be a shop, plant or yard Foreman, Superintendent or Engineer. The equipment supervisor may not "own" the equipment, but is the responsible user or caretaker of the equipment. The equipment supervisor would usually be the first person to notice (or have reported to them) that a piece of equipment was not working properly.

supervisor, functional - The person designated by management to be the day-to-day supervisor of an authorized employee. Authorized employees assigned duties in more than one area may have more than one functional supervisor. The functional supervisor shall ensure that the authorized employee is trained and qualified to perform assigned tasks.

tag - An approved SLC form (see details in Section 4.4) that can be securely fastened to an energy-isolating device with a lock and in accordance with procedures established in the SLC Lockout and Tag Program. This tag indicates that the energy-isolating device and the equipment being controlled shall not be operated until the lock and tag is removed.

testing - Determination that machinery, equipment, or equipment parts are de-energized. This involves the use of approved, properly operating test equipment designed for and capable of determining if any energized conditions exist.

verification - Operating equipment controls for the purpose of determining that equipment cannot be restarted after an energy-isolating procedure has been performed and before maintenance or repair work is initiated.
Divisional - Loss Control Manual

LOCKOUT AND TAG PROGRAM

Appendix B
Lockout and Tag Procedure Self-Assessment Checklist, and Lockout and Tag Inspection Form

Supervisors shall use this checklist as a guide to ensure that authorized employees adhere to the requirements of the SLC Lockout and Tag Program before completing the Lockout and Tag Inspection Form.

B.1 Authorized Employee Knowledge

* Can the authorized employee demonstrate knowledge about the Lockout and Tag Program?

* Can the authorized employee demonstrate knowledge about the appropriate lock and tag devices?

* Can the authorized employee demonstrate knowledge about the location of all energy-isolating devices?

* Can the authorized employee demonstrate knowledge about any (or all) secondary or residual energies?

* Can the authorized employee demonstrate knowledge about the energy-isolation verification procedures?

* Can the authorized employee demonstrate knowledge about the necessary procedures if the equipment does not have a lockable energy-isolating device?

* Can the authorized employee demonstrate knowledge about the log-keeping requirements?

* Has the authorized employee received the required training?

B.2 Lock and Tag Devices

* Is there an adequate number of locks and tags?

* Are the locks properly labeled?

* Are the SLC danger tags the correct version?

* Is a lockout and tag log available and current?

* Are copies of the applicable energy control procedures available?

B.3 Equipment

* Are energy-isolating devices properly labeled?

* Are energy-isolating devices lockable?
LOCKOUT AND TAG PROGRAM

* Are energy-isolating devices (other than electrical) required for lockout and tag (e.g., valves)?

* Are valves adequately identified, and are suitable locking devices available?

* Are other devices (e.g., blank flanges, blocks, chains) required for lockout and tag, and are these devices available?

Lockout and Tag Inspection Form
PERSONAL PROTECTIVE EQUIPMENT (PPE)

CONTENTS
1.0 Introduction
2.0 Garments
3.0 Protective Footwear
4.0 Hand Protection
5.0 Respiratory Protection
6.0 Head Protection
7.0 Eye Protection
8.0 Hearing Protection
9.0 Fall Protection

1.0 INTRODUCTION

Personal protective equipment is not a substitute for adequate engineering or controls, which are always the first levels of protection from hazards. Where a need for personal protective equipment is identified, Dufferin Construction Company (DCC) provides suitable equipment to protect personnel from hazards in the workplace. The Health & Safety Department shall suggest the type of protective equipment required for the task. The supervisor of the operation shall obtain the equipment, and see that it is used properly.

2.0 GARMENTS

In addition to protective garments, employees shall wear appropriate personal clothing for the work they have been assigned to perform. Protective garments may be necessary to protect employees who handle hazardous materials. When a need for such a garment is identified, it shall be furnished at the discretion of DCC Management.

The type of garment that will provide the best protection for a job will depend on the nature of the job and the physical and chemical hazards associated with the job. For example, where toxic or highly corrosive materials are to be used, disposable protective clothing shall be worn rather than reusable clothing. The Health & Safety Department shall be contacted for assistance in determining the protective garment best suited to an operation. It is the responsibility of the supervisor of an operation to provide the protective garments specified for a job and enforce their use.

3.0 PROTECTIVE FOOTWEAR

3.1 SAFETY BOOT POLICY

Appropriate protective footwear shall be worn by employees who work in the following areas:

- Construction project sites and affiliated operations;
- Plant and Yard Compounds;
- Maintenance facilities;
- Other locations where a foot hazard exists;
- Where otherwise required by regulation or policy

Supervisors are responsible for evaluating job assignments to determine the type of foot protection appropriate with consideration of all anticipated hazards (impact, hazardous materials, thermal, etc.). DCC or employee supplied protective footwear shoes shall be replaced if, in the supervisor's opinion, the footwear are unserviceable as a result of excessive wear or extreme conditions in the work environment. The Health & Safety Department may be contacted for assistance in evaluating the need for foot protection.
PERSONAL PROTECTIVE EQUIPMENT (PPE)

Protective footwear furnished for contamination control/remediation shall be appropriate for the intended use; and the Health & Safety Department will provide guidance in the selection. Supervisors are responsible for enforcing the rules controlling the use of protective footwear in contaminated areas.

4.0 HAND PROTECTION

Hand protection may be required for the safe performance of a job. The type of hand protection required depends on the hazards associated with the job; i.e., whether the potential hazard is exposure to chemicals, flame, heat, abrasives, cuts, electrical devices, etc. When protection from chemicals is required, the type of protection required will depend on the chemicals being used. Contact the Health & Safety Department for assistance in selecting the best hand protection for your particular job.

4.1 GLOVES FOR PROTECTION FROM CHEMICAL HAZARDS

Table 1 is a guide for selecting a glove material that will serve as an effective barrier against many of the substances commonly found around DCC operations. Each glove material has its limitations and, therefore, shall be carefully matched to the substance that will be encountered.

Research on glove materials shows that:
1. each glove material temporarily resists solvent breakthrough, but eventually some permeation will result;
2. the same glove material from different suppliers may vary in its permeation characteristics; and
3. a glove that swells indicates excessive permeation has occurred. Disposable gloves shall be discarded after each use. Reusable gloves shall be inspected regularly for damage and replaced when necessary. They shall be stored in a protected location away from chemical exposure when not in use. Avoid wearing contaminated gloves outside the immediate operation area to prevent spreading contamination.

4.2 THERMALLY-RESISTANT GLOVES

Asbestos gloves are not permitted for general use. When protection from thermal hazards is required, the type of protection required will depend on the temperature as well as other factors. Contact the Health & Safety Department for assistance in selecting the best hand protection for your particular job.

4.3 BARRIER CREAMS

Gloves are usually the method of choice for protecting hands from chemical hazards. However, under some circumstances, properly used protective hand creams are also effective barriers against skin irritants. Frequent application and removal ensure the most effective results. Washing with soap and water, which removes both the cream and whatever may be dissolved in it, shall always be done before eating and smoking to prevent hand-to-mouth contamination. Two types of creams are available from DCC:

- Water-repellent cream—protects skin from water and chemicals dissolved in water.
- Water-miscible cream—protects skin from dry substances and non-aqueous materials.

Contact the Health & Safety Department for assistance in selecting the best barrier cream protection for your particular job.

5.0 RESPIRATORY PROTECTION

Various forms of airborne contaminants are generated by many DCC operations. The incidence of occupational illnesses caused by toxic dusts, fumes, mists, gases, and vapours is best controlled using accepted
PERSONAL PROTECTIVE EQUIPMENT (PPE)

engineering control methods to prevent the air from becoming contaminated. However, there will always be circumstances in which engineering methods will not be practical or sufficient. In such cases, respiratory protective equipment shall be used.

A summary of the respiratory protection program is given below.

5.1 DCC RESPIRATORY PROTECTION PROGRAM

To ensure that respirators are used effectively to reduce exposure, supervisors and employees shall contact the Health & Safety Department for assistance. Use of respirators requires prior assessment of need, proper fitting and training. All respirators used at DCC shall be approved by the National Institute for Occupational Safety and Health (NIOSH).

5.1.1 Need for Respirators
Contact the Health & Safety Department for assistance in all aspects of respirator use and selection. A member of the Health & Safety Department shall perform a hazard assessment and specify the type of protection needed for each type of operation.

5.1.2 Supervisor Approval
Supervisors are responsible for periodically monitoring the use of respirators to ensure that they are worn properly.

5.1.3 Medical Approval (optional)
When appropriate or as prescribed, potential users shall be approved for respirator use by a physician.

5.1.4 Fitting and Training
The Health & Safety Department or its designate is responsible for fitting employees with the right masks and training them in the proper use of the equipment.

5.1.5 Supervisors
Supervisors of employees who use respirators are required to attend appropriate training to ensure the proper use of respirators. Contact the Health & Safety Department for information on supervisor training.

Supervisors are responsible for ensuring that employees are provided with information concerning the hazards for which the respiratory protective equipment has been required in an area. Contact the Health & Safety Department to assist in providing information to employees.

Specific training in the hazards of particular operations and the protection factors of various respirators will be provided by a senior member of the Health & Safety Department. Supervisors shall allow sufficient time for training to be completed before operations begin, especially for infrequently used respiratory protection equipment.

Supervisors are responsible for ensuring that each respirator stored for emergency use is inspected at least once a month. A record of the inspection shall be entered in a log book by the inspector and the entry verified by the supervisor.

5.1.6 Self-Contained Breathing Apparatus (SCBA)
Those requesting self-contained breathing apparatus (SCBA) shall contact the Health & Safety Department. A senior member of the Health & Safety Department shall perform a hazard assessment and provide guidance and recommendations.

5.1.7 Employees
Users shall inspect the respirator before each use to ensure that it is in proper working condition. Facial hair (such as beards and mustaches) that comes between the sealing periphery of the face piece and the face or interferes with valve function is prohibited. Fitting and testing will not be performed on persons with such facial hair. Spectacles, goggles, face shields, or welding helmets shall not be worn in a way that
adversely affects the seal of the facepiece to the face.

5.1.8 Contract Workers
Contract workers who are under the direct supervision of a DCC employee shall be provided with respiratory protective equipment. DCC supervisors shall initiate the procedures described above to obtain hazard assessments, fitting, and training. This does not extend to independent contractors or subcontractor employees. Any questions on use of respirators by non-DCC employees should be referred to the Health & Safety Department.

For information on any aspect of respiratory protection, consult the Health & Safety Department.

6.0 HEAD PROTECTION

Employees working in areas where there is possible danger of head injury from impact, from falling or flying objects, when working with high-voltage equipment or as prescribed by regulation must wear approved and appropriate head protection. The supervisor is responsible for determining the need for such protection and ensuring that employees, contractors and subcontractors use it when required. Protective head gear can be obtained from the Oakville Shop. A sufficient supply of required protective head gear shall also be provided for visitors at the work site.

7.0 EYE PROTECTION

DCC provides appropriate eye protection in areas where hazards to the eyes exist. The supervisor is responsible for determining the need for eye protection, obtaining suitable protective devices, and ensuring that employees use them. The Health & Safety Department shall assist the supervisor in defining eye hazards and selecting appropriate eye protection.

Employees should not wear contact lenses if exposed to a eye hazard.

The standard sign "Caution--Eye Protection Required in This Area" shall be posted in all areas where eye protection is mandatory. Employees who work in these areas shall wear the eye protection issued to them. Visitors to the area shall also be provided with suitable eye protection.

Types of Eye Protective Equipment

Eye protection devices fall into the following four categories:

- Personal safety glasses--issued through the supervisor;
- Goggles, face shields, etc.--available from the Oakville shop;
- Temporary safety glasses for visitors; and

Table 2 is a guide for selecting the devices that will provide adequate eye protection for various operations. Table 3 lists the lens shades recommended for protecting the eye against glare and welding. If eye protection is needed for situations not listed in Table 10-3, consult the Health & Safety Department.

8.0 HEARING PROTECTION

Dufferin Construction provides hearing protection for employees who may be exposed to excessive noise levels. Protective devices are used as an interim measure until an engineering solution is found to control the noise, unless the particular job is temporary or related to construction activities. The Health & Safety Department shall advise where hearing protection is necessary and the type of protective device needed. Ear muffs and foam plugs are available from the Oakville Shop.

9.0 FALL PROTECTION
PERSONAL PROTECTIVE EQUIPMENT (PPE)

DCC has available specialized protective devices for employees who work at elevated locations or in confined spaces. Fall arrest or travel restraint systems shall be worn when a fall hazard exceeds 8 ft. A full-body harness is required for all fall arrest or travel restraint systems. Safety belt are prohibited. Only equipment approved by the Health & Safety Department shall be used as part of a fall arrest or travel restraint system.

9.1 APPROVED FALL ARREST AND TRAVEL RESTRAINT SYSTEM COMPONENTS

- Harness -
- Carabiner -
- Shock Absorbing Lanyard -
- Lanyard -
- Locking Snap Hook -
- Ladder Hook -
- Rope Grab -
- Life Line -

Lifelines, full-body harnesses, lanyards and other hardware shall be used only for employee safeguarding. Any lifeline, full-body harness, lanyard or other hardware actually subjected to in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for employee safeguarding.

9.2 FALL PROTECTION PLANNING

Because of the potential for serious injury or death, work planning is vital in situations where fall protection is required. General guidelines for planning fall protection are listed below:

1. List each fall exposure.
2. Determine worker’s vertical and horizontal movement.
3. Evaluate strength of anchor point.
4. Plan anchoring system.
5. Select and obtain correct equipment.
6. Train workers.
7. Maintain equipment.

Before performing work in these situations, contact the Health & Safety Department for assistance in evaluating the most effective type of fall protection system.

9.3 INSPECTION

Fall protection equipment shall be inspected before each use and every 6 months in accordance with the manufacturer’s guidelines. The manufacturer’s inspection guidelines may be a part of the literature enclosed with the fall protection equipment at the time of purchase. This information is also available from the Health & Safety Department.

9.4 TRAINING

All users of fall protection equipment shall be trained in the proper selection, use, and maintenance of the equipment. The Health & Safety Department offers course (Fall Protection for Elevated Locations) to fulfill this requirement and provide further information on fall protection equipment, as well as possible solutions to fall hazards at elevated locations.
PURPOSE

This section of the Divisional - Loss Control Manual is intended to establish procedures to be employed in the event that a designated substance will be used or likely encountered on a project.

POLICY

1. Estimating personnel shall advise the health and safety department prior to establishing and submitting a tender for contract where a designated substance shall be employed or is likely to be encountered.

2. Marketing personnel shall provide contractors/subcontractors with a list of designated substances (if applicable) at the same time as tender documents are presented.
PERFORMING OPEN FLAME OPERATIONS

PURPOSE

This section of the divisional manual is provided in order to establish procedures for conducting "hot work" at projects or work sites.

POLICY

- All burning, heating, cutting or welding operations must be approved by project or work site supervision prior to commencing work.
- Permission to perform such operations will be provided by senior project/work site supervision. Permission to perform hot work will be granted if it can be established that this form of work will not contribute to cause further hazards; and that all safe working practices will be adhered to.

Additional Precautions

1. Suitable type of shields should be provided to protect project or work site personnel from welding flash or sparks.
2. Appropriate and adequate fire extinguishes shall be positioned immediately adjacent to the "hot-work" process.
3. Compressed gas cylinders must be secured in position during transport, storage or use. The valve protection cap shall be in position when the cylinder is not in use. Cylinders containing acetylene must be secured in an upright position.
4. A fire watch shall be posted where necessary.
HEAVY EQUIPMENT MAINTENANCE

PURPOSE

This section of the Divisional Loss Control Manual is intended to establish minimum recommended safe job procedures to follow prior to performing repair or maintenance of heavy equipment.

POLICY

All heavy equipment should be locked-out (where available), de-energized, blocked or otherwise secured in order to protect workers from electrical or mechanical contact hazards prior to conducting repairs or maintenance.

Procedures

Lockout, De-energizing, Blocking or Securing Procedures - Heavy Equipment.

1. See that buckets, bowls, etc. are lowered. Verify that parking brake is set and controls are in the neutral or shutdown position.
2. Locate job site (if possible) in a safe and easily accessible location. Mobile equipment that can be moved should be repaired on level ground out of the way of other operations. Advise others of selected job site and work plans.
3. Reposition equipment as necessary to avoid working between equipment and the highwall or spoil bank where escape may be hindered. Special safety precautions must be taken when repair work is required between immobilized equipment and the highwall or spoil bank.
4. Block wheels securely, especially if on a grade or if maintenance operation could possibly cause release of brakes, transmission, etc. Keep yourself to the side when installing and removing wheel blocks.
5. Lower any raised parts which can be lowered. If necessary to work on or from equipment in the raised position, it must be blocked securely. Good blocking materials for most purposes include solid ground, berms, wooden crib blocks, solid concrete blocks, or specially designed locking devices, pins, etc. Cinder blocks are inadequate for many purposes.
6. Visually inspect work area for potential hazards. Remove debris and combustible material from job site.
7. If equipment must be running or moving to evaluate condition, or to complete certain portions of the repair, exercise extreme caution and be sure of good communications with anyone involved.
8. Obtain assistance as needed for towing. Be sure the vehicle used is large enough and powerful enough to handle the job.
9. Do not operate any towing equipment you are not trained and qualified to operate.
10. When towing requires disabling any failsafe brake system or other safety devices, be sure they are restored to operative condition before the equipment is returned to service.
11. Use a smooth steady pull when towing. Do not snatch and jerk equipment.
12. Carefully watch contour of ground when towing. Take precautions against the towed equipment overtaking the towing equipment on downgrade.
13. Place warning tags on steering wheel or other prominent location, and remove ignition key.
14. Equipment operators should not attempt repairs or maintenance they do not understand.
15. Ensure that pressure is relieved from hydraulic systems before any attempt to disconnect or repair hoses, cylinders, motors, etc.
16. Use safety belt or harness and line where there is a danger of falling (when work must be done at an elevated location unprotected by railings).
17. Select, inspect, and use the proper tools for the job. Do not use tools with mushroomed heads, loose or cracked handles, etc.
18. Do not leave tools or other objects lying around loose where they could fall on someone. Rope off area, use screens, etc., if necessary for adequate protection of those working or passing below. Do not leave tools or other objects lying around in walkways.

19. Keep hands, fingers, and other parts of body out of pinch points.

20. Take care to avoid burns from hot bearings, hot hydraulic fluid, etc. Wear gloves where possible. Wear safety glasses.

21. When using a wrench, seat it firmly and use steady controlled force. Avoid jerking the wrench.

22. Always wear safety glasses when striking objects with a hammer.

23. Wear gloves to handle metal parts and when using tools.

24. Maintain good communication with all co-workers. Tell them what you’re about to do if it could cause equipment movement.

25. Assume a safe position out of direct line of potential motion of parts. Do not position yourself in the inside radius of wire ropes being used for pulling.

26. Avoid excessive skin contact with lubricants, especially penetrating oil. Carry waterless hand cleaner or preferably soap and water, and use regularly.

27. Use extreme caution when working with tires and multipiece rims. Be sure components are properly matched and undamaged. Use inflation cages, long inflation hoses, adequate lifting and handling equipment and adequate mounting and dismounting tools.

28. Use proper lifting procedures. Obtain help when load may be too heavy.

29. Carry, inspect, and use lifting devices, jacks and hoists to the extent possible to avoid manual lifting.

30. Be sure component being removed is secured as last bolts or nuts are removed.

31. Before taking on the weight of a part being removed, be sure it is something you can handle. Stand in close to the part and be sure of good footing. Get help in advance if you think it may be needed.

32. Stay clear of suspended loads.

33. Use taglines when hoisted objects require steadying or guidance. Stay out of confined areas where you could be caught between a swinging load and a stationary object.

34. Keep hands and fingers clear of pinch points when lowering or placing parts.

35. Secure all guards, covers and shields which protect people and equipment.

36. Remove any accumulations of oil and grease.

37. Be sure tools, old parts, or other objects are returned to proper storage or disposed of. Be especially careful not to leave objects in walkways or at elevated locations. Keep tools clean.

38. Inspect completed work to ensure that all bolts are tightened, guards replaced, tools removed, etc.

**Management**

1. Establish an effective preventive maintenance program which minimizes the need for emergency repairs, and which emphasizes both the safety of the equipment and safety in the maintenance program itself.

2. Provide maintenance personnel with substantial hoists and slings and encourage their use to minimize manual lifting. When necessary to use the choker method, nylon slings are less likely to slip.

3. Provide substantial, permanently attached devices, where possible, for securing raised equipment (such as truck beds and loader buckets).

4. Purchase or fabricate substantial work stands and platforms of the type and size required for the equipment used. This will minimize reaching and lifting, and slip and fall accidents.

5. Use grip-strut grating on steps and platforms. Use nonskid paint or antislip strips on flat equipment surfaces.

6. Where access to service and inspection points is difficult, consider installation of oil sight gauges, extended dipsticks, automatic lubrication systems, extended grease fittings, additional handholds, and/or additional steps.
7. Install pressure release radiator caps.
8. Provide and increase the use of gloves, and safety belts and lines. Purchase gloves which provide protection and yet allow good dexterity.
9. Provide and maintain proper tools for maintenance tasks.
10. Provide adequate tow ropes and connecting links to prevent the use of makeshift towing devices.
MATERIAL HANDLING

10.0 Truck Loading

SUPPLEMENTS

• 27B Fork Truck Safety
• 27C Crane and Hoist Safety

1.0 INTRODUCTION

Mechanical devices rather than manual effort should be used to lift and move objects whenever practical. The type of equipment used, however, must be appropriate for the task. Employees are always encouraged to use mechanical equipment to lift heavy or bulky objects. DCC policy requires that employees be properly trained and physically qualified--by medical examination (if necessary)--for any work assignment that involves lifting heavy objects.

2.0 RESPONSIBILITIES

The supervisor shall ensure that employees know how to safely move objects manually or with mechanical devices. Only those employees who have been trained and certified are permitted to operate fork trucks, cranes, or hoists. The supervisor shall enforce the use of safe lifting techniques and shall ensure that the equipment is kept in good mechanical condition.

Employees are required to observe all established safety regulations for lifting heavy objects; they shall never manually lift or move objects that exceed their physical limitations.

3.0 FOOT PROTECTION

Protective footwear shall be worn in materials handling environments. Supervisors shall evaluate job assignments and determine the need for foot protection. See Chapter 15 of the Divisional Loss Control Manual for additional information on foot protection.

4.0 MANUAL LIFTING AND HANDLING

When manually lifting and handling material, use only those methods that ensure your safety and that of the material. Never attempt to lift objects that are either too heavy or bulky to handle safely. Under no circumstances shall an individual push or pull a load that exceeds 275 kg (600 lb). Whenever possible, push rather than pull loads--pushing uses the strong leg muscles, whereas pulling uses the easily strained back muscles. The Health & Safety Department conducts a back-care workshop at which employees are taught proper and safe techniques for manually lifting and handling heavy objects; the workshop also identifies exercises to strengthen the back.
4.1 WEIGHT LIMITS

Although there are no legal maximum limits for weights that an employee may lift, the Health & Safety Department recommends a 23-kg limit (50-lb) for objects that are regularly lifted. The Health & Safety Department can assist you in assessing and calculating safe lift limits.

4.2 RULES FOR MANUAL LIFTING

The following rules shall be adhered to when lifting heavy objects:

1. Inspect the load for sharp edges, slivers, and wet or greasy spots.

2. Wear gloves when lifting or handling objects with sharp or splintered edges. To ensure a good grip on the object, the gloves must be free of oil, grease, or other slippery materials.

3. Inspect the route over which the load will be carried; the route should be free of obstructions or spillage that could cause tripping or slipping.

4. Consider the distance the load will be carried; your gripping power may weaken over long distances.

5. Size up the load and make a preliminary "heft" to be sure the load is within your lifting capacity; if it is not, get help or use a mechanical lifting device.

6. If team-lifting is required, the individuals involved should be similar in size and physique. One person should act as the leader and give commands as to when the object should be lifted or lowered.

7. Two persons transporting a piece of pipe or lumber should both carry it on the same shoulder and walk in step. Use shoulder pads to prevent the shoulders from being cut and to help reduce fatigue.

8. Grasp boxes, cartons, and stacks at the opposite top and bottom corners, drawing the bottom corner between the legs.

4.3 SAFE LIFTING PROCEDURE

To lift an object off the ground, use the following method adapted from the National Safety Council's booklet, "A New Way to Lift", which is available from the Health & Safety Department:

1. Make sure your feet are firmly placed about 24-40 cm (10-15 in.) apart. Place one foot alongside the object being lifted and the other behind it (Fig. 1a).

2. Use the knee-bend or squatting position (Fig. 1b); keep the back straight, but remember that straight does not mean vertical. Tuck in the chin so the neck and head continues the straight back line.

3. Grasp the object using the palmer grip

4. (Fig. 1c); the fingers and the hand should be extended around the object to be lifted, using the full palm.

5. Tuck arms and elbows into the side of the body, and position the body so that your weight is centered over your feet (Fig. 1d).

6. Start lifting with a trust of the rear foot, keeping the object close to the body as you lift with your legs—not with your back

7. (Fig. 1e)

8. Carry the load close to your body—not on extended arms (Fig. 1f). To turn or change your position, shift your feet--do not twist your back.
MATERIAL HANDLING

To set an object on the ground, follow the above procedure in the reverse order.

5.0 MECHANICAL LIFTING AND HANDLING

Mechanical devices shall be used for lifting and moving objects that are too heavy or bulky for safe and manual handling; however, only employees who have been properly trained are permitted to operate such devices. Heavy objects that require special handling or rigging must be moved only by riggers or under the guidance of employees specifically trained to move heavy objects. The Health & Safety Department can assist in identifying appropriate training programs for operating fork trucks, cranes, hoists, etc.

All operators are required to use seat belts where provided.

6.0 MECHANICAL LIFTING EQUIPMENT

All mechanical lifting and moving devices shall be inspected periodically and shall be repaired when necessary. Under no circumstances shall defective equipment be used. Write the rated load capacity on lifting devices and ensure that the capacity is never exceeded. As a safety precaution, before lifting a load near the load capacity of the equipment, check for faulty or defective parts.

The following safeguards must be taken to prevent accidents when operating mechanical lifting and moving equipment:

- Drive fork trucks forward when going up a ramp and backward when going down.

- Do not allow anyone to walk under a raised load; call out a warning if necessary.

- Check the floor-load limits before mobile lifting equipment enters an area, and do not exceed those limits.

- Do not carry passengers on lifting equipment unless it is specifically equipped for that purpose.

7.0 SUSPENDED LOADS

Do not stand under a load suspended by mechanical devices. [In addition, an equipment operator shall plan the pathway that will be used to transport a load so that no part of the load passes over worker.] If this is not possible, check that the lifting device has a redundant supporting system that would prevent the suspended material from falling if the device fails. Never leave a suspended load unattended; lower the object to the floor or working surface, and secure the handling or lifting device before leaving.

8.0 MATERIAL STORAGE

Materials that are radioactive, fissile, flammable, explosive, oxidizing, corrosive, or pyrophoric shall only be stored under conditions that have been approved The Health & Safety Department. Incompatible materials such as cartons, boxes, drums, lumber, pipe, and bark stock shall be segregated and stored in racks or stacked in appropriate stable piles. To prevent toppling, secure the racks with "tie-downs."

9.0 STORAGE FACILITIES

Materials to be stored shall not exceed either the rated floor capacity for the area or the weight capacity of the storage racks.
MATERIAL HANDLING

The load limit and the maximum height to which materials may be stacked shall be posted in a conspicuous location, and traffic lanes and loading areas shall be marked appropriately and kept clear. The floors in these areas shall be maintained in good condition at all times.

10.0 TRUCK LOADING

All objects loaded onto trucks shall be firmly secured to the truck to prevent them from shifting during transit. The wheels of trucks being loaded or unloaded at a loading dock shall be blocked to prevent movement.
Dufferin Construction Company - Health and Safety Policy

Dufferin Construction Company is committed to the protection from accidental injury and loss to its employees and property. In fulfilling this commitment, we will provide and maintain a safe work environment and we will strive to eliminate hazards which may result in injury and property damage. Accidental injury and loss can be controlled through good management in combination with active employee involvement. Supervision and Management will take all necessary action to eliminate or control hazardous working conditions and work in compliance with laws pertaining to occupational health and safety. All persons on a project are responsible for their own safety and that of their co-workers. They are expected to use the safest work methods to carry out their job and point out sources of danger and suggest means to remedy them. I trust that each of you will join me in a personal commitment to enforce this health and safety policy as away of life.

Operator Policy

All drivers and operators of vehicles or equipment on Dufferin Construction Company (DCC) projects must comply with the Occupational Health and Safety Act and Regulations for Construction Projects, the Highway Traffic Act, the Environmental Protection Act as well as Dufferin Construction’s, Divisional - Loss Control Manual.

Objectives

This subsection of the Fleet Safety Program is intended to be a general overview of safety policies and procedures applicable to all drivers and operators of vehicles or equipment on Dufferin Construction projects. Drivers and operators of vehicles or equipment should not rely on this subsection of the Fleet Safety Program exclusively. Reference to the Occupational Health and Safety Act and the Regulations passed pursuant thereto for Construction Projects and Industrial Establishments, as well as to Dufferin Construction Company’s - Divisional Loss Control Manual is required to ensure compliance. The information contained in this subsection of the Fleet Safety Program is designed to provide assistance to all drivers and operators of vehicles or equipment in maintaining a safe working environment. In addition, each and every driver and operator of vehicles or equipment should be aware of his or her responsibilities, as prescribed by the Occupational Health and Safety Act, Section 28,

1. Work in compliance with the provisions of this Act and all health and safety regulations
2. Use or wear the equipment, protective devices or clothing required by the employer (or Dufferin Construction).
3. Report to the Company (Dufferin Construction) defective or dangerous equipment and hazards.
4. Do not remove any protective devices.
5. Do not operate equipment or machinery in a dangerous manner.
6. Do not engage in any horseplay or pranks in the workplace.
7. Report all accidents immediately.

Safe Operating Procedures

Drivers and operators must remain in their vehicles at all times unless authorized by a Dufferin Construction Company supervisor.

Personal Protective Equipment

Drivers and operators must wear approved hard hats, safety boots and reflective vests when exiting their vehicles or equipment. Eye protection may be required on certain projects. Seat belts must be worn at all times.

Operating Speeds

Equipment and vehicles shall not exceed 30 km/h unless otherwise posted. Operating speed should be reduced appropriately when traveling in the vicinity of construction processes.

Backup Procedures

Subcontractors and/or brokers must ensure that all drivers and operators receive backup hazard awareness training. Training can be obtained by contacting the Construction Safety Association of Ontario (CSAO) (416) 781-2726. All drivers and operators must alert a Dufferin Construction Company supervisor when first arriving on a project. The Dufferin supervisor will advise drivers or operators of the job specific backup procedures and the backup safety plan, if applicable. All drivers and operators must comply with the OSHA and Regulations for Construction Projects; Sec. 184. No vehicle, machine or equipment or crane or similar hoisting device, or shovel, backhoe, or similar excavating machine shall be operated unless the operator is assisted by a signaller, (a) where the operator’s view of the intended path of travel of any part of it or its load is obstructed; or (b) where it is in a location in which a person may be endangered by any part of it or its load.

Sec. 185. An operator of a vehicle, machine or equipment, or crane or similar hoisting device, or shovel, backhoe, or similar excavating machine who is required to be assisted by a signaller shall operate it as directed by the signaller.

Inspection And Maintenance

Drivers and operators must perform daily inspections and ensure that the vehicle/equipment is in a safe operating condition. The attached circle check and inspection record shall be completed daily.

Servicing Equipment

Drivers and operators must disconnect power, stop the engine and remove and retain the ignition key before servicing equipment. Never oil or grease machinery while it is running. Dozer and grader blades, backhoe and loader buckets, scraper pans and dump truck boxes must be fully lowered when the machine is stopped.

Appendix A A/O/I Response Plan; A/O/I incident questionnaire; Forms for personal interview; SCAT Chart; DCC Accident Report Form; Evaluation of Reports; WSIB Follow-up Questionnaire;

4.1 Purpose and Scope

An "incident" is a sequence of events or conditions that could result in an accident, injury, illness, and/or a reportable occurrence. The term "incident" is used to broadly encompass many types of events because numerous environment, safety, and health (ES&H) requirements for incident notification, analysis, and reporting do not allow for simple categorization or development of procedures for each type of incident.

The threshold response requirements for an incident vary by type (e.g., vehicle accident or chemical spill) and the severity (e.g., extent of injury or property damage). For example,

* For significant incidents, internal procedures usually specify notifying the Fire Department, the Ministry of Labour, the appropriate managers, and the General Manager. The HSE Manager will coordinate the investigation and report directly to the General Manager.

* It is DCCs policy that supervisors analyze all incidents, no matter how seemingly minor, to understand the causes and prevent a recurrence. The Ministry of Labour may also conduct its own analysis and develop a report of major incidents and request a written report to be submitted by DCC.

* Supervisors are expected to collect information and prepare reports on workers who have sustained occupational injuries and illnesses, as specified in Section 4.5.2.

In many cases, however, management's judgment and the information and processes described in this chapter are to be used to determine the appropriate response to an incident after emergency conditions are stabilized.

This chapter

* Focuses on the necessary management responsibilities for reporting and notification following an accident after emergency response and health care needs have been satisfied.

* Provides guidance on managing various responsibilities arising from ES&H incidents.

* Describes

-- The notification process for incidents.
ACCIDENT/INCIDENT - NOTIFICATION, ANALYSIS & REPORTING

-- The procedures for preserving the incident scene to retain pertinent information.

-- The incident analysis process.

-- Reporting procedures and the required reports following an incident.

Appendix A contains terms and definitions used in this chapter.

4.2 Requirements/Regulatory Summary

This chapter and its supplements conform to the requirements of Occupational Health and Safety Act and Regulations for Construction Projects. In addition, compliance with the Workplace Safety and Insurance Act is strictly maintained.

4.3 Applicability

Individuals involved in incident notification, analyses, and reporting at DCC must comply with all requirements specified in this chapter.

4.4 Incident Process

4.4.1 Initial Incident Notification and Management's Action

DCC employees are required to report all incidents that are neither planned nor typical of normal operations to their supervisors. Upon notification of an incident, the supervisor shall gather preliminary information to have a reasonably accurate picture of what happened, then notify management and the area ES&H team in the manner prescribed for the directorate. The environmental analyst on the ES&H team shall follow the Company's notification procedures for any incident involving an environmental issue (see Chapter 3 of the Environmental Compliance Manual).

When necessary, the HSE Manager (or his designee) will make the other required notifications to regulatory organizations. It is important to note that initial notification to the MOL must be made as soon as possible, and in some circumstances within one hour of an incident categorization.

NOTE: Care for injured personnel is the first priority following an incident. Contact the Health and Safety Dept after these personnel have received proper attention.

4.4.2 Preserving the Incident Scene

Emergency response personnel must be notified immediately (dial 911 or 905-676-3033 at the GTAA) of any incident categorized as an emergency, as described in Chapter 3 of the Health & Safety Manual. The supervisor or senior person present at the scene of an incident is responsible for making the area safe and for preserving the scene. The incident scene must be preserved in a manner consistent with procedures for emergency control operations to retain valuable information for the incident analysis committee should one be appointed. This may include

* Preventing any physical items involved in the incident from being operated, moved, or otherwise altered; and impounding such items as necessary until the incident analysis is completed.

* Photographing (digital photographs are preferable) the scene soon after the incident, with particular emphasis on spilled materials and tire marks; check each photograph carefully to determine that it is properly classified. The area ES&H team or personnel can provide barriers, cameras, and other items if necessary.

If an incident analysis committee is appointed (see Section 4.4.4 for criteria), the chairperson shall arrange with the person in charge of emergency control activities (or the supervisor) to assume control of the scene as soon as it is safe to do so. The committee chairperson shall not release the incident scene for normal operations until
all relevant information has been obtained. If more than one incident analysis committee is involved, the chairperson of each committee must agree to release the area and the physical items involved.

4.4.3 Supervisor's Incident Analysis

All incidents involving injury, illness, property loss, transportation of materials, radiological and hazardous wastes above threshold limits, release of toxic or radiological materials to the environment, or vehicle damage shall be analyzed by management. The purpose of an incident analysis is not to place blame but rather to identify the operational system errors and omissions (root causes) that brought about the incident so that they can be corrected to prevent a recurrence of the incident. The degree of evaluation is dictated by the severity of the event, its likelihood of recurrence, and other factors. The Practical Loss Control "SCAT Chart" may be used for guidance.

The incident analysis must begin as soon as possible if all the facts that will help explain why and how the incident occurred are to be obtained free from excessive rationalization. An incident analysis conducted by the supervisor of the area involved usually gathers enough information to complete the required reports described in Section 4.5. However, one conducted by an incident analysis committee generally will be more detailed, independent, and thorough.

If preliminary information about the incident indicates that a formal committee analysis is not required, then an incident critique (as recommended by the Loss Control Manual) may be performed. This critique must never be performed before an incident analysis because it can destroy the privacy of those individuals involved in the incident and cause them to suppress facts that may reflect on their personal competence and judgment.

4.4.4 Incident Analysis Committee

Incidents of a more serious nature require a thorough evaluation to obtain a better understanding of the event and measures necessary to prevent a recurrence. The ES&H team leader will assist the supervisor in determining if a committee should be appointed to conduct a formal incident analysis. Project Engineers will have taken the Practical Loss Control course (Incident Analysis) and received training in DCC in-house accident investigation.

Further guidance on making appointments to the incident analysis committee, on incident analysis methodology, and on preparing incident analysis reports can be found in Supplement 4.08 of the Health & Safety Manual.

4.4.5 Management's Action Following an Incident Analysis

Responsible managers shall decide on the corrective actions necessary to reduce the likelihood of a recurrence of an incident, considering both the practicality of implementation and the cost benefit. If the request for corrective action is from a judgment-of-need in an incident analysis report (described later in this chapter), managers will have 30 days to inform the JH&SC co-chairs of their contemplated action and the estimated date of completion, or of their rejection of the recommendation. Copies of this document must be sent to their Health and Safety Representatives and posted as an Accident Summary Report.

The Safety Department maintains a permanent central archive of all incident analysis reports, including the status of all corrective actions whether they are completed, contemplated, or rejected.

4.5 Reporting Procedure

This section describes the reporting procedure for the incidents listed below.
ACCIDENT/INCIDENT - NOTIFICATION, ANALYSIS & REPORTING

Managers and/or employees may be expected to prepare the required reports.

* MOL reportable occurrences. (Contact the HSE Manager or Safety Advisor immediately)

* High-risk or significant loss incidents. Investigation to be conducted by Health and Safety Dept. in cooperation with the Senior Supervisor.

* Occupational injuries and illnesses reported to H&S Dept. immediately, WSIB Occupational Injury Form 7 are required.

* Property loss or damage exceeding the reporting threshold limits

* Vehicle accidents causing damage in excess of any reporting threshold limits.

Any incident involving personal injury to third parties must be reported to H&S Dept. The reporting threshold dollar amounts change periodically. Operators of DCC vehicles are required to report incident to Provincial Collision Reporting Centres within 24 hr.

4.5.2 Injuries/Illnesses

Any DCC employee who is injured or becomes ill as a possible result of a job-related condition or accident must notify his/her supervisor who must report the illness or injury to Health and Safety Department within one hour. For subcontractors and visitors, the supervisor must also contact the H&S Dept. ASAP. Emergency assistance for all cases may be obtained by dialing 911 or the GTAA emergency number. Supervisors will follow the DCC Emergency Response Plan.

If the injured or ill individual seeks care at Health Services, the health care provider will conduct a medical evaluation, provide the needed treatment, and initiate the OSHA and Workers' Compensation processes. If the injured or ill employee is not evaluated by Health Services, the employee's supervisor must complete the CSAO’s Injury Treatment record in the first-aid kits.

MOL and WSIB Reporting. Once a supervisor, employee, subcontractor, or visitor notifies the Health & Safety Dept of an occupational illness or injury, an initial notification report is completed and copied to necessary individuals. If the onsite supervisor is an employee of a subcontractor firm, that subcontractor must report the accident in accordance with its contractual requirements. Reporting procedures for construction contractors are described in Supplement 1.11 of the Health & Safety Manual.

Workplace Safety Insurance Board Reporting. Upon notification of an illness or injury by an employee or a supervisor, the Health and Safety Dept will file the required WSIB form 7 within three working day of notification, as required by law.

4.5.3 Property Damage/Loss

Any person who damages or loses property assigned to the Company must notify his/her supervisor of the incident. The project having responsibility for the property shall be liable for all losses and reporting obligations

* Initiate an incident analysis to the extent necessary, as described in Section 4.4.3. Confirm the current DCC threshold reporting level requirements with the Loss Control Manual.

4.5.4 Vehicle Accident

Operators involved in an accident with a DCC vehicle must verbally notify their supervisors immediately after the accident. Operators shall also cooperate with law enforcement authorities involved, but should neither offer assumptions nor admit fault. If possible, operators should collect the following information from the incident
scene that may assist in preparing other reports:

* The other party's name, address, phone number, license number, and insurance number.

* The names, addresses, and telephone numbers of all witnesses.

* Local police department reports including badge numbers and incident numbers.

* Reports made to rental vehicle companies and a copy of their damage report.

Vehicle operators shall also

* Obey all applicable Provincial and local regulations concerning vehicle accidents, and notify the appropriate law enforcement authorities of the accident as soon as possible.

* Report to the Collision Reporting Centre for all motor vehicle accidents involving an injury or property damage that exceeds $700.

* Complete a DCC Accident Report and return them to the Safety Dept within three days. Faxed copies are acceptable until such time as the Senior Supervisor can review and sign the report.

Following an accident involving a motor vehicle, the supervisor will conduct an incident analysis (as described in Section 4.4.3) and complete and return the standard DCC accident report to the HSE Manager.

4.6 Summary Reports

Accident summary reports on injuries, illnesses, and other loss producing incidents are completed by the HSE Manager in conjunction with the recommendations of the JH&SC. The Accident Summary reports are published with the monthly JH&SC minutes. The minutes are distributed to all yards, plants and job site locations. Foreman receive copies of the summary reports to share with the crew members as a weekly tailgate topic.

4.7 Responsibilities

4.7.1 Project Engineer

The Project Engineer is responsible for notifying the Safety Dept. of any incidents. The Project Engineer will begin the investigation process and complete the Company’s accident report.

4.7.2 Superintendent

The Superintendent is responsible to ensure the accident scene is secured, that all sources of secondary accidents are mitigated. The Superintendent is responsible to ensure the Company's Emergency Response Plan is initiated. The Superintendent will oversee the accident investigation and ensure recommendations to prevent recurrence are adopted.

4.7.3 Safety Advisor

The Safety Advisor is responsible for:
* Reviewing the incident analysis report, giving careful attention to the judgments-of-needs

*Assessing the Analysis of Cause as per the SCAT Chart.

* Ensuring the recommended action plan is appropriate and personnel are assigned tasks to eliminate a recurrence.

* Sending copies of the incident analysis report to supervisor once the review is completed.

* Keeping the Incident Analysis Report Archive updated.
*Ensuring the action plan is implemented and verified during a follow-up audit.
**Treatment Stage**

- **A/E Response Plan No. 1 Personal Injury**
  - **Provide EMERGENCY FIRST-AD TREATMENT as required.**
    - **Yes**
      - Transport and accompany the injured worker to the nearest DESIGNATED MEDICAL CLINIC via company vehicle.
    - **No**
      - **Yes**
        - Does the injury require medical treatment?
        - **Yes**
          - Transport and accompany the injured worker to the nearest DESIGNATED EPIDEMIOLOGIC CLINIC via company vehicle.
        - **No**
          - **Yes**
            - Is the injury severe enough to warrant immediate emergency treatment?
            - **Yes**
              - Call 911 for emergency ambulance service and accompany the injured worker to the nearest hospital. At the GTA, call 905-678-3003.
            - **No**
              - **Yes**
                - Does the injury require transport for ambulance?
                - **Yes**
                  - Transport and accompany the injured worker to the hospital via company vehicle.
                - **No**
                  - **Yes**
                    - Has a previous incident resulted in CATASTROPHIC or CRITICAL INJURY as defined by R.C.O. 1990, Reg. 165?
                    - **Yes**
                    - **No**
                      - **Yes**
                        - Will the injury prevent the worker from returning to work?
                        - **Yes**
                          - A.S.A.P. Contact and notify Safety Advisor Lindsay Butcher or HSE Coordinator Scott Winger at the office number 905-236-0000 ext. 309 or Scott 905-236-3134 ext. 320. If he is not available, leave a detailed message.
                        - **No**
                          - A.S.A.P. Contact and通知 Denise Roach at the GTA office on 905-678-3003.
                          - Provide the required information.
                          - Preserve the ‘Accident Scene’ (saved as noted in R.C.O. 1990, s. 91, s. 153(1)), including all evidence when possible. Until released otherwise by the Safety Dept.
                          - Eliminate all unsafe conditions prior to commencing an investigation.
                          - Complete the field investigation.
                          - Report the results of the investigation on the O.C.C. Accident & Incident Report Form (or Personal Injury)
                          - Assert the Safety Dept. in displaying information during the investigation.
        - **No**
          - **Yes**
            - Was a request made by the Safety Coordinator to preserve the ‘accident scene’?
              - **Yes**
                - Eliminate all unsafe conditions prior to commencing an investigation.
                - Complete the field investigation.
                - Report the results of the investigation on the O.C.C. Accident & Incident Report Form (or Personal Injury)
                - Assert the Safety Dept. in displaying information during the investigation.
              - **No**
                - Eliminate all unsafe conditions prior to commencing an investigation.
                - Complete the field investigation.
                - Report the results of the investigation on the O.C.C. Accident & Incident Report Form (or Personal Injury)
                - Assert the Safety Dept. in displaying information during the investigation.

Appendix 2.4(g)(1)
Appendix 2.4(g)(1) - INTENTIONALLY DELETED
Appendix 2.4(g)(3)
Appendix 2.4(g)(3) - Elements of the Project Specific Site Security, Public Safety and Emergency Response Plan

The Project Specific Site Security, Public Safety and Emergency Response Plan shall include, at a minimum, the following elements:

- Identification of all public safety hazards associated with the Site;
- Identification of all potential means of unauthorized access to the Site;
- Means for controlling access to the Site to authorized personnel;
- Identification of appropriate physical barriers (existing and new fences, security gates, signage, etc) to ensure that unauthorized personnel do not gain access to the Site and procedures for modifications to such barriers if same are ineffective in preventing unauthorized personnel from gaining access to the Site;
- Identification of the manner in which the Site will be monitored (cameras, patrols, etc);
- Identification of the manner and timing for reporting to OPG non-conformance with the Project Specific Site Security, Public Safety and Emergency Response Plan to OPG;
- Manner in which the Contractor will coordinate Site security, public safety and emergency response with the off-Site measures taken by OPG Niagara Plant Group; and
- Manner in which the Contractor will coordinate Site rescue methods with off-Site methods.
Appendix 2.4(m)
Appendix 2.4(m) - Designated Substances Present at Site

Silica and lead are present on the Site, as follows:

- Silica is present in the concrete at the INCW and the PGS Dewatering Structure and may be mobilized by the Contractor through concrete cutting, coring, demolition, etc.; and

- Lead may be present in lead-based coatings applied to handrails and embedded steel parts at the INCW and the PGS Dewatering Structure and may become mobilized through contractor operations such as sandblasting or saw-cutting these elements.

1.0 INTRODUCTION

1.1 BACKGROUND

In response to the Invitation to Submit Design/Build Proposals, dated December 22, 2004 (as amended February 1, 2005, March 7, 2005, March 21, 2005, April 15, 2005 and April 26, 2005), by the Ontario Power Generation (hereinafter referred to as “OPG”), STRABAG AG and its sub-contractors (hereinafter referred to as the “Contractor”) have developed this Outline Environmental Management Plan (OEMP). The OEMP is provided as required for the proposal submission for the Project.

The OEMP has been developed for the Niagara Tunnel Facility Project (hereinafter referred to as the “Project”) as described in the Invitation to Submit Design/Build Proposals, the Draft Design/Build Agreement and associated appendices and amendments. The Contractor has developed the OEMP to meet or exceed the requirements of OPG.

The OEMP will provide the basis for the Environmental Management Plan to be provided to OPG after contract award within 60 days of signing the Design/Build Agreement.

1.2 OEMP OVERVIEW

1.2.1 Purpose/Objectives

The purpose of an environmental management plan is to provide the procedures that will take place during project design, construction and post-construction activities with respect to all issues related to the environment and environmental protection. Generally, these procedures and plans are based on:

- Project requirements;
- Regulatory and approval requirements;
- Government agency requirements;
- Public concerns; and,
- Guidelines and best management practices.

Specifically, the plans and procedures as outlined in this OEMP are based on the following:

- The requirements of the Niagara River Hydroelectric Development Environmental Assessment, dated March 1991 including update of July 13, 1992 and amendment dated June 3, 1993;
- The requirements of the Environmental Assessment Approval, dated October, 14, 1998;
- The requirements of Approvals obtained by OPG;
- The requirements of Approvals to be obtained by the Contractor;
- The requirements of the Draft Design/Build Agreement and associated appendices and amendments;
- The requirements of the Community Impact Agreement, dated December 22, 1993;
The requirements and information outlined in the Environmental Approvals and Third Party Information dated March 2005;
Plans submitted to OPG as outlined in this document and the Draft Design/Build Agreement;
Applicable statutes, laws and regulations;
OPG’s Environmental Management System; and
The requirements of federal, provincial and municipal government agencies.

The OEMP will describe the Project related environmental requirements, procedures to meet the requirements and compliance procedures that will be implemented by the Contractor. The OEMP demonstrates how the Contractor will ensure that all environmental requirements are met and how the Contractor will work in accordance with applicable statutes, laws, regulations, OPG policies, approvals, agency requirements and project documentation including the Draft Design/Build Agreement and the Community Impact Agreement. These will also be reflected in the management plans to be developed for Project implementation.

In order to ensure environmental protection and compliance, more specifically, the OEMP will meet the following objectives:

- Outline the environmental requirements for the Project;
- Develop management plans for activities that will occur in the Project area and during all phases of the Project to ensure environmental protection (natural and socio-economic);
- Will identify preliminary project environmental mitigation measures to support project engineering design and construction planning and incorporate these into the management plans and construction documents;
- Provide compliance procedures, (including design environmental audits, environmental inspection, environmental training, construction environmental audits, post-construction monitoring and environmental reporting);
- Provide the procedures for risk management and contingency plans for potential risks;
- Provide the management structure and staff qualifications for those responsible for the environmental management and compliance requirements; and,
- Provide reporting and communication procedures.

The information provided on the environmental management plans have been developed based on current best management practices and information in the Environmental Approvals and Third Party Information, dated March 2005. The information in the OEMP provides the Contractor with the scope and guiding principles of management plans throughout all project phases.

1.2.2 Process

The OEMP will provide the basis for the Environmental Management Plan (EMP) to be provided to OPG after contract award within 60 days of signing the Design/Build Agreement.
The individual management plans (e.g. Stormwater Management Plan, Excavated Materials Management Plan, etc) as required by the Project requirements, will be developed and provided as required during the Project design phase.

The EMP may require revision periodically throughout the project to accommodate new or amended legislation, industry standards, community concerns, or changes to the project’s design or schedule. If revisions are made to a particular management plan, after the initial filing of the EMP, the revisions will be subsequently submitted to the applicable regulatory authorities upon OPG approval. Copies will be provided to interested parties on request. If, during the remainder of the planning period, concerns that are not addressed in this submission are brought to the attention of the Contractor and a revised management plan is required to address the concerns, the EMP will be revised.

If there are any changes to the Contractor’s Environmental Management Plan, a Notice (as contained in Appendix A) will be provided to OPG. Prior to implementation of any change to the Environmental Management Plan, approval from OPG will be required.

1.2.3 Structure

The OEMP consists of eight sections and they are as follows:

- Section 1 provides an introduction to the OEMP outlining the purpose, objectives and structure of the OEMP and the Project requirements.
- Section 2 includes all the issues that require procedures and plans for management as required and as appropriate for environmental protection. It provides the information to be integrated into the management plans, specifically, what is required and how it is to be accomplished.
- Section 3 outlines the how the requirements of the Community Impact Agreement are to be met.
- Section 4 is the environmental compliance plan which describes the procedures that will be followed to ensure compliance with all Project related environmental requirements.
- Section 5 outlines the risk management procedures that will be undertaken by Project staff to flag any potential risks and mitigate the risks. It also provides potential risks and associated contingency plans based on Project information to date.
- Section 6 provides the management structure of the Project Team and Environmental Project Team and the roles and qualifications of the Environmental Project Team members.
- Sections 7 and 8 include the references and glossary, respectively.

1.3 PROJECT REQUIREMENTS

Prior to determining the plans and procedures for the OEMP, it is necessary to understand the requirements of the Project. These requirements are based on the information contained in the Invitation to Submit Design/Build Proposals and Draft Design/Build Agreement and associated appendices and amendments with reference to associated documentation including:
2. Environmental Assessment Approval, dated October 14, 1998;
3. *Fisheries Act* Authorization 5250-43;
5. Environmental Approvals and Third Party Information; and
6. Applicable statutes, laws and regulations.

Table 1, Summary of Environmental Project Requirements provides the type of environmental requirement, refers to the specific source of the requirement and includes the general details of the requirement. In Table 1, the Project requirements are grouped into the following categories: statutes and agreements; plans and submittals; environmental protection; and, public and community.

Generally, the Project requirements are integrated into the design and the associated plans, programs, submittals, contract documents and approvals. These are then carried forth into the construction and post-construction activities where these requirements are monitored and inspected. Figure 1 depicts the environmental Project requirements process.

• Section 2 of Appendix 2.8(a) – Submittal Requirements of the Draft Design/Build Agreement  
• Environmental Approvals and Third Party Information | • The disposal of any excavated material will be carried out in accordance with applicable laws, the EMP and any order, directive or notice from a government authority.  
• A storage pad will be used to store material suspected of containing benzene, toluene, ethyl benzene and xylene (BTEX). This material will be sampled and analyzed to determine appropriate management which is to be approved by applicable agencies. Runoff from this area and stockpile area will be treated, as required, prior to discharge. Approvals will be obtained for discharge to a watercourse.  
• The Contractor is required to install and manage a leachate collection and handling system, leachate treatment and disposal system at the excavated material storage areas.  
• The Contractor will sample excavated materials to determine if the Contractor has introduced contaminants. Material will be managed as required.  
• No excavated material shall be spilled in a watercourse.  
• The Contractor shall submit a Plan for the Disposal of Excavated Materials on OPG lands to the OPG and subsequently to MOE based on OPG’s “Management of Excavated Material”, dated December 2004.  
• Information in this plan will include:  
  • Arrangement and specifications of proposed material handling plan;  
  • Stockpile design and sequencing;  
  • Haul routes and other delivery systems;  
  • Mitigation measures to manage noise, dust, and other community |

Figure 1: Environmental Project Requirements Process
2.0 ENVIRONMENTAL MANAGEMENT

The information contained in this section will provide the basis for the Plans to be submitted to OPG, as required for Project construction or to aid the Contractor in meeting the Project requirements and schedule. Since the information required to complete these Plans will be determined during the design of the Project, the Plans will be provided to OPG once the required information has been determined. The Plans to be completed are:

- Approvals Acquisition Plan
- Environmental Protection Plan
- Water Withdrawal Plan
- Erosion and Sedimentation Control and Stormwater Management Plan
- Water Management Plan – Intake
- Water Management Plan – Outlet
- Blasting Plan
- Excavated Materials Management Plan
- Construction Effects of Tunnel and Shafts Management Plan
- Environmental Emergency Plan
- Hazardous Waste Management Plan
- Non-Hazardous Waste Management Plan
- Air Quality Management Plan
- Noise Management Plan
- Archaeology Resource Management Plan
- Public Consultation Plan

The Environmental Compliance Plan for the Project is contained in Section 4, below.

2.1 APPROVALS

2.1.1 Existing Approvals

Scope/Requirements

The Contractor will comply with approvals that have previously been obtained by OPG. These are as follows:

1. *Environmental Assessment Act* (Ontario), Approval dated October 14, 1998;
2. International Niagara Diversion Treaty;
3. *Navigable Waters Protection Act*; and,

The information to ensure compliance with existing approvals is contained in Section 4, Environmental Compliance Plan, below.
The Contractor is required to complete or support OPG in completing several conditions associated with the Environmental Assessment Approval. The required action for these is contained throughout the Outline Environmental Management Plan and as outlined in Table 1 above.

With respect to the *Fisheries Act* Authorization 5250-43 and associated amendments, the Contractor will:

- Provide a Blasting Plan;
- Provide an Erosion and Sedimentation Control and Stormwater Management Plan (including cofferdam installation and removal methodologies) based on OPG’s “Erosion and Sediment Control During Construction Phase – Preliminary Requirements” dated December 2004 and the Ministry of the Environment’s memorandum dated December 22, 2004;
- Remove (alive) and transport fish trapped in the dewatered areas of the intake to an appropriate area in the Niagara River;
- Ensure that any water discharged to a water body meets agency and regulatory requirements;
- Ensure that any excavated material, waste (solid and liquids) and construction materials do not enter a water body;
- Implement all mitigation measures to the satisfaction of Fisheries and Ocean’s Canada and Ontario Ministry of Natural Resources; and,
- Notify and discuss any changes to the construction of the Project that could impact fisheries resources with Fisheries and Oceans Canada and Ontario Ministry of Natural Resources.

2.1.2 Approval Acquisition

**Scope/Requirements**

Table 2, Legislative Approvals, (contained in Appendix B), provides the list of potential approvals required for the Project to be obtained by the Contractor during the life of the Project. This list is based on the list of approvals provided in Table 13-1 of the Environmental Assessment dated March 1991 and in Table 1.1B in Appendix 1.1(rrr) – Summary of Work of the Draft Design/Build Agreement. Based on current Project information, information has been obtained on changes to legislation and on new applicable legislation. The requirements for approvals related to these statutes have also been determined and noted in Table 2. The approvals to be acquired are as follows:

- Transportation of Dangerous Goods Act - Permit
- Temporary Magazine License
- Lakes and Rivers Improvement Act – Work Permit
- Public Lands Act – Work Permit
- Ontario Water Resources Act – Permit to Take Water and Certification of Approval under Section 53
- Environmental Protection Act – Waste Generation Number, Certificate of Approval (Air), Certificate of Approval (Industrial Sewage Works) and Dust Suppressant License
- Niagara Peninsula Conservation Authority – Regulation 97/04 & 508/94
After initial consultation with the regulatory authorities after contract award, all required approvals will be confirmed. An approval under the *Canadian Environmental Assessment Act*, is not considered as part of this Project as stated in OPG’s Response to Proponents Questions 3, dated April 15, 2005.

With respect to the Environmental Assessment Approval, OPG is responsible for meeting the conditions and obtaining respective approvals. The Contractor is responsible for either finalizing the required documentation and support the acquisition of the approvals or providing data and information for the documentation. The following lists the approvals where the Contractor has the above noted responsibilities:

- Plan for Disposal of Excavated Materials
- Disposal Monitoring and Contingency Plan
- Construction Effects of Tunnels and Shafts Management Plan
- Erosion and Sedimentation Control Plan

The Contractor will provide a Blasting Plan to meet the requirements of the *Fisheries Act* Authorizations to be approved by Fisheries and Oceans Canada.

Further details on each of these is provided in the following respective sections.

**Approval Acquisition Plan**

In order to ensure that environmental and other approvals are obtained in a timely manner so as not to impact any aspect of the Project schedule, an Approvals Acquisition Plan is being advocated. This Plan will involve:

- Discussions with all participating regulatory authorities;
- Detailed consultation with OPG; and,
- Detailed consultation related to the specific Project schedule requirements of the Contractor (subconcontractors and others performing the work).

Thereby, it is the intention to accommodate all reasonable requirement related to the many approvals required to facilitate the work.

To facilitate this process, it is suggested that an Approvals Task Force be formed jointly with OPG, the Contractor and participating regulatory authorities. Since both OPG and the Contractor have responsibilities for approvals, it is also suggested that regular monthly meetings
are held between OPG’s environmental team and the Contractor’s environmental team to ensure frequent dialogue, to ensure various aspects are understood and to ensure that the approvals are continually moving forward.

An Approvals Acquisition Plan, including a schedule, will be developed by the Contractor. The schedule will be developed based on “best efforts” by the Contractor, since the Contractor is not responsible for the time required by the agencies to review and provide approval. The Plan will be developed in conjunction with OPG and regulatory authorities to devise a realistic schedule for approval acquisition. The Contractor will act in good faith to facilitate the Plan to meet the Project schedule.

If, however, during implementation the Approvals Acquisition Plan proves not to be feasible, through no fault of the Contractor, and therefore could impact the Project schedule, the Contractor will request OPG and the regulatory authority to revise the Plan accordingly. This may or may not require a revision to the overall Project schedule.

The basis of the Approvals Acquisition Plan will be to schedule the approvals based on:

1. The time required by the agency,
2. The time needed to obtain the required information, and
3. The date the approval is required for construction.

Table 2, in Appendix B contains the approximate length of time required by the regulatory agencies to provide the approval based on preliminary discussions with the agencies. During the initial stages of the design phase of the Project, discussions with the relevant regulatory authorities will further take place to confirm the requirement for the approvals and the time required by the agencies to provide the approval. The Plan will be revised accordingly so that the Project schedule will not be impacted or if impacted, the impacts are minimized to the best extent possible.

The Contractor will assemble all information that is required for the approvals. OPG shall provide copies of and/or access to all documentation referenced in the Niagara River Hydroelectric Development Environmental Assessment, dated March 1991, related to the proposed generation facilities and any other documentation related to the Project. Additional information will be provided by the Contractor. All approval applications and associated documentation will be provided to OPG for review prior to submission to the appropriate agency.

Upon receipt of the approval, the Contractor will provide a copy of the approval, including any imposed terms and conditions, to OPG. The Contractor will complete all testing and monitoring requirements, as outlined in the approvals, which are the responsibility of the Contractor. All results will be provided to OPG and the appropriate agency.

The Contractor will invite OPG to all meetings with the agencies. Notification of meeting with regulatory authorities to OPG will be made no less than 48 hours before the scheduled meeting. Any approvals that will remain in place after construction must have input from OPG, as approval conditions may impact OPG.
Agency approval is also required for various plans and other submittals that are Project specific. These include, for example, Citizen’s Complaints Procedure, the Erosion and Sedimentation Control and Stormwater Management Plan, Plan for Disposal of Excavated Material, etc. In addition, it is anticipated that there will be requirements stipulated by regulatory authorities from the federal, provincial and municipal governments, that are not required under an approval but are as a result of their jurisdictional and statutory responsibilities. Since regulatory authorities have responsibility for various legislation and regulations, to ensure compliance, they typically provide related requirements and/or recommendations related to environmental protection.

2.2 ENVIRONMENTAL PROTECTION PLAN

2.2.1 Scope/Requirements

Through all phases of the proposed Project there is potential to negatively affect the natural environment. The Environmental Protection Plan will assist project planning and execution so that negative impacts to the natural environment are prevented or controlled. The plan will incorporate and address regulatory requirements, which will guide the decision-making process for natural environmental resource management.

The guiding principles used to develop the Environmental Protection Plan include:

- Meeting or exceeding all existing regulatory standards and requirement of regional stakeholders;
- Meeting or exceeding the requirements as outlined in the Environmental Assessment and approvals; and,
- Implementing best practices in environmental protection.

The Contractor will perform all work in a manner that protects the natural environment. The Contractor will also work in accordance with applicable laws, regulations, approvals and agencies requirements, including, those regulatory authorities responsible for air quality and aquatic and terrestrial resources (e.g. Fisheries and Oceans Canada, Ontario Ministry of the Environment, Ontario Ministry of Natural Resources and Niagara Peninsula Conservation Authority).

The Environmental Protection Plan includes environmental protection measures related to the atmospheric, aquatic, terrestrial and socio-economic environments and includes a restoration plan. The Contractor will provide the specific environmental protection measures, will identify the impacts on the community and provide mitigative measures for all construction methods. The environmental protection measures outlined in Sections 2.2.2 to 2.2.5 below, are primarily based on those provided in the Environmental Assessment and Environmental Assessment Approval and from the industry’s best management practices. These measures may change during the design (after consultation with government agencies and after approvals are acquired) and construction of the Project and will be revised accordingly. These protection measures will also be translated into the Plans (e.g. Erosion and Sedimentation Control and Stormwater Management Plan, Water Management Plans, Waste Management Plans, etc.) and construction documents and drawings for the Project.
The Environmental Protection Plan will also include measures to ensure adequate containment in areas where oil leaks, spillage, and other contaminant concerns are likely to occur during normal operations and maintenance. In addition to protection measures, the Plan will include guidelines and designated areas for maintenance activities. These designated areas will be as far away from watercourses as possible and performed on impermeable surfaces with contained boundaries, if possible. All refuelling procedures will take place away from watercourses and in a safe fashion to reduce the likelihood of a spill. All refuelling and maintenance trucks will be equipped with spill clean up materials. All construction equipment will be in good working condition in order to reduce any release of fuels, grease or lubricants.

Since information on the atmospheric, terrestrial and aquatic environments for the Project were completed around 1990, it is necessary to update or “ground truth” some of this information. It is anticipated that only the terrestrial environment, related to flora and fauna, may have changed since this time. Therefore, during the design phase, the Contractor will update the information on the terrestrial environment in areas where they will be disturbed (e.g. construction storage areas, excavated material storage area, retention pond area, etc.). The results, including any changes, will be documented. An assessment will be completed to determine the impacts of any such changes. This information will then be utilized when developing the plans and construction documents. The verification and assessment procedure will be performed by biologists with experience in completing terrestrial investigations. This will ensure that the appropriate environmental protection measures will be included in the construction documents and subsequently in place during construction. Any significant changes will be reported to OPG.

During construction, monitoring of environmental protection measures will be completed. See Section 4.3 below on construction phase environmental inspection.

2.2.2 Atmospheric Environment

The following table, Table 3, provides the proposed preliminary mitigation measures (based on information in the Environmental Assessment and on to-date design information) to be implemented during construction to protect air quality and the atmospheric environment.

Erosion and sediment control measures such as silt fence barriers, straw bale flow checks, and sandbag flow checks must be installed, maintained and removed in such a manner as to protect the adjacent watercourses. The following information on the installation of these measures was obtained from Ontario Provincial Standard Specification 577 “Construction Specification for Temporary Erosion and Sediment Control Measures”. Schematics of these erosion and sediment control measures are found in Appendix C.

The erosion and sediment control measures shall be installed such that:

• The control measure is adequately supported to ensure that there is no overflow;
• The passage of sediment through or under the barrier is prevented;
• The control measure support is always attached to the upstream side of the control measure;
• Soil scour and erosion is minimized (place additional protection against the downstream side, at the lowest point);
• Multi-component control measures (such as straw bales, sandbags) have no gaps between the pieces and they are placed tightly together; and
• A 2 m end-run angled upstream is placed to direct runoff to the main-run of the barrier.

The erosion and sediment control measures shall be maintained such that:

• All control devices are effective, functioning and in stable condition;
• They are vertical, without tears or sagging;
• They are without holes, etc.

Sediment removal will be completed as part of required maintenance. The removal of accumulated sediment will not cause sediment to escape to the downstream side of the control measure. The sediment will be removed to the grade existing when the control measure was installed.
The control devices will only be removed once all work in the area and/or restoration activities are complete. All accumulated sediment must be removed prior to control measure adjustment and/or removal. The control measure will be removed through the use of hand-held equipment in a manner that prevents the release of sediment and any debris to any watercourse.

During the removal of the accelerating wall, no fines are expected to be found or released. The accelerating wall will be removed in such a way as to ensure that material will not be conveyed downstream. If material is unintentionally released, it will be retrieved.

The construction and demolition procedures for the cofferdam will be such that fines released will be limited. The cofferdam cells will be used to filter out sediment when the cofferdam is initially dewatered and when any dewatering is required from the cofferdam during the construction of the intake.

2.2.4 Terrestrial Environment

The following table, Table 5, provides the proposed preliminary mitigation measures (based on information in the Environmental Assessment and on to-date design information) to be implemented during construction to protect the terrestrial environment.

| Wildlife displacement and breeding disruption. | • Clearing operations will be timed to reduce the potential for fauna mortality or breeding disruption.  
• Clearing and grubbing activities will be limited to times outside of May 1 to June 15 to accommodate the main bird nesting and raising period.  
• Construction staff will be advised to avoid sensitive areas such as Smeaton Cove, Dufferin Islands and the main construction yard woodlot. |
| Clearing of vegetation within construction areas | • Areas of preservation will be identified, such as the woodlot within the construction area.  
• A minimum 10 m buffer zone will be established around these sites; fencing may be used if necessary.  
• Trees will be identified, by an arborist, for removal, replanting and relocation.  
• The amount of vegetation cleared will be minimized.  
• Following construction, disturbed areas will be restored according to the approved |
2.2.5 Socio-Economic Environment

The protection of the socio-economic environment includes that of archaeology, heritage, resource use, local roads and traffic. The following table, Table 6, provides the proposed preliminary mitigation measures (based on information in the Environmental Assessment and from to-date design information) to be implemented during construction to protect the socio-economic environment.

### 2.2.6 Restoration Plan

The Contractor will develop a Restoration Plan detailing the rehabilitation of all disturbed areas to conditions prior to the commencement of construction. The information in the Restoration Plan will also be contained in the Erosion and Sedimentation Control and Stormwater Management Plan, as required. The Restoration Plan aims to:

- Stabilize all disturbed areas;
- Reduce disturbance of the surface soil and ground cover vegetation;
- Reduce the loss of nonrenewable resources, such as surface soil and granular material;
- Reduce long-term erosion of excavated material stockpile area;
- Reduce the loss of soil quality;
- Minimize the use of fertilizer;
- Encourage and facilitate the natural recovery of native plants;
- Encourage and facilitate the establishment of self-sustaining native plant communities;
- Establish species that provide erosion control and do not interfere with existing or proposed end land use;
- Avoid introducing weeds and invasive species; and,
- Remediate (decontaminate), if required.

A stable ground surface will be established by implementing suitable construction and restoration techniques throughout construction, including:

- Grading selectively;
- Providing temporary cover in areas of concern;
- Establishing erosion and drainage control structures; and
- Revegetating most disturbed areas.

With respect to the excavated material stockpile area, after all material is in place, 100mm of topsoil will be placed and appropriate grass mixture applied and trees and shrubs planted. Inspections will be completed to ensure that vegetation is successful. If it is not, it will be reapplied. There is speculation that the excavated material may have a high salt content, which can impede seed growth. The restoration efforts will be monitored and mitigation will be applied if there are any issues with the revegetation of this area.
2.3 WATER MANAGEMENT

2.3.1 Scope/Requirements

To meet regulatory and Project requirements with respect to water management, individual management plans will be developed. These encompass issues related to the management of groundwater, surface water and stormwater and water withdrawal within general and specific areas of the Project. These include:

- Water Withdrawal Plan
- Erosion and Sedimentation Control and Stormwater Management Plan
- Water Management Plan – Intake
- Water Management Plan – Outlet

The guiding principles used to develop the water management plans include:

- Meeting all applicable regulatory standards regarding water use and disposal;
- Meeting Project requirements; and
- Implementing best practices in water management.

Specifications for the management of water will be incorporated in the contract documents and drawings for the Project. All water management plans and associated measures to protect the environment will be inspected to ensure compliance and to protect the environment during construction. See Section 4.3 below for information on the construction phase environmental inspection.

2.3.2 Water Withdrawal Plan

As part of the design phase, water requirements for various components and activities associated with construction, drilling, blasting, operations and maintenance will be detailed. Subsequent engineering analysis will refine water requirements and attempt to reduce the total water demand for the project through re-use and recycling.

Water may be required for the following project activities:

- Water required to maintain haul roads (dust suppression),
- Water required for construction activities; and,
- Water for drilling and blasting operations.

Water will be sourced from existing municipal services, groundwater or the SAB2 Canal. The suitability of water source intake location, from a regulatory perspective, will be determined before locations are finally selected. Unless permission is otherwise granted, all water sources will meet regulations related to water use under the *Ontario Water Resources Act* (Government of Ontario 1999) and the *Ontario Environmental Protection Act*.

As required, a Permit to Take Water, under Ontario Regulation 387/04 of the *Ontario Water Resources Act*, with the Ontario Ministry of the Environment will be obtained.
The water withdrawal points, including amounts, will be monitored during use to ensure withdrawal rates do not exceed approved guidelines and permit requirements.

Water trucks will deliver water as required. Alternatively, surface pipelines might be used to transport water from the waterway to the adjacent project site. Details of onsite water storage will be refined as part of the design phase.

2.3.3 Erosion and Sediment Control and Stormwater Management Plan

During the design phase of the Project, the Contractor will develop an Erosion and Sedimentation Control and Stormwater Management Plan based on OPG’s “Erosion and Sediment Control During Construction Phase – Preliminary Requirements” dated December 2004 and MOE’s memorandum dated December 22, 2004. The Plan will include the intake and outlet construction area, excavated material disposal area(s) and any other areas disturbed during construction. This will also include a sediment control plan for in-water work and restoration plans for all disturbed areas.

The Erosion and Sedimentation Control and Stormwater Management Plan will provide the proposed mitigation measures to ensure environmental protection. These measures and the Plan will be consistent with the Ontario Ministry of Transportation procedures for highway construction, Ontario guidelines for erosion and sediment control at urban construction sites, provincial stormwater management guidelines and best management practices.

With respect to stormwater management, the Plan will include:

- Measures to prevent negative impacts to the natural environmental features and receptors;
- Measures to control surface runoff;
- Measures to manage surface runoff including the collection and disposal of runoff;
- Snow and ice management; and
- Measures to prevent the contamination of runoff (including snow and ice).

Direct surface runoff into watercourses will not be permitted and as such mitigation measures will be put in place which can include a collection system to direct runoff to retention ponds for treatment, erosion and sedimentation control measures or, as is planned at the INCW area, the stormwater runoff will be emitted to sewers if the runoff quality meets the sewer use by-laws. The retention ponds will promote the settling of suspended solids and the reduction of contaminants to ensure that water discharged from the pond meets the requirements of the Provincial Water Quality Objectives and the conditions of the Certificate of Approval, prior to discharge. Water from the ponds will only be discharged if the total suspended solids effluent limit of 15 mg/L has been met.

Stormwater and effluent from the excavated material area and rock (which is potentially contaminated with BTEX) storage pad will be directed towards the retention pond. Prior to discharge to the SAB2 Canal, sampling and analysis will be completed. The parameters to be analyzed will be based on requirements of the Ontario Ministry of the Environment. The results will be compared with the Ontario Ministry of the Environment’s “Guideline for Use at Contaminated Sites in Ontario” (February 1997) and Regulation 153 of the Ontario
To determine treatment requirements. Treatment will be completed, if required, prior to discharge.

Where material suspected of being contaminated with benzene, toluene, ethyl benzene and xylene (BTEX), will be analyzed and sent to the treatment facility for treatment prior to discharge.

Examples of mitigation measures include: the installation of silt fence barriers between the excavated material area and the SAB Canals; construction and seeding of ditches between the excavated material area and the SAB Canals; installation of straw bale flow checks every 250m in the ditches and/or before any culvert or intersecting ditch; and, rock flow check dams in ditches with a slope of greater than 10%. Schematics of erosion and sedimentation control measures are contained in Appendix C.

To ensure the effectiveness of the erosion and sediment control devices, regular and detailed inspection must be performed. The Erosion and Sedimentation Control and Stormwater Management Plan will outline the inspection frequency and requirements. Also included in the Plan are the details for the rehabilitation of all disturbed areas, including aquatic areas to conditions prior to the commencement of construction. The restoration plan will use native species and will require input from all relevant agencies.

The information in the Erosion and Sedimentation Control and Stormwater Management Plan, Plan for Disposal of Excavated Material and Water Management Plans for the intake and outlet areas will be integrated due to common issues in these plans.

The complete Plan will be submitted to OPG for review and subsequently to applicable agencies (e.g. Ontario Ministry of the Environment, Ontario Ministry of Natural Resources and Niagara Peninsula Conservation Authority) for approval. No related construction activities will commence until these approvals have been acquired.

2.3.4 Water Management Plan – Intake

During the design phase, the Contractor will develop a Water Management Plan for works associated at the intake area, which aims to ensure that all surface water discharged from the site meets the effluent criteria established by the Ministry of the Environment. A value added design approach will be used to minimize the amount of water requiring treatment by strategically identifying waste and material storage locations, in relation to surface runoff patterns.

The Contractor will submit a Water Management Plan for works associated at the intake area, which collects and treats, if required, runoff and which manages water during construction operations at the inlet, including cofferdam installation, operation and removal, tunnel construction, acceleration wall removal and construction and dock construction. The runoff shall include all water used in various construction processes, including equipment washing. The Plan will also provide the methodology for managing water within the cofferdams and provide measures to ensure that release of the water within the cofferdams do not negatively impact the water resources. The Plan will include a monitoring process, involving sampling and analysis, to ensure that the effluent meets all discharge criteria prior to release. If the surface water tested meets criteria detailed in the Region of Niagara sewer use by-law, then permission will be
obtained to direct the treated runoff into the sewer system. If the sewer use-by-law criteria are not met, the management plan must outline what measures will be taken to meet the criteria or propose alternate disposal methods. Any off-site disposal of surface water will be appropriately documented by the Contractor using disposal records and manifests, as required.

The Plan will also address snow and ice management such that the melt water does not flow directly into adjacent watercourses or excavations. Prior to the start of daily activities the Contractor is required to remove snow and ice from work areas and place in an approved location. The stockpiled snow and ice will be surrounded with silt fence in an area graded to facilitate collection of the melt water.

The Erosion and Sedimentation Control and Stormwater Management Plan and Plan for Disposal of Excavated Material will be coordinated with the Water Management Plan for the intake area to ensure that they complement each other and provide an integrated approach to identify responsible and economically viable protection measures.

2.3.5 Water Management Plan – Outlet

During the design phase, the Contractor will develop a Water Management Plan to primarily address the dewatering of the tunnel excavation and outlet area. All discharges from the excavations will be pumped into retention ponds. The retention ponds will have an Ontario Ministry of the Environment Certificate of Approval prior to entering into service. Sampling of the discharge will be completed in accordance with the Certificate of Approval.

The groundwater from the tunnel will be conducted through pipes to the surface and then to the retention ponds and the water treatment plant. During the TBM drive in the decline, the water will be collected behind the cutter head and pumped to the retention ponds. After passing the tunnel low point, a sump pump will be installed with pumps and float switch to ensure that all water will be pumped to the treatment plant. A permanent dewatering station will be established near the outlet area with adequate placement of monitoring wells.

In the retention ponds, the water treatment takes place. The treatment will depend on the content of solids, chlorides and sulphate concentration as well some metals, ammonia, calcium, fluoride and phosphate.

The tunnel water treatment plant consists of a Svedala Lamella Clarifier/Thickener (or similar) with sufficient capacity in combination with a series of two or more ponds. The clarifier is the primary means of treatment and includes oil skimmer, neutralization and flocculation device. The ponds are providing contingency for any flows in excess of the clarifier’s capacity.

The Plan will also include a monitoring protocol, which will involve sampling and analysis to ensure that the water quality meets the mandatory discharge criteria. The plan will be submitted to OPG and will subsequently be submitted to the Ontario Ministry of the Environment, Ontario Ministry of Natural Resources and the Niagara Peninsula Conservation Authority for comment and/or approval. Regulatory authorities and OPG will have site access to permit periodic sampling and testing of the water.
Prior to discharge, the effluent will be sampled and analyzed. Based on existing information (as outlined in Condition 4.2(e) of the Environmental Assessment Approval) and to be confirmed by the Ontario Ministry of the Environment, the effluent will analyzed for: general chemistry, major anions and cations, metals, volatile organic compounds and other organics includes polyaromatic hydrocarbons, pesticides and PCBs. The monitoring program will be based on the assumption of a one-week turnaround time for receipt of the test results from the laboratory. Subsequently the retention ponds will be designed with adequate storage capacity to ensure water can be held until receipt of the test results. The chemical analysis results will be compared to the Provincial Water Quality Objective to determine if treatment is required. If treatment is required, the effluent will be directed to the treatment facility.

Effluent from the rock storage area, which contains the potential contaminated rock, will be conveyed across the SAB2 Canal to the retention ponds. The effluent from the retention ponds, after sampling, analysis and treatment, if required, will be discharged to the SAB2 Canal.

In addition, the Contractor has the responsibility of preparing and submitting the required documentation and obtaining the related approvals, as outlined in the Environmental Assessment Approval Condition Nos. 4.1 and 4.2. The required documentation will include groundwater mapping prior to, during and upon completion of the tunnel construction, within 1 km radius along the tunnel alignment, with detailed mapping for specific areas of concern.

The Contractor will provide support to OPG in implementing the Groundwater Monitoring Program dated November 19, 2004 completed by Jagger Hims Limited and subsequently approved by MOE. The work will be completed by an outside nominated sub-consultant.

The groundwater will be monitored in various bedrock units within a one kilometer radius of the tunnel alignment, with emphasis placed on the tunnel incline and decline areas. The various geologic formations in the area will have specific monitoring requirements, such as:

- Lockport Formation – monitoring only within the incline and decline areas
- Grimsby and Whirlpool Formations – monitoring within the outlet area (northern decline) and intake area
- Queenston Formation – limited monitoring near the tunnel incline and decline areas

All groundwater monitoring wells will be tested for general chemistry parameters, major ions and metals. Two samples will be taken from each well and analyzed for volatile organic compounds (VOCs). Wells completed within the Lockport Formation will have two additional samples taken to be analyzed for other organics (polyaromatic hydrocarbons, pesticides and PCBs).

2.4 BLASTING MANAGEMENT

2.4.1 Scope/Requirements

The Contractor will provide OPG with a Blasting Plan which will comply with the following:
Specifications for blasting will be incorporated into the contract documents for the Project.

The Blasting Plan will be provided to OPG for review and subsequently to DFO to meet the requirements of the Fisheries Act Authorization 550-43.

2.4.2 Blasting Plan

The Contractor will prepare a Blasting Plan which will include the:

- Details of all blasting activities and operations;
- Mitigation strategies;
- Development of standard blast warning codes;
- Details of the ground vibration monitoring program during all blasting activity; and
- Development of a protocol for notification to affected residents.

During construction, monitoring of environmental protection measures and all other associated Blasting Plan measures will be completed. See Section 4.3 below on construction phase environmental inspection.

2.5 EXCAVATED MATERIALS MANAGEMENT PLAN

2.5.1 Scope/Requirement

The Contractor will prepare an Excavated Materials Management Plan based on OPG’s “Management of Excavated Material” dated December 2004. It will be developed during the design phase, which details the storage requirements, testing requirements (if necessary), treatment methods (if required), transportation, and disposal method. Every effort will be made to attempt to profit from the reuse of the excavated material. However, contaminated material may pose a problem due to the natural occurrence of BTEX in the shale formations within the Niagara region. A Disposal Monitoring and Contingency Plan will be prepared to manage this potentially contaminated material based on OPG’s “Management Plan for BTEX” dated December 2004 and MOE’s memoranda both dated December 2, 2004. Any contaminated excavated material will be appropriately stored, treated and disposed of in the most economically feasible fashion.

The specification of these two plans will be incorporated into the contract documentation and drawings for the Project. During construction, monitoring of environmental protection measures
and all other excavated materials management plan measures will be completed. See Section 4.3 below on construction phase environmental inspection.

2.5.2 Plan for Disposal of Excavated Material

As part of the Plan for Disposal of Excavated Material, procedures related to the management of material suspected of being contaminated will be provided. This will include segregation and storage, sampling and analysis and final disposal locations. These procedures will be in accordance with the Ontario Environmental Protection Act, Ontario Regulation 153/04 and the Ontario Ministry of the Environment’s “Guideline for Use at Contaminated Sites in Ontario” (February 1997). If any material is found to be contaminated, the Contractor will notify OPG.

The excavated material is to be stored between the two SAB canals, no closer than 10m from the canals. All stockpiles will be positioned such that they do not block access to existing or planned transmission towers and lines. Specifically, the stockpiles will be located no closer than five metres from existing or planned transmission towers and overhead lines.

Where a surge pile or stockpile is located at the outlet area, including the designated disposal site, any runoff from the surge pile or stockpile shall be directed to a water treatment facility (i.e., retention ponds). Prior to discharge from the retention pond(s), the water must be sampled and tested to ensure that the water quality meets the acceptable effluent criteria.

The excavated material will be stockpiled using best practices to ensure compaction and slope stability. The Contractor will construct stockpiles such that they are stable on the underlying foundation material with side slopes not steeper then two horizontal to one vertical. Any contaminated material will be stored on a liner system, designed and inspected by a licensed Geotechnical Engineer, to minimize the downward movement of contaminants.

Upon completion of the work, the Contractor will ensure that the surface of the stockpile is generally level with the maximum difference in surface elevation, over any part of the stockpile, of one metre. The stockpile will be graded smooth and crowned sufficiently to promote drainage to the edge of the stockpile. The toe of the stockpile will not encroach on any elevation lower than one hundred and eighty metres and be no closer than twenty metres at any point from the edge of the existing canals. All permanent stockpiles will be revegetated to reduce the impact of erosion.

The Plan will be submitted to OPG for review and subsequently filed with the Ontario Ministry of the Environment.

During construction, the requirements of the Plan will be monitored. See Section 4.3 below on construction phase environmental inspection.

2.5.3 Disposal Monitoring and Contingency Plan

The intent of the Disposal Monitoring and Contingency Plan is to ensure that the natural environment is protected from negative impacts of the storage and disposal of the contaminated material. If negative impacts are identified, mitigation measures will be proposed and implemented. Specifically, areas requiring remediation will be rehabilitated to meet the soil,
groundwater, and sediment standards of Ontario Regulation 153/04 of the Ontario *Environmental Protection Act*. The groundwater remediation will meet the criteria for non-potable groundwater for industrial land use sites, contained in Table 3 of the Ontario Ministry of the Environment publication entitled: *Soil, Groundwater and Sediment Standards for Use Under Part XV.I of the Environmental Protection Act* (Government of Ontario).

The Plan will include the baseline groundwater conditions in the disposal areas and details regarding drainage plans for groundwater and surface water in final disposal areas. This Plan will also outline the protocol for: sampling and analysis of the excavated material, storage, removal, transportation, determination of final destination, the actual destination of the excavated material, and reporting.

Contaminated material shall be stored in a segregated area at the northeast end of the main disposal site. A perimeter drain leading to a retention pond will be installed to redirect contaminated runoff for testing and treatment, if required. Subject to Ontario Ministry of the Environment approval, the retention pond will be discharged provided the suspended solids concentration is less than 15 mg/L, pH is within 6.5 to 8.5, and the Provincial Water Quality Objectives are met. If the runoff exceeds these requirements, arrangements will be made for off-site disposal (i.e., wastewater treatment plant) or further on-site treatment (i.e., aeration).

Sampling of the water within the retention pond will be performed at several locations and depths within the pond for verification purposes. The retention pond will be designed to:

- Accommodate storm events;
- Have volume control capabilities;
- Limit the potential for sediment resuspension;
- Permit maintenance monitoring and sediment sampling; and
- Permit sediment cleanout.

The specific details of the permanent disposal site and retention ponds will be finalized by the Contractor and submitted to OPG at least six months prior to the commencement of tunnel construction. Tunnel excavation will not commence until the Ontario Ministry of the Environment and the Ontario Ministry of Natural Resources have approved this Plan.

During construction, the requirements of this Plan will monitored. See Section 4.3 below on construction phase environmental inspection.

### 2.6 CONSTRUCTION EFFECTS OF TUNNELS AND SHAFTS MANAGEMENT PLAN

#### 2.6.1 Scope/Requirements

The Contractor will provide further details on the construction effects of tunnels and shafts based on OPG’s “Service Shafts and Tunnels” dated December 2004 and MOE’s memoranda dated December 3 & 7, 2004. The Plan provides the documentation on the construction effects of tunnels and shafts by providing a plan on managing groundwater inflow, sealing, slaking and
tunnel integrity. It also provides monitoring and contingency plans for tunnel integrity and possible seepage/failure and for the monitoring of soils and groundwater.

The Contractor’s Plan will be provided to OPG and then subsequently for approval to the Ontario Ministry of the Environment and the Ontario Ministry of Natural Resources in consultation with the Regional Municipality of Niagara, City of Niagara Falls and the Town of Niagara-on-the-Lake.

2.6.2 Documentation of Construction Effects

The Contractor is responsible for providing detailed documentation on the construction and effects of the shafts and tunnels. The Contractor will provide this information based on studies related to:

- Handling of groundwater inflow;
- Prevention of cross-contamination;
- Methods of sealing and maintaining shafts and tunnels;
- Nature and extent of slaking in the Queenston shale and possible effect of slaking on tunnel integrity; and
- Possible effects of groundwater chemistry on concrete grouting.

2.6.3 Monitoring Plan

Prior to construction, the Contractor provide the details of the monitoring plan to examine the construction effects of the tunnels and shafts. The monitoring plan shall ensure that the following is developed and implemented as required.

- A monitoring maintenance program to verify tunnel/shaft integrity over time;
- A contingency plan to deal with possible cavern/tunnel/shaft seepage or failure; and
- A soil and groundwater sampling program to determine the quality and quantity of material that may require special handling, dewatering, storage or treatment.

The latter will be provided in the Water Management Plan – Outlet and Excavated Materials Management Plans, as outlined above in Sections 2.3.5 and 2.5 respectively.

2.7 ENVIRONMENTAL EMERGENCY PLAN

2.7.1 Scope/Requirements

An Environmental Emergency Plan (EEP), which meets regulatory requirements, will be developed before construction for all storage, handling and transportation of controlled or hazardous materials. The EEP will provide the appropriate procedures in the event of a spill or other environmental emergencies. The planning of emergency measures makes it possible to reduce the impacts, losses and damages caused by accidental spills. The EEP outlines prevention measures, response plans, on-site equipment, reporting, containment and clean up. The management structure for environmental emergency responsibilities and training requirements are also defined.
The EEP addresses various emergency situations, including, but not limited to: flooding, fuel spill, and hazardous materials. The response procedures, contained in the EEP, will be determined for all possible environmental incidents related to this Project and associated activities that will ensure protection of the environment and human health. The EEP and its implementation will comply with the Ontario Environmental Protection Act and all other appropriate related legislation and regulations.

If a notice, directive, order or other communication related to an environmental emergency by a regulatory authority to the Contractor, a Notice, as contained in Appendix A, will be provided to OPG.

The Contractor’s Site Offices will be provided with a copy of the EEP and all required emergency and reporting personnel phone numbers. The EEP will also be part of the training requirements for all construction site personnel.

The EEP will serve to augment and work in conjunction with the Project Emergency Response Plan. The EEP is a part of the Project Emergency Response Plan. The requirements of the EEP will be incorporated into the contract documentation.

2.7.2 Environmental Emergency Plan

The following provides the elements of the EEP.

Notification and Reporting

If an accidental release of controlled or hazardous material occurs, the worker present during the release will make an immediate report to their supervisor and Project Manager. The Project Manager or Environmental Manager will notify in a timely manner the Ontario Ministry of the Environment, Spills Action Centre, unless the spill is exempt under Ontario Regulation 675/98 of the Environmental Protection Acts, as follows:

- Class I – Approved Discharges – Certificate of Approval has been obtained and complied with
- Class II – Water from Reservoirs and Water Mains – exempt completely
- Class III – Household Fires – Not applicable to the Project
- Class IV – Planned Spills – Must apply for exemption approval 15 days in advance of activity resulting in a planned spill, such as maintenance of equipment
- Class V – Refrigerants – Quantity of the spill is less than 100 kilograms
- Class VI – Motor Vehicles – Quantity of spill is not more than 100 litres of fluid, other than fluid transported as cargo, from the fuel system of other operating system of a motor vehicle. Exemption applies provided the spill does not enter and is not likely to enter watercourses; does not cause any adverse effects; and remediation is carried out immediately.
- Class VII – Electrical Utilities – Quantity of spill is not more than 100 litres of mineral oil from electrical transformers or capacitors. Exemption applies provided the spill does not enter and is not likely to enter watercourses; does not cause any adverse effects; and remediation is carried out immediately.
• Class VIII – Petroleum Sector – Spill of a fluid petroleum product at a dispensing outlet of not more than 100 litres in an area restricted from public access or not more than 25 litres in areas with public access. Exemption applies provided the spill does not enter and is not likely to enter watercourses; does not cause any adverse effects; and remediation is carried out immediately.

• Class IX – Transportation of Dangerous Goods – Exempt from reporting applies if quantity is less than the amount requiring reporting in the Transportation of Dangerous Goods Regulations under the Transportation of Dangerous Goods Act, 1992 (Canada). Also the exemption only applies provided the spill does not enter and is not likely to enter watercourses; does not cause any adverse effects; and remediation is carried out immediately.

Release reports will be documented and maintained in order to comply with and support spills that are exempted from reporting. If the spill is not exempt, documentation of the spill will also be completed. Reporting includes the date, time, location and duration of release; type of emission/pollutant; amount released; circumstances that caused the spill; details of clean-up; method used to dispose of pollutant; any adverse effects; and, notification procedures completed.

If required, fire, ambulance or police will be contacted if the emergency is such that there are potential risks to humans.

Initial Response

If a spill of a substance occurs, the first person on the scene will:

1. Do an initial assessment to identify imminent danger;
2. Restrict site access if there are dangers to human health;
3. Identify the material spilled and verify the nature of the hazard using Material Safety Data Sheets, and implement applicable safety procedures;
4. Cut off the source of the spill, if possible, and if safe to do so;
5. Control danger to human life, for example, by removing ignition sources, if possible, without further assistance;
6. Immediately obtain the assistance of others and begin to contain and clean up the spill; and,
7. Notify the Project Manager or Environmental Manager who will ensure that relevant regulators and affected residents are notified.

Personal protective equipment (PPE) shall be worn by those responding to the spill. The type of PPE will be based on the type and expected concentrations of the contaminants and the routes of exposure.

When notified of a spill, the Environmental Manager will immediately ensure that:

1. Action is taken to control danger to human life and the environment;
2. An on-site safety supervisor is designated/notified;
3. OPG’s management personnel are contacted and given details of the spill;
4. If a risk to the public exists, the applicable local authorities (i.e. fire, ambulance and/or police) are notified; and

5. The necessary equipment and personnel are mobilized, and measures are implemented to contain the source of the spill and commence cleanup.

The Contractor will make all suitable equipment available to contain and cleanup the spill.

Once the emergency contacts are made and initial efforts to contain and cleanup the spill are underway, the Environmental Manager will again notify OPG’s management personnel and the applicable government agencies.

**Spill Containment Procedures**

Response personnel will start containment measures immediately to limit the spread of the spill and to reduce danger to the public and impacts on areas of environmental concern, such as waterbodies, and to prevent damage to property. The following steps might also be taken:

- If the spill source is a leaking fuel truck, pump the fuel tank dry into suitable containers or another tank;
- Block potentially affected culverts to limit spill travel;
- Excavate a shallow depression or construct a surface berm in the path of the spill to stop and contain the flow;
- If feasible without unduly delaying containment efforts, remove surface material and store it separately during excavations;
- Apply sorbent materials to contain and cover small volumes of petroleum products; and
- Collect all spilled petroleum product and transport it to an approved waste disposal facility, to the extent practical.

Spill response equipment will be kept on site at all times. Where fuel is stored and dispensed, a commercially available kit for a 40 gallon spill will be kept. These typically include: oil socks, oil pads, pillow, disposable material contaminant bags, latex gloves, granular absorbent and 55 gallon capacity polyethylene salvage drum. For sites within 30 m of a water body, the kit shall include absorbent boom supplies.

**Spills Adjacent to or into a Waterbody**

If a spill occurs adjacent to, or into a waterbody, response personnel might take the following steps:

- Construct berms or trenches to contain the spilled substance before it enters a waterbody, where practical;
- If the spill is sediment, stop work that is causing the sediment to be released and implement mitigation measures (see Section 2.7.2.5 below);
- Recover free (liquid) petroleum products to the extent practical;
- Clean up contaminated areas, including downstream shorelines, in consultation with spill response specialists and the applicable government agencies; and
• Notify all applicable regulators and potentially affected residents immediately that a spill has occurred adjacent to or into a waterbody.

Siltation of Aquatic Resources

Excessive amounts of silt in a water body caused by construction activities is considered to be a spill. Erosion and sediment control are imperative for addressing instances of siltation of aquatic resources. The following section outlines the procedures to prevent erosion of soils by water and the siltation of watercourses.

Erosion control measures will be implemented, as required, to control water erosion of soils. If erosion is evident, or the potential for erosion is high, the following measures might be implemented progressively, or individually, as required.

• Remove the remaining loose surface material and store it away from the area to be regraded;
• Install temporary berms of subsoil, logs, timbers or sandbags during construction;
• Implement one, or a combination of, the following mitigation measures:
  • Armour the upslope face of berms with geotextile, logs or sandbags;
  • Import small diameter slash, then roll back and walk down with tracked equipment;
  • Apply erosion control matting, mulch or tackifier to hold the soil;
  • Install sediment traps at the discharge points of cross ditches and berms;
  • Install page wire, silt fencing, or both to trap or direct surface water flow; and
• Re-establish vegetation as soon as ground and weather conditions permit.

The Contractor will notify applicable government agencies, as required.

Sediment control measures as outlined in Section 2.3.3, Erosion and Sediment Control and Stormwater Management Plan, and will be implemented as standard environmental protection measures. If an extreme precipitation, stream flow event or other circumstance occurs that renders the existing sediment control measures inadequate, the following measures might be implemented individually or progressively, as required:

• Prohibit the operation of construction equipment close to the banks of watercourses where there is a risk of bank sloughing, bridge failure or flooding of the work area;
• Excavate cross ditches to divert runoff away from the watercourse;
• Construct berms of subsoil, timber, sandbags or rock on approach slopes, banks, or both, to divert surface water flow off construction areas onto well-vegetated lands, where practical;
• Place sandbags strategically to help stabilize and add height to banks, to prevent flooding of nearby areas, especially where vegetation has been removed; and,
• Install page wire, silt fencing, or both, to trap and divert surface water flow from construction areas onto well-vegetated lands.

The Contractor will notify applicable government agencies, as soon as feasible, that contingency measures have been implemented.
Spot Spills

A spot spill is a spill that involves a small quantity of contaminant over a small, isolated surface area. In the event of spot spills, response personnel might take the following steps:

- Ensure that the most suitable method to remove or reclaim contaminated soils is determined;
- Ensure that response personnel will reduce impacts from small spills by taking immediate action, clean up all spot spills immediately and follow suitable materials handling procedures;
- Report to Project Manager, Environmental Manager and to OPG’s representative; and,
- Ensure that response personnel flag locations where spot spills have occurred and that the environmental staff records them for future attention during post-construction monitoring.

Reclamation

Site reclamation after a spill has occurred might include the following, as applicable:

- In situ reclamation will only be conducted if approved by OPG and applicable government agencies;
- Following laboratory analysis of contaminants, if required, remediation and final cleanup will be conducted in consultation with the applicable regulatory agencies;
- Documentation for the spill will include a sketch with dimensions showing the spill location and a report describing the type of spill, cause of the spill and the cleanup and reclamation procedures undertaken;
- Used sorbent material will be disposed of at an approved hazardous waste treatment facility, as required;
- For oil spills, attempts will be made to restructure the soil by adding fibre and incorporating it into the surface soil, where practical. Acceptable fibrous materials include local peat and wood shavings;
- Fertilizer might be applied to the site at a rate and formulation suitable for site conditions; and
- The spill area will be reworked during nonfrozen conditions, where practical and necessary.

The Contractor shall ensure that applicable government agencies, as soon as feasible, will be notified that contingency measures have been implemented.

2.8 WASTE MANAGEMENT

2.8.1 Scope/Requirements

The Contractor is responsible for transport, receipt, inspection, use, storage, and disposal of hazardous and non-hazardous substances, materials, solids, liquids and gases. The Contractor will develop and provide both a hazardous waste management plan and a non-hazardous waste management plan. These will include procedures to manage waste generated on site during construction which will also be reflected in the construction documents.
Waste is defined as a broad term which categorizes items that are no longer wanted at the site of
generation and are dealt with by either reusing, recycling, composting or landfilling. The waste
management plans will contain standards to identify, handle, store, transport, treat and dispose of
solid, semi-solid and liquid wastes.

The guiding principles used to develop the waste management plans include:

- Meeting all existing regulatory standards regarding waste management;
- Meeting or surpassing Project requirements; and
- Implementing best practices in waste management.

The regulatory requirements governing the waste management plans set clear direction and
standards for decision-making and implementation. Key federal and provincial regulatory
requirements used for waste management planning include:

- Ontario Environmental Protection Act (R.S.O. 1990), including Regulations 347
  (R.R.O.1990) and 102/94;
- Canadian Environmental Protection Act (Government of Canada 1999a);
- Export and Import of Hazardous Wastes Regulations (Government of Canada 1992c);
- Transportation of Dangerous Goods Act (Government of Canada 1992); and,
- Transportation of Dangerous Goods Regulations (Government of Canada 2001c).

In accordance with Ontario Regulation 102/94, of the Ontario Environmental Protection Act,
a Waste Audit and Waste Reduction Workplan will be completed for non-hazardous waste. This
will identify all commercially reasonable efforts to implement 3Rs opportunities. It will be
completed during the design phase and will be implemented during the construction phase.

A Waste Generator Number, in accordance with Regulation 347 of the Ontario Environmental
Protection Act, will be obtained for the site and will be removed at the end of the contract.

During the design phase, the potential use of regional infrastructure and services for waste
transportation, treatment and disposal will be examined. The Project will use the most suitable
methods for managing different waste types, always considering the needs and requirements of
the local environment/community.

The Project will take an integrated systems approach to waste management, combining several
complementary alternative waste management. An integrated waste management hierarchy will
be used to reduce the environmental impact and improve efficiency. The hierarchy will reflect
the preferred waste management alternatives that should be explored, in order of preference. The
hierarchy is as follows: 1) reduce, 2) reuse, 3) recycle, 4) treat, if applicable, 5) disposal.

To support the waste management hierarchy, the Contractor will:

- Identify waste types and classification;
- Provide proper handling, transportation and storage;
- Ensure proper treatment and disposal; and
• Provide suitable documentation for all waste management activities (e.g. waste manifests).

Figure 2 illustrates the proposed decision-making process for managing waste from point of generation to disposal.

Waste identification information is critical to planning, designing, and implementing plans for proper waste handling, storage, transportation, treatment and disposal. It affects the size of storage facilities, number of transportation vehicles required, treatment requirements and disposal methods.
**Figure 2:** Waste Management Plan Decision-Making Process
2.8.2 Waste Classification

Waste generated by the Project will be classified as hazardous or non-hazardous according to Ontario Regulation 347/90 of the Ontario Environmental Protection Act. Generally, hazardous waste is defined as hazardous industrial waste; acute hazardous waste chemical; hazardous waste chemical; severely toxic waste; ignitable waste; corrosive waste; reactive waste; radioactive waste, except radioisotope wastes disposed of in a landfilling site in accordance with the written instructions of the Canadian Nuclear Safety Commission or the Atomic Energy Control Board; pathological waste; leachate toxic waste; or, PCB waste as defined in Regulation 362 of the Revised Regulations of Ontario, 1990. Hazardous waste does not include the following:

- Hauled sewage;
- Waste from the operation of a sewage works subject to the Ontario Water Resources Act where the works, is owned by a municipality; is owned by the Crown subject to an agreement with a municipality under the Ontario Water Resources Act; or receives only waste similar in character to the domestic sewage from a household;
- Domestic waste;
- Incinerator ash resulting from the incineration of waste that is neither hazardous waste nor liquid industrial waste;
- Waste that is a hazardous industrial waste, hazardous waste chemical, ignitable waste, corrosive waste, leachate toxic waste or reactive waste and that is produced in any month in an amount less than five kilograms or otherwise accumulated in an amount less than five kilograms;
- Waste that is an acute hazardous waste chemical and that is produced in any month in an amount less than one kilogram or otherwise accumulated in an amount less than one kilogram;
- An empty container or the liner from an empty container that contained hazardous industrial waste, hazardous waste chemical, ignitable waste, corrosive waste, leachate toxic waste or reactive waste;
- An empty container of less than twenty litres capacity or one or more liners weighing, in total, less than ten kilograms from empty containers, that contained acute hazardous waste chemical;
- The residues or contaminated materials from the clean-up of a spill of less than five kilograms of waste that is a hazardous industrial waste, hazardous waste chemical, ignitable waste, corrosive waste, leachate toxic waste or reactive waste; or
- The residues or contaminated materials from the clean-up of a spill of less than one kilogram of waste that is an acute hazardous waste chemical.

Hazardous waste will not be mixed or diluted with any substance or divided into smaller quantities to avoid being defined as a hazardous waste.

Non-hazardous waste or municipal waste is defined as any waste, whether or not it is owned, controlled or managed by a municipality, except, hazardous waste, liquid industrial waste, or gaseous waste.
2.8.3 Waste Handling, Storage and Transportation

The Hazardous and Non-Hazardous Waste Management Plans will outline the required facilities for waste storage before transporting waste for recycling, treatment and disposal. During construction, waste storage will only be temporary. However, some materials may be stored longer until waste volumes are sufficient for the selected treatment or disposal option, or for transportation to a waste management facility.

The following guidelines are to ensure proper handling and storage for all waste types:

- Temporary waste storage sites and containers will be provided at designated locations;
- Waste will be sorted and separated according to waste classification, i.e., hazardous and non-hazardous, and end use, e.g., recyclable materials will be segregated from waste intended for treatment and disposal;
- Containers will be selected based on:
  - Waste type, i.e., physical and chemical properties;
  - Preventing wildlife attraction, e.g., positive clamping lids;
  - Transport requirements, e.g., truck, barge or forklift;
- All containers will be labelled to facilitate the safe and proper handling of the waste type;
- Waste will be transferred regularly from points of waste generation, for consolidation at centralized waste management facilities;
- Waste will be stored until quantities are sufficient to support transport for recycling, treatment and disposal;
- Waste management facilities and transfer points will have secondary containment (i.e., berms) to prevent loss of materials to the surrounding environment;
- Centralized waste management facilities and transfer points will have controlled access restricted to authorized personnel; and,
- All waste types and quantities accepted and removed from waste management facilities and transfer points will be documented using waste tracking procedures.

The transportation of all waste types will be planned and implemented to ensure safety for the carriers and to reduce impacts to the environment. Waste will be transported according to Ontario Regulation 347/90 and the Transportation of Dangerous Goods Act and regulations. Any interprovincial and transboundary movement of waste, if required, will be performed according to the Canadian Environmental Protection Act (Government of Canada 1999a) and its Interprovincial Movement of Hazardous Waste Regulations (Government of Canada 2002c) and Export and Import of Hazardous Waste Regulations (Government of Canada 1992c).

Waste will be primarily transported by road. Transportation of waste will involve the use of specific, designated vehicles or vehicles that have been adequately adapted to ensure the safe transport of waste. Details for the transportation of waste will be provided, including routes, waste pickup schedules, and waste tracking and documentation for waste identification, pickup, delivery and chain-of-custody.
Each carrier who transports the controlled or hazardous materials must possess, and be able to produce a copy of, the shipping document related to the materials, while the materials are in transport. Placards will be used as clear indications that a transport unit contains controlled or hazardous materials. Trained personnel will monitor the movement of controlled and hazardous materials to ensure compliance with relevant regulations and requirements.

2.8.4 Hazardous Waste Management Plan

During the design phase, the Contractor will prepare a Hazardous Waste Management Plan. This plan shall include the identification and classification of all hazardous waste, treatment options and disposal method, as outlined above. It will also provide the required procedures of managing the hazardous wastes.

A standard hazardous waste classification process will form the basis of Project waste classification. A list will be prepared to itemize all project waste as hazardous or non-hazardous. Hazardous dangerous waste classification will follow accepted *Transportation of Dangerous Goods Regulations* criteria:

- Class 1 – explosives
- Class 2 – gases
- Class 3 – flammable and combustible liquids
- Class 4 – flammable solids, substances liable to spontaneously combust and substances which, on contact with water, emit flammable gases
- Class 5 – oxidizing substances and organic peroxides
- Class 6 – poisonous, toxic and infectious substances
- Class 7 – radioactive materials
- Class 8 – corrosives
- Class 9 – assorted other dangerous goods

The Contractor is responsible for the proper identification, classification, labelling and tracking of hazardous waste. Classification of hazardous waste includes identifying, according to Ontario Regulation 347/90 and the *Transportation of Dangerous Goods Regulations* criteria, the following:

- The shipping name,
- The primary class,
- The compatibility group,
- The subsidiary class,
- The United nations number,
- The packing group, and
- The risk group.

The Hazardous Waste Management Plan will document the required handling, storage and transportation as outlined above in Section 2.8.3.
2.8.5 Non-Hazardous Waste Management Plan

The Contractor, during the design phase, will complete the initial Waste Audit and Waste Reduction Workplan. This will provide the basis for which the Contractor will devise the Non-hazardous Waste Management Plan. The Plan will outline anticipated waste types and volumes, collection procedures, on-site storage, treatment (if necessary), transportation, and final disposal.

As required by Regulation 102/94 of the Ontario *Environmental Protection* Act, the Contractor must complete a Waste Audit and Waste Reduction Workplan to determine the types and approximate amounts of waste generated as a result of the Project. The Waste Management Workplan will determine strategies to divert waste from landfill disposal, utilizing the 3Rs principles. The Workplan will provide specific diversion measures for each waste type and will take into consideration federal and provincial approved waste management strategies and municipal and industry waste management opportunities and constraints. The Contractor will investigate and, if possible, secure the sale of waste generated through various construction activities. The Contractor will participate in the City of Niagara Falls waste diversion program. During the construction phase, the actual amounts of waste diverted in relation to the Workplan and the end location of the waste will be documented in the final Workplan.

The handling, storage and transportation of non-hazardous waste will also be included in the Non-Hazardous Waste Management Plan as outlined above in Section 2.8.3.

The Waste Audit and Waste Reduction Workplan will not include the excavated material as a Reuse of Excavated Materials Report will be completed by OPG.

2.9 AIR QUALITY MANAGEMENT PLAN

2.9.1 Scope/Requirements

The Contractor will ensure that construction activities that could impact air quality are managed in accordance with regulatory requirements. The Contractor will develop an Air Quality Management Program to meet these requirements.

Project activities will produce air emissions from a variety of sources. Controlled air emissions are assumed to occur because of normal operation of equipment and facilities according to regulatory standards and permits. Emission sources might include:

- Equipment and vehicle operation during construction;
- Excavation and transportation of shale from tunnel;
- Electrical generation during construction;
- Process equipment;
- Compressors; and
- Blasting.

Dust from removal and transportation of excavated material may impact air quality within the tunnel and on the construction site. However, the most significant events are assumed to result from emergency occurrences and might include, but are not limited to:
• Vapour loss during fuel transfer;
• Unanticipated blasting debris; and
• Tunnel failure.

The guiding principles used to develop the Air Quality Management Plan include:

• Meeting all applicable regulatory standards regarding emissions;
• Designing, procuring and operating equipment according to the procedures outlined in this plan; and
• Having a program in place to monitor and verify regulatory compliance.

Specifications of the Air Quality Management Plan will be incorporated into the contract documentation for the Project.

2.9.2 Air Quality Management Plan

Specifically, the Air Quality Management Plan will:

• Outline procedures for designing, purchasing and operating project equipment according to applicable regulatory requirements, land use permits and industry best practices for air quality management;
• Include measures for managing project-related air emissions;
• Include air quality monitoring procedures in key areas, for example in the tunnel, intake, outlet, disposal site, truck routes and locations of complaints; and
• Recognize the potential for uncontrolled releases.

The management requirements for the uncontrolled releases are contained in Environmental Emergency Plan in Section 2.7 above.

Mitigation strategies will include:

• Implementing good site management practices to control dust emissions where project road use might disrupt community air quality;
• Reducing the length of time vehicles are left idling along the access roads to the project;
• Using process and compression equipment that complies with appropriate emission standards; and
• Maintaining vehicles and equipment to reduce fuel use.

It is anticipated that the TBM will generate dust within the tunnel. In order to mitigate this, the following is proposed.

A steel dust curtain maintains a seal between the bored diameter and the cutterhead support in the area directly behind the head. Dust generated at the face is trapped in the cutterhead area and sucked out from muck dump area through a closed system in the main beam area through a dust scrubber system provided as part of the backup system.
Dust control is enhanced by a network of nozzles that spray a water pattern on the face. This mist basically prevents the dust particles generated in cutting from becoming airborne. Actual flow to the face is variable and may even be eliminated should ground conditions dictate. Nozzles are mounted in large steel blocks and are oriented to avoid plugging and damage from muck. All exposed plumbing is shrouded by heavy steel angles to prevent damage. Nozzles will also be mounted off the roof supports spraying forward of the dust shield.

2.9.3 Air Quality Monitoring

During the design phase of the Project, the Contractor will incorporate a comprehensive air quality monitoring program within the Air Quality Management Plan. Specifically, the air quality monitoring program will have monitoring stations at strategic locations (e.g. within the tunnel and rock conveyor), depending on atmospheric conditions and location of receptors. The program will determine sampling event frequency, reporting procedures, mitigation measures and response requirements. Specifically, air quality will be monitored within the tunnel during excavation and transportation of shale formations suspected of containing BTEX.

During construction, the Contractor will ensure that the total suspended particulates at property lines of the Project Site will not exceed 100 μg/m³ for an averaging time of 0.5 hour for fugitive dust sources for particles less than 44 microns. Monitoring for compliance and applying mitigative measures, such as dust suppressants, as required, will achieve this. See Section 4.3 below on construction phase environmental inspection.

Explosive and noxious gases in the tunnel will also be monitored. A gas monitor with sensor heads behind the cutter head and in the dust extractor ducts for the detection of methane gas will be provided. The gas concentration readings are relayed to the operator station and will sound a warning with subsequent shutdown of the TBM at a predetermined level of concentration. Additionally, an oxygen deficiency monitor is installed, which will sound a warning once the oxygen level is below the safe limit. Air samples are taken on a regular basis. The detailed procedures are included in the Site Specific Safety Plan.

2.10 NOISE

2.10.1 Scope/Requirements

The Project’s noise emission sources will include facilities, vehicles and construction activities. Noise control measures will be adopted that are consistent with recognized industry practices and guidelines. Specifically, the Contractor shall ensure that noise levels are in accordance with MOE Publication NPC 205, unless exceptions are otherwise obtained. The Contractor will also meet the more stringent requirements of the Niagara Falls Noise Control By-Law 2004-105, MOE Publication NPC 05 or truck traffic to and from the Site at the intake area shall not take place on Sundays unless noise at sensitive receptors are mitigated to OPG’s and Ontario Ministry of the Environment’s satisfaction.

The specifications of the Noise Management Plan will be incorporated into the contract documentation for the Project.
2.10.2 Noise Management Plan

The Contractor will develop a program for monitoring noise during construction to ensure that the hourly equivalent sound levels from construction activities are met in accordance with requirements listed above in Section 2.10.1. This will aim to ensure that impacts to the residents are minimized and meet Ontario Ministry of the Environment and municipality noise requirements. The Contractor will also include in the Noise Management Plan a protocol following the Ontario Ministry of the Environment publication NPC 103 for ascertaining that all construction equipment and trucks meet the requirements of NPC 115 and 118.

Primary mitigation strategies include:

- Implementing industry proven engineering noise controls, including silencers, upgraded building shells, intake and exhaust plenums;
- Applying acoustical treatments;
- Using inherently quiet equipment and equipment with strict noise emission specifications; and
- Scheduling operations activities, e.g., scheduling blasting during the daytime only as practical.

2.11 ARCHAEOLOGY RESOURCE MANAGEMENT PLAN

2.11.1 Scope/Requirements

It has been documented in the Environmental Assessment that there are no indications of archaeological resources in the Project area. However, this does not preclude that artefacts will not be uncovered. The Contractor will develop an Archaeological Resource Management Plan. This Plan will serve to direct the Contractor in the appropriate procedures to follow in the event of an archaeological or heritage resource discovery. The specifications of the Plan will be incorporated into the construction documentation for the Project.

2.11.2 Archaeology Monitoring

The Contractor is required to ensure that if any natural and historical objects of significance are found during excavations, that OPG is notified. The Contractor will not remove any artefacts until OPG is notified. The removal of any artefacts will be at the expense of OPG. The Contractor will be responsible for the appropriate removal and take all reasonable precautions to ensure that the artefacts are not damaged prior to and during removal. Artefacts will only be removed by the appropriate archaeological personnel, or under their supervisor, or upon their approval.

If archaeological, heritage or palaeontological resources are discovered during the design and construction Project phases, the site will be assessed and suitable mitigation measures will be determined. The Contractor will notify the applicable government agencies, as required.

The site will be assessed based on the following information:
• Input from the applicable regulatory authority;
• Input from the environmental team;
• The significance of the site;
• The depth of the site;
• The location of the site relative to the area being developed; and
• The feasibility of alternative locations for site relocation to avoid the resource.

The following steps will be taken if possible heritage or archaeological resources are discovered:

1. Immediately suspend work near any newly discovered archaeological, palaeontological or historic site.
2. Notify the appropriate regulatory agencies.
3. The Contractor’s archaeological resource consultant will visit the site, if necessary.
4. They will develop a suitable mitigation plan in consultation with OPG, environmental staff and associated regulatory agencies.
5. Construction within the area will resume after the artefact has been removed and no further work investigation is required.

2.12 PUBLIC CONSULTATION AND PUBLIC RELATIONS

2.12.1 Scope/Requirements

The Contractor recognizes that the Project is located in an urban/tourist area and recognizes the potential intrusiveness of construction on the activities of the local residents. The Contractor also recognizes that the Project is subject to the constraints set out in the Summary of Work and cooperation with and information to the public on the Project is essential. Therefore, the Contractor will participate in local committees and conduct or attend meetings or public information sessions. In addition, the submittals related to design will all include an identification of construction impacts on the community and mitigative measures. This will ensure that the construction activities will be assessed in light of the effects to the public during the design process and measures to minimize or eliminate negative effects will be documented and implemented.

There is the opportunity to promote this unique and important Project. By providing information to the public and providing site access for the public to view interesting aspects, it is anticipated that positive sentiments will be generated about the Project. Furthermore, since it is anticipated that one of the main concerns the local residents may have will be related to public safety, information related to public safety will be conveyed. It is suggested that the following be completed to promote this Project:

• Development and distribution of promotional material at the public information facility and at local school boards;
• Public, including local residents and tourists, access/tours to areas of interest on the site; and
• Publishing articles in industry related magazines.
3.0 COMMUNITY IMPACT AGREEMENT

The Contractor will provide support and assistance to OPG on the implementation of the Community Impact Agreement. This will include the Liaison Committee, Citizen Complaints Procedure, Neighbourhood Advisory Committee, Monitoring and Remedial Programs, Transportation Impact Management Program and Emergency Services. The requirements of the Tourism Impact Management lies with the City of Niagara Falls and the Town of Niagara-on-the-Lake.

3.1 LIAISON COMMITTEE

3.1.1 Scope/Requirements
The Contractor will support OPG by providing information to the Liaison Committee with respect to the status of the Project and will attend Committee meetings as required.

3.2 CITIZEN COMPLAINTS PROCEDURE

3.2.1 Scope/Requirements
The Contractor will develop a citizen complaints procedure during the design phase of the Project. This procedure will provide the public with a means of contacting an appropriate project representative to discuss issues with respect to the construction phase of the Project, provide an internal process of addressing/resolving public concerns, provide a process of documentation and reporting on a quarterly basis and provide a procedure to follow-up with the public on how the concern was addressed.

The draft citizen complaints procedure will be submitted to OPG for review and subsequently to the Regional Municipality of Niagara, Town of Niagara-on-the-Lake and the City of Niagara Falls for review. Revisions to the procedures will be made accordingly.

3.3 NEIGHBOURHOOD ADVISORY COMMITTEE

3.3.1 Scope/Requirements
The Contractor will support OPG by providing information to the Neighbourhood Advisory Committee with respect to the status of the Project and will attend Committee meetings, if required.

3.4 MONITORING AND REMEDIAL PROGRAMS

3.4.1 Scope/Requirements
The Contractor will support OPG in the form of collecting and providing data and information for development of monitoring programs agreed upon by the parties of the Community Impact Agreement with respect to the social, economic and financial effects attributable to the construction of the Project, if required.
Depending on the monitoring and remedial requirements, to be agreed upon by the Contractor and OPG, the Contractor may be responsible for implementing and obtaining the results of these requirements and reporting to the Liaison Committee on a basis to be agreed upon.

3.5 TRANSPORTATION IMPACT MANAGEMENT PROGRAM

3.5.1 Scope/Requirements

The Contractor will support OPG in the form of collecting and providing data and information for the Transportation Impact Management Program. Prior to the commencement of construction activities, the Contractor will submit a Transportation Impact Management Plan, which will subsequently be approved by the Regional Municipality of Niagara.

3.5.2 Plan/Procedures

The Plan will contain the following details:

- Scheduling and coordinating material deliveries;
- Designates routes, lanes and speeds;
- Special designation for toxic materials and explosives;
- Improvement of signs and hardware;
- Keeping roads clean;
- Scheduling to minimize construction traffic during peak tourist season and hours and special tourist events;
- Methods of ensuring contract compliance;
- The daily monitoring of road conditions, on roads to be used by construction equipment, including (but are not limited to): pavement condition, signage and safety;
- Measures to mitigate mud tracking by contracting street sweepers in order to clear construction roads of mud; and
- Reporting procedures.

Prior to, and during construction, the contractor will submit specific traffic control plans regarding certain activities that are expected to result in a disruption to the public. Examples of such activities are:

- Movement of oversized loads, requiring lane closures, police escort, etc;
- Directing construction traffic into residential areas, if applicable; and
- Remedial construction and road improvements (if needed).

The traffic control plans will demonstrate the methods, which the Contractor intends to implement in order to maintain road safety, and as much as possible, mitigate the public’s inconvenience.
3.6 EMERGENCY SERVICES

3.6.1 Scope/Requirements

The Contractor will support OPG in developing the Emergency Services Plan. For details, see Preliminary Project Site specific Site Security, Public Safety and Emergency Response Plan.

4.0 ENVIRONMENTAL COMPLIANCE PLAN

4.1 BACKGROUND/REQUIREMENTS

As outlined in the Draft Design/Build Agreement, the Contractor is responsible for specific environmental requirements and OPG has undertaken to complete and be responsible for all remaining environmental requirements as outlined in the following documents:

2. Environmental Assessment Approval, dated October 14, 1993;
3. *Fisheries Act* Authorization 5250-43;

In response to this the Environmental Compliance Plan (ECP) was developed. Since OPG has maintained a significant role for environmental requirements, integration with OPG’s work will be an important component of the Project. The scope of the ECP has been developed based on the Contractor’s requirements only.

Note that at the time of the proposal submission the ECP is not a complete document, as some of the requirements require input from government authorities. In addition, further requirements may be provided from the conditions of approvals acquired during the design phase of the Project. Additions and clarifications to the ECP will be included after discussions with appropriate government authorities and after approvals are obtained. Amendments may also be made to the ECP as the Project progresses.

Generally, during design, construction and post-construction activities, the Contractor agrees to work in a manner that protects health and the environment and in compliance with:

- The requirements of the Niagara River Hydroelectric Development Environmental Assessment, dated March 1991 including update of July 13, 1992 and amendment dated June 3, 1993;
- The requirements of the Environmental Assessment Approval, dated October, 14, 1998;
- The requirements of Approvals obtained by OPG;
- The requirements of the Environmental Approvals and Third Party Information, dated March 2005;
- The requirements of Approvals to be obtained by OPG or the Contractor;
- The requirements of the Draft Design/Build Agreement;
The requirements of the Community Impact Agreement, dated December 22, 1993; This Environmental Management Plan; Plans submitted to OPG as outlined in this document and Draft Design/Build Agreement; Applicable statutes, laws and regulations; OPG’s Environmental Management System; and The requirements of federal, provincial and municipal agencies.

In order to meet all of the environmental requirements for the Project, as outlined above, a compliance plan has been developed. This plan provides the specific procedures that will be completed during all phases of the Project to ensure compliance with the Draft Design/Build Agreement, Community Impact Agreement, Environmental Assessment, applicable laws, regulations and guidelines, approvals, agency requirements and applicable Project documentation.

To effectively document and explain the compliance procedures, this section has been divided into the three phases of the Project: design, construction and post-construction. The compliance plan utilizes procedures such as environmental audits, risk management analysis, quality assurance/quality control, and environmental inspection, monitoring and training, to ensure compliance. Figure 3 depicts the Project environmental compliance process. A database will be utilized to effectively track all compliance requirements.

Monthly reports on the progress of the Environmental Compliance Plan will be completed by the Environmental Manager and submitted to OPG and the Contractor’s Project Manager. The Environment Compliance Plan Monthly Reports will provide the following information:

- Notices (which will also be provided individually at the time of requirement);
- Agency communication and requirements;
- Compliance procedures completed (e.g. Environmental Audits);
- Results of ongoing risk management assessments;
- Summarized Environmental Inspection reports;
- Activities completed for the Liaison Committee, Neighbourhood Advisory Committee and any other public consultation activities;
- Incidents of non-compliance and resolution; and
- Overall status of environmental compliance.

A risk management assessment will be implemented during all phases of the Project in order to determine risks associated with all environmental issues including the acquisition and prioritization of approvals and compliance issues. This is discussed in more detail below in Section 5.
Figure 3: Project Environmental Compliance Process
4.2 DESIGN PHASE

The compliance procedures for the design phase ensure that all activities to take place prior to construction start-up are in compliance with the Project requirements, as outlined above. The design phase includes all activities that are required to be completed in order for construction to take place.

At the beginning of the design phase, the Contractor and OPG will meet with agencies that have jurisdictional responsibilities for environmental and approval related issues. The purpose of the meeting is to provide these agencies with background information on the Project and information on how the Project is going to proceed and be carried out, the specific construction activities for the Project and schedule. This meeting will allow agencies to ask questions and provide their initial requirements. Subsequent to the meeting, the agencies will be asked to provide their requirements in writing. If necessary, the Contractor will provide additional information in order for the agencies to provide their requirements. These requirements can be based on a statutory approval or due to jurisdictional responsibilities for environmental protection. It is anticipated that further meetings will be required with specific agencies on an individual basis.

As previously stated, the Contractor will complete investigations of the terrestrial environment to confirm the information in the Environmental Assessment, dated March 1991, for the Project or to note any changes. Any changes will be assessed in relation to construction activities and reflected in the submittals and construction documents to ensure environmental protection on existing resources.

In order to ensure that design phase activities are in compliance with Project requirements, the compliance procedure will take the form of an Environmental Auditing Program and within the Project Quality Assurance/Quality Control procedures. The Environmental Auditing process will ensure environmental compliance and the QA/QC process will ensure that documentation, and scheduling meet with OPG’s standards.

4.2.1 Environmental Auditing Program

The Environmental Auditing Program is a means of ensuring compliance with Project environmental requirements during the design phase. Design phase activities with related environmental components include:

- Approval acquisition;
- Development and submission of Environment Management Plan;
Specific Environmental Protection Procedures, Project Schedule, and, any other submittal with environmental implications);

- Development of monitoring programs (including Monitoring and Remedial Programs, Air Quality Monitoring Plan, Archaeology Management Plan, and Noise Monitoring Program);
- Implementation of additional agency design requirements;
- Revisions to Environmental Compliance Plan and the Environmental Management Plan;
- Activities with respect to Community Impact Agreement, (including Liaison Committee, Citizens’ Complaints Procedures, Neighbourhood Advisory Committee, Monitoring and Remedial Programs, Transportation Impact Management Plan, and Emergency Services); and
- Development of contract specifications and drawings.

The Environmental Audit for each activity/deliverable listed above will be specific to each activity/deliverable. Generally speaking, the common elements of each Environmental Audit will consist of:

- A structured internal review by the Environmental Manager or Senior Environment Specialist;
- Monthly design review meetings with Project Team (purpose of, for example, determining project changes or issues that could impact environmental requirements);
- Monthly meetings with Environmental Project Team to discuss status of all environmental issues, problems, work to be completed and risk analysis; and
- Documentation of all Environmental Audits.

The Environmental Audit Program will be completed by senior environmental staff with experience in project management, environmental auditing procedures and environmental requirements for design and construction projects. The documentation of the Environmental Audits will be kept on file and OPG may request copies. Monthly reports/updates to OPG on the progress/process of the Environmental Compliance Plan which will include information related to the Environmental Audit program.

The following contains the details of the Environment Audit for each activity/deliverable listed above.

**Approvals Acquisition**

The Environmental Audit for approvals acquisition will ensure that all appropriate approvals are obtained prior to the commencement of Project construction or of the construction activity requiring approval. This, in turn, will also ensure that the Contractor is in compliance with the Draft Design/Build Agreement and applicable laws.

The Environmental Audit for approvals acquisition will monitor and ensure the following:

- The requirements of the approval are clearly understood;
- The requirements of and application for the approval are conveyed to OPG and then to the agencies in a timely manner;
• The time required for the agency to review the information and provide the approval are clearly understood and scheduled accordingly;
• Follow up with agencies will be completed to facilitate the timely acquisition of approvals;
• Copies of the approvals and conditions are provided to OPG;
• Approval conditions are conveyed to the Project Manager; and
• A methodology to complete approval conditions is developed and implemented.

The documentation of the Environmental Audit for approvals acquisition will be completed and updated on a monthly basis. It is anticipated that this will continue into the construction phase of the Project, as some approvals may be obtained during this time. The Environmental Audit will also outline the approvals to be obtained, the approval requirements, activities completed to ensure compliance and agency communications (which will also be communicated to OPG when received).

As stated above, monthly design review meetings will take place with the Project Team to keep up to date on Project status and changes and to ensure that information required for approvals are conveyed and obtained. Monthly meeting with the Environmental Project Team will be completed to discuss approval requirements and status.

If the requirements of approvals and the direction given by regulatory authorities are conflicting, the Contractor will attempt to resolve the discrepancy or disagreement by meeting with representatives of all the government agencies involved.

Environmental Management Plan

The Environmental Audit for the Environmental Management Plan (EMP) will ensure that the documentation is comprehensive and complete and submitted within 60 days of signing of the Project Agreement.

During the monthly design review Project Team meetings, information requirements will be conveyed and obtained with respect to the Project and EMP. In addition, during the monthly Environmental Project Team meetings, the status and information requirements of the EMP will be completed.

The Environmental Audit will review this activity on a monthly basis to ensure that the requirements have been met and that the activity is on schedule. The Environmental Audit report will be completed after the document has been submitted to OPG.

If the EMP requires revision due to Project changes or agency and OPG requirement changes, the Environmental Audit for this activity will be updated. Note also that if the EMP is revised, OPG will be provided a Notice and the revised document for review and approval prior to the implementation of the change.

Plans and Submittals

The Environmental Audit for Project plans and submittals will ensure that they are completed in compliance with Project environmental requirements. It will ensure that they are in compliance
with applicable laws, regulations and guidelines, agency requirements, approvals, the Draft Design/Build Agreement, Environmental Approvals and Third Party Information and the Community Impact Agreement. It will also ensure that they are approved prior to commencing construction.

The Project plans and submittals include:

- Approval Acquisition Plan;
- Environmental Protection Plan;
- Erosion and Sedimentation Control and Stormwater Management Plan;
- Environmental Emergency Plan;
- Water Withdrawal Plan;
- Water Management Plan – Intake;
- Water Management Plan – Outlet;
- Plan for Disposal of Excavated Material;
- Disposal Monitoring and Contingency Plan;
- Blasting Plan;
- Hazardous Waste Management Plan;
- Non-Hazardous Waste Management Plan;
- Construction Effects of Tunnels and Shafts;
- Air Quality Management Plan;
- Noise Management Plan;
- Archaeology Resource Management Plan;
- Construction Documents; and
- Any other submittal with environmental implications.

The Environmental Audit, for those plans not principally developed by the Environmental Project Team, will monitor the following:

- Participation of an Environmental Team member in the development or finalization of the Plans to discuss and convey environmental requirements;
- Attendance of an Environmental Team member at meetings related to the Plans; and
- Review of all draft plans by an Environmental Team member to ensure that all environmental requirements have been met, which includes: applicable mitigation measures, compliance with relevant legislation, regulations and guidelines, takes into account feasible approaches to environmental issues/problems. Documentation in the form of a memo, providing comments and recommendations will be provided to the Contractor’s design team and revised accordingly.

The Environmental Audit, for those plans principally developed by the Environmental Project Team, will monitor the following:
- Participation of a Project Team specialist in the development of the Programs to discuss and convey Project requirements/constraints/issues;
- Attendance of a Project Team specialist at meetings related to the Programs; and,
- Review of all draft Programs by the Project Team specialist to ensure that all Project requirements/constraints/issues have been met and addressed. Documentation in the form of a memo, providing comments and recommendations will be provided to the Environmental Project Team and revised accordingly.

An Environmental Audit and report will be completed per plan/submittal. Should these plans change during the construction phase of the Project, the environmental auditing procedures will be completed and the Environmental Audit report will be updated.

**Construction Documents**

During the design phase, the environmental protection measures and other environmental requirements will be incorporated into the construction drawings and specifications. The environmental protection measures have been documented in the Environmental Assessment for the Project and will have been developed in plans and submittals and from discussions/communications with relevant agencies.

In order to ensure that all applicable environmental protection measures and environmental requirements are incorporated into the construction documents, an Environmental Audit will take place by a senior environmental staff member.

The Environmental Audit will monitor the following:

- Participation of an Environmental Team member in the development of the contract documents to discuss and convey environmental requirements;
- Attendance of an Environmental Team member at meetings related to the contract documents; and
- Review of all draft contract documents by an Environmental Team member to ensure that all environmental requirements have been met which includes: applicable mitigation measures, compliance with relevant legislation, regulations and guidelines, takes into account feasible approaches to environmental issues/problems. Documentation in the form of a memo, providing comments and recommendations, will be provided to the Contractor’s design team and revised accordingly.

The Environmental Audit report will be completed and will document the process and procedures completed.

**Community Impact Agreement**

In order to ensure all compliance requirements are met, with respect to the Contractor’s responsibilities for the various aspects of the Community Impact Agreement, Environmental Audits for each aspect will be completed. The requirements, as outlined above in Section 3, include responsibilities for:
• Liaison Committee;
• Citizens’ Complaints Procedures;
• Neighbourhood Advisory Committee;
• Monitoring and Remedial Programs;
• Transportation Impact Management Program; and
• Emergency Services.

With respect to the Contractor’s responsibilities for the Liaison Committee and Neighbourhood Advisory Committee, reporting on the compliance of this activity will be contained in the monthly report on the Environmental Compliance Plan to OPG. This will report on all of the actions, including attendance at meetings etc. completed by the Contractor.

The Citizen’s Complaints Procedure will be developed by the Public Consultation specialist in the Environmental Project Team with input and review by the Project Manager. The Environmental Audit will monitor the following:

• Participation of the Project Manager in the development of the Procedure to discuss and convey Project requirements/constraints/issues;
• Attendance of the Project Manager at meetings related to the Procedure;
• Review of the Procedure by the Project Manager to ensure that all Project requirements/constraints/issues have been met. Documentation in the form of a memo, providing comments and recommendations will be provided to the Contractor’s Environmental Project Team and revised accordingly; and
• Compliance with the requirements of the Community Impact Agreement, OPG and the Regional Municipal of Niagara, City of Niagara Falls and Town of Niagara-on-the-Lake.

With respect to the Citizen’s Complaint Procedures, a senior environmental team member will complete an Environmental Audit after OPG and the applicable municipalities have approved the Procedure. During the implementation phase of the Citizen’s Complaints Procedure, the Contractor will report to OPG on a quarterly basis on the effectiveness of the procedure. The effectiveness will be based on the public’s response to the Procedure.

The Monitoring and Remedial Programs are to be developed by the OPG and the Regional Municipality of Niagara, City of Niagara Falls and the Town of Niagara-on-the-Lake. The Contractor will facilitate this by providing administration responsibilities for the meetings. The Contractor will also support OPG in providing the data and information for the Programs, which could be related to social, economic and financial effects of the construction of the Project. The type of monitoring and remedial program will determine the environmental auditing requirements. Regardless of the type of monitoring and remedial program, the Environmental Audit will monitor the compliance of the program with applicable laws, approvals, OPG policies and other Project environmental requirements.

The Contractor’s responsibilities for the Transportation Impact Management Program and Emergency Services involve the submission of plans related to road conditions, traffic and reporting and emergency service requirements. These are to be completed by Project Team road and emergency specialists. The Environmental Audit will monitor the following:
• Participation of an Environmental Team member in the development of the plans to discuss and convey related environmental requirements;
• Attendance of an Environmental Team member at meetings related to the plans; and
• Review of all draft plans by an Environmental Team member to ensure that all environmental requirements have been met which includes: applicable mitigation measures, compliance with relevant legislation, regulations and guidelines, takes into account feasible approaches to environmental issues/problems. Documentation in the form of a memo, providing comments and recommendations will be provided to the Contractor’s design team and revised accordingly.

An Environmental Audit will be completed per plan by a senior environmental team member. Should these plans change during the construction phase of the Project, the environmental auditing procedures will be completed and the Environmental Audit report will be updated.

4.3 CONSTRUCTION PHASE

The construction phase compliance procedures will ensure that all construction and monitoring activities are in compliance with Project environmental requirements. Compliance of Project environmental requirements during construction activities will require Environmental Construction Inspection and compliance with Project environmental requirements during monitoring activities will require construction phase Environmental Audits.

4.3.1 Environmental Inspection

Construction Environmental Inspection will ensure that the construction phase is completed in compliance with:

• Approval conditions;
• Laws, regulations, guidelines etc, and Project Agreements;
• Required mitigation measures outlined in the Plans and submittals;
• Agency requirements;
• OPG policies;
• Required mitigation measures and construction activities outlined in the construction specifications and drawings; and
• Requirements of all plans.

It is the responsibility of the Contractor to ensure that the Project is constructed in accordance with the Contract Documents.

The objectives of the Construction Environmental Inspection are to:

• Ensure that all environmental mitigation measures are implemented;
• Ensure that construction activities are completed in a manner that protects health and the environment;
• Ensure that work proceeds in compliance with Project environmental requirements;
Ensure that the conditions of permits and approvals, and all of OPG’s environmental policies and commitments, are met;
Monitor the effectiveness of the environmental protection measures;
Cooperate with other activity inspectors to assist in interpreting and implementing environmental mitigation measures;
Provide alternative environmental protection measures should existing ones prove to be ineffective;
Identify deficiencies and remedial action;
Ensure emergency response procedures are implemented as required;
Sample soil and groundwater, as required;
Provide effective reporting to appropriate individuals on issues of non-compliance; and
Complete daily reporting requirements.

An Environmental Inspector will be assigned to the Project during construction. The Environmental Inspector will report directly to the on-site Environmental Manager. The Environmental Manager and the Environmental Inspector will have direct access to the Construction Manager and/or Construction Superintendents should issues of non-compliance be observed and have the ability to stop work if an action could result or has resulted in a contravention to an act, regulation or approval.

The on-site Environmental Manager will be responsible for coordinating all environmental inspections on the construction site, and will report to the Construction Manager.

The Environmental Inspector will complete inspections on a daily basis, at a minimum, for all construction areas/activities for in-water work and areas for excavated material storage, hazardous materials storage, refueling/maintenance, truck cleaning and groundwater effluent storage. The Environmental Inspector will keep a daily log and provide daily monitoring reports to the Environmental Manager and the Construction Manager.

The daily environmental inspection reports will be summarized on a monthly basis and provided to OPG in the monthly Environmental Compliance Reports. The summarized environmental inspection reports will highlight issues of compliance and non-compliance and issues that required resolution and how the issue was resolved (for example, ineffective environmental protection measures and remedial actions).

If an unforeseen environmental event occurs, for which no mitigation measures have been approved, the following personnel will formulate a plan of action:

- Construction Manager and/or Construction Superintendent(s);
- Senior Environmental Team member; and
- Environmental Inspector.

The plan of action will include measures to assess and reduce the environmental impact and will be communicated to all applicable parties.
In particular, environment inspection will include the monitoring of erosion and sedimentation control measures, aquatic and terrestrial resources, archaeological/heritage resources, noise, waste management, air quality, hydrogeology, and construction effects of tunnels and shafts. The following provides details of these requirements. In addition, after discussions with agencies, including the respective municipalities and after approval acquisition, inspection requirements may be added or changed accordingly.

**Archaeology/Heritage**

A qualified archaeologist, licensed in Ontario, will be on call during construction should any archaeological artifacts be uncovered. They will proceed on site and provide professional advice on the next course of action, as detailed in the Archaeology Resource Management Plan, Section 2.11.

**Noise**

During construction, if there are any public complaints with respect to noise, the noise will be monitored to determine if it exceeds the requirements outlined in Section 2.10. Mitigation measures will be recommended and implemented, as outlined in Section 2.10.

**Excavated Material**

The Contractor is required to finalize and implement a sampling and monitoring program for excavated material suspected of being contaminated with BTEX. In addition, the Contractor is required to implement a soil and groundwater monitoring program associated with the storage of the contaminated material, as detailed in the Excavated Materials Management Plan, Section 2.5. The Environmental Inspector will be required to monitor these areas.

**Waste**

The waste management strategies as identified in the Hazardous Waste Management Plan and the Non-Hazardous Waste Management Plan, Section 2.8, will be monitored during construction. Should issues of non-compliance be evident, the Environmental Inspector will document the issue and provide the documentation to the Construction Manager for resolution.

**Air Quality**

Air quality monitoring stations will be constructed as determined in the Air Quality Monitoring Program, Section 2.9. The levels analyzed will be compared with appropriate criteria levels. If levels exceed the criteria, measures will be taken to reduce dust using water or other dust suppressant materials. If a substance other than water is used for dust control, a license from the Ontario Ministry of the Environment will be obtained, as required. If other emissions exceed applicable criteria, mitigation measures will be recommended and implemented.

**Hydrogeology**

The Contractor is required to aid OPG in the implementation of the Groundwater Management Plan. Depending on the specific activities of this Program, the Environmental Inspector will monitor the areas where the groundwater monitoring will be taking place.
Construction Effects of Tunnels and Shafts

The Contractor is required to finalize a monitoring maintenance program to verify tunnel/shaft integrity over time. Depending on the specifics of this program, environmental inspection may be required, as detailed in Section 2.6.

4.3.2 Environmental Auditing Program

The construction phase Environmental Auditing Program will involve all activities that required design phase Environmental Audits and that will be completed during the construction phase. These include:

- Approval acquisition (should some approvals be acquired during the construction phase) in Section 4.2.1.1 above;
- Some monitoring programs as outlined in Section 4.2.1.3 above;
- Community Impact Agreement in Section 4.2.1.5 above (including Citizen Complaints Procedure, Liaison Committee, Neighbourhood Liaison Committee, and, Monitoring and Remedial Programs); and
- Any changes on environmental requirements that will result in a change to an Environmental Audit due to construction.

The purpose of the Environmental Audits during construction is to ensure that compliance is maintained and documented for those design activities continued through to the construction phase as listed. Refer to section 4.3.1 for the procedures to be followed.

In addition, an Environmental Audit for Environmental Construction Activities (i.e. environmental inspection) will be completed. The objective of construction Environmental Audits for Environmental Construction Activities is to ensure that all of the standards for environmental compliance are met or are exceeded for the construction.

The Audit will include:

- Review the construction environmental protection programs for all applicable construction activities;
- Evaluate chain-of-command procedures related to environmental issues;
- Ensure the adequacy of the environmental training program;
- Audit compliance with the environmental protection measures to be used during construction;
- Ensure the construction waste management program is adequate to handle and dispose of all waste associated with construction;
- Handling of response/remedial action in environmental emergencies; and
- Audit the inspection program that addresses environmental issues related to construction.

Senior environmental Project team staff will complete the Environmental Audit for Environmental Construction Activities. A report will be completed on a quarterly basis, which will be provided to the Construction Manager and OPG.
4.3.3 Training

In order to ensure environmental protection and compliance, training of construction staff on the Project will be completed. The purpose of the training is to provide direction and promote awareness for all relevant personnel and to ensure effective implementation of environmental requirements and protection measures. Two types of training will be provided, one for all construction personnel and another for environmental inspection personnel.

Construction Staff

The Training Program for construction site personnel will involve environmental orientation and include:

- Principles of Project environmental protection;
- An outline of the Project’s environmental requirements and issues;
- Regulatory commitments associated with the project;
- Importance of environmental protection measures;
- Emergency response requirements and procedures; and
- Roles and responsibilities of project personnel with respect to environmental requirements and issues and chain-of-command.

For the purposes of ensuring that all individuals on the site will work in compliance with legislation, regulations, guidelines, approvals and Project environmental requirements and to support the Training Programs, the Contractor will prepare an Environmental Handbook that will outline the general environmental issues and mitigation associated with the Project, and the roles and responsibilities of all Project personnel and visitors, regarding environmental protection. All construction personnel will be required to complete a sign-off page stating that they have read, understood and will comply with, the contents of the Handbook and taken the Training Program before working on the site. All individuals who have completed the environmental training will be given a sticker that must be displayed on their hard hat.

The Training Program for construction site personnel will be developed and presented by the Environmental Project Team members.

Environmental Inspection Staff

The Environmental Inspectors will be required to complete an environmental training course before the start of construction, which focuses on Project specifics. The primary objective of this training is to ensure that the Environmental Inspectors understand:

- All of the Project’s environmental requirements and issues;
- All regulatory commitments associated with the Project;
- Role of the environmental inspector in ensuring that these commitments are met;
- Environmental protection details, including environmental protection measures;
- Monitoring requirements and details;
- Reporting and documentation requirements and chain-of-command;
- Environmental constraints, the EMP, the ECP;
- Conditions of regulatory permits and approvals;
- Spills response and reporting procedures and responsibilities; and
- Construction management organization, roles and responsibilities.

The Training Program for environmental inspection personnel will be developed and presented by the Senior Environmental Specialists.

4.4 POST CONSTRUCTION

In order to ensure that all environmental requirements are complied with for all post-construction activities, an environmental monitoring program has been developed.

4.4.1 Environmental Auditing

Post construction environmental monitoring will be required to:

- Evaluate the success of vegetation in the areas disturbed by construction and rehabilitated according to the restoration plans;
- Evaluate the success of any permanent erosion and sedimentation control measures;
- Assess and report on the status of outstanding environmental issues identified in the environmental as-built report; and
- Identify any new environmental issues that might have arisen during the construction.

A list of any outstanding environmental issues/requirements will be completed and provided to OPG during the last year of construction. During the design phase when approvals are obtained, any post-construction requirements from the approvals will be provided to OPG during the design phase. At the end of each year of post-construction environmental monitoring a report will be provided to OPG outlining the post-construction environmental monitoring activities completed and a revised list of outstanding environmental issues that require further action or monitoring. Post-construction monitoring reports will be submitted OPG for review and then subsequently to regulatory agencies, if required.

The Contractor will use a master list or database to track the status of issues addressed during post-construction monitoring. This list or database will be updated on an ongoing basis. The list will form the basis of a post-construction monitoring report, which will be prepared at the end of the first year and as required after construction. Issues that are resolved will be removed from the list for the following calendar year.

The frequency of the monitoring events will be determined during the last year of construction. During the monitoring events, a monitoring report, including remedial measures, if required, will be provided to the Contractor’s representative responsible for post-construction issues.

Qualified personnel will conduct post-construction monitoring related to environmental issues, such as those pertaining to vegetation and erosion and sedimentation control and those required
as a result of approval conditions. Site inspection procedures to monitor the status of these environmental issues will be developed on a site-specific basis and any remedial measures will be implemented.

4.5 QUALITY ASSURANCE/QUALITY CONTROL

With respect to environmental compliance, the Contractor’s Quality Assurance/Quality Control (QA/QC) program plays an important role. The QA/QC program requires that senior Project personnel review all documentation prior to submission to OPG. The review will include compliance with the Project requirements and commitments and ensuring that the submittals/documentation are free of errors and meet or exceed OPG standards.

For details on the Project’s QA/QC program have been submitted in a separate section of this proposal.

5.0 RISK MANAGEMENT

The Project’s risk management procedures have been submitted in a separate section of this proposal. The following provides the details of the risk management process for the environmental issues which is integrated into the overall Project risk management procedures.

5.1 PROCESS

In order to determine risks associated with all environmental issues including the acquisition and prioritization of approvals and compliance issues, a Risk Management Plan will be developed. The Risk Management Plan will be completed as follows.

At Project start-up, an Environmental Risk Management Team will be developed made up of key Project personnel including the Project Manager, Environmental Manager, Project Managers from the major subcontractors and two OPG representatives. The Environmental Risk Management Team meetings will be coordinated with Project level risk management plan meetings.

The Environmental Risk Management Team will determine the risk factors. These risk factors will be analyzed for probability, level of impact, overall risk, risk response and risk allowance. The risk factors will also be prioritized and those with higher unacceptable risks will have higher priority for response. The relevant components of the Project will be modified if risks are found to be unacceptable or risk mitigation measures will be developed and implemented to minimize the unacceptable risks. Throughout the Project, at regular intervals or when the Project changes result in a change to risks or new risks become evident, the Risk Management Plan will be revisited and revised accordingly. This will ensure that new risks are determined, analyzed and responded to throughout the life of the Project and that existing risks will be monitored and responded to accordingly during the entire Project. Several industry guidance documents on risk management plans and checklists of potential risk factors will be utilized when completing the Environmental Management Plan. In addition, the Risk Management Plan will be completed with the aid of appropriate risk management software (e.g. Risk Radar) to ensure quality control, reliability, time efficiency, cost effectiveness and accuracy.
Involvement from key stakeholders (e.g. Ontario Ministry of the Environment, Ontario Ministry of Natural Resources and respective municipalities) will be required to complete the Risk Management Plan. The draft Risk Management Plan completed at project start-up will be communicated to key stakeholders for input, comment and notification. Any changes to the Risk Management Plan during the project implementation phase will also be communicated to the key stakeholders.

5.1.1 Identified Risk Issues

Upon review of the Project requirements, information to date and discussions with Contractor’s team members, several risks have been identified. These are as follows:

- Delays in project schedule;
- Coordination of work to be completed by OPG;
- Stop work situations;
- Extreme weather conditions;
- Rare flora/fauna discoveries; and
- Contaminated groundwater.

Details of these risks are provided below, including contingency plans. Contingency plans describe procedures to be implemented if unforeseen events occur that could have environmental impacts during construction or operation of the project. Similar to the management plans, conceptual contingency plans have been developed to address regulatory requirements. Contingency plans provided are conceptual in nature and describe:

- Initial response actions that might be undertaken to control an event that would have negative environmental impacts;
- Mitigation that might be applied in a specific situation that would reduce or control negative environmental impacts; and
- A protocol for proper communication procedures if a contingency plan were implemented.

Delays in Project Schedule

It has been identified that third party (federal, provincial and municipal agencies) reviews may cause a delay in the Project schedule. In order for the construction to commence, many approvals are to be acquired. According to the Draft Design/Build Agreement, Environmental Assessment Approval and the Community Impact Agreement, approval acquisition is required for numerous statutes, plans and submittals. The responsibility of approval acquisition is shared between OPG and the Contractor. From experience and from discussions with relevant agencies, the time required by agencies to review information and provide approval is not consistent and can impact Project schedules. In addition, approvals of plans and submittals will also require agency review prior to implementation and could cause Project delays. The Contractor has no control over process requirements and the time needed by the agencies to provide their approval.

Early in the design phase, the Contractor will develop an Approvals Acquisition Plan including a schedule. This will be completed in conjunction with OPG and the relevant government authorities. An Approvals Task Force, jointly made up of OPG, regulatory authorities and the Contractor will be
established. If through no fault of the Contractor, deadlines by OPG or third parties are not met, the Contractor will request revised schedules by OPG and the government authorities. A meeting with the agencies early in the design process will also clarify the requirements of the approvals.

In addition, in order to mitigate this potential risk, it is proposed that agencies assign or hire a staff member to the Project at the expense of OPG. This will ensure that agency staff are committed to the Project and therefore not have to deal with conflicting priorities from other projects. This dedication of time by the agencies will help to potentially alleviate schedule delays from third party reviews.

Other measures to reduce the risk of third party review include TAC monthly meetings to ensure appropriate communication with agencies requirements and approval times and risk sharing between OPG and the Contractor.

**Coordination of Work to be Completed by OPG**

As outlined in the Draft Design/Build Agreement, the Contractor is responsible for specific environmental requirements and approvals and OPG has undertaken to complete and be responsible for all remaining of environmental requirements and approvals as outlined in the Environmental Assessment dated March 1991, the Environmental Assessment Approval and the *Fisheries Act* Authorization. OPG has maintained a significant role for environmental requirements on the Project. These potentially will affect the Contractor’s responsibilities on the Project and Project schedule. In addition, the information obtained by OPG during the course of executing their responsibilities should be conveyed to the Contractor. Coordination of the work by the Contractor and OPG is a risk that could impact Project deliverables.

In order to mitigate this risk, it is proposed that monthly meetings be held with OPG’s and Contractor’s environmental teams to coordinate activities and disseminate information.

**Stop Work Situations**

During construction, certain environmental events can occur (such as a spill or significant issue of non-compliance) that will result in the requirement to stop work. The Environmental Inspector in conjunction with the Construction Manager and/or Construction Superintendent(s), will have the ability to stop work should these events occur. Stop work situations could result in Project delays.

In order to mitigate the risks to the Project schedule, it is proposed that immediate action be completed by the Contractor to resolve the problem and the action be determined in conjunction with senior environmental team member, Environmental Inspector and Construction Manager or Construction Superintendent. The Contractor will: develop and implement an effective emergency response plan; provide training to workers in the response procedures; effectively communicate issues of compliance and non-compliance; ensure all approvals are in place prior to construction; and, continue risk management analysis to aid in foreseeing any potential issues.

**Extreme Weather Conditions**

Extreme weather conditions can negatively impact the natural environment on and within the construction areas. Terrain disturbance and soil structure damage through rutting or compaction
can result from wet soil conditions. Sedimentation of water features can result in extreme rain conditions on construction sites.

If warranted, contingency measures will be implemented in the area experiencing wet conditions. The contingency measures that might be implemented individually, or in combination, as required by site-specific conditions in the affected area include actions such as:

- Restrict construction traffic, where feasible, to low-ground pressure equipment;
- Work only in nonproblem areas, such as well drained soils, until conditions improve;
- Install geotextiles, swamp mats or corduroy in problems areas;
- Suspend construction until soils dry out;
- Ensure erosion and sedimentation control measures are functioning, as well as possible;
- Regrade areas that were subject to rutting, if rutting has occurred; and
- Rip compacted solids, if soil compaction has occurred.

**Rare/Endangered Flora or Fauna Discoveries**

Rare plant species and uncommon vegetation communities are as identified in the Environmental Assessment, dated March 1991. However, since this time federal and provincial species at risk lists and legislation have changed.

If rare or endangered wildlife, a site-specific wildlife habitat feature, a rare plant, or uncommon vegetation community are discovered during the “ground-truthing” exercise or during construction, the discovery will be assessed and suitable mitigation measures will be determined. In addition, appropriate government agencies will be notified as required. The site will be assessed based on the following information:

- The location of the newly discovered feature relative to the proposed construction area;
- The timing of construction versus the critical timing constraints for the wildlife species;
- The potential for construction activities to be altered, to reduce or avoid disturbance;
- The relative rarity of the plant or vegetation community;
- The growth habit and propagation strategy of the plant or vegetation community; and
- The habitat preferences of the animal, plant or vegetation community.

If this occurs during construction, work at that location will be suspended until the Environmental Inspector is notified, and they in turn notify:

- Applicable government agencies;
- The Contractor’s wildlife assessment or botanical specialist; and
- The Environmental Manager.

The wildlife assessment or botanical specialist will visit the site if necessary. They will develop a suitable mitigation plan in consultation with the Project’s environmental staff. Subsequently, the applicable government agencies will be notified.
Contaminated Groundwater

During construction, the Contractor will be performing groundwater monitoring, as part of OPG’s Groundwater Management Plan. In the event that the monitoring identifies groundwater contamination, the Contractor will execute the contingency plan which will consist of the following:

- Identify the source of contamination, characteristics of the contaminant, and the volume of contaminant introduced into the groundwater;
- Remove the contamination source, if possible, which may result in a work stoppage;
- Develop and implement mitigation measures, if applicable; and
- Develop a remediation plan to treat the contaminated groundwater and reduce the extent of the contamination, this may include using natural attenuation (“do-nothing”) as the remediation approach.

In the event of groundwater contamination the Contractor will notify the OPG and applicable regulatory agencies.

6.0 PROJECT TEAM

6.1 TEAM ORGANIZATION/MANAGEMENT STRUCTURE

6.1.1 Project Team

Please refer to the Project Organization Chart and List of Personnel, submitted as separate sections of this proposal.

6.1.2 Environmental Project Team

The Environmental Project Team will be made up of individuals/firms with expertise in specialties required for the Project. The head of the Environmental Project Team or the Environmental Manager will be a senior level environmental specialist with experience in large scale design and construction projects. The Environmental Manager will report directly to the Project Manager. Senior, Intermediate and Junior Environmental Specialists will support the Environmental Manager to meet the design and construction requirements of the Project. The Environmental Specialists will have experience in natural sciences (fisheries and terrestrial biology), waste management, public consultation, soil and groundwater monitoring, management of water (surface, storm and groundwater) and approval acquisition.

During construction, the Environmental Inspector will report directly to the Environmental Manager and also to the Project Manager, if issues of compliance during construction arise.

The Environmental Manager will be responsible for overseeing the following specialists/firms: archaeology, air quality, arborist, remediation/restoration and public consultation/public relations. The Environmental Manager may report directly to OPG, as required.

Figure 4 provides the Environmental Team Organization Chart.
6.2 ROLES AND RESPONSIBILITIES OF ENVIRONMENTAL TEAM STAFF

6.2.1 Environmental Manager

The Environmental Manager will undertake the following roles and responsibilities:

- Manages all environmental staff and environmental subconsultants;
- Attends all Project meetings with OPG for design and construction phases; and
- Completes monthly reports on Environmental Compliance Plan and completes the Environmental Audits.
Figure 4: Environmental Team Organization Chart

* Environmental Specialists (design phase only) responsible for approvals, design, Community Impact Agreement, waste management, contaminated sites and natural sciences (fisheries and terrestrial).

** Environmental Inspector (construction phase only) responsible for environmental inspection, sampling and analysis (surface water, groundwater and effluent), fisheries and Community Impact Agreement.
- Provides advice to Project Manager and OPG on environmental issues;
- Completes QA/QC responsibilities on environmental documentation;
- Leads all Environmental Project Team meetings;
- Liaises with agencies and attends meetings with agencies and OPG; and
- Partakes in the Project and environmental risk management assessments.

6.2.2 Senior Environmental Advisor(s)

The Senior Environmental Advisor(s) will undertake the following roles and responsibilities:

- Provides advice to Environmental Team Project Manager on specific environmental issues (in particular related to compliance);
- Reviews documentation, plans, monitoring programs and training programs (in particular related to compliance).

6.2.3 Senior Environmental Specialists

The Senior Environmental Specialists will undertake the following roles and responsibilities:

- Provides advice to Environmental Manager on specific environmental issues;
- Completes Environmental Audits;
- Attends Project meetings related to specific design and construction elements;
- Partakes in the environmental risk management assessment;
- Completes Community Impact Agreement public and municipal consultation requirements;
- Liaises with agencies and attends meetings with agencies and OPG, as required;
- Completes documentation;
- Develops and implements plans and monitoring programs;
- Develops and presents training programs.

6.2.4 Intermediate and Junior Environmental Specialists

The Intermediate and Junior Environmental Specialists will undertake the following roles and responsibilities:

- Provide support to the Environmental Manager and Senior Environmental Specialists;
- Complete research;
- Attend Environmental Team Project meetings;
- Aid in the implementation of Project requirements; and
- Draft environmental documentation (e.g. Environmental Handbook).

6.2.5 Environmental Inspectors

The Environmental Inspectors will undertake the following roles and responsibilities:
Monitor construction activities on a daily basis;
Maintain a log of monitoring events;
Complete a daily monitoring report and provide to Environmental Manager and Project Manager;
Provide advice and recommendation for ineffective environmental protection and issues on non-compliance; and
Sample surface water and groundwater and provide recommendations on management.

6.3 QUALIFICATIONS OF ENVIRONMENTAL STAFF

6.3.1 Environmental Manager

The Environmental Team Project Manager will have the following qualifications:

- Fifteen years of experience managing multi-disciplinary environmental projects including those for design and construction projects;
- Have an undergraduate degree or higher in a related environmental field from a recognized university;
- Experience in managing staff, environmental planning, providing advice with respect to environmental issues and compliance, risk management assessments, obtaining approvals, liaising with agencies, client relations, and in QA/QC responsibilities; and
- Effective communicator and project manager.

6.3.2 Senior Environmental Advisor(s)

The Senior Environmental Advisor(s) will have the following qualifications:

- Fifteen years of experience in providing advice on specific environmental issues, in particular environmental compliance; and
- Experience in reviewing environmental documentation, for in particular environmental compliance.

6.3.3 Senior Environmental Specialists

The Senior Environmental Specialists will have the following qualifications:

- Fifteen years of experience in working on environmental projects including those for design and construction projects;
- Have an undergraduate degree or higher in a related environmental field from a recognized university;
- Experience in providing advice with respect to environmental issues and compliance, risk management assessments, obtaining approvals, liaising with agencies, public consultation/public relations, development and implementation of plans and monitoring programs, and, development and presentation of environmental training programs; and
- Providing advice on specific environmental issues.
6.3.4 **Intermediate and Junior Environmental Specialists**

The Intermediate and Junior Environmental Specialists will have the following qualifications:

- Five and two years of experience respectively on environmental projects including those for the design and/or construction projects;
- Have an undergraduate degree or higher in a related environmental field from a recognized university or college;
- Experience in environmental research, field work and/or writing reports.

6.3.5 **Environmental Inspectors**

The Environmental Inspectors will have the following qualifications:

- Five years of experience in environmental inspection of construction projects with particular experience with in-water construction;
- Have an undergraduate degree or higher in a related environmental field from a recognized university or college;
- Experience in providing advice and recommendations to upper management on environmental issues, field work and report writing. Environmental projects for the design and/or construction projects environmental research, field work and/or writing reports; and
- Have good communication skills.

Department of Fisheries and Oceans Canada (DFO). 1986. Policy For the Management of Fish Habitat. Fish Habitat Management Branch. Ottawa, Ontario.

Department Fisheries and Oceans Canada. 1994. Guidelines for the Use of Explosives in Canadian Fisheries Waters.

Ontario Hydro. 1991. Niagara River Hydroelectric Development Environmental Assessment (including Update, Amendment and Associated Documentation)
8.0 GLOSSARY

best management practices A practice or combination of practices that will be implemented by the proponent and considered to be an effective and practical (including technological, economical, and regulatory considerations) means of planning and constructing the project.

CCME The abbreviation for Canadian Council of Ministers of the Environment.

cofferdam A device that, when placed within a stream channel, is designed to divert half of the main flow of water away from an area to be subjected to disturbance within the stream channel.

construction phase The phase of a project after the design phase, during which project facilities and infrastructure are assembled and installed on their foundations, and connected and tested to ensure that they operate as designed.

contaminant A substance that is present or released in the environment at an amount, concentration, level or rate that results in, or might result in, an adverse effect.

DFO The abbreviation for Fisheries and Oceans Canada.

ECP The abbreviation for Environmental Compliance Plan.

EEP The abbreviation for Environmental Emergency Plan.

EMP The abbreviation for Environmental Management Plan.

grubbing A construction activity that involves removing tree roots and stumps from areas that will be under construction or development.

habitat The part of the physical environment in which a plant or animal lives, e.g., a stream habitat or forest habitat.

hazardous materials Any substance or material that, because of its quantity, concentration, or physical or chemical characteristics is capable of posing a significant risk to health, safety, property or the environment through handling, transportation, or storage. Any substance or material that is regulated as a controlled product under federal or provincial legislation. This definition excludes hazardous waste.

heritage resources Cultural, historic, archaeological and paleontological resources, including pre-contact and post-contact features.
**impact**  
Any effect on land, water, air or any other component of the environment, including any effect on the social and cultural environment or on heritage resources.

**mitigation**  
The elimination, reduction, or control of a project’s adverse environmental effects, including restitution for any damage to the environment caused by such effects through replacement, restoration, compensation or other means.

**MNR**  
The abbreviation for the Ontario Ministry of Natural Resources.

**MOE**  
The abbreviation for the Ontario Ministry of the Environment

**monitoring**  
Resolving specific outstanding environmental issues, observing the potential environmental effects of a project, addressing the effectiveness of mitigation measures undertaken, identifying unexpected environmental issues and determining the action required based on the result of these activities.

**non-hazardous materials**  
Any substance or material that does not fit within the parameters outlined in the definition of hazardous materials.

**OEMP**  
The abbreviation for Outline Environmental Management Plan.

**operations phase**  
The phase of a project during which the generators and associated facilities are operated.

**page wire**  
A robust material used to add support to a silt fence. It increases the strength of the silt fence, to contain large amounts of eroded soil and silted water on the upslope side of the fence.

**restoration**  
The process of re-establishing a disturbed site to a former or other productive use, not necessarily to the same condition that existed before disturbance. The land capability might be at a level different, i.e., lower or higher, than that which existed prior to the disturbance, depending on the goal of the process. Restoration includes the management of a contaminated site and revegetation where necessary. Restoration is not considered complete until the goals for restoration have been achieved.
<table>
<thead>
<tr>
<th><strong>riparian</strong></th>
<th>Pertaining to anything connected with, or immediately adjacent to, the banks of a watercourse or waterbody.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>silt fence</strong></td>
<td>Impermeable material installed at the base of slopes and along banks of watercourses that is designed to capture eroded soil and silted water that runs off during spring break-up or during heavy rains. Silt fences are left intact until revegetation of the area is sufficient to reduce or eliminate soil erosion.</td>
</tr>
<tr>
<td><strong>siltation</strong></td>
<td>The discharge of soil material into a watercourse, or disturbance of the streambed, that results in an increased sediment load.</td>
</tr>
<tr>
<td><strong>soil compaction</strong></td>
<td>The loss of void spaces between soil particles as a result of vehicles and heavy equipment travelling over poorly drained, fine textured soils.</td>
</tr>
<tr>
<td><strong>sorbent material</strong></td>
<td>Materials that are used to absorb liquid hydrocarbons after a spill.</td>
</tr>
<tr>
<td><strong>species at risk</strong></td>
<td>An extirpated, endangered or threatened species, or a species of special concern, as defined in the <em>Species at Risk Act</em>.</td>
</tr>
<tr>
<td><strong>stockpile</strong></td>
<td>A storage supply of material, such as granular or soil, to be used later.</td>
</tr>
<tr>
<td><strong>study area</strong></td>
<td>The area within the spatial boundaries of the scope of the Project.</td>
</tr>

</table>
| Transportation of Dangerous Goods Act – 1992 | Possibly | • Section 31. (1) of the Transportation of Dangerous Goods Act states that a permit may be issued authorizing any activity to be carried on in a manner that does not comply with this Act, if the regulatory authority deems that the manner in which the authorized activity will be conducted provides a level of safety at least equivalent to that provided by compliance with this Act.  
• Contractor requires permit if transporting dangerous goods as defined by the Act. |
| Canada Water Act – 1970 | No | • Permit not required, as there will be no intentional emission of contaminants into a water body. |
| International River Improvements Act - 1985 | No | • Section 4. of the International River Improvements Act states that no person shall construct, operate or maintain an international river improvement unless that person holds a valid licence therefore issued under this Act.  
• License required if the project involves a structure that will alter the natural flow of an international river. This Act also triggers the Canadian Environmental Assessment Act, see below.  
• Discussions with Environment Canada – project is exempt |
<p>| Canada Wildlife Act – 1985 | No | • Act specifies designated wildlife areas, where permits are required to disturb vegetation etc. The Niagara Falls area is not a designated wildlife area as specified in this Act. |
| Migratory Birds Convention Act – 1994 | No | • No permit required prior to construction. Construction should commence prior to the nesting season to minimize concerns. If a nest is encountered during construction then a permit is required to move or dispose of the nest. The permit is applied for and granted within the same business day. |
| Environmental Contaminants Act | No | • Act repealed in 1988, except Section 9, which was repealed in 1994. |</p>
<table>

<th>Notes</th>
</tr>
</thead>
</table>
| Canadian Environmental Assessment Act    | No        |                  | • Section 74 (3) states when a proponent proposes to carry out a project which was conducted in accordance with EARPGO, the information from that assessment can be used to comply with section 18 or 21. If requirements are not met under these sections, they must be met to proceed with the project.  
• Not required as per OPG’s Response to Proponent’s Questions 3 dated April 15, 2005 |
| Resources and Technical Surveys Act - 1985 | No        |                  | • Act does not contain any permit requirements.                                                                                                                                                      |
| Canada Land Surveys Act                  | No        |                  | • Act established fees to be charged for release of maps, plans, field notes, etc.                                                                                                                  |
| Explosives Act – 1985                    | Possibly  |                  | • Section 7. (1) of the Explosives Act states that The Minister may issue (a) licences for factories and magazines; (b) permits for vehicles used for the transportation of explosives.  
• License required for temporary storage of explosives on site. |
<p>| Historical Sites and Monuments Act, Indian Burial Grounds | No        |                  | • Environmental assessment isolated four undisturbed areas and one archaeological site. These sites will not be disturbed during construction, therefore no permit required. |
| Telecommunications Act – 1993            | No        |                  | • Act contains the regulations to broadcast in Canada, or distribute broadcasting, such as a radio station or cable provider.                                                                         |
| Ontario Environmental Assessment Act     | No        |                  | • Previously obtained by OPG.                                                                                                                                                                         |
| Ontario Environmental Protection Act (Air)| Yes       | Permit required  | • Permit is required for tunnel ventilation system and works such as paint booths.                                                                                                                     |
| Ontario Environmental Protection Act (Water/Industrial Sewage Works) | Yes       | Permit required  | • Permit required, for the release of discharge from the retention ponds to a water body. However, if contaminants are accidentally introduced, the spill must be reported to the Niagara Conservation Authority and the Ministry of the Environment. |</p>

APPENDIX C - Schematics of Erosion and Sedimentation Control Measures (From Ontario Provincial Standards)
Light Duty Straw Bale Barrier
NOTES:
1 Balance of excavated trench to be backfilled following bale placement.
A All dimensions are in millimetres or metres unless otherwise shown.

Heavy Duty Straw Bale Barrier
Light Duty Silt Fence Barrier
Heavy Duty Silt Fence Barrier
Berm Barrier
Sandbag Barrier
Notes:
1. Number of bales varies to suit ditch or channel.
2. Balance of excavated trench to be backfilled following bale placement.

All dimensions are in millimetres or metres unless otherwise shown.

Straw Bale Flow Check
Silt Fence Flow Check

NOTE:
A All dimensions are in millimetres or metres unless otherwise shown.
Sand Bag Flow Check
Temporary Rock Flow Check – V-Ditch

NOTE:
A All dimensions are in millimetres or metres unless otherwise shown.
Temporary Rock Flow Check – Flat Bottom Ditch or Channel
Turbidity Curtain
Turbidity Curtain – Seam Detail

Appendix 2.5(b) - Environmental Notice

ENVIROMENTAL NOTICE

To: Ontario Power Generation Inc. (“OPG”)  Contract: Design/Build Agreement dated •, 2005 between Strabag AG (the “Contractor”) and OPG (the “Agreement”)

Environmental Notice No.: •

Date: •

Defined terms used in this Notice have the same meanings given to those terms in the Agreement. Under Section 2.5(b) of the Agreement, the Contractor hereby gives OPG notice of:

| (a) the changes to its environmental management plan described on Appendix A to this Environmental Notice; | ■ |
| (b) the discharge, spill, release, emission, deposit or leak described on Appendix A to this Environmental Notice; or | ■ |
| (c) the order, directive, notice or other communication attached as Appendix A to this Environmental Notice from the Governmental Authority set out in the order, directive, notice or other communication. | ■ |

STRABAG AG

Title: ____________________________
Appendix 2.7(a)(3) - INTENTIONALLY DELETED
Appendix 2.8(a)
1. **SUBMITTAL REQUIREMENTS**

For each element of the Work shown under Section 2, Summary Table of Submittals, the Contractor shall submit those Submittals marked with a “✓” and the Additional Submittals as indicated. Each Submittal shall comply with the following requirements.

1.1 **Submittal Categories**

1. **Schedules** - submit schedules in accordance with Agreement Sections 2.7(a)(1); 2.7(a)(2); 2.7(a)(3); and 7.1

2. **Environmental and Quality Assurance Documents** - submit in accordance with Agreement Sections 2.5(a)(4); 2.5(a)(5); and 2.12(c)(1).

3. **Design Basis Document** - for each applicable element of the Summary of Work, submit information as one complete document. Allow 45 calendar days for the Owner’s review. The Submittal shall include the following:

   (a) identification of Summary of Work elements and applicable codes and standards

   (b) layout drawings, major plans and profiles, major sections, typical details, work limits, tie-ins and relationships to existing facilities and features

   (c) conceptual design solutions, loadings, design calculations

   (d) construction methodology with sequence and phasing of demolition, removal and construction for each package and relationship to the overall Project

   (e) identification of construction impacts on the community and mitigative measures

   (f) measures to address compliance with constraints in the Owner’s Mandatory Requirements

   (g) measures to address compliance with 90-yr service life

   (h) identification of design issues and deviations from the Owner’s Mandatory Requirements.

   (i) equipment and material specifications

   (j) other relevant information which defines the Work.

4. **100% Construction Documents** - submit in discreet construction packages according to the scheduled sequence of construction. Allow 30 calendar days for Owner’s review. The submittal shall include the following:
(a) Drawings and Specifications ready for construction with signature and seal of a professional engineer registered in the Province of Ontario. An Autocad 2000 copy of each drawing and four paper copies to be delivered. Each drawing and item of data will contain the name of the Project, the title of the package of Work to which the drawing belongs, the OPG requisition number and the title of the drawing or data item.

(b) checked engineering analysis and design calculations

(c) minutes from the Contractor’s design review meetings.

5. **Construction Methods**- submit the following in discreet construction packages according to the scheduled sequence of construction. Allow 30 calendar days for Owner’s review

(a) specific environmental protection procedures

(b) specific QA/QC Plan and procedures

(c) specific method statements.

6. **As-Built Design and Drawings**- submit the following engineering as-built documents. Identify revisions to the 100% Construction Documents. Allow 30 calendar days for Owner’s review

(a) Drawings updated with all ‘as-built’ revisions and changes made during construction

(b) Specifications revised to reflect ‘as-built’ condition

(c) checked design calculations for revisions to the 100% Construction Documents.

7. **Additional Submittals**- In addition to the above, the Contractor shall submit ‘Additional Submittals’ as identified under Section 2, ‘Summary Table of Submittals’. Unless otherwise indicated, submit in accordance with the Contract Schedule. Allow 45 calendar days for Owner’s review.

1.2 **Format of Submittals**

1. Submit written documentation on 8\(\frac{1}{2}\) by 11 in. paper.

2. Submit four copies of all submittals and such additional copies as the Owner may reasonably request.

3. Drawings shall be per the Owner’s standards. Standards with respects to borders, levels, text, etc, will be provided.
4. Compact disc (CD) format shall be used to submit electronic files of as-built documents.

5. Software requirements shall be as follows:
   (a) Drawings shall be in AutoCAD version 2000
   (b) word process documents are to be in MS Word 2000
   (c) spreadsheets are to be MS Excel 2000
   (d) schedules are to be in Primavera Project Planner for Windows Version 3.1 with the capability for delivery in P3e/c - Version 3.5
   (e) any other proposed software requires prior approval by the Owner.

Defined terms used in this Notice have the same meanings given to those terms in the Agreement. In accordance with Section 2.9(c) of the Agreement, the Contractor hereby gives OPG notice of the error/deficiency/defect/inconsistency/discrepancy/omission/deviation from the requirements of the Agreement in the Contractor’s Proposal Documents or the Final Submittals as more particularly described below:

- [Describe issue]

STRABAG AG

Title: __________________________
Appendix 2.12(c)(2)
Appendix 2.12(c)(2) - Outline Quality Assurance/Quality Control Program

[See attached]
SECTION 11
OUTLINE OF QUALITY ASSURANCE/QUALITY CONTROL PROGRAM

General

The Quality Assurance/Quality Control Program is an integral part of the Design/Build Agreement. It will ensure that the design, procurement, construction and commissioning is completed according to schedule, that the quality of the work is in accordance with the requirements of the OPG and that this can be demonstrated to OPG on an on-going basis during the performance of the work.

The Quality Assurance and Quality Control Program consists of various key elements:

- The requirement that Quality Control procedures, processes and testing are first established and then are built in as an integral component of the Contractor's work.
- The requirement to demonstrate that the Contractor's Quality Control procedures and processes are being adhered to through the appropriate on site and off site testing, inspection and documentation.
- The requirement that this documentation be well organized to allow verification, that the Contractor's Quality Control procedures, processes and testing have been implemented appropriately.
- The requirement for an independent verification, that is Quality Assurance, of these various elements.

The Quality Assurance Manager is a key component of the overall Quality Assurance and Quality Control Program. The Quality Assurance Manager will be employed full time for the duration of the design/build process and will be experienced in administering QA/QC plans, reviewing the design for constructability and presentation of details of the work, developing QA/QC check lists for submittals, sampling/testing, inspection of works and tracking of timely submittals.

The prime contractor Strabag, Dufferin and the other subcontractors and the design consultants have comprehensive internal QC processes in place, which will be submitted with the Quality Assurance Program within 60 days after signing of the agreement.

Quality Assurance Manager

The Quality Assurance Manager reports to the Project Manager and is responsible for the QA/QC Program. His role in general terms will be:

- Performing the Quality Assurance of the Contractor's work and assuring that the Contractor performs the Quality Control of their own work.
- Ensuring that the QA/QC Program is clearly articulated and meets the QC requirements and is followed.
- Tracking the Contractor's QC process and results to ensure compliance with the QA/QC Program.
- Ensuring that records are maintained of the Contractor's work, materials supplied and placed and other aspects of the work in such an manner to meet the requirements of the QA/QC Program.
- Preparing weekly reports for the Project Manager and OPG to provide assurance that the QA/QC program is being adhered to and that a quality product is being produced.
- Ensuring that the non conformance notice as detailed in appendix 2.12 (c)(4) are produced in a timely manner and remedial action is undertaken in a timely manner.
Summary

This Outline Quality Assurance and Quality Control Program is not meant to be all inclusive and is not. A detailed plan will be developed as required by OPG on signing of the Contract. All members of the Design/Build Team will customize their existing QA/QC Programs, processes and procedures for the project to ensure that the objectives of OPG are met. This will be formulated into one integrated plan that will be administered by the Quality Assurance Manager on behalf of the Contractor Project Manager for OPG.

Management System for implementation of the Group Principles
Group Principles

Organisation and Management
Employees and Resources
Business Activities
Measurement, Analysis and Improvement

This Management Manual describes the system for implementation of our Group Principles in all companies of BAUHOLDING STRABAG SE.

The Boards of Directors commit themselves and the management to supporting the Management System and providing the resources for further development of Quality Assurance, Work Safety, Environmental Protection and the Management System as such.

All employees are obligated to organise and perform their tasks and duties in accordance with the guidelines specified in this Management Manual.

For the BHS Board

Signed Dr. Hans Peter Haselsteiner

Vienna, February 2005
GROUP PRINCIPLES

Our Group Principles provide the basis for the objectives, strategies and entrepreneurial activities.

Economic Success

In responsibility to our shareholders, customers, employees, suppliers, subcontractors and society, our prime aim is to ensure economic success on a long-term basis.

Targeted activities, early identification of chances and risks and their responsible consideration safeguard the continuity of our companies and protect our shareholders' interests.

Owing to systematic and constant improvement, we will also be able to meet the growing challenges of the future.

Customers

Our activities are focused on satisfying our customers' justified requirements and expectations.

We meet market demands through close customer contact, professionalism, innovative ideas, and competitive prices.

A frank exchange of information and experience with our business partners is also foreseen within the framework of our strategies and objectives, whereby we ensure the required degree of confidentiality and discretion.

Employees

In order to meet our corporate objectives, we rely on competent and efficient employees. We promote the level of know-how within the Group by professional development and training, support the personal development of our employees and provide adequate information and suitable working conditions.

Our employees keep themselves well informed, while harmonising their own objectives with those of the Group and giving Group interests priority.

The health and safety of our employees and all other parties to our activities are among our main concerns.

Suppliers and Subcontractors

For the purpose of furthering quality and the economic efficiency of our services, we also count on the experience and capacities of carefully selected suppliers and subcontractors.

Social Awareness

We respect human rights and promote public welfare.

We observe existing laws and recognise the rules of fair competition.

We are aware of our environmental responsibility. In the execution of our supplies and services, we make every effort to use energy and natural resources economically and reduce noxious emissions and waste.

The BHS Board’s stated strategic objective for the 2003 – 2006 planning period:

"Achieving and/or maintaining market leadership in all defined markets and business fields by cost leadership, employee qualification and motivation, and innovative initiative."

The Management Manual
is subject to revision
ORGANISATION AND MANAGEMENT

Organisational Structure

Under the auspices of BAUHOLDING STRABAG SE, controlling company of the Group, legally independent 'country' companies act in the market within the framework of the overall international organisation.

The Business Field represents the main Group structuring criterion.

The organisational structure permits close to market decisions and provides the co-ordinated and controlled management required for achieving Group objectives. It is detached from commercial law structures.
Business Fields and Fields of Activity

A range of services of the business fields covers all stages of the construction process. The business fields provide coordinated and complementary services.

The location of the various spheres covered in the fields of activity to the business fields must be implemented on a blanket average basis and adhered to. Regional changes to the allocation can only be undertaken with the agreement of the responsible business fields’ boards.

- Hotels
- Office and Commercial Buildings
- Shopping Centres
- Multifunctional Projects (Entertainment, Hotels, Shopping, Sports)

A jointly, project acquisition, planning and execution are performed after consultation and in co-operation with partners from within the Group.

Object acquisition across regional borders requires the agreement of the respective BHS Board.

Co-operation with internal partners, customers or subcontractors is contractually agreed.
Responsibility and Authority (Management Structure)

The BHS Board practises uniform management, and is responsible for maintaining financial equilibrium throughout the Group and safeguarding Group interests.

After consultation with Division Managers, the Board also determines their programme and defines Group strategic objectives.

For management, co-ordination and control of the Divisions or of Sub-divisions reporting directly to the Board (without going through Division Management), the Board acts on the basis of code of procedure.

Within the framework of Group business policy, Division Managers carry out their business independently and on their own responsibility, i.e. it is incumbent on them to achieve objectives defined in the strategic and operative planning and realise the individual measures prescribed.

All operating business is undertaken by the Sub-divisions. They are responsible for the best possible result in the regional markets allotted to them and are usually managed, co-ordinated and controlled by Division Managers.

The supervision of managers of Sub-divisions reporting directly to the Board is the concern of the BHS Boards responsible.

The service companies are organised in Central Business Units and operated by Sub-divisions. Within their area of responsibility they work independently from the operative Divisions and Sub-divisions, with the Central Business Manager being responsible for co-ordination of the regional service companies.

Interfaces and co-operation between service companies and operative units are regulated with service agreements.

Responsibilities, assignments and authorisations of the Boards, Division Managers and Sub-division Managers are defined in the business rules of procedure.

The functions’ objectives, and operating and management work within the Sub-divisions are laid down in descriptions of the functions.

For assurance and further development of the Management System representatives are appointed as follows:

<table>

Group Guidelines

The Management System is documented in the Management Manual and further guidelines.

Management Manual

Further Guidelines

- Internal Agreements
- Resolutions of Group’s Board of Directors / Business Field Boards
- Group Guidelines / Procedures
- Resolutions of Division Managers
- Rules of Procedure according to Organisational Structure of the Group
- Service Agreements between Service Companies and Operating Units
- Resolutions of Sub-division Managers
- Directives issued at particular management levels

All guidelines can be identified by titles, dates of issue and, if necessary, number. Applicable guidelines are integrated into the Management System by the respective representative.

Corporate Planning and Evaluation (Corporate Management)

Planning and Controlling

Strategic and operative planning and controlling represent the main Group management instruments.

Strategic planning is aimed at long-term improvement of the market position and construction services and products offered by the targeted use of personnel, financial and technical resources. Sources of loss should be eliminated, existing profit potentials strengthened and new ones identified.

Management Manual

developed on the basis of analyses, the strategic concept, in which the strategic objectives and planned measures with the respective resources requirement and effects on performance are presented, is approved by the BHS Board after assessment and, if necessary, adjustment.

The strategic framework is rounded off by operative planning comprising foreseen short and medium term business policy goals and measures.

In the end of the year operative planning for the following year is prepared by the Sub-division / Division Managements for approval by the BHS Board in the month of January of each year after planning meetings with the Division and/or Sub-division Managements with direct reporting access.

Effectively harmonised with the above, controlling follows current business development in the comparison of target and performance.

valuation

Then undertaking Group assessment, the main indicative figures are compared with targets agreed for the respective anning period. Deviations are analysed and assessed and, if necessary, corrective action taken.

Improvement potential is highlighted and used for continuous further development. Analysis and improvement of the management system is a component of the Group evaluation.

Internal Communication

Internal communication and information flow are achieved within the defined structure of committees under agreed chains of formation through minutes, reports and electronic information systems. Communications outside the chain of information are identified by source and responsible function.

committees

_Employees and Resources_

_Employees_

The systematic recruitment of qualified and competent employees, their promotion and the support of their personal progress through professional development and training are effected based on a pre-determined procedure. Major personnel development phases include:

- Human Resources Planning
- Recruitment
- Introduction and Orientation
- Consultations, Development and Succession Planning

_Training_

Defined distribution of tasks and co-operation between operating units and BRVZ - Human Resources - ensure effective results.

In order to maintain and develop the Management System, the representatives responsible for quality management, health and safety, environmental protection, hazardous materials etc. are trained, employed and authorised in accordance with their sphere of responsibility.
Information

In addition to internal agreements, information also consists of statutes, regulations, standards, guidelines and market and trade data. For effective use of data and resulting information acquisition, transfer, assurance and confidentiality together with the respective terminology are defined as required.

Infrastructure

To ensure effectual performance by the operating units and economic efficiency throughout the Group, Central Business Units and Staff Units with cross-border competence are answerable to the BHS Board. These have no authority to issue directives to Divisions or Sub-divisions reporting directly to the Board. Matters of importance are harmonised by the managers of both Central Business Units / Staff Units and Division Management.

Assignments performed by the Central Business Units and Staff Units under BHS Board supervision:

BMTI

Plant and equipment management (investment policy, leasing and repair management, plant systems, form work management)

BRVZ

Annual financial statements, taxes and accounting, finance, Group controlling / risk management / insurance / real estate, personnel, information technologies

TPA

Technical development policy (quality management / quality assurance, technical know-how / research and development), management systems

Auditing Department

Control of all entrepreneurial function areas and systems with regard to regularity, expediency and profitability, technical-commercial checks of estimates and construction orders, cartel investigations

Work Environment

In order to provide our employees with suitable prerequisites for efficient performance and to fulfil the statutory requirements regarding health and safety and environmental protection, we monitor and maintain the required work environment.

Construction sites, operational facilities together with their premises and installations, operating procedures, plant and equipment including their erection and provision, utilisation and maintenance comply with the statutory and occupational medical requirements as well as accident prevention regulations.

Responsibilities and procedures are organised and documented in accordance with the relevant national requirements.

Construction Plant and Equipment

In order to perform services and produce materials economically and as required, we ensure that construction sites and production facilities are provided with suitable and reliable plant and equipment. Test and measuring devices are subject to regular monitoring.

BMTI units and locations with their REP workshops, service BOXes and mobile workshops are at the disposal of the operating units on an international basis providing management, maintenance, inspection and repair services and also profitability control for plant and equipment.

Procurement

The aim of procurement is to ensure timely and economic provision of products and services in the desired quality, as well as commitment of subcontractors, service providers and suppliers by long-term partnerships.

The operating units are responsible for procurement, if necessary supported by a central procurement management.

To ensure the success of our services and thereby customer satisfaction, the following activities are performed and documented:

• Clear and complete description of services and products to be procured
• Qualification and (initial) selection of subcontractors, service providers and suppliers
• Agreement on acceptance criteria for products and services
• Systematic evaluation of subcontractors, service providers and suppliers as a decision support for future contract awards.
BUSINESS ACTIVITIES

Customer-oriented business activities are the source of our company's success. The objective is to create added value through our activities on the construction market. Business activities are aligned and planned based on the Group Principles, strategic targets and requirements resulting from corporate planning. Consequently, their efficiency is evaluated through the analysis of revenues. Business activities comprise:

- Acquisition of market data
- Development and marketing of projects
- Realisation of projects
- Production of building materials and components
- Operator / concession models

They are rounded off by fulfilment of our customers' requirements and optimal customer support services.

In the Building sector, Strabag teamconcept integrates the customer as partner during all phases of a project. Business activities are performed in accordance with determined responsibilities and documented procedures with defined targets and tasks including related performance criteria. These procedures are controlled technically, commercially and legally, utilizing amongst others controlling tools, where relevant data are recorded.

</tr>
</tbody>
</table>
Building, Road Construction, Tunnelling, Civil Engineering

Added value is achieved mainly through development of technical design and execution of construction contracts.

Processes
- Acquisition / Tendering
- Execution / Production, Warranty and Customer Service

Acquisition / Tendering
The aim is to prepare offers which are profitable for the customer and the company, convince the customer and lead to the award of contracts.
Acquisition / Tendering comprises:
- Marketing / acquisition
- Review of documentation received from the customer regarding completeness, discrepancies and feasibility
- Technical, commercial and legal review of documentation regarding requirements listed
- Evaluation of the effects of contractual obligations on quality, deadlines and costs
- Determination of production costs
- Determination and listing of risks and opportunities, definition of surcharges for risk and profit
- Documentation of processes and results of contract reviews and estimation in order to ensure traceability of all pricing factors

Within the limits of the reporting obligations, the Business Unit concerned decides on acceptable projects.
Enquiries exceeding the core interests and capacities of the Business Unit are placed within the Group by the Sub-divisions in order to provide competent customer support at this very early stage.
Successful acquisition / tendering is concluded by preparation of the contract estimate.
Efficiency of acquisition / tendering is measured by the ratio of tenders submitted and contracts awarded.
Taking into consideration the targets determined in the corporate planning, further parameters may be evaluated.

Execution / Production, Warranty and Customer Service
The aim of job execution is to hand over the project to the customer in compliance with the contract, without defects, on time, and within the economic objectives for the project.
Depending on the requirements of the project, the working design is performed by the operating unit, supported by internal service companies or subcontracting to external design offices.
Subcontracted and / or customer-provided design services are reviewed in terms of completeness, technical feasibility, economic efficiency, and deadlines.
In order to create suitable conditions, the required works processes, responsibilities and resources are already determined during works planning:
- Ensuring information status of the persons responsible for execution of the work during an internal commencement meeting / kick-off meeting,
- Inspection and test plans and tests according to quality characteristics,
- Monitoring of costs and deadlines based on periodic performance and progress reports,
- Controlling action in case of deviations from target figures,
- Identification and processing of amendments / additions to the contract.
Adequate project documentation including monitoring of subcontractors' performance ensures traceability of relevant project data.
Risks, opportunities, defects and measures identified during project review and/or analysis of project data are evaluated and passed on to the respective functions.
Efficiency of performance is measured by adherence to deadlines and fulfilment of technical requirements, without exceeding the budget costs (work estimate).
Customer satisfaction is monitored systematically and evaluated by the managers in accordance with the management structure.
Project Development Infrastructure

Value is achieved through acquisition of additional contracts by developing infrastructure projects (transportation, water and waste management) including the procurement of funding and contract management in the realisation, operation and marketing.

Assesses
Selection and Definition of Projects
Development, Tendering and Contracting
Realisation, Warranty and Customer Service
Operation and Maintenance, Marketing

Business activities are performed in close co-operation with operating Group partners, observing the reporting obligations towards the Board of Directors.

Achievement of the overall target is measured by the degree of customer satisfaction and the rate of return.

Project Development Building

Value is the result of development, design, realisation, successful marketing and, if required, operation of immovable property.

Achievement of the overall target is measured by the degree of customer satisfaction and the rate of return.

Assesses
Development
Design and Planning
Preparations for Realisation
Realisation, Warranty and Customer Service
Operation and Maintenance, Occupancy

Business activities are carried out in close co-operation with operative partners within the Group, based on pre-determined procedures.

Assess and results of individual stages are evaluated and controlled by comparison with the specified targets.
MEASUREMENT, ANALYSIS AND IMPROVEMENT

We measure the results of our processes and the achievement of our aims. Following analysis and evaluation, control and/or corrective measures are implemented where necessary.

Inspections

Process performance is monitored through inspections. In accordance with the contract and for the purpose of a responsible internal quality control, inspections are performed as follows:

- Inspections upon receipt of materials/equipment in order to verify conformity of both procured or customer-provided performances and supplies
- In-process inspections, if processes do not permit later inspections or risks can be detected and minimised at an early stage
- Final inspection of the contracted performance / supply prior to handing over to the customer.

Quality Audits

Quality audits assess the effectiveness of the Management System, determine whether procedures are suitable for the achievement of targets and are observed, and whether the processes can be improved. Measures and results are recorded and distributed to the responsible functions for evaluation. Corrective, preventive and improvement actions are monitored and evaluated with respect to their implementation and effectiveness.

Administrative Audits

As part of the risk management, process-independent and neutral internal administrative audits are performed to detect and avoid risks and assess the legality of our processes. These assessments are performed during both tender stage and execution of construction works, in accordance with documented selection criteria. Audit reports are distributed to the operating units, Division Management, Board of Directors and, if necessary, the public accountant. Information regarding the Management System is distributed to the Country Representative.

Preventive and Corrective Action

Preventive and corrective actions shall ensure safeguarding or quick re-establishment of target conditions in respect to processes and systems. Preventive measures are undertaken in particular in the field of work environment, environmental protection, and risk assessment during tendering, contracting and work planning. Measures and results are recorded and passed on to the responsible functions for evaluation.

Improvement Process

By means of programmes and activities, we raise the level of performance, processes, systems and internal structures (infrastructure, information, communication) in order to further develop the company. Targets, measures and results are recorded and passed on to the responsible functions for evaluation.

COUNTRY-SPECIFIC ATTACHMENTS

See page 14]
**Code of Procedure**

When marked as **requiring approval**, the following business transactions of the Sub-divisions (Dir.) or Divisions (UB) call for prior consent by the Division Management or the BHS Board, if necessary following agreement with the Central Business Unit Manager.

Applications for approval re. business transactions must be submitted in writing to the Division Management or Executive Board. This is also applicable for lower level Group companies.

Application for approval must be made early enough to allow time for decision making.

Furthermore, certain business activities are marked as being expressly **prohibited** for Division and Sub-division Managements.

Within the framework of de-central and central reporting to the Division Management or the responsible BHS Boards and/or the regional service companies, Management must ensure that all data are reported in compliance with the dates foreseen throughout the complete organisation using the information and communication paths set up.

In addition, the following **reporting obligations** must be complied with:

2. Provisions in the operating result for structural measures and imminent losses

3. Acceptance of contracts with specific risks, i.e. particularly
   3.1. Funding
   3.2. Assumption of unrestricted building land risk not included in or over and above the soil investigation report
   3.3. Exceptionally long or unusual warranty periods / special warranty of over five years (exception: 10 years in connection with maintenance contract)
   3.4. Contract penalty of over 5%, per diem rates of over 0.1% of the contract sum with contracts of over EUR 2.5 million

0.5. Construction „for stock“, i.e. to own account

0.6. Major contracts of over EUR 15 million for building, tunnelling, civil engineering and project development, and EUR 7.5 million for roadwork

0.7. Construction where clients must obtain official approval

1. With private clients, waiving of payment security in the case of contracts amounting to at least 10% of the gross contract value and where the contract sum exceeds EUR 1 million. The approval obligation does not apply to contracts from major European banks and bank-related companies, insurance companies, and major industrial or trading concerns.

2. Pre-tax assignment (in the form of bank / client guarantees)

3. Bringing on actions and filing of other petitions to courts and arbitrators, and defence of corresponding actions and petitions by others where the value exceeds or could exceed EUR 1 million for building and EUR 100,000 for roadwork

4. Transfer of ownership by way of security and pledging of fixed and current assets and rights

5. Conclusion of license and sub-license agreements

6. Purchase, sale or encumbrance of land or leasehold rights

7. Preparation of tenders with a contract value of over EUR 15 million for building, tunnelling, civil engineering and project development and EUR 7.5 million for roadwork

8. Conclusion of contracts outside the EU

9. Deviations from the basic capitalisation prohibition where variation orders have not been applied for in writing

10. Project-related co-operation (formation of construction teams) between several national and/or international Sub-divisions

11. Donations to political parties

12. All transactions outside the usual course of business, particularly stock market, futures or speculative transactions

13. Transactions where it is planned to make use of a tied financial credit and STRABAG is partially liable

14. Change of banking reference

15. Inquiry reports for all tenders worth over EUR 3.5 million for building, tunnelling, civil engineering and project development and EUR 1.7 million for roadwork

16. Unusual events, individually and unfallingly

Appendix 2.14(e)
Appendix 2.14(e) - Labour Obligations

UNION OBLIGATIONS

Construction Collective Agreements

The Contractor will ensure that all construction trade Work performed at the Site will be carried out in accordance with the applicable construction collective agreements (collectively, the “Collective Agreements”), applicable labour relations laws and other Applicable Laws. The Contractor, not OPG, is responsible for identifying all Collective Agreements, applicable labour relations laws and other Applicable Laws. The Contractor will comply with the Collective Agreements, including fabrication clauses, and will not take any action that would cause OPG to fail to comply with any of its obligations under the Collective Agreements.

ACKNOWLEDGEMENT OF LABOUR REQUIREMENTS FORM

The Labour Acknowledgement Requirements Form forms part of this Appendix 2.14(e). The Contractor will advise all Subcontractors of the requirements in the Labour Requirements Clause and the Contractor will deliver to OPG a written acknowledgement substantially in the form of Appendix 2.14(e) from each Subcontractor before that Subcontractor commences to perform Work at the Site.

The acknowledgement of Labour Requirements Clause and the Labour Requirements Clause are incorporated into and form part of this Appendix 2.14(e). As between OPG and the Contractor, in the event of any inconsistency between this Agreement and a Collective Agreement, the provisions of this Agreement will prevail. As between

(a) the Contractor and/or Subcontractor, and

(b) any trade union that is a signatory to a Collective Agreement

in the event of any inconsistency between this Agreement and a Collective Agreement, the provision of the applicable Collective Agreement will prevail.
# ACKNOWLEDGEMENT OF LABOUR REQUIREMENTS CLAUSE

(Name of Proponent)

(hereinafter call the “Proponent”) acknowledges and agrees that, should its Proposal with respect to

(Identification of Proposal and Work)

be accepted by the Owner:

the contract with the Owner resulting from that acceptance shall include all the terms and conditions of the attached Labour Requirements Clause.

all the terms and conditions of the Labour Requirements Clause shall form part of any subcontract which the Proponent enters into for the performance of any work covered by such contract with the Owner.

failure by the Proponent or any of its Subcontractors to comply with any of the terms and conditions contained in the Labour Requirements Clause, shall, at the option of the Owner, render such contract or any such subcontract, or any part of such contract or any such subcontract as determined by the Owner, null and void.

The Proponent shall give to the Owner on request evidence satisfactory to the Owner that it and any of its subcontractors are complying with the terms and conditions of the Labour Requirements Clause. It is understood that this acknowledgement of Labour Requirements shall form part of the Proponent’s contract with the Owner.

Dated this _____________________day of ____________________________, 200_
LABOUR REQUIREMENTS CLAUSE

The following sets out the labour requirements (the “Labour Requirements Clause”) pursuant to Section 2.14(e) of the Agreement.

I. WORK BY TRADE JURISDICTIONS

The Labour Requirement Clause is designed to reflect three major groupings of trade skills, as follows:

1. Schedule I - Work which can be described as coming within the trade jurisdiction of the following unions:

   (a) Power Council of Unions
       International Union of Operating Engineers
       Laborers’ International Union of North America
       United Brotherhood of Carpenters and Joiners of America
       United Brotherhood of Carpenters and Joiners of America on behalf of Millwrights

   (b) Operative Plasterers’ and Cement Masons’ International Association of the United States and Canada

   (c) International Association of Heat and Frost Insulators and Asbestos Workers

   (d) International Union of Painters and Allied Trades

   (e) International Brotherhood of Teamsters

   (f) International Association of Bridge, Structural, Ornamental and Reinforcing Iron Workers for Ironworkers

   (g) International Association of Bridge, Structural, Ornamental and Reinforcing Iron Workers on behalf of Reinforcing Rodmen

   (h) United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada

   (i) Electrical
       (i) International Brotherhood of Electrical Workers Construction Council of Ontario for Generation Projects Construction

       (ii) Canadian Union of Skilled Workers

   (j) International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forgers and Helpers

   (k) The Brick and Allied Craft Union of Canada
2. **Schedule II** - Work which can be described as coming within the trade jurisdiction of the following unions.

   At present there are no unions in this category.

3. **Schedule III** - Work which cannot be described as coming within the trade jurisdiction of any of the unions listed in Paragraphs 1 and 2 above.

   If any of the work which is the subject of a proposal will be the type of work described in Paragraph 1 of this Section I, Paragraphs B, C and D of Section II, but not Paragraphs E and F of Section II, of the Labour Requirements Clause specifically apply to such work.

   If any of the work which is the subject of a proposal will be the type of work described in Paragraph 2 of this Section I, Paragraph E of Section II, but not Paragraphs B, C and F of Section II, of the Labour Requirements Clause specifically applies to that work.

   In the case of any other type of work, as described in Paragraph 3 of this Section I, Paragraph F of Section II, but not Paragraphs B, C and E of Section II, of the Labour Requirements Clause specifically applies to such work.

   With the exception of Paragraphs B, C, D, E and F of Section II, which are applicable as explained above. All other Paragraphs of the Labour Requirements Clause apply to any work which is the subject of a proposal.

4. (a) Notwithstanding anything set out above, the field construction by jump or slip method of hollow concrete columns (such as chimneys, silos and bins, exclusive of multiple-celled silos as used in cement and grain storage and including the construction of chimneys, chimney liners and the demolition or repair of any of the aforementioned structures) shall not be subject to the provisions of the Electrical Power Systems Construction Association Collective Agreements if the employer of employees performing such work is a party to the National Agreement for Canada - Stacks, Chimneys, Silos or any renewal thereof.

   (b) Notwithstanding anything set out above, work coming within the trade jurisdiction of the International Union of Operating Engineers, Local 793, as that jurisdiction relates to Crane and Equipment Rentals, shall not be subject to the provisions of the Electrical Power Systems Construction Association/Power Council of Unions Collective Agreement if the employer of employees...
performing work within such jurisdiction is a party to a collective agreement with the International Union of Operating Engineers, Local 793, with respect to Crane and Equipment Rentals.

II. LABOUR REQUIREMENTS

A. For the purpose of this Labour Requirements Clause, the following definitions shall apply:

1. “Company” shall mean any company, partnership, sole proprietorship, joint venture, contractor, subcontractor or person contracting to do the whole or any part of the work contemplated by this proposal document or contract, as the case may be, at the site described in this proposal document or contract, as the case may be.

3. “EPSCA Agreement” shall mean any collective agreement in existence now or in the future between EPSCA and any Trade Union or Council of Trade Unions.

4. “CUSW” shall mean the Canadian Union of Skilled Workers.

5. “CUSW Agreement” shall mean the collective agreement in existence now or in the future between CUSW and Ontario Power Generation Inc. or any other relevant CUSW agreement.

6. “BACU” shall mean the Brick and Allied Craft Union of Canada.

7. “BACU Agreement” shall mean the collective agreement in existence now and in the future between BACU and Ontario Power Generation Inc.

8. “Work on Site” shall mean work performed by any Company for Ontario Power Generation Inc. in the Province of Ontario on property acquired by Ontario Power Generation Inc. for:

   (a) the construction of generation facilities or microwave and repeater stations;

   (b) the supply of aggregate and concrete used in the construction of said facilities; and

   (c) ancillary material yards.

B. Any Company performing any non-electrical Work on Site which would come within the jurisdiction of any of the unions that are signatory to an EPSCA Agreement shall be required to conform to and adhere to the provisions of that EPSCA Agreement. If the EPSCA Agreement does not contain a wage rate for a trade classification required by any such Company, it shall request the General Manager of EPSCA for a wage rate and the wage rate so specified shall apply.
Appendix 2.14(e) - Labour Obligations - Page 6

C. 1. Any Company performing any electrical Work on Site which would come within the jurisdiction of either the International Brotherhood of Electrical Workers (“IBEW”) or CUSW shall be required to conform and adhere to the following:

   (a) if the Company is in a contractual relationship with IBEW, the EPSCA/IBEW Generation Projects collective agreement will apply; and

   (b) if the Company is NOT in a contractual relationship with IBEW, the CUSW Agreement will apply.

2. Any Company performing bricklaying or masonry Work on Site, which would come within the jurisdiction of BACU, shall be required to execute and comply with the terms and conditions of Appendix E of the BACU Agreement, a copy of which is attached to this Labour Requirements Clause.

D. The labour costs of any directly contracted Company falling within the provision of Paragraphs B or C of this Labour Requirements Clause which has submitted a proposal to Ontario Power Generation Inc. with respect to this contract and which has entered into a direct contract with Ontario Power Generation Inc. as a result of its proposal being accepted by Ontario Power Generation Inc. shall be based upon rates of wages and working conditions specified or incorporated by reference in the EPSCA Agreements, CUSW Agreement or BACU Agreement set out above. Any such Company shall give Ontario Power Generation Inc.’s auditors full access to all Company records considered by the auditors to be necessary for the purpose of determining the accuracy of any amounts contemplated by this paragraph. Ontario Power Generation Inc. shall have no liability to pay any amounts under this paragraph. Such Company will include in its proposal any allowance for daily travel, subsistence or travel and transportation as provided for in the relevant articles of the applicable collective agreement and will not receive from Ontario Power Generation Inc. a reimbursement for the direct cost it incurs for these items.

E. Any Company performing any Work on Site which would come within the jurisdiction of any trade union that is signatory to a collective agreement with Ontario Power Generation Inc. (other than an EPSCA Agreement or CUSW Agreement) shall, as a minimum, be required to conform to and adhere to those provisions set out in Schedule II, set out above. If Schedule II, set out above, does not contain a wage rate, overtime rate, shift differential rate or other information for a trade classification required by any such Company, it will request the Manager of Ontario Power Generation Inc.’s Construction Labour Relations Department, or his designate, for such rates and the rates so specified in writing shall apply.

F. Any Company performing any Work on Site which is not covered by either Paragraph B, C or E hereof, shall be required to pay all employees who perform such Work on Site as follows:

   (a) (wage rates as are established by representative collective agreements existing with contractors working in the municipality or district concerned which are
appropriate for the classifications and kind of labour employed, and such revisions to the wage rates of the aforesaid collective agreements as may result from collective bargaining during the term of this contract;

(b) if no such collective agreements are in force, the rates currently paid to competent workmen in appropriate classifications in the municipality or district; and

(c) if no such collective agreements are in force, and no current rate is established, a fair and reasonable rate.

G. Any Company performing any Work on Site shall conform to such working conditions and administrative practices as are required by Ontario Power Generation Inc. from time to time at the work site.

H. If the applicable rates, schedules, working conditions and/or administrative practices change during the term of this contract any Company performing any Work on Site shall be required to conform to and adhere to any such revision or revisions.

I. Unless otherwise specified herein or by this Contract, no Company shall be entitled to payment or reimbursement for any increases resulting from any changes, revisions and/or additions or deletions in any rates, schedules, working conditions and/or administrative practices nor for payment or reimbursement for any resultant increases in workers’ compensation assessments, employment insurance payments and/or vacation pay nor for payment or reimbursement for any other increase of any sort or type in any other matter.

J. If any Company subcontracts to any other Company any part of the Work on Site contemplated by this contract, it shall require any such Company to conform to and adhere to all terms and conditions contained in this Labour Requirements Clause and all such subcontracts shall incorporate all terms and conditions contained in this Labour Requirements Clause.

K. The Company shall specify to Ontario Power Generation Inc. that portion of the Work on Site that will be subcontracted and shall submit prior to the subcontractor’s commencement of work the name of any Company that will be engaged to perform such Work on Site together with the amount and kind of work each will perform. No work shall be subcontracted by the Company until Ontario Power Generation Inc. is informed of the portion of the work to be subcontracted and the Company receiving the subcontract.

L. Any Company submitting a proposal with respect to this contract or any Company performing any Work on Site contemplated by this contract may consult with Ontario Power Generation Inc.’s Manager of Construction Labour Relations, or his designate, with respect to rates, schedules, working conditions and/or administrative practices which may be applicable to this contract. Any information given by Ontario Power Generation Inc. shall in no way obligate Ontario Power Generation Inc. with respect to any matter nor shall it in any way relieve any Company of its responsibility for determining any matter upon which to base its proposal.
M. Ontario Power Generation Inc.’s Manager of Construction Labour Relations, or his designate, may call meetings with respect to rates, schedules, working conditions and/or administrative practices or for discussion and clarification of any problem involving labour relations. Any Company making a proposal with respect to this contract and any Company performing any Work on Site contemplated by this contract shall attend such meetings when requested by Ontario Power Generation Inc.

N. Ontario Power Generation Inc. may require from time to time any Company making a proposal with respect to this contract to supply Ontario Power Generation Inc. forthwith with any and all collective agreements that it or any of its subcontractor Companies may have covering the area where the work is to be performed.

O. Any Company contracting or contracted to perform any Work on Site contemplated by this contract shall give to Ontario Power Generation Inc. immediately upon request evidence satisfactory to Ontario Power Generation Inc. of such Company’s compliance with any or all of the terms and conditions contained in this Labour Requirements Clause. Failure to do so, or failure to comply with any of the terms and conditions contained in this Labour Requirements Clause shall, at the option of Ontario Power Generation Inc., render this contract or such part of it as is determined by Ontario Power Generation Inc., null and void upon notification in writing to the defaulting Company by Ontario Power Generation Inc.

III. VACATION AND STATUTORY HOLIDAY PAY

Vacation and Statutory Holiday Pay will be included on the employees’ pay-cheques for all trades, with one exception - the Millwrights (see below). Companies should disregard the instructions in the International Brotherhood of Painters’ and Allied Trades’ Appendix (Article 15 - Paragraphs 1 and 2) as the Painters are now in line with the majority of trades having vacation and statutory holiday pay included on employees’ pay-cheques.

MILLWRIGHTS

The successful Company is required to remit Vacation and Statutory Holiday Pay for employees working under the terms and conditions of the EPSCA/Millwright Appendix to the Union’s respective Plan, as follows:

The Millwright Benefit Plan Trust Funds.

IV. MARK-UP MEETING

There is a contractual requirement for the successful Company to hold a mark-up meeting with all interested unions prior to the commencement of work.

The successful Company must inform the appropriate EPSCA Representative of the contract particulars at the time an award is made. The EPSCA Representative will then arrange the mark-up meeting with the contractor and the unions.

Appendix 2.20(d)
Appendix 2.20(d) - Preliminary INCW Part Project Specific Safety, Security, Public Safety and Emergency Response Plan

The INCW Part Project Specific Site Safety Plan will be prepared in accordance with Section 2.20(d). It will be a comprehensive plan and will incorporate the following elements to the extent that they are applicable to the Work being undertaken by the Contractor, considering the Contractor’s means and methods for performance of the Work:

1. the safety hazard analysis described in Section 2.20(d);

2. the Preliminary Project Specific Site Safety, Security, Public Safety and Emergency Response Plan attached at Appendix 2.4(d);

3. the OPG policies and procedures identified below (copies of which have been provided to the Contractor) (the “OPG Policies”); and

4. any Contractor’s safety procedures not included above.

The Contractor will ensure that the INCW Part Project Specific Site Safety Plan (1) incorporates those OPG Policies which are mandatory and (2) is, in all other respects, at least equivalent to the OPG Policies.

OPG Policies, Standards and Procedures

- Corporate Safety Rules
  - Part 1 - Common and Risk Based Rules
  - Part 2 - Management Requirement Rules
- OPG-SFTY-STD-005 - Safety Incident Management
- OPG / Electricity Production - Work Protection Code
- OPG Craning and Rigging Handbook
- Ontario Hydro Manual for Waterways Safety
- Electricity Production (EP) - Lead Plant Documents
  - LP-HS-003 - Safety Incident Management Procedure
  - NPG-LP-HS-007 - Work Protection Code Training Requirements
  - NPG-LP-HS-015 - Diving Operations Safety
- Electricity Production (EP) - Project Safe Work Practice Procedures
  - EP-MAN-004 - Safe Work Practice Procedures (Part 2)
    - Administrative Procedures A1 through A6
    - Safe Work Practice Procedures B1 through B47
- Niagara Plant Group (NPG) - Administrative Instructions
  - 2-1 - Health and Safety Incident Management
  - 2-2 - Personal Protective Equipment
  - 2-3 - Smoking Policy
Appendix 2.20(d) - Preliminary INCW Part Project Specific Safety, Security, Public Safety and Emergency Response Plan

- 2-9 - Lead Exposure Control
- 2-12 - Working Near Open Water
- 2-15 - Use of Crane to Raise / Lower Worker
- 2-16 - Hazardous Material Management
- 2-20 - Job Safety Planning Folder Instruction
- 2-27 - Silica Control Measures
- 2-28 - Housekeeping
- 2-30 - Interim Instruction for Site Excavation in the Vicinity of Buried and Embedded Sources of Energy
- 2-31 - Core Drilling
- Form F2-54 - Service Locate and Excavation Approval Form
Appendix 2.20(o)
Appendix 2.20(o) - Designated Substances Present at INCW Part Project Area

Silica and lead are present on the Site, as follows:

- Silica is present in the concrete at the INCW and the PGS Dewatering Structure and may be mobilized by the Contractor through concrete cutting, coring, demolition, etc.; and

- Lead may be present in lead-based coatings applied to handrails and embedded steel parts at the INCW and the PGS Dewatering Structure and may become mobilized through contractor operations such as sandblasting or saw-cutting these elements.

Appendix 4.1(d)
Appendix 4.1(d) - Letter of Credit

Letter of Credit

To: Ontario Power Generation Inc. 700 University Avenue Toronto, Ontario M5G 1X6
Attention: Director, Credit

Date of Issue: ●, 2005
Irrevocable standby letter of credit
No: ●
Amount: Not exceeding CAD $70,000,000
Date of Expiry: ●, 200● (subject to automatic renewal)
Applicant: ●

Dear Sirs/Mesdames:

At the request of Strabag AG (the “Customer”), we hereby issue in your favour our irrevocable standby letter of credit for a maximum total amount not to exceed CAD $70,000,000).

This letter of credit is available against presentation of the following documents delivered to us at ●:

(a) your written demand for payment under this letter of credit;
(b) the original of this letter of credit for notation hereon of the drawing or, if no further drawings are available under this letter of credit, for cancellation; or
(c) a certificate, signed by your Chief Financial Officer, Treasurer or Secretary stating that Ontario Power Generation Inc. is entitled to draw on this letter of credit pursuant to Section 4.1(d) of the Design/Build Agreement between the Customer and Ontario Power Generation Inc. dated ●, 2005.

This letter of credit will be automatically renewed for a period of one year upon the expiration date set out above and thereafter each year upon each anniversary of such date, unless at least 45 days before such expiration date, or before any anniversary of such date: (a) we notify both you and the Customer in writing by registered mail that we elect not to so renew this letter of credit for any additional period; or (b) you or the Customer delivers to us written confirmation from you that this letter of credit is terminated. Upon your receipt of such notice of election from us not to renew this letter of credit, you may at any time before the expiration date, or anniversary of such date, draw under this letter of credit by your sight draft(s) drawn on us and bearing the statement “drawn under letter of credit no. ●”.

5600344.6
14504-2060
Partial drawings are allowed under this letter of credit.

We will honour each demand made by you under this letter of credit which is accompanied by the documents specified above, without inquiring whether you have the right, as between you and the Customer, to make such demand.

This letter of credit is irrevocable.

This letter of credit is subject to the Uniform Customs and Practice for Documentary Credits (1993 Revision), International Chamber of Commerce publication No. 500.

Appendix 4.1(e)
INDEMNITY AGREEMENT

This Agreement is made as of August 16, 2005, between

ONTARIO POWER GENERATION INC., a corporation existing under the laws of Ontario (“OPG”),

and

STRABAG AG, a corporation existing under the laws of Austria (“Subsidiary”),

and

[●], a [corporation] existing under the laws of Austria (“Parent”).

RECITALS

(A) Subsidiary and OPG will enter into a design/build agreement in connection with the Niagara Tunnel Facility Project (the “Underlying Agreement”).

(B) OPG will not enter into the Underlying Agreement unless Parent and Subsidiary execute this Agreement.

(C) Parent wishes to assist Subsidiary, its subsidiary, to obtain the Underlying Agreement. Accordingly, Parent has agreed to provide OPG with the indemnifications and other rights contained in this Agreement.

For value received, the parties agree as follows.

Obligation to Perform. If Subsidiary fails to perform in a timely manner any obligation under the Underlying Agreement or any other document delivered in respect of the Underlying Agreement (collectively, the “Subsidiary Obligations”), Parent will itself perform such Subsidiary Obligations, or cause the same to be performed, in each case as if Parent were itself Subsidiary with respect to such Subsidiary Obligations. Parent will perform such Subsidiary Obligations immediately following receipt of a notice from OPG indicating the Subsidiary Obligation(s) that Subsidiary has failed to satisfy in a timely manner, regardless of whether or not OPG has attempted to enforce any of the Subsidiary Obligations against Subsidiary. Any failure by Parent to perform in a timely manner any Subsidiary Obligations that Parent is obliged to perform will immediately entitle OPG to pursue all rights and remedies available to it in law, in equity or otherwise against each of Parent and Subsidiary.

Other Obligations. Parent irrevocably and unconditionally agrees to indemnify and save harmless OPG from and against all costs, damages, expenses, losses, liabilities, demands, claims, suits, actions, proceedings, judgments and obligations (including, without limitation, legal fees and expenses) arising in respect of any breach by Subsidiary of any Subsidiary Obligations (the
“Indemnity Obligations” and collectively the Subsidiary Obligations and the Indemnity Obligations are the “Obligations”). This indemnity does not extend, however, to impose any obligation on Parent that would not have been an obligation of Subsidiary under the Underlying Agreement, except that Parent will not be relieved of any of its obligations under this Agreement due to any relief of Subsidiary from any of the Subsidiary Obligations arising in respect of any bankruptcy, insolvency, reorganization, moratorium, arrangement, readjustment of debt, liquidation, winding-up or dissolution proceedings or legislation.

Obligations Absolute. The obligations of Parent under this Agreement are absolute and unconditional and continue regardless of any change or other modification to the Subsidiary Obligations from time to time and regardless of any other circumstance which might otherwise constitute, in whole or in part, a defence available to, or a discharge of Parent, Subsidiary or any other entity in respect of the Subsidiary Obligations or any of the obligations of Parent.

No Obligation for OPG. OPG will have no obligation to Parent whatsoever for any act, omission, matter, thing or circumstance whatsoever and OPG’s obligations to Subsidiary are governed solely by the Underlying Agreement.

Parent’s Representation. Parent represents and warrants to OPG that Parent has taken all necessary corporate action to authorize the execution and delivery of this Agreement and the performance of its obligations under this Agreement and that this Agreement constitutes a valid and binding agreement of Parent enforceable against it in accordance with its terms.

Financial Information of Parent. Parent authorizes OPG to make credit enquiries about Parent or any of its affiliates from time to time and to receive and exchange credit information from credit reporting agencies or other persons with which Parent or any of its affiliates has or may expect to have financial dealings. Parent has provided OPG with Parent’s consolidated audited financial statements for the last three financial years. Such financial statements have been prepared in accordance with the International Financial Reporting Standards issued by the International Accounting Standards Board (and including the interpretations of the International Financial Reporting Interpretations Committee), consistently applied. Such financial statements fairly reflect the consolidated financial position and results of operations of Parent as at the dates and for the periods set out in such statements. Parent will provide OPG with its audited consolidated financial statements and unaudited quarterly consolidated financial statements promptly after each such statement becomes available. Parent will also provide OPG with any other financial information respecting Parent that OPG may reasonably request to assist OPG in its ongoing evaluation of the value of the indemnifications and other rights provided to OPG by Parent under this Agreement.

Subrogation. Until the Subsidiary has satisfied all of its liabilities, obligations and covenants under the Underlying Agreement and until repayment in full of the Obligations, all dividends, compositions, proceeds of security, security valued or payments received by OPG from the Subsidiary or others in respect of the Obligations shall be regarded for all purposes as payments in gross without any right on the part of the Parent to claim the benefit thereof in reduction of the liability under this Agreement and the Parent shall not claim any set-off or counterclaim against the Subsidiary in respect of any liability of the Subsidiary to the Parent, claim or prove in the bankruptcy or insolvency of the Subsidiary in competition with OPG or have any right to be
subrogated to OPG. The Parent shall have no right of subrogation in respect of payments made to OPG hereunder until such time as the Subsidiary has satisfied all of its liabilities, obligations and covenants under the Underlying Agreement and the Obligations have been fully satisfied. In the case of the liquidation, dissolution, winding-up or bankruptcy of the Subsidiary (whether voluntary or involuntary) or in the event that the Subsidiary makes an arrangement or composition with its creditors, OPG shall have the right to rank for its full claims and to receive all dividends or other payments in respect thereof until its claims have been paid in full. If any amount shall be paid to the Parent on account of any subrogation rights arising hereunder at any time before all of the Obligations have been fully paid and satisfied, such amount shall be held in trust for the benefit of OPG and shall forthwith be paid to OPG to be credited and applied against the Obligations, whether matured or unmatured.

**Assignment and Postponement of Claim.** All present and future indebtedness and liability of the Subsidiary to the Parent is hereby assigned by the Parent to OPG and postponed to the Obligations, and all monies received by the Parent in respect thereof after the occurrence of an event of default (as defined in the Underlying Agreement) which is continuing shall be received in trust for OPG and forthwith upon receipt shall be paid over to OPG all without in any way lessening or limiting the liability of the Parent under this Agreement. Until the occurrence of an event of default (as defined in the Underlying Agreement) which is continuing, OPG consents to the Parent retaining all monies received by the Parent from the Subsidiary. This assignment and postponement is independent of the guarantee and indemnity contained in this Agreement. Any claim of the Parent against the Subsidiary arising from payments made by the Parent pursuant to the provisions of this Agreement shall be in all respects subordinate to the full and complete payment, performance and discharge of the Obligations, and no payment hereunder by the Parent shall give rise to any claim of the Parent against OPG.

**Notice.** Every notice or other communication required or permitted under this Agreement must be in writing and may be delivered in person, by courier or by fax to the applicable party, as follows:

<table>
<thead>
<tr>
<th>if to OPG,</th>
<th>if to Subsidiary,</th>
<th>if to Parent,</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ontario Power Generation Inc. 700 University Avenue, Toronto, Ontario, M5G 1X6 Attention: Director, Credit Fax: (416) 592-8335</td>
<td>Strabag AG Donau-City-Str. 9 1220 Wien (Vienna) Austria Attention: Ernst Gschnitzer Fax: +43 1 22422 1227</td>
<td>[■]</td>
</tr>
</tbody>
</table>

or to any other address, fax number or individual that a party designates. Any notice or other communication under this Agreement, if delivered personally or by courier will be deemed to have been given when actually received, if delivered by fax before 3:00 p.m. (Toronto time) on a business day in Toronto will be deemed to have been delivered on that business day and if delivered by fax after 3:00 p.m. (Toronto time) on a business day in Toronto or on a day which is
not a business day in Toronto will be deemed to be delivered on the next business day in Toronto.

**Service.** For the purpose of all legal proceedings, this Agreement will be deemed to have been performed in Ontario and the courts of Ontario will have jurisdiction to entertain any action arising under this Agreement. Each of the parties irrevocably submits to the non-exclusive jurisdiction of the courts of Ontario. No party will oppose the enforcement against it in any other jurisdiction of any judgment or order obtained from an Ontario court regarding this Agreement. Any party may effect service of summons or any other legal process that may be served in any action, suit or other proceeding by delivering any such process to such other party in accordance with the previous Section. Parent hereby nominates, constitutes and appoints Subsidiary its true and lawful agent to accept service of process and to receive all legal process in respect of any action arising in respect of this Agreement. Until lawful notice of the appointment of another and subsequent agent in Ontario has been given by Parent and accepted by OPG, service of any legal process upon Subsidiary will be accepted by Parent. Nothing in this Section will affect the rights of OPG to serve legal process in any other manner permitted by law.

**General.** The division of this Agreement into sections and the insertion of headings are for convenience of reference only and are not to affect the construction or interpretation of this Agreement. Unless otherwise specified, words importing the singular include the plural and vice versa. This Agreement is governed by, and is to be construed and interpreted in accordance with, the laws of Ontario and the laws of Canada applicable in Ontario. If there is a conflict between any term of this Agreement and any term of the Underlying Agreement, the relevant term of this Agreement is to prevail. If any term of this Agreement is or becomes illegal, invalid or unenforceable, the illegality, invalidity or unenforceability of that term will not affect the legality, validity or enforceability of the remaining terms of this Agreement. For every term of this Agreement, time is of the essence. This Agreement and the Underlying Agreement constitute the entire agreement between the parties with respect to the subject matter and supersede all prior agreements, negotiations, discussions, undertakings, representations, warranties and understandings, whether written or verbal. Neither Parent nor Subsidiary may assign this Agreement in whole or in part without the prior written consent of OPG. This Agreement enures to the benefit of and binds the parties and their respective successors and permitted assigns. No waiver of any term of this Agreement is binding unless it is in writing and signed by the party entitled to grant the waiver. No failure to exercise, and no delay in exercising, any right or remedy, under this Agreement will be deemed to be a waiver of that right or remedy. No waiver of any breach of any term of this Agreement will be deemed to be a waiver of any subsequent breach of that term. Subsidiary and Parent will from time to time promptly execute and deliver all further documents and take all further action reasonably necessary or appropriate to give effect to the terms and intent of this Agreement and to satisfy all of the Subsidiary Obligations. The rights and remedies under this Agreement are cumulative and are in addition to and not in substitution for any other rights and remedies available at law or in equity or otherwise. No single or partial exercise by a party of any right or remedy precludes or otherwise affects the exercise of any other right or remedy to which that party may be entitled. This Agreement and any amendment, restatement or termination of this Agreement in whole or in part may be signed and delivered in any number of counterparts, each of which when signed and delivered is an original but all of which taken together constitute one and the same instrument. This Agreement and any amendment, restatement or termination of this Agreement
in whole or in part may be delivered by fax. Except as expressly provided in this Agreement, no amendment, restatement or termination of this Agreement in whole or in part is binding unless it is in writing and signed by each party.

Parent and Subsidiary have duly sealed and the parties have duly executed this Agreement.

Appendix 4.1(f)
Appendix 4.1(f) - Maintenance Bond

No. [■]

[■] as Principal, hereinafter called the Principal, and [■] a corporation created and existing under the laws of [■] and duly authorized to transact the business of Suretyship in [■] as surety, hereinafter called the Surety, are held and firmly bound unto [■] as Obligee, hereinafter called the Obligee, in the amount of [■] Dollars ($[■]) lawful money of Canada, for the payment of which sum, will and truly to be made, the Principal and the Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has entered into a written contract with the Obligee, dated [■] day of [■], in the year [■] for [■], which contract is by reference made a part hereof and is hereinafter referred to as the Contract.

The condition of this obligation is such that if the Principal shall promptly and faithfully perform the obligations under Sections 7.4(a), 7.8(d), 9.7, 9.8, 9.9 and 9.10 of the Contract then this obligation shall be null and void; otherwise it shall remain in full force and effect.

Whenever the Principal shall be, and declared by the Obligee to be, in default under the Contract of any of the Principal’s obligations under Sections 7.4(a), 7.8(d), 9.7, 9.8, 9.9 and/or 9.10 the Contract, the Obligee having performed the Obligee’s obligations thereunder, the Surety shall promptly:

(a) remedy the default, or;
(b) complete the Contract in accordance with its terms and conditions, or;
(c) obtain a bid or bids for submission to the Obligee for completing the Contract in accordance with its terms and conditions and upon determination by the Obligee and the Surety of a bidder acceptable to the Obligee, acting reasonably, arrange for a contract between such bidder and the Obligee in form and content acceptable to Obligee, acting reasonably, and make available as work progresses (even though there should be a default, or a succession of defaults, under the contract or contracts of completion, arranged under this paragraph) sufficient funds to pay to complete the Principal’s obligations in accordance with the terms and conditions of the Contract and to pay those expenses incurred by the Obligee as a result of the Principal’s default relating directly to the performance of the work under the Contract, less the balance of the Contract price; but not exceeding the Bond Amount. The term “balance of the Contract price” shall mean the total amount payable by the Obligee to the Principal under the Contract, less the amount properly paid by the Obligee to the Principal, or
(d) pay the Obligee the lesser of (i) the Bond Amount or (ii) the Obligee’s proposed cost of completion, less the balance of Contract price.

It is a condition of this Bond that any suit or action must be commenced before the expiration of two (2) years from the earlier of (i) the expiry of the Warranty Period (as defined in the Contract and as such period may be extended in accordance with Section 9.8(d) of the Contract) or (ii) the
date on which the Principal is declared in default by the Obligee of any of the Principal’s obligations under Sections 7.4(a), 7.8(d), 9.7, 9.8, 9.9 and/or 9.10 of the Contract.

The Surety will not be liable for a greater sum than the Bond Amount.

No right of action shall accrue on this Bond, to or for the use of, any person or corporation other than the Obligee named herein, or the heirs, executors, administrators or successors of the Obligee.

This Bond and the obligations created hereby are in addition to and not in substitution for any other rights and remedies available to the Obligee at law or in equity including, without limitation, any other rights and/or remedies which the Obligee may have under any other bond, letter of credit, holdback or security now or hereafter held by the Obligee. None of the other rights or remedies of the Obligee at law or in equity will delay or in any way prejudice the Obligee’s rights and remedies under this Bond and the Surety shall not be entitled to require the Obligee to enforce such other rights and remedies prior to enforcing the Obligee’s rights and remedies under this Bond.

IN WITNESS WHEREOF, the Principal and the Surety have Signed and Sealed this Bond dated [●] date of [●], in the year [●].

1 INTRODUCTION

1 Ontario Power Generation Inc. (OPG) is implementing the Niagara Tunnel Facility Project, the key element being a water delivery tunnel. The project will be constructed following the Design/Build delivery method.

2 This Geotechnical Baseline Report (GBR) includes descriptions of the tunnel and other underground works to be constructed; interpretations of the geological and geotechnical information obtained for the Project, and a summary of expected geotechnical and groundwater conditions to be encountered.

3 The designs, means, methods, sequences, timing or level of workmanship required to construct the project in accordance with the Contractor’s design will influence the behaviour of the subsurface materials during construction. This GBR is intended to assist the Contractor in evaluating the requirements for excavating and supporting the ground, and in preparing the design.

4 The GBR will be used during the execution of the Contract for comparison of the assumed subsurface conditions with actual subsurface conditions as encountered during construction. Consequences associated with subsurface conditions consistent with, or less adverse than, the baseline conditions represented in the Contract Documents are the responsibility of the Contractor. Those consequences associated with subsurface conditions more adverse than the baseline conditions are accepted by OPG. The GBR is intended to assist the parties in the resolution of contractual disputes.

5 Documents and reports that were prepared during the development of the project and other studies in the project area, including the GDR, are reference documents for information only. None of the information contained in these reference documents constitutes a representation by OPG or any Person (whether in tort or contract), and the Contractor must make its own assessment of the relevance and validity of such information.

6 This GBR presents the soil, rock and groundwater conditions expected to be encountered in the surface and subsurface excavations. While the actual conditions encountered in the field are expected to be within the ranges as given in the GBR, the distribution of geologic conditions encountered will likely vary from those presented in this GBR. Where an average value is given without a range or histogram, the given value shall be considered to be the 50% probability of occurrence averages, and the range shall include extreme values at 10% probability of occurrence that are 30% greater and 30% lower than the average.

7 Where the values are presented as a range, the range shall be considered to include all values at 25% probability or higher. The extreme values in the range shall be increased or decreased by 10% to address values at 10% probability of occurrence for a normal distribution. The distribution will be assumed to be skewed so that the
average value of the distribution will be an amount equal to the arithmetic mean of the values given for the range plus 10% of the arithmetic mean, except in the cases of rock strength and deformability characteristics for surface, where it shall be taken as minus 10% of the arithmetic mean.
2 PROJECT DESCRIPTION

1 The Niagara Tunnel Facility Project comprises the design and construction of an approximately 10.3-km long water conveyance tunnel, and associated intake and outlet structures. The intake is located upstream from the Niagara Falls and the outlet is near the canal system feeding the existing Sir Adam Beck (SAB) and Pumping Generating Station (PGS) hydroelectric plants, generally as shown on the Concept Drawings.
3 SOURCES OF GEOLOGICAL AND GEOTECHNICAL INFORMATION

3.1 Site Investigations

1. The geotechnical investigations for the Project were carried out in stages. Concept phase geotechnical investigations for various potential development schemes were carried out by Ontario Hydro from 1983 to 1989. Investigations were also carried out during both the Definition Phases 1 and 2 Engineering Studies in 1990 and 1992/1993 respectively. The Phase 2 investigations included the excavation of an adit and a 12-m diameter trial enlargement in the Queenston Formation in an area about 500 m from the outlet area for this project.

2. Although a second additional diversion tunnel and an additional generating station were considered in all stages of the investigations, the Niagara Tunnel Facility Project consists only of a diversion tunnel. Site investigations have been generally separated into ‘Generation’ and ‘Diversion’ areas of interest. Data from the Diversion area investigations are covered in the following sections, with inclusion of relevant data from the Generation area investigations. The data presented herein for the Generation area are considered to be applicable to the tunnel outlet area.
4 GEOLOGIC SETTING

4.1 Regional Geology

1 The Niagara Region is underlain by Cambrian, Ordovician and Silurian sedimentary rocks having a total thickness of approximately 800 to 900 m. The strata include dolostones, dolomitic limestones, sandstones, and shales. All units are subhorizontal, gently dipping uniformly southward. The present Niagara River Gorge was formed by erosion during the last major ice retreat, about 12,000 years ago. The buried St. Davids Gorge represents an earlier river course that has been infilled with glacial outwash materials. Away from gorge areas, the bedrock is covered almost entirely by glacial lake sediments.

4.2 Overburden and Buried Glacial Valleys

1 The Project area is covered almost entirely with glacial lake sediments with some deposits of sandy silt and sandy silt till. The thickness of soils along the corridor of the diversion tunnel alignment as shown on the Concept Drawings, excluding St. Davids Gorge, varies from less than 1 m to up to 35 m near Dufferin Islands as shown in Figure 4.1.

2 The buried St. Davids Gorge is similar in shape to the Niagara River Gorge and extends from Lake Ontario through the village of St. David’s to the Whirlpool Rapids area. The St. Davids Gorge is oriented in a northwest direction and varies in width from 350 to 630 m in the vicinity of the Niagara River. Depth to bedrock is in the order of 125 m in the vicinity of the alignment as shown on the Concept Drawings and in excess of 200 m where it intersects with the present Niagara River at the Whirlpool Rapids. The gorge is completely infilled with deposits of glaciolacustrine, glacial and glaciofluvial origin.

4.3 Bedrock Stratigraphy

1 In descending order from surface, the sequence of rocks is as follows:

- Guelph 2 to 3 m
- Lockport 43 to 45 m
- DeCew 2 to 3 m
- Rochester 17 to 19 m
- Irondequoit 2 to 4 m
- Reynolds 3.5 to 4.5 m
- Neahga 1.5 to 2 m
- Thorold 2 to 3.5 m
- Grimsby 12.5 to 15 m
- Power Glen 10 to 12 m
- Whirlpool 4.9 to 8.5 m
- Queenston >300 m
The Queenston Formation extends well below the deepest section of the tunnel as shown on the Concept Drawings, with thicknesses greater than 300 m being reported in the literature. These major stratigraphic units are presented and described in Table 4.1.

2 Variations in thickness of some units, particularly the Whirlpool Formation, are primarily due to irregularities in unconformable and weathered contacts between units. Variations are also dependent on bedrock structure. Noted thicknesses are approximate only and will vary along the tunnel route.

3 Various phases of surface drilling have been undertaken along the tunnel alignment. All data has been utilized to generate the geological sections as shown in Figures 4.1 and 4.2. For the rock formations above the Queenston Formation, division of the stratigraphy is relatively straightforward, as formation boundaries are lithologically distinctive. Within the Queenston Formation, it is more difficult to define lithologically distinct marker units. However, six major stratigraphic divisions have been identified from geophysical logging in the Queenston Formation, which are bounded by correlatable bedding planes. These group divisions can be separated into subdivisions, designated Q1 to Q10, by fairly distinctive primary bedding planes. Each of these subdivisions exhibits subtle characteristic changes that allow them to be considered as correlatable divisions within the Queenston Formation (refer to Table 4.1).

4.4 Bedrock Characteristics

4.4.1 Bedding Planes

1 Bedrock in the Project area has generally well-defined bedding with a southerly dip of about 6 m/km and an east-west strike. Sheared, weak bedding planes exist between many of the rock formations and within the Queenston Formation.

2 Primary bedding planes are defined as major bedding planes between lithological units above the Queenston Formation and between subunits within the Queenston Formation. Sheared primary bedding planes refer to those planes where some differential displacement has occurred. The approximate elevations, at various borehole locations, of the primary bedding planes are given in Tables 4.2 and 4.3. Within the Queenston Formation, the primary bedding planes are major discontinuities occurring at spacings of about 5 m to somewhat greater than 20 m and locally affect the rock mass quality. These planes often exhibit features such as gouge or breccia (a few millimetres to 2 to 3 cm) and slickensides that are consistent with lateral structural dislocation. Most of the primary bedding planes encountered in the test adit excavations up to about 400 m from the Niagara Gorge are sheared. Striae measurements in the test adit suggest movement trends towards the Niagara River. It is unknown whether these planes are sheared at greater distances from the gorge.
The primary bedding planes will affect the excavation of the tunnel as many are clay rich and form weak discontinuity surfaces that, because of the shallow dip of the tunnels, may follow the excavation for considerable distances. Their locations can be estimated from Figure 4.1. However, because only two boreholes are available with geophysical trace information, detailed correlation of all the bedding planes within the Queenston Formation across the complete length of the tunnel alignment has not proved possible.

4.4.2 Faulting and Discontinuities

1. There are no known occurrences or reports of any major faulting within the Project area. Some near-surface, low angle thrusts with minor vertical displacement are known to occur and are probably related to stress relief associated with the gorge formation and the high horizontal residual stresses in the area. Some shearing of this type can be expected in the area of the St. Davids Gorge.

2. Regional joint measurements indicate the jointing to be high angle or vertical with the dominance of three major joint directions and a subordinate fourth set. In addition to these high angle sets, there is another set parallel to bedding. Based on strike directions the most prominent subvertical joint sets are

(a) a 005deg joint set which parallels the general trend of the Niagara River, particularly in the area of the tunnel outlet

(b) a 045deg joint set which approximately parallels the Niagara River, downstream from the Whirlpool

(c) a 085deg joint set which approximately parallels the Niagara Escarpment

(d) a 135deg joint set which approximately parallels the buried St. Davids Gorge.

3. Gypsum and calcite, and dolomite mineralization occur along joint sets of 085deg and 135deg orientations.

4. The joint sets vary in spacing, frequency and continuity depending on location and lithology. Vertical joints are generally widely spaced. The joint surfaces are generally rough and fresh to slightly weathered.

4.4.3 In Situ Stresses

1. High in situ stresses exist in the Project area bedrock. Measurements show that maximum horizontal stress in the Queenston Formation range from 10 to 24 MPA, with a maximum horizontal/vertical stress ratio varying from 3 to 5. Higher stress ratios are measured in the overlying rock units. In general, the orientations of the maximum horizontal stresses along the alignment of the diversion tunnel lie within the NE-SW quadrant. The orientations of the local stresses are influenced by the
presence of major physiographic features, namely the buried St. Davids Gorge and the Niagara River Gorge.

4.4.4 Bedrock at St. Davids Gorge

1 The geological profile of and below the buried St. Davids Gorge, interpreted from boreholes and geophysical investigations, is shown in Figure 4.2.

2 For the purposes of this GBR, the width of the St. Davids Gorge is 800 m.

3 Figure 4.3 represents the baseline for the bottom of the St. Davids Gorge. This figure is based on available seismic (Niagara River Hydroelectric Development, Seismic Reflection Survey, Niagara Falls, Ontario, multiVIEW Geoservices Inc., January 1991) and borehole data from the St. Davids Gorge area. Elevations shown are equal to the interpreted seismic elevations minus an amount equal to a 20% error in depth calculations (as compared to 15% that was recommended in the seismic report). Elevations are given as ellipses consistent with the original seismic report. Borehole information is given as top of rock minus 5 m. The baseline represents spot elevations of the bottom of the gorge, defined as the top of bedrock (fractured or otherwise). Contouring of this data does not represent a baseline.

4 The bedrock (Queenston Formation) over the width of the St. Davids Gorge is slightly weathered and relatively more fractured to a depth of between 15 to 25 m below the bottom of the gorge. Below this depth, the rock is generally fresh and of excellent quality. No evidence of a major fault or other major discontinuities underlying the St. Davids Gorge has been found to date either by drilling or from geophysical surveys.

4.4.5 Geological Profile

1 The geological profile and the lithology as shown in Figures 4.1 and 4.2 of the GBR has been projected horizontally and is applicable to the alignment selected by the Contractor.

4.5 Hydrogeologic Setting

1 Groundwater conditions in the Project area are influenced by depth and lithology, and vary between the rock formations above the Queenston Formation, but are relatively consistent in the Queenston formation. The only known aquifers are the Lockport and DeCew (dolostone) Formations, whereas the remaining strata below the DeCew are generally considered to be aquitards. The groundwater below the DeCew Formation is highly corrosive.
4.6 Natural Gas

1 Natural gas has been encountered in some of the formations, particularly in the Rochester and Grimsby Formations, with some minor amounts of gas being encountered in other formations, including the Queenston.
5 GROUND CHARACTERIZATION – SOILS

5.1 General

1. The Project area is covered almost entirely with glacial lake sediments consisting mostly of alternating layers of grey to reddish-brown silt, clayey silt or silty clay. The silt is locally sandy. A silty or clayey till occurs at depth locally, generally overlying bedrock.

2. At the buried St. Davids Gorge, the thickness of overburden intersected by boreholes drilled in the vicinity of the diversion tunnels is up to 125 m. Broadly, two distinct overburden zones were identified in the St. Davids Gorge, an upper zone, about 56 m in thickness, consisted of fine, reddish-brown, dense, silty sand to sandy silt glacial till with occasional layers of gravel, cobbles, and boulders. A lower zone consisted of alternating layers of silt, sand, and gravel, cobbles and boulders of talus-like material. Pervious layers are common and shale fragments are frequently found in the glacial till.

3. The soils encountered in the outlet area have been deposited in a glaciolacustrine environment and consist mostly of fine grained deposits of silty clay/clayey silt, silt/sandy silt and sandy silt till.

5.2 Characteristics

1. Testing results for soil samples from boreholes in the PGS area are summarized in Table 5.1.

2. Soils that will be encountered in the following areas are:

   (a) Intake Excavation—minimal river bottom sediments of 0.3 m or less in thickness

   (b) Outlet Excavation—8 m in thickness

   (c) Dewatering Shafts—17 m in thickness if located east of the St. Davids Gorge.

3. Properties given in Table 5.1 are applicable to all soils east of the St. Davids Gorge.
6 GROUND CHARACTERIZATION – ROCK

6.1 Mineral Composition and Detailed Lithology of the Queenston Formation

1 Table 6.1 details the mineralogical composition of the various bedrock units above the Queenston Formation.

2 Table 6.2 details the mineralogical composition of the Queenston Formation. Detailed lithology of the Queenston Formation was discerned from logging in the test adit. In approximately decreasing order of grain size, the lithological types are as follows:

   I - sandstone and crystalline carbonate units
   II - reddish-brown siltstone/interbedded siltstone
   IIA - siltstone, containing >40% greenish-grey bands
   IIB - siltstone, containing <40% greenish-grey bands/mottling
   IIIA - muddy siltstone, containing >40% green bands, in places mottled
   IIIB - muddy siltstone, containing <40% green bands or mottling
   IV - reddish-brown silty mudstone; with some more weathered, weaker zones than other types
   V - mudstone, with compaction features dipping at 45° to 75°, often associated with shears and/or weak zones.

3 Based on mapping in the test adit, the majority of the upper six subdivisions (Q10 to Q4) comprise muddy siltstone (Type IIIB); however, in the upper Q10 division of the Queenston Formation, a significant percentage of Type V (mudstones) occurs. Type I rocks have only been encountered in the SD borehole series in the area of the St. Davids Gorge below the elevation of the concept tunnel.

4 The above classification is shown in the figures and borehole logs, which indicate the non-uniformity of the Queenston Formation. The non-uniformity of these types is directly related to the variation in intact rock strengths as discussed in the following section. Note that borehole logs completed prior to excavation of the test adit do not describe the individual Queenston lithological types.

5 Gypsum nodules and green banding occur within the Queenston Formation. Both may be used as lithographic marker beds. Green coloured, Type IIIA rocks are not common, but where they do occur they are found as bands or sometimes isolated pockets. The green colouration is due to a reduction process referred to as reduction banding. Gypsum occurs mainly in the form of disseminated nodules below approximately el 55 m.
6.2 Intact Strength and Deformation Properties

6.2.1 Rock Above Queenston Formation

1 A summary of average strength and deformation data and other mechanical properties for rocks above the Queenston Formation is given in Table 6.3. A histogram of all unconfined compressive strength testing for the sandstone units is given in Figure 6.1. Punch penetration tests were carried out on Whirlpool sandstone core samples and results ranged from 3777 to 5260 kN.

6.2.2 Queenston Formation

1 A summary of average strength and deformation data is given in Table 6.4. The following subsections pertain to the Queenston Formation only.

(a) Uniaxial Compression

(i) Laboratory strength testing of intact rock samples has shown a wide range of strength values, most likely due to variations in lithotypes as given in the previous section. All relevant uniaxial compressive strength data are shown graphically as histograms for 5 MPa strength intervals in Figures 6.2 to 6.4.

(ii) No clear trend of strength variation with depth is apparent due to the variability of the test results for vertically oriented core, however, there is some indication that the range of strength values increases at depth in horizontal and inclined specimens. The Phase 2 testing results are combined with all available previous uniaxial data for non-vertical Queenston Formation samples (15 tests in 1990 and 46 tests in investigations prior to 1990) in Figures 6.3 and 6.4.

(iii) The variability of the test results is believed to be partly a result of variations in the composition of the rock. The variability in strength has previously been established to be a function of the siltstone or conversely, the ‘shale’ content of the rock. In addition, the mode of failure under uniaxial loading has been observed to vary from classical diagonal shear to predominantly tensile axial splitting, with some samples exhibiting mixed modes of failure. This mode of failure is also believed to be partially responsible for the variations in the measured uniaxial strength of the rock.

(iv) In view of the variations in modes of failure in the uniaxial compression tests, uniaxial strengths were obtained by taking the intercept at zero confining pressure from fitting an envelope to the results of triaxial tests at various confining pressures. These fitted values were only used later in assessing rock mass strengths as discussed in later sections.
(b) Tensile Strength

(i) The tensile strength was tested using different methods, including split tensile testing, biaxial extension and direct tension testing. Testing results ranged from 0.8 to 13.6 MPa. The range of values is likely to be a function of the natural variability of the rock, since no evidence was seen of splitting on pre-existing planes of weakness. Tensile strengths are shown in Figure 6.5.

(c) Triaxial Compression Tests

(i) Results from Triaxial Compression testing undertaken in the Definition Engineering Phase 1 are given in Table 6.5 and are also plotted in Figures 6.6 and 6.7. The failure planes in the test specimens were generally inclined between 20º to 30º to core axis. At very low confining stress, the failure planes were vertical to subvertical. Two conclusions were drawn from these results:

- the intact strength of the Queenston shale is generally higher in the diversion tunnel area than in the generation facilities area
- considerable strength variation was noted particularly at higher confining pressures, probably as a result of material variability.

(ii) Additional triaxial testing was undertaken during the Definition Engineering Phase 2. This testing was mainly on cores from the boreholes drilled downstream from the proposed tunnel alignment in the area of the underground trial enlargement. The data set also included results from Boreholes NF-38 and NF-43 along the tunnel alignment.

(iii) The triaxial test results were grouped into test ‘suites’ for limited ranges of elevation in each borehole, including the appropriate uniaxial and tensile test results, to define strength envelopes. The results of each suite of triaxial, uniaxial compression and indirect tensile strength tests were then fitted with a strength envelope by means of both a linear regression and simplex technique using the program ROCKDATA from the University of Toronto. The geometry of each intact rock strength envelope is described in terms of the Hoek-Brown ‘$m_i$’ parameter together with a uniaxial compressive strength ($\sigma_c$) intercept. The results for each suite of tests are presented in Table 6.6. The range of ‘$m_i$’ values is 4.6 to 36 with uniaxial compressive strength intercepts ranging from 10.6 to 56 MPa. Patterns can be seen, however, in this apparently wide range of values, when results are plotted with respect to core orientation as is done in Figures 6.8 and 6.9. In addition, Figure 6.10 shows results of all strength testing in the area of the trial enlargement.

(iv) The following general trends are noted:
• the strength of vertically oriented core increases with depth, as seen in Boreholes NF-31, NF-38 and NF-43. Results from Borehole NU-13 do not fit this trend, however, it is most likely that these results are influenced by the close proximity of major sheared bedding planes to the sampling elevations.
• a similar trend of increasing strength with depth can be seen for inclined core samples
• for any particular elevation range, lower triaxial strengths were obtained in samples recovered from the inclined boreholes, indicating the influence of bedding
• the strength of horizontally oriented core is approximately equivalent to the strengths for vertically oriented core at any particular elevation.

(d) Modulus of Deformation

(i) Deformation moduli for the Queenston Formation were measured by five different methods, namely

• dial gauge measurements during uniaxial compressive tests
• strain gauge measurements during uniaxial compressive tests
• biaxial test measurements by USBM gauge on overcore samples
• biaxial test measurements by USBM gauge on redrilled laboratory specimens
• in situ measurements by dilatometer.

(ii) All test results are summarized in Table 6.7 and average results from the table are plotted with respect to the elevation of the sample or the measurement in Figure 6.11. As can be seen, there is a wide variation in these results, ranging from less than 5 to almost 55 GPa.

(iii) The results of dilatometer testing, USBM biaxial testing and strain gauged laboratory samples are fairly consistent, however results from dial gauged laboratory samples are consistently lower, being in the order of 10 GPa. The probable reason for this discrepancy is due to measurement system inaccuracies. All dial gauge results were thus omitted from interpretations of the modulus.

(iv) The shales in the Niagara area are generally considered to be anisotropic in deformation behaviour, therefore the modulus of deformation is interpreted dependent on the test method, in either the vertical or horizontal plane as follows:
(v) The averaged results from the above testing are plotted with respect to elevation in Figures 6.12 and 6.13, for results in the vertical and horizontal plane respectively. As can be seen in these figures, the intact moduli in the vertical plane is fairly consistent, ranging from about 19 to 25 GPa. In the horizontal plane, a definite trend of increasing modulus with depth is seen.

(vi) Thus, in general, the Queenston Formation exhibits an anisotropic stiffness, with a vertical modulus in the order of 20 GPa. There is an apparent increase in stiffness in the horizontal plane with depth, resulting in increasing anisotropy with depth. The modulus ratio $E_h/E_v$ ranges between one and two over the elevations as shown on the figures. This greater stiffness in the horizontal plane would be expected in horizontally bedded rocks.

(vii) The modulus values discussed in the preceding paragraphs are modulus values of essentially intact rocks and must be adjusted to obtain rock mass modulus values. Stress-dependent stiffness will be considered.

(viii) In the upper 10 to 15 m of the Queenston Formation where lower rock mass quality is found, lower vertical and horizontal moduli would be expected. This observation is based on

- geophysical data along the test adit within a few hundred metres of the Niagara River Gorge
- dilatometer results within 1.5 times the test adit excavated diameter (about 3.5 m)
- empirical relationships between Rock Mass Rating (RMR) values and modulus.

(ix) Based on these methods, it has been assumed that the modulus is in the order of 10 GPa for the upper 10 to 15 m of the Queenston Formation.

(e) Shear Strength of Bedding Planes

(i) The overall shear strength envelope for the Bedding Plane BP8, based on five test results with normal stresses up to 4.7 MPa, is shown in Figure 6.14. The nonlinear failure envelope shown on the figure will be assumed when assessing shear strength at low normal stresses.

(ii) Average Joint Roughness Coefficients (JRC) ranged from 11 to 15, with a micro roughness angle of 9º to 11º.
6.3 Rock Mass Classification

1 In order to provide an index of the relative behaviour of rock mass surrounding the proposed tunnel, the RMR system (Bieniawski 1976) has been used. Rock Quality Designations (RQD’s) were used in the development of the RMR values. In estimating the ratings, the groundwater condition ‘dry’ has been assumed for units with low hydraulic conductivities and for units below the Thorold sandstone. The condition ‘Damp’ was assumed for other rock units.

2 Table 6.8 summarizes the RMR values for each of the rock units. The RMR values are fairly uniform across the site with the exception of the rock units in the Lockport Formation in the Generation area which are influenced by the stress relief effects of the Niagara River Gorge. Within the main part of the diversion tunnel area, the RMR values are slightly lower than average below the Whirlpool/Queenston contact primarily due to a slightly higher joint frequency. Below this zone, the joint spacing is wide and the RMR values increase.

3 Table 6.8 also covers information from the Generation area to provide a further assessment of the Queenston Formation near the contact with the overlying Whirlpool. In this location, the RMR value is relatively low within the first 10 m below the Whirlpool/Queenston contact and gradually increases with depth. There is a significant increase in quality below subdivision Q4. This latter variation is also partially reflected in the changes in lithological character to more silty rocks at depth.

4 The RMR values given in Table 6.8 are used to assess rock mass strengths in the next section.

6.4 Assessment of Rock Mass Strength

1 The Hoek-Brown (Hoek, 1988, 1992, 1997) rock mass strength failure criterion has been used to assess the rock mass strengths of the various rock units in the concept design. The Hoek-Brown criterion is as follows:

(a) When the discontinuity spacing of a rock mass is small compared with the size of the excavations under consideration, the rock mass is considered to behave in a pseudo-homogeneous manner and its strength can be defined by

\[ \sigma_1 = \sigma_3 + (m \sigma_c \sigma_3 + s \sigma_c^2)^{1/3} \]

where
- \( \sigma_1 \) is the major effective principal stress at failure
- \( \sigma_3 \) is the minor effective principal stress or confining pressure
- ‘m’ and ‘s’ are material constants for the rock mass
- \( \sigma_c \) is the uniaxial compressive strength of the intact rock.

(b) In order to provide a basis for relating the above criterion to field observations, the RMR values are slightly modified where required to account for water
pressure and structural orientation terms. The modified value is denoted the Geological Strength Index (GSI). A set of empirical relationships are then used relating GSI values and the constants ‘m’ and ‘s’.

(c) Mohr-Coulomb parameters will be estimated from the constants ‘m’ and ‘s’ following the instantaneous approach suggested by Hoek (1997), at the applicable actual effective horizontal stresses, in consideration of pore water pressures.

6.4.2 Rock Formations Above Queenston Formation

1 The rock mass strengths were estimated on the basis of the average uniaxial compressive strength of the rock and m, values recommended by Hoek (1988) for the various rock types. The resulting ‘m’ and ‘s’ values given in Table 6.9 were based on RMR values that were adjusted for the purpose of rock mass strength estimates as per Hoek (1988).

6.4.3 Rock Mass Strength of Queenston Formation

The Queenston rock mass strength has been evaluated in the Definition Engineering Phase 2 investigations, based on the ‘mi’ (intact) values from triaxial testing and RMR values. Results of laboratory triaxial strength testing were used to estimate the intact rock strength as previously discussed. Rock mass strengths are given in Table 6.10.

1 The RMR values noted in Table 6.8 were similarly grouped into simplified ‘generic’ classes to provide approximate values for specific areas. These RMR values were then combined with the ‘mi’ and compressive strength evaluations to estimate the strength of the in situ rock mass as given in Table 6.10.

2 The subdivision of the Queenston rock mass strengths into particular depths in Table 6.10 does not take into account any weaker or close jointed zones such as those under the St. Davids Gorge.

6.5 Groundwater and Gas

6.5.1 Hydrogeology

1 The rock strata form an interlayered succession of relatively pervious and relatively impervious rocks. The impervious formations impede flow, whereas the more permeable formations serve either as recharge or discharge horizons for adjacent formations. Within the more permeable formations, the hydraulic conductivity is principally related to the presence of a few open fractures which are predominantly horizontal. Vertical connectivity of these fractures is low, except in the upper rock units. Thus, formations which exhibit high hydraulic conductivity from packer testing may have a low vertical hydraulic connectivity.
In addition to areas of increased weathering and discontinuities as given in Section 4, zones of increased jointing and higher hydraulic conductivity in the area will potentially occur where the tunnel alignment crosses the trend line of the crest of Horseshoe Falls (the east-west trending jointing at the Canadian Falls area is parallel to this trend line).

Piezometric levels in the Guelph and Upper Lockport formations are controlled by recharge from nearby bodies of water such as the Niagara River, the PGS reservoir, and the existing power canals into which these strata daylight. High hydraulic conductivity was measured for some of these rocks and the flow is largely confined to near-horizontal bedding fractures. Discharge is primarily toward the lower Niagara River, the buried St. Davids Gorge, and the Niagara Escarpment. Adjacent to the Niagara River, the lower Clinton Group and the Whirlpool sandstone are dry.

In the rocks underlying the DeCew Formation, the piezometric levels are largely governed by regional recharge. In most cases, the piezometric levels are significantly lower than those in the Lockport Formation or the water levels in nearby bodies of water. Some of the high piezometric levels which have been measured are assumed to be associated with the presence of gas in the formation. The groundwater levels are given in Table 6.11.

The hydraulic conductivity results measured by packer testing in the rock formations during drilling are summarized in Table 6.12. This table gives a summary of the general jointing and hydraulic conductivity along the tunnel alignment. Histograms of available data from borehole testing are given in Figures 6.19 to 6.22.

Two pumping tests were carried out on the south bank of the Niagara River adjacent to the International Niagara Control Works. The results of the pump tests indicate the following:

(a) the upper Lockport Formation at a depth of 15 to 16 m below bedrock surface contains open joints and permeable bedding partings. This zone is hydraulically connected to the Niagara River. The associated hydraulic conductivity of this zone is in the order of $10^{-2}$ cm/s and the transmissivity was estimated to be within the range of 120 to 420 m$^2$/d.

(b) a deep water bearing zone of about 4.5 m thick occurs within the Gasport member (Unit 3) of the Lockport Formation. Pumping test in this zone indicated a broad, comparatively flat cone of drawdown. The associated hydraulic conductivity of this zone is in the order of $10^{-3}$ cm/s and the transmissivity ranges from 14 to 23 m$^2$/d.

The Lockport Formation in the outlet area is also an area of open jointing and relatively high hydraulic conductivity as given in Table 6.12.
6.5.2 Groundwater Quality

1 Groundwater from the primary bedding planes in the Queenston Formation is generally of connate origin. This connate water is supersaturated with salts. Seepage waters are acidic (lowest measured pH of 4.65) and have high chloride and sulphate levels, as well as high concentrations of some metals (including iron, magnesium, manganese, potassium, aluminum), ammonia, calcium, fluoride and phosphate. Chloride contents up to 296 000 mg/L and sulphate contents up to 1860 mg/L have been measured. Significant salt precipitation occurred along some primary bedding planes and also formed hollow stalactite-like precipitation features hanging from the crown of the adit in areas where bedding planes were exposed.

2 Generally, the percent difference between cations and anions in groundwater testing is less than 5%. However, in these brines, the differences in some cases are much greater, probably due to supersaturated conditions. In general, the chloride and metals levels were related to the amount of seepage at any location, with higher levels associated with less seepage: the higher the chloride concentration, the lower the sulphate concentration. The high chloride and sulphate contents are indicative of very corrosive groundwater conditions. Table 6.13 summarizes the groundwater quality.

3 Adjacent to the Niagara Gorge, the groundwater is relatively fresh and percolates from the surface through a system of open jointing into the rock formations.

6.5.3 Gas

1 During investigations for this project, methane gas was encountered along all those primary bedding planes encountered below the elevation of the Niagara River and St. Davids Gorges as shown in Figure 4.2. Gas pressures, however, were insignificant and flow usually reduced to insignificant levels within a few hours. However, minimal gas seepage was ongoing from some of the bedding planes intersected in the test adit for some months after its completion. Pockets of gases were encountered in Borehole NF-32 in the Rochester Formation and in the upper Lockport Formation near the proposed intake area.

6.6 In Situ Stress Conditions

1 The sedimentary rock strata in the Niagara Region are known to possess relatively high horizontal in situ stresses. The in situ stresses in the project area were determined using the overcoring method for shallow measurements of up to 40 m and the hydrofracturing method for tests at greater depth. In general, the horizontal stresses in the Niagara area are three to five times greater than the overburden stresses for the majority of the tunnel but the ratio can be greater than 5 at the inlet and outlet ends due to reduced overburden pressure.
6.6.2 In Situ Stress Orientations

1 Figure 6.15 shows locations of boreholes with stress determinations and illustrates the average orientation of the stresses within the Queenston Formation. Results indicate that the orientation of the maximum principal stress in the central north-south segment of the diversion tunnel, obtained from impression packer tests on unambiguous vertical fractures, consistently lies within the northeast quadrant for all the rock formations. This is consistent with the regional stress trend in the Niagara area. Modifications of the regional stress regime by significant topographic features are evident from the results of measurements near the buried St. Davids Gorge and the Niagara River Gorge. These features tend to align the maximum horizontal stress parallel to the gorges.

6.6.3 Stress Magnitudes

1 The stress regime along the tunnel alignment can be divided approximately into three sections, namely,

(a) upstream curved section from the proposed intake to Borehole NF-32

(b) central straight section from Borehole NF-32 to a point at the buried St. Davids Gorge, near Borehole SD-6

(c) downstream section from SD-6 to Borehole NF-33.

2 Figures 6.16 to 6.18 summarize in situ stresses in these three sections, plotted against elevation.

3 Different modes of fractures have been observed in the impression packer tests performed following hydraulic fracturing. These modes include vertical fractures, horizontal fracture and mixed mode fractures. Interpretations for vertical fractures following conventional analyses provide a single value of stresses. In other modes of fracturing, conventional interpretation methods result in large range of stresses giving very high maximum horizontal stresses. Interpretation by the modified stress path method results in a narrow range of horizontal stress as indicated in the figures. The high values shown in the figures are considered to be unrealistic because of the inherent limitation of the conventional methods. The lines shown in Figures 6.16 to 6.18 were assumed to be the major and minor horizontal stresses during various earlier studies.

(a) Central Section (Approximately Sta 2+000 to Sta 7+600)

(i) The maximum and minimum horizontal stress values in this section of the tunnel alignment (up to 19 and 23 MPa, dependent on elevation; Figure 6.16) are substantially higher than the overburden stress by factors of about five and three, respectively. Both the maximum and minimum horizontal stresses increase with depth. At the St. Davids Gorge, the
magnitudes of the maximum and minimum stress in the Queenston Formation below the bottom of the gorge are comparable to those in this section.

(b) Upstream Section (Approximately Sta 7+600 to Sta 10+000)

(i) The horizontal stress values are plotted against elevation as shown in Figure 6.17. The maximum and minimum horizontal stresses in this section are about 17 and 10 MPa, respectively, and are relatively constant in the Queenston Formation.

(c) Downstream Section (Approximately Sta 0+000 to Sta 2+000)

(i) Results shown in Figure 6.18, including one test from Borehole NF-33, indicate that the maximum and minimum horizontal stresses at the elevation of the tunnel alignment as shown on the Concept Drawings are about 24 and 14 MPa, respectively.

(d) Stress Regime near the Trial Enlargement

(i) The boreholes for stress measurement in the downstream area are located in an area bounded by the Niagara River, the Niagara Escarpment and the St. Davids Gorge. The measured stress near the trial enlargement is lower than values in the diversion tunnels area due primarily to the stress relief effects of the Niagara River Gorge as all the measurements in the generation area are above the river bed.

(ii) The three-dimensional (3D) in situ stress components were determined by the overcoring technique at the powerhouse area and at a stub near the trial enlargement area. The average in situ stresses in the area close to the trial enlargement are as follows:

<table>
<thead>
<tr>
<th>Principal Stresses</th>
<th>Azimuth (deg)</th>
<th>Dip (deg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \sigma_1 ) = 11.9 MPa</td>
<td>133</td>
<td>-13</td>
</tr>
<tr>
<td>( \sigma_2 ) = 9.6 MPa</td>
<td>050</td>
<td>-15</td>
</tr>
<tr>
<td>( \sigma_3 ) = 4.6 MPa</td>
<td>008</td>
<td>-70</td>
</tr>
</tbody>
</table>

(iii) The resolved vertical stress from the overcoring tests is 5.3 MPa which is about 30% higher than the overburden stress calculated by the weight of the overburden material. This difference in magnitude is considered to be within the expected range of variation of vertical stresses from the overburden pressure in sedimentary rock deposits. This result is considered to be applicable to the entire tunnel alignment.
Appendix 5.4 – Geotechnical Baseline Report – Page 26

(c) Stresses Above the Queenston Formation

(i) In the upstream sections, maximum and minimum horizontal stresses above the Queenston Formation are about 10.5 and 4.5 MPa, respectively, measured in the Power Glen Formation in Borehole NF-3. Stresses are higher in the central segment; up to 18 and 6.5 MPa for maximum and minimum horizontal stresses, respectively, measured in the Grimsby Formation. No stress measurements were made in the upper formations at the outlet.

4 Based on the selection of principal stresses along the designated sections of the tunnel alignment, four stress regimes were developed for purposes of various studies. These regimes were based on the following criteria:

(a) magnitude and orientation of the measured principal stresses given in Figures 6.16 to 6.18

(b) direction of the tunnel with respect to the stress field

(c) confidence level in the data available

(d) major topographic features such as the St. Davids Gorge

(e) changes in tunnel vertical and horizontal alignments

5 The stress regimes for tunnel design purposes are presented in Table 6.14. Where there is greater confidence in orientation data, the stresses have been resolved with respect to tunnel orientation. However in some of the regimes, the maximum stress magnitudes are presented in the table.

6 Above the Queenston formation, stresses at the intake area will be a maximum horizontal stress of 10.5 MPA and a minimum stress of 4.5 MPA. Stresses in the outlet area will be 17 and 11 MPA (maximum and minimum horizontal values).

7 The vertical stresses are 30% higher than stresses calculated on the basis of overburden pressure. The horizontal stress values given in this section will be used as input into analyses and then reduced appropriately until no overall plastification of the rock mass occurs. These modified values for horizontal stress will be used in subsequent analyses.

6.7 Particular Characteristics of Shale Units

6.7.1 BTEX Occurrences

1 Four shale units were tested for the presence of naturally occurring hydrocarbons, in particular benzenes, toluenes, and xylenes (BTEX, also formerly referred to in the literature as BTX). The tests indicated that Queenston Formation appears to be inert with respect to BTEX but that the Rochester, Power Glen and Grimsby Formations
(bituminous type shales) do contain measurable concentrations. Using high
temperature thermal desorption tests, the range and average concentrations BTEX for
the upper three shales were determined.

2 The amount of BTEX in samples of these three shale units was measured in the low
parts per billion range (i.e., 5 to 70 nanograms/gram). These hydrocarbons readily
volatilise on exposure.

3 Disposal of all excavated rock containing Rochester, Power Glenn and Grimsby
material is covered in the Owner’s Mandatory Requirements (Appendix 1.1(vv)).

6.7.2 Shale Degradation

1 All shale and shaley units will degrade to various degrees with changes in humidity.
The Type II (siltstone) and Type III (silty mudstone) rocks within the Queenston do
not generally deteriorate on drying, whereas the Types IV and V rocks and zones,
where compaction features occur, are the most prone to such degradation. Results
from slake durability testing of two samples from the Queenston Formation showed

(a) 9 to 11.5% weight loss on the 2nd cycle

(b) 4.9 to 7.2% weight loss average per cycle over 5 cycles.

6.8 Time Dependent Deformations

6.8.1 General

1 High horizontal stresses are prevalent in the rock formations in Southern Ontario.
Rock excavation at surface and underground relieves the initial state of stresses,
providing an initiating mechanism for time-dependent deformation to occur. Refer to
Section 7 for a summary of local experience dealing with this phenomenon.

2 In many publications, the time dependent deformation phenomenon is described in
terms of ‘rock squeeze’ and ‘swelling’, however these processes are interrelated, and
the individual effects of each are difficult to distinguish. Both effects can continue
for many years.

3 Squeeze is usually associated with the long-term creep behaviour of rock, initiated by
the relief of high in situ horizontal stresses. There is a well documented history of
rock ‘squeeze’ affecting surface excavations in the upper dolostones and dolomitic
limestones. Refer to Section 7. This squeeze, however, may include the effects of
swelling of the shale interbeds in these rock units.

4 Swelling potential of the shale units in the Niagara Area is well documented.
Swelling involves a volume increase in shale units, and is also initiated by the relief
of the high in situ stresses. However, swelling also requires the presence of fresh
water. The process is associated with ionic diffusion of salts from the connate pore
water in the rock. The swelling phenomenon is suppressed under applied stress.
6.8.2 Swelling Potential

1 The index which is used to describe time-dependent deformation characteristics of the shale is called the ‘free swell potential’, defined as the amount of expansion strain measured within one logarithmic cycle (10 to 100 days) of time in a specimen which is either fully submerged in water or kept at 100% relative humidity in unconfined conditions.

2 The free swell potential for the shale layers of the Lockport and the Rochester formations is generally low but the deformation is known to occur over a lengthy period of time. The shale layers in the Power Glen and the Grimsby Formations have higher swelling potential. However, the presence of the sandstone interbeds, which are nonswelling, tend to inhibit the overall deformation. The Queenston shale possesses the highest swelling potential of all shale formations in the Niagara area. The swelling potential is affected by the calcite content of the rock.

3 Based on laboratory measurements of time-dependent deformation by a number of researchers, the following conclusions have been drawn:

   (a) the horizontal swelling potential of the Queenston Shale is isotropic and is the highest among the shales for Southern Ontario

   (b) the vertical swelling potential is up to 1.6 times the horizontal swelling potential

   (c) for a specimen under applied stress, the application of stress in one direction not only suppresses the swelling in that direction but also reduces the swelling in the orthogonal directions

   (d) the swelling deformation response of shales from Southern Ontario is stress-dependent. The nonlinear behaviour may be reduced to a linear relationship between swelling potential and applied stress in a semi-log plot.

4 It was further concluded that for swelling to occur, the necessary conditions are

   (a) the relief of initial stresses, which serves as an initiating mechanism

   (b) the accessibility to fresh water

   (c) an outward salt concentration gradient from the pore fluid of the rock to the ambient fluid.

6.8.3 Variability of Swelling Potential

1 The Queenston Formation is composed of complex layering of mudstone, shale, siltstone and sandstone. A test specimen is therefore a composite material. For a specimen containing predominantly shale and mudstone, high swelling will occur. In contrast, little or no swelling occurs in a specimen composed of siltstone and sandstone. On a macroscopic scale, the shale (mudstone) content governs the amount
and rate of swelling. On a microscopic scale within the shale (mudstone) layers, swelling will be influenced by the calcite content which acts as a cementing agent inhibiting swelling.

2 Based on the results of various investigations, the stress-dependent characteristics of the swelling potential of Queenston Formation have been developed. As the applied pressure is increased, the swelling potential decreases logarithmically until a critical pressure is reached at which the swelling is entirely suppressed. Various types of tests including the semi-confined swell test and the null deformation test (in which no displacement was allowed and the build-up in stress was measured) have been performed to measure this suppression pressure. Owing to the natural variability of the rock, ranges of values are expected. A suppression pressure of 4 MPa is considered to be the average case. However, results indicate that higher values in the order of 5 MPa can be expected to occur for samples with high mudstone content and low calcite content.

3 Swelling to be assumed for design purposes in the Queenston Formation is given in the Owner’s Mandatory Requirements.

4 There are no available data regarding suppression of swell potential for the other shaly units.
7 PREVIOUS CONSTRUCTION EXPERIENCE

7.1 Time-Dependent Deformations Observed in Surface Excavations

1 The phenomenon of time dependent deformation in surface excavations (often referred to as ‘rock squeeze’) was first recognized in the early 1900s during the construction of the wheel pits of the Canadian Niagara and Toronto Power Plants in Niagara Falls. The wheel pits are 5.5 m wide, 50 m deep slots to house the penstocks and turbines. The wheel pits extend through the upper carbonate units into the Rochester Formation. Measurements of the closure of the pit walls at the Canadian Niagara Plant began in 1903. Sum total inward movement of both walls over a 68-yr period at the turbine deck opposite the DeCew/Lower Gasport units was 7.2 cm.

2 Extensive concrete cracking occurred in the Thorold Tunnel west bulkhead wall shortly after construction associated with the shaly limestone bed of the Gasport member. A major remedial program involving excavation of a slot in the rock and backfilling with a clay/bentonite mixture was carried out.

7.2 Grouting at the International Control Works and PGS Dyke

1 A review of the existing grouting records compiled during foundation grouting for the excavation of the International Control Works indicates that the average grout take of the primary holes, spaced at 6-m centres drilled to about 10 m below rock surface was 30 bags/m, with much larger takes over particular intervals. Records of grout takes for secondary and tertiary split-spaced holes are not available.

2 Grouting for the construction of the PGS dyke is considered applicable to the tunnel outlet area. Primary and secondary grout holes were spaced 12 m apart and extended 3 m into the Rochester Formation. Tertiary and fourth stage holes were split-spaced. Overall average grout takes were about 8.9 and 3.7 bags/m for the primary and secondary holes, respectively, with about 1.6 bags/m take in the tertiary and fourth stage holes. Grout takes varied significantly from interval to interval, with up to 82 bags/m take being recorded.

7.3 Gas Encounters

1 There is a long history of natural gas occurrence and exploitation in the Niagara Peninsula. Records of gas occurrences have been compiled from previous boreholes drilled for the construction of existing tunnels and the SAB2 Generating Station and from the observations made during the recent investigations. Pockets of gas were encountered near the intake end of the tunnel in the Rochester and overlying formations. Gas was also detected during sampling of groundwater in rock formations below the Rochester shale. Methane gas was encountered in Queenston shale in boreholes and in sheared primary bedding planes in the test adit. Gas was encountered during excavation of the existing diversion tunnels in the 1950s but the amount was small. It appears that the ventilation system in the tunnel was capable of
handling the volume of gas involved. Minor quantities of gas were also encountered in the exploratory adit.

7.4 Observed Performance of the Trial Enlargement

7.4.1 General

1 A 12-m diameter trial enlargement was excavated in the Queenston Formation as part of the Definition Engineering Phase 2 Investigations. Observations of road header performance during the underground excavations indicate that the Queenston Formation can be successfully excavated by this means, however, productivity and efficiency of excavation depends on proper ventilation and dust suppression, and the selection of an appropriately sized machine to attain adequate power and capacity for cutting in relatively massive, uniform, unjointed rock conditions. In addition, experience showed that temporary support measures are problematic due to rock mass behaviour as noted below.

2 The following summarizes the observed performance of the excavation.

(a) numerous instances of stress-induced and excavation geometry controlled sidewall spalling developed. Significant arcuate cracking and subsequent sidewall spalling in the range of 0.1 to 0.5 m deep were noted soon after excavation. Similar, but somewhat deeper, stress controlled spalling was observed adjacent to and at the end wall of the enlargement.

(b) the presence of sheared primary bedding plane above the crown contributed to instability at the crown of the enlargement. The rock broke back to a secondary bedding plane within a few hours after excavation. The depth of crown slabbing (up to 0.5 m) was controlled by the presence of the overlying bedding plane.

(c) excavation related, stress controlled slabbing of the rock in the invert, up to 1.4 m in depth, was noted upon excavation of the second bench when the invert was excavated to a horizontal, rather than curved, excavation profile.

(d) where spalling and slabbing did not take place, the zone of active movement around the trial enlargement was limited to the first 1 to 2 m from the surface of the excavation. The cumulative measured displacements beyond 1 m from the surface of the excavation were generally less than 6 mm.

(e) a pattern of on-going, very small ‘creep’ movements were measured in the first few months after excavation, in the order of 5mm or less measured from 7 to 70 days following excavation.

(f) due to the high salinity of the groundwater, premature rusting of mesh and/or bolts had the effect of weakening the support.
(g) cyclical changes in moisture content of the rock mass brought about by temperature changes, changes in ventilation patterns, changes in humidity conditions, etc, all contribute to a degradation process, and the frequency of cycles controls the rate of degradation. In most cases, it takes some months before the pattern of small-scale cracking develops sufficiently that a larger block is able to delaminate from the crown. Typically where loose rock was cleared from the mesh and the mesh was retied to the fresh rock surface, evidence of further degradation would develop within days.

(h) where applied, no degradation of the shotcrete occurred, and based on observations of holes drilled through such shotcrete, little or no deep degradation of the rock mass occurred

(i) spin lock type rock anchorages did not perform satisfactorily in the Queenston Formation. Mechanical bail-type anchors and resin anchored bolts provided acceptable anchorages. However, rock bolts at 1.5-m centres were unsuccessful in controlling stress-induced slabbing.

7.5 Previous Experience Constructing Existing Tunnels

1 The two existing parallel tunnels were excavated by drilling and blasting using the heading and benching method. Each has an excavated diameter of 15.5 m and a finished internal diameter of 13.7 m. Tunnel 1 has a length of 8705 m and Tunnel 2 has a length of 8321 m. Tunnelling was carried out from five working shafts located midway between the two tunnels. The two tunnels are 76 m apart, centre to centre and are located up to 100 m below the ground surface. The intake consists of two 152 m long gathering tubes. The tunnels discharge into an open cut canal immediately upstream from the buried St. Davids Gorge.

2 The temporary tunnel support consisted of half circle 0.20 m (8 in.) steel ‘I’ beams spaced at 1.2-m intervals, with steel lagging. The permanent support consists of cast in place concrete lining with a minimum thickness of 0.76 m.

3 From the intake the tunnels are inclined downward at a slope of 30° (to a depth of 98.5 m below the ground surface. From here the tunnel alignment slowly rises, following the bedding of the rock formations, until emerging with a 30° slope at the outlet. The tunnels were excavated through a heterogeneous mixture of nearly flat lying sedimentary rocks. The tunnels traverse, in descending order, the Guelph and Lockport dolostones, DeCew dolostone, Rochester shale, Irondequoit limestone, Reynales dolostone, Neagha shale, Thorold sandstone and half way into the Grimsby sandstone. For most of their length, the tunnels are located between the massive Irondequoit limestone (about 3 m thick, forming the roof) and the Grimsby sandstone (interlayered sandstone and shale). The Grimsby sandstone hosts the lower one-third of the tunnel (the invert).

4 The Rochester and Neagha shales tended to deteriorate when subjected to prolonged exposure. These rocks were considered to be among the least competent encountered.
In general, the Irondequoit limestone served well as the roof of the tunnel due to its high strength and absence of joints and fractures. The bedding in the Reynales dolostone was found to be remarkably uniform throughout the tunnels. It contains at least two thin and continuous shaly bedding partings that are locally infilled with a thin gypsum coating. Local warping of the Reynales unit is reported, resulting in overbreak at the crown. During construction, this problem was made worse by the deterioration of the underlying Neagha shale causing undermining of the Reynales. The weak Reynales and Neagha shale beds necessitated the use of continuous roof support.

5 Tape extensometers were used to measure inward convergence in the two tunnels. Horizontal inward movements of up to 60 mm were recorded over a 6-mo period in Tunnel 1 (first tunnel to be excavated). Most of the movement occurred immediately after installation of the instrument. About half of the movement occurred following removal of the advancing heading and half after removal of the bench. The creep movement appears to be a logarithmic function of time. The horizontal movement of the rock walls of the second tunnel was only about one-half to one-third of that measured in the first tunnel. The long-term vertical movement of the crown was extremely small (about 1 mm). No instruments were installed to monitor deformations of the rock mass during initial excavation of the tunnels.

6 No attempt was made to measure the upward movement in Tunnel 1. In Tunnel 2, upward movement or invert heave was measured during bench removal. Bench removal resulted in an upward movement of about 12 mm creating voids in the invert rock to a depth of about 6 m, or to the top of the underlying Power Glen shale. As a result, extensive grouting was carried out to consolidate this zone. No such voids were encountered in the crown rock.

7 Water and gas ingress were not noted as problematic during the tunnel drives.

7.6 Previous Experience Constructing Queenston-Chippawa Canal (Canal 1)

1 Rock was excavated to a depth of 18.3 m into the Lockport Formation, and the bottom lined with 15-cm thick concrete lining, poured in three slabs without expansion joints. One floor heave failure occurred during construction in 1921 over about 70-m length of canal. When the canal was unwatered in 1964, a 915-m length of floor was heaved up to 0.9 m. It was assumed that the failure was due to buckling loads built up due to ‘rock squeeze’ over time.

7.7 Previous Experience Constructing Canal 2

1 The existing twin tunnels daylight immediately upstream of the buried St. Davids Gorge, as at the time, it was considered inadvisable to cross the buried gorge with the tunnels. The solution adapted for crossing the buried gorge was similar to that used for Canal 1 (constructed for SAB1 station) by means of a concrete lined canal with a trapezoidal cross section. Canal 2 was constructed between 1951 and 1954 to convey a flow of 1130 m³/s of water. It is located about 305 m northwest of Canal 1. The
two canals run parallel to each other for about 3200 m before they cross at the cross
over near the forebays. Canal 2 consists of two cross sections, a concrete lined
trapezoidal cross section and an unlined rectangular cross section excavated in rock.
The depth of water flowing in the canal is about 8.5 m.

2 Soil was excavated and paved with a smooth graded bed of riprap and crushed stone
and lined with concrete up to a few feet above the operating water level. The
trapezoidal section is 670 m in length and has a width of 28.6 m at the invert and
about 150 m at the top having side slopes of two horizontal to one vertical.

3 On the north side of the buried St. Davids Gorge, the canal has a rectangular cross
section of about 60 m wide and consists of close drilled vertical rock walls. The rock
was not lined with concrete. Along most of its length, the canal bottom follows the
contact of Gasport limestone and DeCew dolomite to utilise the natural, smooth and
nearly horizontal bedding plane. The width of the canal was modified locally to
accommodate variations in the elevation of the above contact and, at the same time, to
maintain the same cross section area of flow.

4 The rectangular section of the canal was excavated through some 3 to 4.5 m of soil
and about 23 m of rock. The bedrock was excavated in two passes. The top 7.5 m of
rock were removed in the first pass and the next 15 m were removed during the
second pass. The amount of over break was held to a minimum during blasting.

5 The Pumped Storage Forebay Canal is located just upstream of the cross over. It is
identical in its construction characteristics to the rock portion of Canal 2 described
above. An Interconnecting Canal was constructed to hydraulically connect the
forebays of the two SAB powerhouses. It is 30.5 m wide and 213.5 m long, and was
constructed in the same manner as the rock portion of Canal 2.

6 The excavations extend about 18 m into the Lockport/Decew Formations. Elastic
deformation at the top of the rock cut amounted to about 1 to 1.3 cm on the first lift,
with an additional 1.3- to 1.8-cm closure immediately following final excavation.
Small creep movements of up to 0.33 cm/yr were noted for the 2 years that
measurements were taken.

7 To date, no significant problems regarding the above rock cut canals have occurred
that required any sort of remedial treatment. They have been performing in a
satisfactory manner, since construction. The only known maintenance work occurred
as a result of relatively minor soil erosion/slumping on the soil slopes (left bank)
above the trapezoidal section in the late 1970s.
8 CONSTRUCTION CONSIDERATIONS

8.1 Diversion Tunnel

8.1.1 Alignment

1 The Owner’s Mandatory Requirements define the mandated aspects of the tunnel alignment. These requirements allow the Contractor to modify the diversion alignment both horizontally and vertically.

2 The proposed alignment is as shown on Drawing PD-01-1001, Rev 00 in Appendix 1.1 (s) Draft Drawings.

8.1.2 Construction Methodology

1 The Owner’s Mandatory Requirements define the mandated aspects of the construction methodology for the diversion tunnel.

2 For the rocks above the Queenston Formation, primary bedding planes exist at all major lithological boundaries. The major effects of these bedding planes on tunnel excavations will be to promote delamination, crown slabbing and instability when they are located in the immediate vicinity of the tunnel crown. The grade of the tunnel drive with respect to the dip of the rock bedding along the tunnel is such that the tunnel will often be intersecting the rock strata at a shallow angle. As a result, there is a potential for thin rock wedges to develop at any bedding plane.

3 The Queenston Formation is generally massive. However, construction of the tunnel in the Queenston Formation will have to allow for high in situ stresses and variations in rock mass strength. In addition, the presence of major sheared bedding planes at specific elevations must be accounted for. The weathered zone below the contact with the Whirlpool Formation and below the St. David’s Gorge represents a weaker zone. Sheared bedding planes have developed within the Queenston Formation along Type IV (reddish-brown silty mudstone) and Type V (mudstone) rocks. These sheared planes are of low strength, are planar on a large scale and observed to be continuous throughout the test adit. There is potential for these sheared bedding planes to be continuous throughout the tunnel alignment. The performance of the trial enlargement has shown that significant slabbing can occur in the crown, in areas where sheared bedding planes exist some 2 m or less above the crown elevation, and on the sidewalls, particularly in areas immediately below such planes. These planes will be intersected by the tunnel at a low angle for a substantial portion of the tunnel length.

4 All shale formations through which the diversion tunnel passes will degrade when subject to changes in humidity.
5 Slabbing and plucking of rock blocks around and above the TBM shield and cutterhead can be expected to occur throughout the tunnel due to the occurrence of weak bedding planes in combination or not in combination with joints.

6 Stability in the Queenston Formation will be further influenced by stress-induced failure. Over stressing will occur at the crown and at the invert. Stress induced spalling will occur at the sidewalls and will be exacerbated by the presence of sheared bedding planes. A maximum of 3-m thick crown slabbing and 1 m thick sidewall spalling will occur. Crown slabbing can occur immediately upon excavation, while sidewall spalling of 0.1 - to 0.2 -m depth due to overstressing will occur within ½ hr of excavation. Invert heave is expected.

7 Total rock overbreak will be 30 000 m³ where overbreak refers to rock beyond the maximum tunnel excavation diameter.

8.1.3 Rock Support Requirements

1 Note that rock bolts at 1.5 m centres were unsuccessful at controlling stress induced slabbing in the Queenston Formation.

2 In the Queenston Formation, the initial support must be installed within or immediately behind the shield of the TBM and must provide full coverage to the rock surface. In the rocks above the Queenston Formation, the initial support must be immediate and full where there is potential for slabbing and in other areas support can be delayed and reduced from full coverage.

3 Rock support will be required over the entire tunnel length. In the Queenston Formation, the support must be full and immediate.

4 In the rocks above the Queenston Formation, the support must be full and immediate for a 25 -m length of tunnel before and after the intersection, at the tunnel crown, of a major lithological boundary.

5 The formations above the Queenston Formation will be supported by steel profiles in the crown, systematic rock bolting and wire mesh reinforced shotcrete. The rock in the Queenston Formation will predominantly be supported by closely spaced steel sets and reinforced shotcrete. The thickness of the shotcrete and the spacing of rock bolts and steel sets will depend on the rock support class to be applied.

6 The rock support will be designed to accommodate 3 m thick crown slabbing and 1 m thick sidewall spalling.

7 Tunnel rock support will be designed to accommodate the Rock Conditions as given below. The in-situ Rock Condition shall be determined based on the closest match to the Rock Characteristics within each Rock Condition defined below.

### 8.1.4 Rock Mass Boreability

1. A linear cutter test was carried out on a single block sample from the Queenston Formation to evaluate the basic requirements of a TBM system. Note that the block sample was taken from the test adit excavation, and that no uniaxial strength data is available for this particular block sample for comparative purposes.

2. This cutter test is not considered to be representative for the full range of conditions in the Queenston Formation and obviously does not address the rocks above the Queenston. The linear cutter test shall not be used solely to assess the boreability.

3. Instantaneous penetration rate above the Queenston is an average of 2.70 m/h; instantaneous penetration rate within the Queenston is an average of 2.40 m/h. Average penetration rates are based on average thrust values of 150 kN per cutter.
8.1.5 Groundwater and Seepage

1 The most significant impacts of groundwater on tunnelling are seepage into the excavation and the groundwater quality. For the ramp arrangement shown in the concept design, the tunnel will intersect all the water-bearing rock units along the decline and the incline sections.

2 At the outlet end of the tunnel, the main seepage area will be in the vicinity of the ramp portal as the tunnel crown intersects Gasport, DeCew, and Upper Rochester. These rock units and the overlying Lockport formations will allow inflow into the excavation. Mitigation measures, such as a grout curtain or a pressurized face TBM, must be implemented, and must be applied beyond the tunnel portal to below the DeCew/Rochester contact. For the rest of the length of the decline and within the Queenston shale, the tunnel drive is anticipated to be relatively dry.

3 At the buried St. Davids Gorge, the hydraulic conductivity of the Queenston shale below the buried gorge at the elevation of the alignment shown on the Concept Drawings is low (as given in Table 6.12) and there is no evidence of vertical jointing from the limited drilling data. The thickness of the shale at this location is anticipated to provide an adequate seal against groundwater infiltration from the water-bearing sediments in the buried gorge. Drilling ahead of the tunnel face to identify the potential of water inflow when tunnelling below the St. Davids Gorge should be considered.

4 Between the buried St. Davids Gorge and the start of the incline to the tunnel intake, the alignment shown on the Concept Drawings has the tunnel driven primarily under a cover of between 20 to 90 m of fairly uniform Queenston shale. The hydraulic conductivity of the shales is low.

5 As the tunnel is driven up the incline to the intake end, seepage into the tunnel is expected when the tunnel comes close to the contact of DeCew/Rochester. Results of pumping tests confirm that the Lockport Formation is a water-bearing strata. Thus, there is a need for mitigative measures to cut off the seepage prior to the tunnel drive or to provide TBM features to address the seepage.

6 As the tunnel is excavated further upward, it will intersect the highly permeable upper fractured zone that is directly connected to the river. Substantial potential for inflow into the tunnel from this zone is anticipated. Extensive mitigation measures and seepage control will be necessary and will be required to protect the intake excavation. A grouting gallery will be constructed over the upstream tunnel end section for this purpose. A total of 3400 tonnes of cementitious material will be used in the grouting program at the gallery. Grouting procedures will follow best modern practices, using stable cement/bentonite grout mixes with additives, together with electronic monitoring equipment for real-time control of pressures and volumes, in order to optimize grout takes and migration.
7 The water inflow is 500 l/s for the whole tunnel, after completing the grouting gallery at the intake end of the tunnel alignment.

8 The other significant effect of groundwater on the tunnel construction is the high salinity of the groundwater. The chloride concentrations are given in Table 6.13 and it should be noted that these values range up to 30% salinity. The potential corrosion of the tunnel support components and the tunnel excavation equipment must be considered in the design and construction phases.

8.1.6 Gas and Dust

1 Pressurized gas trapped in rock formations could be released suddenly upon excavation.

2 Dust was a major construction problem during excavation of the test adit with roadheaders.

3 A total of 12 events at 6 hours lost production time each will occur during the TBM tunnel drive.

8.2 Tunnel Intake

1 The excavation for the intake and the intake channel are located upstream from the INCW. Excavation in lifts utilizing controlled blasting techniques must be adopted in all excavations in this area to reduce overbreak and to prevent blast damage to the rock and to the INCW.

2 The investigation in this area indicates a strong pattern or orthogonal and oblique joints in the dolostone and limestone units in the upper formations. Many of these joints are iron stained as noted in the rock core from these units, thus, high hydraulic conductivity and connectivity are anticipated. Blocky ground conditions are also likely. Based on the results of the pumping tests and the water-bearing horizon identified from the borehole information, previous studies assumed a grout curtain around the excavation extending below the bottom of the excavation and into the Rochester shale.

3 Grouting of the intake area and the Intake Channel will be carried out to reduce the amount of seepage water, which has to be pumped out of the construction pit. Up to four stages of cement based grouting will be envisaged. For each phase, grout holes spacing max. 12 m shall be drilled.

4 A total of 3400 tonnes of cementitious material will be used for all grouting phases. Seepage of water into the outlet excavation works and the adjacent channel will be reduced to 50 l/s following completion of the grouting. Grouting procedures will follow best modern practices, using stable cement/bentonite grout mixes with additives, together with electronic monitoring equipment for real-time control of pressures and volumes, in order to optimize grout takes and migration.
5 Rock support for the exposed rock face will be required in areas where adverse jointing would produce potentially unstable blocks. In view of the depth of the excavation, wire mesh or equivalent will be required on the exposed face to provide safety within the excavation.

8.3 Tunnel Outlet and Canal

8.3.1 Excavation

1 The outlet area is the site proposed for the start of the tunnel excavation. The outlet comprises an open channel which will connect to the existing canal system.

2 The construction of the outlet will comprise an open channel excavation through both soil and rock leading to the tunnel portal. Soil overburden consists of sandy silt, silty clay and possibly some local fill. Excavation in overburden slopes of 2.0H:1.0V and 2.5H:1.0V were considered in previous studies for temporary and permanent slopes, respectively. Permanent slopes in overburden will require protection by rock fill and filter materials. The excavation in rock will be through the Lockport, DeCew and Rochester formations. Controlled blasting techniques must be implemented throughout rock excavations. In view of the depth of the excavation, it must be undertaken in lifts to reduce blast induced vibrations.

8.3.2 Grouting

1 On the basis of the water pressure testing in the boreholes drilled in the vicinity of the tunnel outlets and the previous records of remedial grouting at the PGS reservoir dyke, the Lockport Formation at this location consists of open joints that form seepage horizons for potential inflow into the excavation.

2 Grouting of the outlet area and Canal will be carried out to reduce the amount of seepage water, which has to be pumped out of the construction pit. A total of 700 tonnes of cementitious material will be used in the grouting program. Seepage of water into the outlet excavation works and the adjacent channel will be reduced to 30 l/s. Grouting procedures will follow best modern practices, using stable cement/bentonite grout mixes with additives, together with electronic monitoring equipment for real-time control of pressures and volumes, in order to optimize grout takes and migration.

8.3.3 Rock Support

1 Rock support will be required in areas where adverse intersection of joints would give rise to potentially unstable blocks. Since the excavation is deep, wire mesh or equivalent must be considered for installation on the exposed walls of the ramp to provide safety during construction. In addition, shotcrete will be required to protect the exposed Rochester shale from degradation along the ramps and in the initial sections of the tunnels. Drainage holes must be provided to prevent the build-up of water pressure behind the shotcrete.
8.4 Expected Deformations in Surface Excavations

1 Surface excavations and structures for the intake and outlet located in shaly zones of Gasport and DeCew Formations, as well as any shale formations, will have to account for long-term time-dependent deformations which will result in wall inward movements and potential invert heave.

Table 4.1
Major Stratigraphic Units

<table>
<thead>
<tr>
<th>Formation Name</th>
<th>Thickness (m)</th>
<th>Petrographic Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Guelph</td>
<td>2 - 3</td>
<td>Dolostone, brownish-grey to dark grey, medium-grained, massively bedded, with local thinly bedded zones and shaly partings, occasional gypsum occurs throughout.</td>
</tr>
<tr>
<td>Lockport</td>
<td>43 - 45</td>
<td>Dolostone, medium grey to medium dark grey, thin- to thick-bedded, with numerous bituminous and carbonaceous, and irregular shale and stylolitic shaly partings in the Goat Island member. The rocks vary from relatively pure to dolomitic limestone, slightly argillaceous. Chert nodules and white dolomite crystals are common, particularly in the finely crystalline and sugary textured units. Vugs commonly are filled with calcite, gypsum and sphalerite. Stromatolites are occasionally present.</td>
</tr>
<tr>
<td>DeCew</td>
<td>2 - 3</td>
<td>Dolostone, medium to dark grey, thin- to medium-bedded with an occasional thick bed; argillaceous with wavy irregular shale partings that contain well-developed slickensides. Stylolites and stylolitic shale partings are common; occasionally zones and/or nodules of gypsum occur. The member is finely crystalline to crystalline with a well-cemented mosaic texture.</td>
</tr>
<tr>
<td>Rochester</td>
<td>17 - 19</td>
<td>Shale, medium to dark grey; laminated, slightly dolomitic, dense and moderately hard. Clay minerals are illite, chlorite, kaolinite and traces of mixed layer montmorillonite clays. Some zones contain pyrite and gypsum, some carbonaceous stringers also exist.</td>
</tr>
<tr>
<td>Irondequoit</td>
<td>2 - 4</td>
<td>Limestone, light grey with pinkish tint, medium-bedded to massive with frequent wavy irregular green or black shale partings near the top. The member is coarsely crystalline. A few vugs and small pores are present.</td>
</tr>
<tr>
<td>Reynales</td>
<td>3.5 - 4.5</td>
<td>Dolostone, generally light to medium grey, carbonate-rich, although argillaceous and/or siliceous in some zones. Numerous wavy, dark grey shale partings. The texture of the member is very finely crystalline to dense.</td>
</tr>
<tr>
<td>Neahga</td>
<td>1.5 - 2</td>
<td>Shale, dark greenish-grey; platy to fissile. Some areas of pyrite and gypsum partings occur along bedding planes; calcite and dolomite occur in small amounts and quartz is the most abundant non-clay mineral. Illite is the dominant clay mineral with lesser amounts of chlorite, kaolinite and mixed layered clay. The rock is soft and flakes readily during wet-dry cycles. Slickensides are present.</td>
</tr>

<tbody>
<tr>
<td>Thorold</td>
<td>2 - 3.5</td>
<td>Sandstone, light grey to greenish-grey; medium-bedded to massive; irregular green shale partings occur throughout. The sandstone is orthoquartzitic. The texture of the formation is very fine-grained. Silt-size to fine-grained quartz particles are cemented with secondary silica.</td>
</tr>
<tr>
<td>Grimsby</td>
<td>12.5 - 12</td>
<td>Sandstone, to reddish-brown; thin- to thick-bedded, often calcareous with interbedded shale. The sandstone texture varies from fine to medium grained. A weathered zone frequently occurs at the top of the formation.</td>
</tr>
<tr>
<td>Power Glen</td>
<td>10 – 13</td>
<td>Shale with siltstone beds and stringers; dark grey to greyish-green shale and siltstone, and light grey limestone and dolomite. Quartz is the most abundant non-clay mineral. Clay minerals consist of illite, chlorite and small amounts of montmorillonite and mixed layered clays.</td>
</tr>
<tr>
<td>Whirlpool</td>
<td>4.9 - 8.5</td>
<td>Sandstone, light grey to white; medium-bedded and cross-bedded; fine- to medium-grained. The quartz grains are well rounded, and are well cemented by secondary silica. Feldspar grains altered to kaolinite are abundant. Occasional green shale inclusions and chloritic shale partings occur throughout.</td>
</tr>
<tr>
<td>Queenston</td>
<td>&gt;300</td>
<td>Shale (technically classified as a silty mudstone or siltstone), reddish-brown with interbeds and nodules of green. The shale is silty and is cemented in many situations by dolomite and calcite. In many places it is massive to blocky, however some fissile sections occur. Scattered gypsum nodules occur throughout lower sections of the unit; quartz is a common constituent. Clay minerals are illite, chlorite, kaolinite, montmorillonite and other clays. Numerous small, high angle slickensides occur, often stained with iron oxide.</td>
</tr>

**NOTES:**
1. 1991 Mean: RMR assessed for average across thickness of lithological unit.
2. Presence of clay infilling.
3. Due to zones of local disturbance, detailed subdivision of the Queenston was not attained in the area of the St. Davids Gorge.
4. Ratings for Borehole NF-39 are based on equivalent elevations from Borehole NF-30.
5. RMR values prior to adjustment for use in estimating Hoek-Brown failure criterion.

Appendix 7.1
Appendix 7.1 - INTENTIONALLY DELETED
Appendix 7.2 - Measurement for Payment Schedule

1. MEASUREMENT AND PAYMENT

1.1 Mobilization and Demobilization

1. Payment for mobilization and demobilization will be made at the price for ‘Mobilization and Demobilization’ as listed in the Schedule of Values.

2. This item will include all requirements for Mobilization including preparatory work within and outside the work areas, site preparation, supply, installation and maintenance of temporary facilities including project signs, site and roadway maintenance, water treatment facilities, erosion and sediment control; all costs related to establishing construction offices for the Contractor, its subcontractors and the Owner, communication, environmental protection, temporary utilities which may be required; temporary controls, site security and fencing as necessary; transportation to and from the site of construction equipment as required for the performance of the Work, and mandatory training under OPG’s Work Protection Code and assuming the groundwater monitoring contract to be performed by Jagger Hims Limited, including contract administration. This item will also include groundwater monitoring per EA Conditions 4.1 and 4.2 for the duration of this Agreement.

   This item will also include all requirements for Demobilization from site.

1.1.1. Payment Terms

1. 80% for Mobilization. The first progress payment will be the lesser of 80% of the Contractor's submitted price for ‘Mobilization and Demobilization’ or $10,000,000.00, less holdbacks. Any net remaining payment for 80% of the Contractor's submitted price for ‘Mobilization and Demobilization’ will be made in equal monthly amounts over the duration of the contract up to the Final Completion Date.

2. 20% for Demobilization. Application for this may be made on or after the Final Completion Date.

1.2 Maintenance Bond

1. Payment for maintenance bond will be made at the price for “Maintenance Bond” as listed in the Schedule of Values.

1.3 Performance LC(s)

1. Payment for Performance LC(s) will be made at the price for “Performance LC(s)” as listed in the Schedule of Values.
1.4  [Intentionally deleted]

1.5  Design

1. All Work for Design including Design Basis, Design, Specifications and Drawings will be paid for according to the actual work performed based on values as listed in the Schedule of Values.

1.6  Accelerating Wall, Intake Channel and Approach Wall

1. All Work for the Accelerating Wall, Intake Channel and Approach Wall will be paid for according to the actual work performed each month based on values as listed in the Schedule of Values.

1.7  Diversion Outlet Canal

1. All Work for the Diversion Outlet Canal will be paid for according to the actual work performed each month based on values as listed in the Schedule of Values.

1.8  Dewatering System Shafts

1. All Work for the Dewatering System Shafts will be paid for according to the actual work performed each month based on values as listed in the Schedule of Values.

1.9  Intake Structure

1. All Work for the Intake Structure will be paid for according to the actual work performed each month based on values as listed in the Schedule of Values.

1.10  Intake Gates

1. All Work for the Intake Gates will be paid for according to the following payment terms based on values as listed in the Schedule of Values.

1.10.1. Payment Terms

1. 50% after delivery of Intake Gates to site

2. 20% after installation of Intake Gates

3. 20% after successful testing and commissioning

4. 10% after removal of gates to storage.

1.11  Outlet Structure

1. All Work for the Outlet Structure will be paid for according to the actual work performed each month based on values as shown in the Schedule of Values.
1.12 **Outlet Structure Gate and Hoist**

1. All Work for the Outlet Gate and Hoist will be paid for according to the following payment terms based on values as listed in the Schedule of Values.

1.12.1. Payment Terms

1. 50% after delivery of Outlet Gate and Hoist to site
2. 30% after installation of the Outlet Gate and Hoist
3. 20% after successful testing and commissioning.

1.13 **Diversion Tunnel**

1. All Work for the Tunnel will be paid for according to the actual length of tunnel completed each month based on values as listed in the Schedule of Values, subject to Section 7.6.

1.14 **Tunnel Boring Machine**

1. All Work for the Tunnel Boring Machine will be paid for by OPG according to the following payment terms based on values as listed in the Schedule of Values.

1.14.1. Payment Terms

1. 20% on the date on which the subcontract with the manufacturer of the TBM is executed by all Persons who are parties to such subcontract and a copy of such fully executed subcontract, unpriced, is delivered to OPG
2. 20% on the date on which the TBM is 50% completed (the “TBM Milestone”) and OPG has confirmed that the TBM Milestone has been achieved. The 50% completion of the TBM is determined by the status of the main components of the TBM as described below:

- Ring gear: forging received for machining
- Cutterhead centre plate: fit and welded, stress relieved, ready for machining
- Cutterhead sections: fit and welded, ready for stress relief
- Main bearing and spare bearing: Purchase order in place
- Motors: Purchase order in place
- Main beam: main components welded
- Gripper cylinders: raw material received by subcontractor
- VFD modules received for assembly
- Ring gear: forging received
- Design and fabrication drawings complete
• Main seals ordered
• All major steel plate and components: ordered

3. 20% after the date on which the shop testing for the TBM has been completed, a factory test certificate for the TBM has been delivered to OPG and the Contractor and all documentation and other acts necessary to transfer the Contractor’s right, title and interest in the TBM to OPG have been completed

4. 20% after delivery to Site of the TBM, all ancillary components of the TBM and all backup plant and equipment relating to the TBM

5. 20% after the TBM has successfully bored and lined 1 km of tunnel in accordance with the Design-Build Agreement and provision of an acceptance certificate signed by the Contractor and the TBM manufacturer stating that the TBM and backup plant and equipment have satisfied the performance requirements.

1.15 Flow Verification Test

1. All Work for the Flow Verification Test will be paid for after successful execution of the test based on values as shown in the Schedule of Values.

1.16 Demolition of Dewatering Structure (Optional)

1. All Work for demolition and disposal of the dewatering structure in the PGS canal and relocation of the existing waterline will be paid for according to the actual work performed each month based on values as listed in the Schedule of Values.

Appendix 7.3(b) - Retail Sales Tax Exemption

[See Attached]
May 27, 2005

Debbie Johnston
Manager - Taxation
Ontario Power Generation Inc.
700 University Avenue
Toronto ON M5G 1X6

Dear Ms Johnston:

Thank you for your letter dated April 1, 2005 regarding the application of Ontario retail sales tax (RST) to intake and outlet structures at the Sir Adam Beck (SAB) Complex.

This interpretation is based on the information provided and which is conveyed in the "Understanding of Facts" portion of this ruling. Please review the information for its completeness and accuracy. If it is determined that the information is incomplete or inaccurate, this interpretation will not be binding. In the event that our understanding of the facts is inaccurate or incomplete, please notify the undersigned, in writing, so that we may reconsider our opinion.

UNDERSTANDING OF FACTS

It is our understanding that the intake and outlet structures for the tunnel are constructed of reinforced concrete and are an extension to the segments that form the pipe that transports water to power the generating turbines. The structures are cast in-place and are equipped with steel gates that will be lowered to block the water passage to control the water flow into and out of the tunnel.

The tunnel intake structure will be located immediately upstream of the existing International Niagara Control Works and will be submerged about 17 metres below normal water level. The opening will be about 13 metres square and will be designed to provide a smooth transition from the underwater approach channel to the new concrete-lined tunnel, to avoid ice and air entrainment, and to minimize inefficiency due to the physical shape of the intake and roughness of the concrete.

The tunnel outlet structure will be located at the SAB generating station complex. The outlet structure will provide a smooth and efficient transition from the circular tunnel to a rectangular channel excavated in rock to complete the new diversion works.
Ontario Power Generation (OPG) believes that these components are part of the production machinery and are eligible for the exemption available to manufacturers.

You are requesting that our previous ruling (#2001-0315) to OPG dated August 14, 2001, be revised to reflect the exemption available pursuant to paragraph 7(1)68 of the Ontario Retail Sales Tax Act (Act).

**LEGISLATION AND/OR ADMINISTRATIVE POLICY**

Paragraph 7(1)68 of the Act exempts reinforced concrete, as defined by the Minister, used in the construction of a structure to be used by a manufacturer directly in the manufacture or production of tangible personal property, but only on such terms and conditions as the Minister may prescribe.

Section 14.4 of Regulation 1012 under the Act states that

(1) For the purposes of paragraph 7(1)68 of the Act, "reinforced concrete" means ready-mix concrete and includes any embedded or attached reinforcing material.

(2) For the purposes of this section, "exempt machinery" means machinery or equipment that is exempt from tax under paragraph 7(1)40 of the Act.

(3) For the purposes of paragraph 7(1)68 of the Act, reinforced concrete used in the construction of a structure to be used by a manufacturer directly in the manufacture or production of tangible personal property is exempt from tax if any of the following circumstances exist:

1. The structure is used directly and exclusively as an integral component of exempt machinery.

2. The structure is used directly and exclusively to detect, prevent, measure, treat, reduce or remove pollutants to water, soil or air, but only if the pollutants are attributable to the manufacture or production of tangible personal property.

3. The structure is used as a foundation or base that forms an integral part of exempt machinery, but only if the structure is required by engineering specifications for the purpose of vibration protection or elevation in order to permit gravity feeds during the manufacturing or production process.

4. The structure is used as an elevated access to exempt machinery for operational and maintenance purposes.

(4) Despite subsection (3), reinforced concrete is not exempt from tax if it is used in the construction of a floor or an environmental containment slab.
ANALYSIS & CONCLUSION

Paragraph 7(1)68 of the Act came into force on June 18, 2002 and does not apply to transactions prior to that date. Our previous ruling remains in effect for transactions occurring prior to the legislative change.

From the facts provided, it appears that the intake and outlet structures are an integral component of the electricity generating equipment. We concur that if the structure is used directly and exclusively as an integral component of exempt machinery, then OPG may purchase the reinforced concrete exempt from RST by providing its supplier with its G permit number.

If a contractor is hired to supply and install the structures for OPG, then the contractor may also purchase the materials exempt from RST by providing the supplier with a properly completed PEC.

If you have any further questions, please contact our office.

Yours truly,

Noel Thompson

July 7, 2005

Debbie Johnston
Manager - Taxation
Ontario Power Generation Inc.
700 University Avenue
Toronto ON M5G 1X6

Dear Ms Johnston:

We refer to your letter dated May 20, 2005 regarding the application of Ontario retail sales tax (RST) to cast in place concrete tunnel liners at the Sir Adam Beck (SAB) Complex and our telephone conversation with you and Emad Elsayed, Vice President, Special Projects on June 29, 2005.

This interpretation is based on the information provided and which is conveyed in the "Understanding of Facts" portion of this ruling. Please review the information for its completeness and accuracy. If it is determined that the information is incomplete or inaccurate, this interpretation will not be binding. In the event that our understanding of the facts is inaccurate or incomplete, please notify the undersigned, in writing, so that we may reconsider our opinion.

UNDERSTANDING OF FACTS

It is our understanding that Ontario Power Generation (OPG) is considering using cast-in-place concrete liners for the tunnels that convey water into the generating station, as opposed to precast liners that we ruled on in our letter (ref.#2001-0315) dated August 14, 2001.

You have provided the following facts regarding the construction of a cast-in-place concrete liner:

- after a tunnel is bored in the bedrock, rock dowels and steel sets are used to stabilize the rock;
- shotcrete is then used as the first layer of the cast-in-place tunnel liner and provides the base on which the various layers are attached;
- a geotextile layer is then attached to the shotcrete and an impermeable membrane is then welded to the geotextile layer;
- an unreinforced layer of concrete is then cast and pressure grout is injected between the membrane and the shotcrete.
Ontario Power Generation Inc.
July 7, 2005

We understand that the grout acts in a way that makes all of the layers of the liner become one. The final layer of concrete layer is attached through pressure and withstands pressure by prestressing. The water pressure in the tunnel balances the pressure of the grout. The prestressing substitutes for the reinforcement within the concrete.

You are requesting confirmation that all of the materials needed to create the cast in place liner, with the exception of the rock dowels and steel sets can be acquired by the contractor on a tax-exempt basis.

LEGISLATION AND/OR ADMINISTRATIVE POLICY

Paragraph 7(1)40 of the Ontario Retail Sales Tax Act (Act) provides an exemption from RST on purchases of machinery, equipment or processing materials used primarily and directly by a manufacturer in the manufacture of tangible personal property or directly in and exclusively for research or development purposes. The equipment must be prescribed in Regulation 1012 subsection 14(1) and must not be excluded by Regulation 1012 subsection 14(1.1).

ANALYSIS & CONCLUSION

In the previous ruling letter noted above, we concluded that:

“OPG is a manufacturer of electricity and qualifies for the exemptions available at paragraph 7(1)40 of the Act. The precast concrete liners qualify as production equipment purchased for the use of a manufacturer as they will be used primarily and directly in the manufacturing process, i.e., the conveyance of water to the SAB to spin the turbines to generate electricity. The liners may be purchased exempt from RST by the contractor under paragraph 7(1)40 of the Act.”

Where the cast-in-place concrete liners described above are used in the same manner as precast liners, the materials required to create them, with the exception of the rock dowels and steel sets, will qualify for exemption from RST. OPG may purchase the materials exempt from RST by providing its supplier with its G permit number. If a contractor is hired to supply and install the structures for OPG, then the contractor may also purchase the materials exempt from RST by providing the supplier with a properly completed purchase exemption certificate.

If you have any further questions, please contact our office.

Appendix 7.9(a)
Appendix 7.9(a) - Substantial Completion Form

NOTICE OF SUBSTANTIAL COMPLETION

To: Ontario Power Generation Inc. (“OPG”)  
Contract: Design/Build Agreement dated ●, 2005 between Strabag AG (the “Contractor”) and OPG (the “Agreement”)

Date: ●

Defined terms used in this Notice have the same meanings given to those terms in the Agreement. In accordance with Section 7.9(a) of the Agreement, the Contractor hereby gives OPG notice that Substantial Completion has occurred as follows:

| Date of “substantial performance” under the Constructor Lien Act (Ontario) | ● |
| Grounds for Requesting Substantial Completion | ● [Contractor to confirm that the requirements of the tests for Substantial Completion have been met] |
| Costs to Finish the Work | $● |
| Delivery of Approvals | ● [Contractor to set out the dates on which Approvals were delivered and/or attach remaining Approvals] |
| Commissioning and meeting all tests under Contractor’s Proposal Documents and the Final Submittals | ● [Contractor to confirm that commissioning and tests were completed and met] |
| Watering up of tunnel | ● [Contractor to confirm watering up for 24 consecutive hours] |
| Delivery of Reports | ● [Contractor to set out on dates on which reports were delivered and/or attach remaining reports] |
| Independent Professional Certificate | Attached as Appendix A. |

(sworn _________)

I, __________, of the City of___________, in the Municipality of ___________, MAKE OATH AND SAY:

(a) I am an [engineer/architect] duly licensed in the Province of Ontario. I am a design Professional as defined under the Design/Build Agreement between Ontario Power Generation Inc. and Strabag AG (the “Contractor”) dated __, 2005 (the “Design/Build Agreement”). I have been designated by the Contractor to provide Professional Services for the design [of a portion] of the Tunnel Facility Project as per the Design/Build Agreement. A copy of the Design/Build Agreement is attached as Exhibit A. Capitalized terms used in this affidavit, and not otherwise defined herein, have the meanings attributed to them in the Design/Build Agreement.

(b) I have prepared a design for use in the construction [of the • portion] of the Tunnel Facility Project (the “work”). A copy of my design is attached as Exhibit B. My design is in accordance with the requirements set out in the Design/Build Agreement.

(c) I have, on an ongoing and frequent basis, observed the Contractor’s execution of my design in the construction of the Tunnel Facility Project. Specifically, my observations related to: _______________________________________

(d) I am satisfied that the work outlined in Paragraph b has been constructed in accordance with my design.

SWORN before me at the City of __, in the County/Region of __, this ___ day of July, 2005.

A Commissioner for Taking Affidavits. ________________________

Certificate - Application for Final Payment

TO: Ontario Power Generation Inc. (“OPG”)

RE: Design/Build Agreement (the “Agreement”) between OPG and Strabag AG (the “Contractor”), dated as of [date], 2005 for the Niagara Tunnel Facility Project

I, [name], am the [title] of the Contractor and am authorized to deliver this Certificate on behalf of the Contractor. I hereby certify, for and on behalf of the Contractor, as follows.

Set out in Appendix A to this Certificate are complete:

(a) as built drawings;
(b) maintenance and operating instructions;
(c) security documents;
(d) certificates of insurance;
(e) certificates of insurance;
(f) certificates of inspection;
(g) all documents required to be maintained at the Site in accordance with Section 2.15(a) of the Agreement; and
(h) all other documents required by the Agreement to be delivered to OPG on the entire finishing of the Tunnel Facility Project.

Set out in Appendix B to this Certificate is the required consent of any surety, if any, to the final payment made under Section 7.12 of the Agreement.

Set out in Appendix C to this Certificate is a certificate of good standing from the Workers’ Safety and Insurance Board or successor organization.

Set out in Appendix D to this Certificate are releases in the form set out in Appendix 7.11 of the Agreement, from the Contractor and each Subcontractor who performed Work in respect of the Tunnel Facility Project, respecting all Liens and other claims filed or otherwise arising in respect of the Work or Tunnel Facility Project.

Set out in Appendix E to this Certificate are statutory declarations in the form set out in Appendix 7.11 of the Agreement, signed by a director or officer of the Contractor, and each Subcontractor who has performed Work at the Site, declaring that all payments due to Subcontractors, all wages and benefit payments due to any of the Contractor’s Personnel, and all contributions, premiums, allowances and remittances due to any Governmental Authority,
pension fund, benefit plan, or union fund in accordance with a collective agreement, have been paid in a timely manner.

There are:

(a) no known outstanding claims under the Agreement, except for those claims which have already been communicated to OPG in a timely manner in the form of Notice required by the Agreement and which are listed in Appendix F to this Certificate, including an estimate of the value of each such claim; or

(b) there are outstanding claims which have not been communicated to OPG in the form of Notice required by this Agreement and each of these claims is described in the attached form of Notice required by this Agreement and is delivered to OPG in a timely manner, and there are no other known outstanding claims under the Agreement, except for those claims which have already been communicated to OPG in a timely manner in the form of Notice required by this Agreement and which are listed in Appendix F to this Certificate, including an estimate of the value of each such claim.

Defined terms used in this Certificate that are not defined in this Certificate have the meanings given to those terms in the Agreement.

DATED: [date], 200[●].

Release - Application for Final Payment

TO: Ontario Power Generation Inc. (“OPG”)

RE: Design/Build Agreement (the “Agreement”) between OPG and Strabag AG (the “Contractor”), dated as of [date], 2005 for the Niagara Tunnel Facility Project

For value received, including the final payment to the Contractor by OPG, the Contractor agrees as follows.

Release. Effective when OPG makes the payment under Section 7.12 of the Agreement, the Contractor irrevocably waives all entitlement to, and releases and forever discharges OPG and each member of the OPG Group from, any and all manner of claims, demands, suits, proceedings, actions and causes of action respecting any and all costs, damages, expenses, losses, liabilities, debts, sums of money, obligations, dues, accounts, interest and statutory rights or remedies, whether express, implied or otherwise, known or unknown, which the Contractor had, now has, can, will or may hereafter have respecting:

(a) any member of the OPG Group; or

(b) any act, cause, matter or thing whatsoever respecting the Project or the Agreement.

No Claims Against Certain Third Parties. The Contractor will not initiate any claim, demand, suit, proceeding or action against any Person respecting the Project or the Agreement if:

(a) that Person has claimed or demanded, in future claims or demands, or may reasonably be expected in future to claim or demand contribution or indemnity under the Negligence Act (Ontario) or otherwise from any member of the OPG Group; or

(b) that claim, demand, suit, proceeding or action may result (whether directly or indirectly against intermediate Parties by way of a third or subsequent party claim or an independent legal proceeding) in a claim, demand, suit, proceeding or action against any member of the OPG Group.

No Assignment. The Contractor represents and warrants to each member of the OPG Group that the Contractor has not assigned, either in whole or in part, to any Person, any right to initiate any claim, demand, suit, proceeding or action respecting the Project or the Design/Build Agreement.

General. The division of this Release into sections and the insertion of headings are for convenience of reference only and are not to affect the construction or interpretation of this Release. Unless otherwise specified, words importing the singular include the plural and vice versa and words importing gender include all genders. The term “including” means “including without limitation”, and the terms “include”, “includes” and “included” have similar meanings. Any reference in this Release to any agreement, is deemed to include a reference to that agreement, as amended, supplemented or restated from time to time. Defined terms used in this Release but not defined in this Release have the meanings given to those terms in the
Agreement. This Release is solely for the benefit of the Parties and, to the extent expressly and specifically made, beneficiaries of this Release. In particular, OPG holds the rights of each other member of the OPG Group under this Release in trust for the benefit of each such member.

The Contractor has duly executed this Release as of [●], 200[●].

Appendix 11.1(a)
Appendix 11.1(a) - Dispute Review Board Agreement

1. Parties. The parties to this Dispute Review Board agreement ("DRB Agreement") are Ontario Power Generation Inc. ("OPG"), [the Contractor], (collectively, the "Parties"), and [name all three Dispute Review Board members] (collectively, the "Dispute Review Board").

2. Project. OPG has entered into an Agreement with the Contractor dated [*], to build the Tunnel Facility Project ("Project"), as defined in that Agreement (the "Agreement"). The Agreement between OPG and the Contractor provides for the implementation of a Dispute Review Board procedure.

3. Object. The object and purpose of the Dispute Review Board is to consider, fairly and impartially, all disputes referred to it (individually, a "Dispute"), and to provide written recommendations to OPG and the Contractor (individually, a "Recommendation"), which will either form the basis for settlement of the Dispute between the Parties or form part of the formal record in any subsequent dispute resolution procedure.

4. Proceedings of the Dispute Review Board. The proceedings of the Dispute Review Board will be conducted impartially, objectively and independently from the interests of any party.

   (a) Recommendations. The Dispute Review Board will provide fully reasoned, written Recommendations to the Parties to assist the resolution of Disputes. The fully reasoned, written Recommendations of the Dispute Review Board are not binding on any party, although it is expected that Parties will place considerable weight on the Recommendations and use them as a basis for settling Disputes.

   (b) Condition Precedent to any further proceedings. If the Recommendations relating to a Dispute are not satisfactory to a Party (the "Dissatisfied Party"), the Dissatisfied Party, not later than 10 Business Days after receipt of the written Recommendations, may deliver written Notice to the other Party of the Dissatisfied Party’s intention to commence an action regarding the unresolved Dispute in a court of competent jurisdiction. All unresolved Disputes will be held in abeyance until the earlier of (i) Substantial Completion; and (ii) termination of the Agreement, except to the extent that holding such Dispute in abeyance could prejudice, by operation of the provisions of the Limitations Act, 2002 (Ontario), the right of the Dissatisfied Party to commence an action regarding the unresolved Dispute. In the event that holding a Dispute in abeyance could prejudice, by operation of the Limitations Act, 2002, the right of the Dissatisfied Party to commence an action regarding the unresolved Dispute, the Dissatisfied Party may commence such action prior to the expiry of the applicable limitation period. It is a condition precedent to any court proceeding that the Recommendations of the Dispute Review Board be pleaded in, referred to and attached as a
Appendix 11.1(a) - Dispute Review Board Agreement - Page 2

schedule to the originating process. Either Party may plead or rely on the Agreement as evidence of the Parties’ consent to an order staying any and all proceedings pending formal annexation of the applicable Recommendations. If neither Party delivers written Notice to the other Party within 10 Business Days after receipt of written Recommendations from the Dispute Review Board of the Party’s intention to commence an action regarding the unresolved Dispute in a court of competent jurisdiction, the Parties will be deemed to have accepted the Recommendations of the Dispute Review Board, the Recommendations will be binding on the Parties, and the Parties will be estopped from commencing court proceedings regarding the unresolved Dispute.

5. **Constitution of the Dispute Review Board.** The Dispute Review Board will consist of three individuals.

   (a) **Members Qualifications.** Only individuals experienced with the type of construction involved in respect of the Project, and with the interpretation of the Contract Documents, may be nominated to the Dispute Review Board. In selecting nominees for the Dispute Review Board, the Parties will only nominate individuals with a demonstrated ability to provide leadership for the Dispute Review Board’s activities. The other mandatory criteria for selecting members of the Dispute Review Board are set out below. These are enduring criteria that apply at all times to all members and nominated members of the Dispute Review Board.

   (i) **No Current Financial Interests.** No member may have a financial interest in either of the Parties or any Subcontractor on the Project, or otherwise have any financial interest in this Project or the Contract Documents.

   (ii) **No Prior Financial Interest.** No member may remain a member, if, except for fee-based consulting services on other projects unrelated to the Project, such member was previously employed by, or had financial ties to either of the Parties or a Subcontractor.

   (iii) **No Close Relationships.** No member may remain a member, who has a then current or recent, close, professional or personal, relationship with any key individual of OPG, the Contractor or any Subcontractor.

   (iv) **No Previous Involvement in Services.** No member may remain a member, who has had a substantial, relevant prior involvement in the Project of a nature which could reasonably be expected to compromise the individual’s or the member’s, as the case may be, ability to participate impartially in the activities of the Dispute Review Board.
(v) **No Employment.** Neither Party will employ, or offer or commit to employ or otherwise engage, a Dispute Review Board member during the member’s tenure. Similarly, no member of the Dispute Review Board may take employment, or offer any service to either of the Parties or a Subcontractor.

(b) Replacement Members. The Parties may agree to terminate the tenure of any member of the Dispute Review Board at any time in writing. Neither OPG nor the Contractor may unilaterally terminate the tenure of any Dispute Review Board member. Any member of the Dispute Review Board may resign, at any time, without stating a reason, so long as there is no outstanding Recommendation with respect to a hearing in which that member participated. This DRB Agreement survives the termination, resignation, death or incapacity of any member. If the tenure of any Dispute Review Board member is terminated or if any such member otherwise ceases to participate on the Dispute Review Board, the two remaining members of the Dispute Review Board will use the process set out in Section 11.2(b)(5) of the Agreement to select a new third member, and the new third member will be bound to enter into a new Dispute Review Board Agreement with the other two members and the Parties. If two or three members are terminated, the procedure in Sections 11.2(b) and 11.2(c) of the Agreement will apply until those positions are filled.

6. **Operation.**

(a) **Beginning and Completion:** The Dispute Review Board will remain empanelled and active throughout the duration of the Project, irrespective of the fact its actual composition may change from time to time.

(b) **Individual Communication:** No individual member of the Dispute Review Board will have any private communication with any party.

(c) **General Procedure:** Dispute Review Board operating procedures will be formulated by the Dispute Review Board as a task under this Dispute Review Board Agreement. It is anticipated that during its first meeting at the Site, the Dispute Review Board will establish procedures for the conduct of its routine meetings, Site visits, and hearings of Disputes. The Parties direct the Dispute Review Board to adapt such procedures as required, in its unfettered discretion, to best achieve the objects of the Dispute Review Board. The Parties acknowledge that the Dispute Review Board may initiate new procedures or modify existing procedures as it deems appropriate or necessary to best achieve the object of the Dispute Review Board. The Parties undertake and agree to comply with such procedures.

(d) **Contract Documents, Reports and Information:** The Parties will provide a conformed set of plans and specifications to each Dispute
Review Board member. The members will thereafter remain informed of
construction activity and other developments by means of timely
transmittal of relevant information prepared by OPG and the Contractor in
the normal course of construction, including through periodic progress
reports and minutes of progress meetings.

(e) **Progress Meetings:** In addition to its other duties, the Dispute Review
Board will meet at regular intervals, no less frequently than quarterly, and
at times of significant construction events. The frequency and scheduling
of these meetings will be as agreed among the Parties and the Dispute
Review Board, depending upon the progress of the Work. In the case of
failure to agree, the Dispute Review Board will schedule the meetings.
Each meeting will consist of an informal roundtable discussion followed
by an optional field observation of the Project. The informal roundtable
discussion will be attended by key personnel from OPG and the
Contractor. The agenda for each meeting will include no fewer than the
following items:

(i) approval of minutes of previous meeting (to be kept by OPG, and
circulated for approval within seven days of each meeting, or less
if necessary);
(ii) Work performed since the last meeting;
(iii) current status of the Project Schedule and schedule for future
Work;
(iv) anticipated or potential problems and proposed solutions;
(v) perspectives on potential Disputes, claims and other controversies;
(vi) status of past Disputes, claims and other controversies;
(vii) new business; and
(viii) set date, time and place of next meeting and Site visit.

7. **Review of Disputes.**

(a) **General.** The Parties will cooperate to ensure that the Dispute Review
Board is able to consider Disputes promptly.

(b) **Prerequisites to Review.** Provided that it has not been expressly excluded
from referral in the Agreement, a Dispute (other than a Default Dispute,
which dispute may be referred to the Dispute Review Board or arbitration
in accordance with Section 11.5 of this Agreement) will be referred to the
Dispute Review Board when:
(i) either Party believes that good faith bilateral negotiations have not and are not likely to succeed or have reached an impasse; or,

(ii) if the Contract Documents provide for a prior decision by OPG’s Representative or a Professional, and such decision has been issued and is unacceptable to one or the other Party.

(c) **Disputes.** Provided that it has not been expressly excluded from referral in the Agreement, either party may refer a Dispute to the Dispute Review Board. Requests for Dispute Review Board resolution must be submitted in writing to the chairperson of the Dispute Review Board and must state the Dispute, with particularity, arising in respect of the Agreement, including a sworn statement that negotiations have been attempted and exhausted or otherwise failed (the “**Dispute Request**”). The Party referring the Dispute to the Dispute Review Board will simultaneously submit a copy of the Dispute Request in compliance with this Section 7 to the other Party. After conferring with both parties, the Dispute Review Board will establish a hearing procedure that is as summary, efficient, and inexpensive as possible in the circumstances and in accordance with the principles set out above.

(d) **Substantial and Complex Disputes.** If and only if the Dispute cannot be resolved summarily by exercise of the Dispute Review Board’s inquisitorial powers, and (i) the Dispute Review Board considers it to be necessary, or (ii) the Parties make a joint request, the Dispute will be heard as follows:

(i) Concise written statements will be prepared by both Parties, together with a binder of relevant supporting documents, indexed, paginated in one continuous sequence throughout the binder, each document separated from each other document by sequentially numbered index tabs corresponding to the index.

(ii) The Party initiating the Dispute will serve its statement (the “**Applicant’s Statement**”) on the other Party and file three copies with the chairperson of the Dispute Review Board within the time set by the Dispute Review Board. The Applicant will set out a proposed method and schedule for the hearing in its Applicant’s Statement.

(iii) The respondent’s statement (the “**Respondent’s Statement**”), prepared in identical form, will be similarly served and filed within the time set by the Dispute Review Board. The respondent will set out a proposed method and schedule for the hearing in the Respondent’s Statement.
(iv) The Dispute Review Board may, by written notice to the Parties, require either or both of the Parties to support their respective statements with documents, affidavits, declarations, tests, samples, photographs, videos, reports or other material, in the Dispute Review Board’s sole and absolute discretion, and at any time and from time to time.

(e) The Dispute Review Board will acknowledge in writing to the Parties that the Dispute is perfected in accordance with this section when all of (i), (ii), (iii), and (iv) above are complied with and shall, at the same time, advise the Parties as to the method and schedule for the hearing having regard to the Parties’ positions as recorded in their statements.

(f) **Board to Visit Site.** In the case of a Dispute referred to the Dispute Review Board, either party to the Dispute or the Dispute Review Board itself may request that a Site visit be undertaken before, or as part of, any hearing.

(g) **Hearing.** The place of the hearing will be at the Site at a time and on a date stipulated by the Dispute Review Board in consultation with the Parties. If circumstances require, the Dispute Review Board may, with the prior consent of the Parties, adjourn all or a portion of the hearing of the Dispute to any other location or time.

(i) **Proceedings in Confidence.** The proceedings of the Dispute Review Board hearing will be conducted and maintained as far as possible in absolute privacy, privilege and confidence.

(ii) **Representation.** Each party has the right, but not the obligation, to be represented by counsel at any hearing or any portion of any hearing, at its own expense.

(iii) **No Transcripts Required.** No transcript is required to be kept of any testimony before the Dispute Review Board, but, if such testimony is transcribed, a copy must be provided to the other Party once received.

(iv) **Hearing Procedure.** The order of proof, the fact and extent of oral evidence (whether under oath or not), examinations and cross-examinations (whether under oath or not), the quality of proof, the burden of proof, argument both written and oral, and all matters of form, procedure, and process relating to the hearing before the Dispute Review Board are within the sole and absolute discretion of the Dispute Review Board.

(h) **Inquiry by Board.** The Dispute Review Board is expressly authorised by the Parties to take all accounts, make all inquiries, give all directions and do all things necessary to reach their Recommendations. The Parties agree
to satisfy, in good faith, and as soon as practicably possible, any inquiries made by the Dispute Review Board, including where appropriate, the production of any documents, affidavits, declarations, tests, samples, photographs, videos, reports or other material, which inquiries are made in their sole and absolute discretion, at any time and from time to time.

(i) **Deliberations.** The chairperson of the Dispute Review Board will declare the hearing closed at the close of argument and thereafter the Dispute Review Board will have, in aggregate, no more than two weeks for deliberation and delivery of its Recommendations.

(j) **Recommendations.** The Dispute Review Board’s Recommendation for the resolution of the Dispute will be transmitted to both Parties simultaneously at the end of the period of deliberation. In a difficult or complex case, this time period may be extended at any time and from time to time by agreement of the parties. The Dispute Review Board will use best efforts to reach a unanimous Recommendation on every Dispute, however, if unanimity is not reached, individual Recommendations are permissible.

(k) **Clarification and Reconsideration.** If either party feels that the Recommendations require clarification or reconsideration, that party may so request, in writing, specifying with all possible particularity that party’s reasons, and the Dispute Review Board may or may not, in its sole and absolute discretion, elect to clarify, re-deliberate or re-open the hearing for the purpose set out in the party’s request, and if the hearing is re-opened, the requirements set out in this section apply once again.

(l) **Funding.** All expenses of the Dispute Review Board shall be shared equally, and billed monthly, in arrears, with OPG paying 50% and the Contractor paying 50%. The Dispute Review Board will render its invoices to OPG, who will pay these and recover the Contractor’s portion as a consensual set-off against monies otherwise earned and payable.

(m) **Termination.** Notwithstanding any term in this DRB Agreement, OPG and the Contractor may terminate this DRB Agreement at any time by a document in writing. Upon termination, the Dispute Review Board will promptly render any outstanding Recommendations and a final account for its services. The Chair of the Dispute Review Board will make the final payments from the Dispute Review Board bank account and will render a final account within 30 days of termination and will disburse any balance remaining in the Dispute Review Board bank account equally to OPG and to the Contractor.

(n) **Legal Relations.** Each Party and each member of the Dispute Review Board expressly acknowledge that each member of the Dispute Review Board is acting as an individual and not in his/her professional capacity, if
any, nor in the capacity of employee or agent of any of the parties or any other person, including any employer of any such individual. The Parties each expressly acknowledge that each member of the Dispute Review Board is acting in a capacity intended to facilitate resolution of the Disputes and accordingly it is agreed and acknowledged that to the fullest extent permitted by the law, each member of the Dispute Review Board will be accorded quasi-judicial immunity for any good faith decisions or actions taken by such member in any way associated with the performance of such member’s services as a member of the Dispute Review Board. Each member of the Dispute Review Board will be indemnified and held harmless, by OPG and the Contractor, of and from any claim of any nature or kind whatsoever that may be brought arising out of or related in any way whatsoever to such member’s conduct (save for failure to act in good faith or willful misconduct) as a member of the Dispute Review Board.

[See attached]
PRINCIPAL AGREEMENT

between

ONTARIO POWER GENERATION INC.
(hereinafter called “OPGI” or "The Employer")

and

THE CANADIAN UNION OF SKILLED WORKERS,
(hereinafter called the "CUSW" or the “Union”)

August 11, 2000 – April 30, 2004
This Collective Agreement distinguishes between two broad categories of work; namely, work that is covered by the "modified provisions" of this construction agreement and work that is not. "Modified provisions" apply to most work on existing generating sites. Following is a more detailed explanation:

The "Modified Provisions" of this Construction Agreement will apply to:

- all work on existing generating sites except the construction of:
  - a new facility which provides a new function
  - a new (ie. additional) generating unit

Appendix A contains the "Modified Provisions of this Construction Agreement". All terms of this collective agreement shall apply to work covered by Appendix A, with the exception of Section 11 - Hours of Work and Section 22 - Travel and Room and Board Allowance. The above Sections 11 and 22 do not apply when working under the terms and conditions of the "modified provisions", as these Sections are replaced by Articles 1 and 2 of Appendix A.

When work does not fall within the scope of Appendix A, all terms of this agreement, with the exception of Appendix A, apply.

A chart to illustrate the above applications follows:

<table>
<thead>
<tr>
<th>Generating - Existing Sites Excluding construction of new facility (new function ) &amp;/or new (additional) generating unit(s)</th>
<th>Generating – Existing Sites Involving construction of new facility (new function ) and/or new (additional) generating unit(s)</th>
<th>Generating - New Sites (ie. Greenfield Work)</th>

**Appendix A – Modified Provisions of this Construction Agreement**
Section 1

PREAMBLE

1.1 WHEREAS the Employer is engaged in construction industry work in the electrical power systems sector on Ontario Power Generation Inc. ('OPGI') property and may enter into collective agreements covering those of its employees in the bargaining unit as hereinafter defined; and

1.2 WHEREAS the Union, as defined in the covering page of this Collective Agreement, has in its membership competent, skilled and qualified journeymen and apprentices to perform work coming within the trade and craft jurisdiction; and

1.3 WHEREAS the Employer and the Union desire to encourage closer co-operation and understanding between the Employer and the Union to the end that a satisfactory, continuous and harmonious relationship will exist between the parties to this Agreement.

Section 2

SCOPE OF AGREEMENT

2.1 The Employer recognizes the Union as the exclusive bargaining agency for a bargaining unit made up of OPGI employees whose classifications are defined in Subsection 2.4 engaged in all construction industry work on the Employer's property in the Province of Ontario.

2.2 This work shall be performed in the Province of Ontario on OPGI property for generating facilities. This work includes the building of generating stations, hydraulic works, heavy water facilities, microwave and repeater stations and Miscellaneous Hydraulic Projects but excludes the building of commercial-type office facilities at urban locations remote from operating facilities.

2.3 The work encompasses:

   (i) construction of new facilities
   (ii) additions to existing facilities
   (iii) modifications
   (iv) rehabilitation
   (v) reconstruction of existing facilities

2.4 The bargaining unit under this Agreement shall comprise the following classifications

   Electrician Journeyman including Foreman and Subforeman
   Electrician Welder
   Electrician Apprentice
   Communications Electrician

2.5 If additional classifications are required, they will be negotiated as appropriate for electrical construction work in the electrical power systems sector.
2.6 The term "employee" shall include all employees of the Employer in the classifications as set out in Subsection 2.4 above.

2.7 A subforeman is an individual who exercises supervisory responsibility and may use the tools of the trade.

2.8 The classifications referred to in Subsection 2.4 do not establish craft jurisdiction. Such jurisdiction is established in accordance with Section 4 of this Collective Agreement.

2.9 The Employer and the Union agree that the use of nomenclature is meant to refer to both genders.

Section 3

DURATION OF AGREEMENT

3.1 This Agreement shall become effective on August 11, 2000 and will expire on April 30, 2004.

3.2 Either party to this Agreement may give notice in writing to the other party not more than 90 days prior to the expiry date and not less than 30 days prior to the expiry date of this Agreement and negotiations should begin within 15 days of the giving of notice. If there is no notice given of change or termination of this Agreement, as mentioned in this Section, this Agreement shall remain in effect from term to term thereafter.

3.3 This Agreement shall be subject to amendment at any time by mutual consent of the parties hereto. Any such amendment agreed upon shall be reduced to writing, signed by the parties hereto.

Section 4

WORK ASSIGNMENT

4.1 Advance Notice

The Employer will advise the Union as far in advance as possible of new construction work coming under the scope of this Agreement.

At the request of the Union, the Employer will convene a prejob conference before this work commences to discuss the preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the work site.

4.2 Work Assignment

(a) The Employer recognizes the work jurisdiction of the union and when assigning work to its employees, agrees to assign all work traditionally performed by employees in the classifications under this agreement in accordance with established practice.
Regular mark-up meetings will be conducted for new construction work at times appropriate for the work in progress subject to the following:

The purpose of these mark-up meetings is to indicate to the Union the work that is about to be carried out by the Employer in order to minimize the potential for jurisdictional disputes.

The Union will attend these mark-up meetings, and every effort will be made to settle questions of jurisdiction before the dates that the Employer indicates the work is expected to commence. The Employer will provide written notice to the Union as far in advance as possible of mark-up meetings.

(b) When work is to be performed on a project site* and it meets the following criteria: same work, same project site, the mark-up process will not be required. This procedure shall not preclude the Union’s right to contest previously disputed work.

When a mark-up is required and the Employer has work that is less than three (3) weeks in duration and there are ten (10) or fewer employees employed on this specific work, the Union will be notified of the scope of work and the Employer’s proposed work assignments.

The Union will have one (1) week from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Union of the final work assignments prior to the commencement of the work.

(c) The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the process set out above may not be practical or possible.

4.3 Jurisdictional Disputes

(a) In the event that a jurisdictional dispute arises over a work assignment, such assignments will remain in effect until the dispute is resolved, if necessary, by the Ontario Labour Relations Board, and will not interfere in any way with the progress of the work.

(b) In the event the Union elects to pursue or respond to the Jurisdictional Dispute Board pursuant to the Act is not authorized to award damages in respect of a mis-assignment of work only in circumstances where the other union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However, this paragraph shall not apply when the Jurisdictional Dispute and the mis-assignment of work results from a bad faith assignment on the same work that was previously the subject of a Jurisdictional Dispute before the OLRB.

* For the purposes of this Section, Bruce Nuclear Power Development (BNPD) will be considered a single project site.
(c) The employer shall have direct recourse to the Ontario Labour Relations Board when the Board has under its consideration a dispute involving the assignment of work being done by employees covered by this agreement.

Section 5

UNION RIGHTS AND REPRESENTATIVES

5.1 The Union will designate Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two representatives from the Union for each Project. The Union will notify the authorized representative of the Employer in writing of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Upon entering the job site, such representatives after identifying themselves to the authorized representative of the Employer will be free to observe the progress and conduct of the work and to conduct normal union business associated with the administration of this Collective Agreement. The Union undertakes that these representatives will not unduly interfere in any way with said work.

5.2 The Accredited Union Representative reserves the right to appoint or remove a steward or stewards on any job where workmen are employed under the terms of this Agreement.

5.3 The Employer shall be notified in writing when a steward is appointed and when such stewards cease to act as stewards.

5.4 Stewards will be responsible for their regularly assigned work on behalf of the Employer.

5.5 Such stewards shall be allowed sufficient time to see that the provisions of this Agreement are observed.

5.6 No steward shall be discriminated against by the Employer because of the performance of his duties as a steward.

5.7 The Chief Steward shall be notified in advance, when reasonably possible, of all overtime. The Chief Steward shall provide the name of the steward who will work the overtime. If no steward is available to work the overtime then the Employer will have no further obligation under this Section.

5.8 Where appropriate and where more than one steward is required, one steward shall be appointed Chief Steward.

5.9 Where the Employer has only one steward appointed for a job, such steward will receive the same consideration given a Chief Steward.

5.10 The Chief Steward shall be the last to be laid off as long as he is capable of performing the remaining work.

5.11 The Employer shall receive the approval of the Accredited Union Representative prior to transferring a Chief Steward to another Project.
5.12 As the parties recognize the responsibilities of the Health and Safety Representative/Joint Health & Safety Committee member, this individual will be among the last five (5) employees kept on a project, providing he is capable of performing the remaining work.

5.13 If management feels that the Health and Safety representative/Joint Health & Safety Committee member is not discharging his health and safety duties in a manner that follows the intent and spirit of the legislation, the Employer may refer the issue to the grievance procedure.

Section 6

UNION SECURITY

6.1 All employees covered by this Agreement will be members or will apply for membership in CUSW within fifteen (15) calendar days, and will maintain such membership in good standing as a condition of employment.

6.2 A checkoff system of Union dues will be made operative for the lifetime of this Agreement. The Employer will supply full checkoff lists of employees subject to checkoff at regular intervals and agrees to collect monthly, or weekly as the case may be, for the Union dues payable to the Union. The Employer will transmit the monies so collected to the designated officials of the Union. The Union will indemnify the Employer for any liability arising from the deduction of dues as requested by the Union.

6.3 Any change in dues will be referred to the Employer through the Accredited Union Representative of the Union before any change is put into effect. Notification of any such change will be given to the Employer at least three (3) weeks prior to the effective date of implementation.

6.4 The Union is required to make arrangements with new employees to join CUSW as provided for in Subsection 6.1 of this Section.

Section 7

EMPLOYEE DESIGNATION

7.1 It is understood that foremen and sub-foremen hold responsible positions in the relationship between the Employer and the Union. Both parties agree that every effort should be made to recruit and retain foremen and sub-foremen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of the Union, the Employer and the Union will make every effort to minimize problems that may arise which concern the relationship between the foremen and sub-foremen, the Employer and the Union.

7.2 The parties recognize the responsibilities of foremen and sub-foremen to discharge their managerial duties. If the Union feels that the foreman or sub-foreman is not discharging his managerial duties in a manner that is fair and equitable, or if the Employer feels that the Union is interfering with the foreman or sub-foreman in the performance of his managerial duties the grievance procedure may be invoked by either party.
7.3 The selection and retention of foremen and sub-foremen will be the responsibility of the Employer. When making appointments to the foreman and sub-foreman level, the Employer will give consideration to those journeymen they presently employ, however, this consideration does not create an obligation to make an appointment from these employees.

7.4 Such foremen and sub-foremen shall be members of the Union and shall register at the union office and shall be issued with clearance cards.

7.5 In the interest of efficiency and productivity, the Employer shall have the right to move foremen and sub-foremen from construction site to construction site.

7.6 The foremen's differential shall be eleven percent (11%) of the Journeyman's Base Hourly Rate. The sub-foremen's differential shall be six percent (6%) of the Journeyman's Base Hourly Rate. The rates of pay for all foremen and sub-foremen covered by this Agreement will be set forth in the current wage schedule(s). The Employer shall provide the Union with current wage schedule(s).

7.7 Where the crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade. The foreman if not already eligible to work during scheduled hours of work, will not be used to replace a journeyman on overtime.

Section 8

EMPLOYMENT PRACTICES/HIRING

8.0 General

An office may be established by the employer for each Project. A purpose of this office will be to coordinate employment as specified in this Section.

The employer and the union will exchange the names of their representatives in each Project who will be responsible for co-operating in the referral and employment of reliable and competent union members.

Where practical the employer will notify the union of future manpower requirements for all employees coming within the scope of this agreement.

8.1 Hiring

The employment and layoff of tradesmen and apprentices, shall be carried out on the following basis and sequence:

(i) The employer agrees to hire and employ only members of the Canadian Union of Skilled Workers on work assigned to the Union in accordance with Section 4 (Work Assignment).
The employer shall submit requests to the Union for certified tradesmen and apprentices as required (see attached Letter of Understanding No.4 on Work Request Process). All requests shall include a description of the work, the number of tradesmen and apprentices required and the prerequisite skills, training and qualifications that these individuals must hold.

The Employer will either hire such persons or substantiate their reasons in writing for not doing so. No one will be employed unless they are in possession of a clearance card from CUSW.

(ii) If the Union is unable to furnish certified members or travel card holders to the Employer within three (3) working days of the time the Union office receives the request for tradesmen (excluding Saturdays, Sundays and Holidays), the Employer shall be afforded the right to employ certified tradesmen (travel card members or permit holders) as are available. The union will issue clearance cards to tradesmen hired in these circumstances.

(iii) All persons referred to the site, shall register with the employer prior to commencing work. Permit holders may be replaced by union members after three (3) working days notice to the employer, but in no case until a tradesperson has worked a minimum one week.

Notwithstanding the above, re-employment as required by the Workplace Safety and Insurance Board shall not be a violation of this Collective Agreement. The union agrees to issue a clearance slip to employees hired in these circumstances.

8.2 Nuclear Sites

Members being referred to Nuclear generating facilities will sign a Security Clearance Identification Report (SCIR) in order to commence the security clearance process prior to being referred for employment. Within three (3) working days the completed and signed SCIR shall be returned to the requesting Nuclear generating facility.

Union members who fail the Security Clearance process are not eligible for employment at a Nuclear generating facility.

The union agrees not to refer for employment members who fail the Security Clearance process.

If the Union is unable to furnish the employer the completed and signed SCIR's within the prescribed time limit, that is, within three working days from when the union receives the Help Requisition (excluding Saturdays, Sundays and Holidays) the employer shall be afforded the right to employ certified tradesmen (permit holders) as are available. The union will issue clearance cards to tradesmen hired in these circumstances.
Section 9

TRANSFER OF EMPLOYEES

9.1 The Employer reserves the right to transfer employees to meet its needs, having regard for the special requirements of thermal, nuclear or hydraulic generation construction.

9.2 The Employer shall provide transportation or pay the equivalent of the cost of public transportation or mileage, whichever is deemed appropriate by the Management, for the initial trip to the new work location from the employee's most recent work location.

9.3 The Employer shall also pay travelling time at the appropriate straight time rate up to a maximum of eight (8) hours per day.

Section 10

REDUCTION OF STAFF

10.1 When a reduction of staff is to take place at a project site, the Employer shall layoff the employees in the following sequence:

(i) permit holders;
(ii) travel card members;
(iii) union members hired by the employer after May 26, 1996
(iv) Union members continuously employed by the Employer since May 26, 1996.

10.2 For those employees identified in 10.1(iv) above, the following procedure shall be utilized for staff reductions:

(i) For the purposes of this procedure, there shall be two (2) classifications of employee:

   Electrician Journeymen (excluding Foremen)
   Electrician Apprentice

(ii) The Employer shall decide which of the classifications listed above will be affected. Layoffs will be based on employee seniority on the project site, subject to the remaining employee(s) having the necessary skills and abilities to satisfactorily perform the remaining work.

10.3 Seniority is based on the Established Commencement Date (ECD) and shall be maintained if an employee is transferred to another project site.

10.4 When possible, the Employer shall notify the Union three (3) days prior to layoff but no later than by the day of the layoff. Failure of the Employer to notify the Union by the day of the layoff will entitle the Employee to an additional one (1) hour's pay.
Section 11

HOURS OF WORK

Section 11 is applicable to work which is not covered by Appendix A - Modified Provisions of this Construction Agreement. Please refer to the GENERAL NOTE preceding the Index Page of this Agreement.

11.1 The normal weekly hours of work for all employees covered by this Agreement shall be thirty-eight (38) except as described in Subsection 11.4 below.

11.2 The weekly hours shall be worked in four (4) eight (8) hour days, Monday to Thursday inclusive, with the remaining six (6) hours to be worked on Friday.

11.3 The normal hours of work for employees working the third shift shall be thirty-two and one-half (32-1/2) made up of five (5) days of six and one-half (6-1/2) hours each.

11.4 The hours of work on Miscellaneous Projects (excluding Lakeview and R.L. Hearn Generating Stations) shall be forty (40) hours per week made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.

11.5 A Miscellaneous Project is any work undertaken by OPGI which will require less than one year to complete and comprise a total work force of not more than one hundred employees at one time.

11.6 The normal starting time for day work hours shall be 8:00 a.m. By mutual agreement between the Employer and the Union, the starting time may be varied by one-half (1/2) hour either way. This variance will be established at the prejob conference or while the job is in progress.

11.7 No employee shall be required to work more than one shift in any twenty-four (24) hour period unless the overtime rate is paid.

Section 12

REST PERIODS

12.1 For employees working regularly scheduled hours, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, for each half shift worked. Where a half shift is less than four (4) hours, there shall be no rest period excluding the third shift.

12.2 For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

12.3 For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two hours of overtime worked.
Section 13

REPORTING PAY

13.1 An employee who reports for work, unless directed not to report the previous day by the Employer, shall receive a minimum of three (3) hours' pay plus his appropriate daily travel or board allowance at the applicable rate when he reports for work but is unable to commence or continue to work because of circumstances beyond his control. An employee will not receive this allowance if he is unable to complete his shift as a result of inclement weather.

13.2 Notwithstanding Subsection 13.1, when the Employer considers it necessary to shut down a job to avoid the possible loss of human life, because of an emergency situation that could endanger the life and safety of an employee, in such cases, employees will be compensated only for the actual time worked.

Section 14

INCLEMENT WEATHER PAY

14.1 An employee who reports for work at the beginning of a shift and is unable to commence work due to inclement weather will receive three (3) hours' pay. To qualify, the employee must remain at a protected place or area as designated by the Employer for three (3) hours unless excused by an authorized representative of the Employer.

14.2 An employee who reports for and commences work but is unable to continue work due to inclement weather shall receive three (3) hours pay at the applicable rate of pay or pay for the actual time worked for that shift, whichever is the greater.

14.3 An employee in receipt of inclement weather pay shall also receive travel or board allowance if applicable.

Section 15

VACATION AND RECOGNIZED HOLIDAYS

15.1 The holidays recognized under this Agreement are:

- New Year's Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

15.2 The Employer agrees to recognize Heritage Day when proclaimed by legislation.

15.3 Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed either on the preceding Friday or following Monday.
15.4 The Employer reserves the right to change the day of observation of a recognized holiday when such holiday falls on a Tuesday or Thursday.

15.5 The Employer agrees to pay vacation and recognized holiday pay on a weekly basis. The vacation pay rate shall be four percent (4%) of the base hourly rate earnings and the recognized holiday pay rate shall be six percent (6%) of the base hourly rate earnings.

Section 16

CALL-IN PAY

16.1 When an employee is called in to work outside of his regularly scheduled hours of work, he shall receive a minimum of two (2) hours’ pay at double the straight time hourly rate plus travel allowance where applicable.

16.2 If the employee’s normal hours of work commences within this two (2) hour period, the employee will be paid double the straight time hourly rate for the actual hours worked and revert to his normal rate at the commencement of his regularly scheduled hours of work.

16.3 The parties agree that Call-In Pay is not meant to replace nor be considered to be extension overtime.

Section 17

OVERTIME

17.1 When working on an eight (8) hour day and five (5) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the straight time hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of 10 hours per day shall be paid at two (2) times the straight time hourly rate.

17.2 When working on a ten (10) hour day and four (4) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the straight time hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the straight time hourly rate.

17.3 Overtime work performed on Saturday, Sunday, Recognized Holidays and non-shift days shall be paid at two (2) times the straight time hourly rate.

17.4 Extension overtime may be worked either prior to or after the regularly scheduled hours of work.
Section 18

MEALS ON OVERTIME

18.1 Scheduled Eight (8) Hour Shifts

18.1.1 When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of the first or second shifts or for more than three and one half (3 ½) hours beyond the normal quitting time of the third shift, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the Base Hourly Rate of pay. This meal break will be taken following the first two (2) hours of overtime worked. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the Base Hourly Rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided after the first two (2) hours of overtime worked, but the employee will be allowed thirty (30) minutes to eat and be paid at the Base Hourly Rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the Base Hourly Rate of pay and he shall be provided with a meal.

18.1.2 When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

18.1.3 The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first or second shifts.

18.1.4 The above-noted is not applicable to the first six and one-half (6 ½) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the third shift.

18.2 Scheduled Ten (10) Hour Shifts

18.2.1 When an employee has not been notified the previous day that he will be required to work beyond his normal quitting time, prior to commencing the overtime work, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the Base Hourly Rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the Base Hourly Rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided prior to the commencement of overtime work, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the Base Hourly Rate of pay and he shall be provided with a meal.
18.2.2 The above-noted is not applicable to the first ten (10) hours worked on Saturdays, Sundays, or Recognized Holidays for employee who normally work the first or second shifts.

18.2.3 When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

Section 19

STANDOFF

19.1 An employee may be subject to standoff for up to six (6) weeks time accumulated in any one calendar year (January 1st to December 31st).

19.2 An employee may be subject to further standoff within the calendar year upon mutual consent of the Union and the Employer.

Section 20

WAGES AND PAY PROCEDURE

20.1 The rates of pay for employees in the classifications listed in Subsection 2.3 of this Agreement and working on the Employer's property shall be as set forth in the wage schedule(s) attached hereto.

20.2 The Normal pay procedure shall be as follows:

(i) Employees shall be paid weekly and payment for any given week will be made not later than the sixth working day after the close of the payroll period, but in any event not later than Thursday of the following week.

(ii) Wages shall be paid by the Employer on the job site, before quitting time by cheque payable at par in the locality of the job site. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee, setting forth:

(a) the period of time or the work for which the wages are being paid;
(b) the rate of wages to which the employee is entitled;
(c) the amount of wages to which each employee is entitled;
(d) the amount of each deduction from wages of the employee and the purpose for which each deduction is made;
(e) any allowance or other payment to which the employee is entitled;
(f) the amount of vacation pay and holiday pay for which the employee is being credited;
(g) the net amount of money being paid to the employee.

(iii) In cases of inclement weather being declared on pay day, employees will receive their pay before leaving the site provided it is available on the site.
20.3 On termination, an employee will have his final pay and termination documents mailed to his last known address by registered mail within five (5) working days of the date of termination.

Once the mailing period has expired and an employee has yet to receive his final pay and termination documents, the employee shall have ten (10) days in which to notify the Employer in writing, of non-compliance with Section 20. Once the Employer has been notified of non-compliance, the employee will be entitled to two (2) hours of pay at the straight time rate for each normal work day of non-compliance.

Section 21

UNION AND BENEFIT FUNDS

21.1 The Employer agrees to pay into operative welfare, pension and/or other such plans, the amounts specified by the Union and identified in the wage schedule(s) attached hereto. Payment to the above-noted funds shall be based on each hour paid unless otherwise noted.

21.2 The Employer agrees to deduct from wages and remit to the Union, Union Funds. The amounts to be deducted and remitted will be as set out in the wage schedule(s) attached hereto.

21.3 The Union agrees to supply the Employer with administrative material and information regarding the Funds identified in this Section.

21.4 The trustees of the employee benefit plans referred to in this collective agreement shall promptly notify the Union of the failure of the Employer to pay any employee benefit contributions required to be made under this collective agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

Section 22

TRAVEL AND ROOM AND BOARD ALLOWANCE

Section 22 is applicable to work which is not covered by Appendix A - Modified Provisions of this Construction Agreement. Please refer to the GENERAL NOTE preceding the Index Page of this Agreement

22.1 Travel Allowance

22.1.1 The daily travel allowance will be paid by the Employer to the employees who are not receiving room and board allowance as referred to in Subsection 22.2, on the following basis:
(i) If an employee lives within twenty (20) radius kilometers* of the project, no travel allowance will be paid.

(ii) If an employee lives within 20 to 40 radius kilometers of the project, he shall receive $15.60 per day ($16.10 effective May 1, 2001, $16.60 effective May 1, 2002, $17.10 effective May 1, 2003) travel allowance for each day worked or reported for.

(iii) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002, $20.35 effective May 1, 2003) travel allowance for each day worked or reported for.

(iv) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) travel allowance for each day worked or reported for.

(v) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) travel allowance for each day worked or reported for.

(vi) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Subsection 22.2 below, he shall receive $29.85 per day ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) travel allowance for each day worked or reported for provided he continues to travel greater than 97 radius kilometers daily.

22.1.2 When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement, board allowance entitlement and initial and return allowance entitlement.

22.1.3 A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

22.1.4 Upon application, payment of Room and Board/Travel Allowance will be issued for the first two pay periods. Failure to provide satisfactory proof of eligibility during this period, will result in cessation of payments and the recovery in two equal amounts. In the event of termination for any reason before full recovery, any balance owing will be deducted from the final pay.

* For the purpose of this Section, "radius kilometers" shall be measured from the centre of the turbine hall on each project.
Note: Bruce G.S. "A", Bruce G.S. "B" and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce Complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.

22.2 Room and Board Allowance

22.2.1 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(i) An Employer may supply either:

(a) free room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(b) a subsistence allowance; or

(c) a travel allowance.

22.2.2 An employee may exercise his option not to stay in a camp or accept free room and board. An employee who exercises this option shall receive a room and board allowance as follows:

(i) When an employee's regular residence is more than 97 radius kilometers from a Project located North of the French River and the employee maintains temporary accommodation at or near the Project, the employee shall be paid a subsistence allowance of $70.00 per day ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for.

(ii) When an employee's regular residence is more than 97 radius kilometers from a Project located South of the French River and the employee maintains temporary accommodation at or near the project, the employee shall be paid a subsistence allowance of $57.00 per day ($59.00 effective May 1, 2001, $61.00 effective May 1, 2002, $63.00 effective May 1, 2003) for each day worked or reported for, subject to Subsection 22.2.2 (iii) below.

(iii) When an employee's regular residence is more than 97 radius kilometers from the Project and the employee commutes to work on a daily basis, the employee shall receive $30.10 per day ($30.60 effective May 1, 2001, $31.10 effective May 1, 2002, $31.60 effective May 1, 2003) for each day worked or reported for.

* An Employee's "Regular Residence" is:

The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee obtains temporary accommodation for that work location.
At the Pickering and Darlington Projects, employees who live beyond 97 radius kilometers from the Project, shall be paid a subsistence allowance of $45.00 per day ($48.00 effective May 1, 2001, $51.00 effective May 1, 2002, $54.00 effective May 1, 2003) for each day worked or reported for.

22.2.3 An employee shall not qualify for daily travel allowance or room and board allowance when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of the Employer. Such permission shall not be unreasonably denied.

22.2.4 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(i) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by an authorized representative of the Employer.

(ii) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(iii) An employee who remains in camp and who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(iv) An employee who remains in camp and who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

Section 23

INITIAL AND RETURN TRAVEL AND TRANSPORTATION

23.1 On recruitment of tradesmen who live between 97 and 161 radius kilometers* from the project, the Employer shall pay $21.00 ($22.00 effective May 1, 2001, $23.00 effective May 1, 2002, $24.00 effective May 1, 2003) for the initial trip to the project.

23.2 On recruitment of tradesmen who live beyond 161 radius kilometers from the project, the Employer shall pay thirty-four cents ($0.34) per radius kilometer (thirty-five cents ($0.35) effective May 1, 2001, thirty-six cents ($0.36) effective May 1, 2002, thirty-seven cents ($0.37) effective May 1, 2003) plus travel time based on one hour's pay at the Base Hourly Rate for each 80 radius kilometers of travel, or part thereof, to a maximum of 8 hours' pay at the Base Hourly Rate for the initial trip to the project from where the tradesman lives or the Union Referral Hall for the project, whichever is closer to the project.

* For the purpose of this Section, "radius kilometers" shall be measured from the centre of the turbine hall on each project.
23.3 To qualify for payment in Subsections 23.1 or 23.2, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of the job, whichever is lesser.

23.4 On termination of employment due to a reduction of staff, an employee entitled to payment under Subsections 23.1 or 23.2 shall be entitled to return expenses calculated in the same manner as in Subsections 23.1 or 23.2 above for the return trip from the project to where the tradesman lives or place of recruitment, whichever is closer to the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.

23.5 On the Thunder Bay Project and Atikokan Project, an employee shall qualify for a return trip from the Project to his regular residence for each thirty (30) days worked on the Project providing his regular residence is more than four hundred (400) radius kilometers from the Project.

23.6 For each entitlement, the Employer shall pay travel expenses on the basis of the equivalent cost of public transportation plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel, or part thereof, to a maximum of eight (8) hours' pay at the Base Hourly Rate.

Section 24

USE OF PERSONAL VEHICLE

24.1 An employee who is requested or receives approval from an authorized representative of the Employer to use his personal vehicle for the convenience of the Employer shall be reimbursed thirty-seven cents ($0.37) effective May 1, 2001, thirty-eight cents ($0.38) effective May 1, 2002, thirty-nine cents ($0.39) effective May 1, 2003) per kilometer travelled for such use of his vehicle.

Section 25

TOOLS AND CLOTHING

25.1 Employees shall be required to provide themselves with the ordinary hand tools of the trade as specified in the attached tool list. The Employer will provide insofar as is practical, separate facilities for storing the tools, but shall not be held responsible for losses, except as noted hereunder:

25.2 When personal tools valued in excess of $15.00 are lost due to fire, the Employer will consider replacement or payment value to a maximum of $500.00 based on the merit of each case. This will include only personal tools that a tradesman is required to have to perform the normal duties with the Employer.

25.3 The Employer agrees to compensate employees for tools lost by theft, as supported by claims submitted in writing with substantiating evidence to establish theft resulting from forcible entry to a locked storage provided by the Employer to a maximum of $500.00.
25.4 In the event of a loss by fire at a work location, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $500.00 for the loss of personal clothing will be made.

25.5 In the event of a loss by fire at an Employer operated camp, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $750.00 for the loss of personal clothing will be made.

25.6 Employees who have obtained tools from the Employer's tool crib shall be allowed sufficient time, in the opinion of Management, to return such tools to the tool crib during working hours. Employees receiving tools from such tool crib shall be held responsible for the return of such tools in good condition, subject to normal wear and tear. On layoff, employees will be allowed reasonable time to return tools to the tool crib.

25.7 Gang tools are tools which are issued to a foreman and are used by one or more members of the crew. Such tools are not identified on trade tool lists, nor are they the tools and equipment identified in this Section. Such tools shall be the responsibility of the Employer.

25.8 Employees eligible for payment under Subsections 25.2, 25.3, 25.4 or 25.5 above, shall be reimbursed within 60 days after the date of submitting a claim. The Employer shall provide tools for the employee to use during the replacement period.

25.9 Employees are required to wear protective clothing and use protective equipment appropriate for the work being done. The Employer shall supply employees working in close proximity to obvious fire hazards (i.e. open flame) with fire retardant coveralls.

25.10 On abnormally dirty and/or corrosive work, in which the employee's clothing may be excessively or permanently damaged, the Employer will supply protective clothing and equipment (including gloves and coveralls where appropriate) at no cost to the employee.

25.11 Employees shall supply themselves with, and wear at all times on the job, approved safety shoes.

25.12 When an Employer wishes an employee to wear a specifically identified safety helmet, the Employer shall provide it on loan, complete with a new liner.

25.13 Protective clothing and equipment (including gloves, coveralls and fire retardant coveralls) and rainwear that is provided by the Employer will be charged out to an employee and the employee shall be responsible for the return of such protective clothing and equipment (including gloves, coveralls and fire retardant coveralls) and rainwear upon completion of the work involved.

Section 26

GRIEVANCES AND ARBITRATIONS

26.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute
concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by the Employer and the Union. In the interests of expediting the procedure, the parties shall process grievances in the following manner.

26.2 **Preliminary Discussion**

26.2.1 Disputes arising out of the interpretation or alleged violation of this Agreement shall, if possible, be settled by discussion between the employee and/or his steward and the employee's supervisor.

26.3 **First Step**

26.3.1 If a dispute cannot be resolved by this method, the Chief Steward for the Union may file a formal grievance on the prescribed form with the Employer. Such grievance shall be filed within fifteen (15) working days of the alleged grievous act.

26.3.2 Within ten (10) working days of the filing of the grievance, the Employer shall investigate the grievance and convene a meeting to attempt to resolve it. The Employer shall give his reply on the prescribed form to the Chief Steward within five (5) working days from the date of the First Step meeting.

26.4 **Second Step**

26.4.1 If a dispute has not been resolved at the First Step of the grievance procedure, the Chief Steward may refer the grievance on the prescribed form to the Employer's Grievance Officer. Such grievances shall be referred within ten (10) working days after the disposition has been issued under the First Step of this procedure.

26.4.2 The Employer's Grievance Officer shall investigate the grievance and convene a meeting to attempt to resolve the matter within five (5) working days from the receipt of the grievance form which was completed at First Step.

26.5 **Employer or Policy Grievances**

26.5.1 The processing of Employer grievances shall begin at the Second Step. The Employer may submit either policy or specific grievances. The Union may also institute policy grievances at this Step. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.

26.6 **Time Limits**

26.6.1 The time limits as to both documents and procedure set out in the above Subsections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree in writing in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, the employee concerned, the Union or The Employer shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been withdrawn and ineligible for arbitration.

26.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at First Step.
Disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement shall not be processed under Section 133 of the Labour Relations Act of Ontario by either party until the provisions set forth in this Section for the resolution of such disputes have been fully exhausted.

The Employer shall provide the necessary facilities for all grievance meetings.

If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in this Section, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either the Employer or the Union to a Board of Arbitration for adjudication. The party desiring to submit the dispute to arbitration shall notify the other party in writing of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, or if the nominees fail to agree upon a Chairman, the appointment shall be made by the Minister of Labour for Ontario upon the request of either party. The arbitration board, when selected or appointed, will proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. The decision of a majority is the decision of the arbitration board, but if there is no majority, the decision of the Chairman governs.

The arbitration board shall have no power to add to or subtract from or modify any of the terms of this Agreement. The arbitration board shall not substitute its discretion for that of the parties except where the board determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the arbitration board may substitute such other penalty for the discharge or discipline as to the arbitration board seems just and reasonable in all circumstances. The arbitration board shall not exercise any responsibility or function of the parties. The arbitration board shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.

In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario, and the fees and expenses of the Chairman shall be shared equally by the parties.

The time limits as to both documents and procedure set out in this section shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree in writing in respect to an extension or waiver of any of the time limits imposed.

There shall be no strikes or lockouts so long as this Agreement continues to operate.
Section 27

COMMITTEES AND APPRENTICESHIP

27.1 Joint Committee

The parties agree that a Joint Committee will be established consisting of Employer representatives and the Executive of CUSW which shall meet on a semi-annual basis to address issues of mutual concern.

27.2 Apprenticeship

27.2.1 The Employer recognizes that the Canadian Union of Skilled Workers has an Apprenticeship Council established for the purpose of training apprentices in the electrical industry.

27.2.2 The employer agrees to participate in the operation of the Apprenticeship Council. This Council will be a Joint Apprenticeship Council for purposes of the Apprenticeship and Tradesman's Qualification Act (or any successor Act).

27.2.3 The Apprenticeship Council shall be responsible for the establishment and maintenance of an apprenticeship training program, as well as adopting operating rules and conditions with respect thereto which are complementary to and in keeping with the intent of the Apprenticeship and Tradesman's Qualification Act (or any successor Act).

27.2.4 All apprentices shall be governed by the Ontario Apprenticeship and Tradesman's Qualification Act and Regulations. The staffing ratio will be one apprentice to six employees in all other classifications.

27.2.5 In order to expedite the Apprentice's entrance into Journeyman status, the following policy shall apply:

(i) The Apprentice must apply to the Apprenticeship Branch to write his examination as soon as possible after he has reached his total hours, less 300.

(ii) The Apprentice will give the Employee two weeks notice that he is going to write his examination.

(iii) After writing the examination, the Apprentice will check his Hours in his Progress Record Book.

(iv) The Employer will commence paying the Journeyman's rate of pay the day after the Apprentice completes his hours and providing the following conditions have been met:

(a) The Employer is satisfied that the Apprentice has completed his hours. If there is a question concerning the completion of hours, confirmation will be supplied by the employee and;
(b) The Employer is shown written proof of Certification from the Apprenticeship Branch and;

(c) The Apprentice has passed his examination for his Certification of Qualification (C of Q).

27.2.6 In the event that an Apprentice fails his examination for his C of Q, he will be paid the journeyman rate of pay from the day he passes any future examinations.

Section 28

LUNCHROOM FACILITIES

28.1 Adequately heated accommodation separate from changerooms and washrooms shall be provided by the Employer on each project when necessary and where such accommodation can be reasonably provided for.

28.2 Such accommodation shall be weatherproof and shall be kept reasonably clean.

28.3 A table and sufficient benches or seats for the employees on the job shall be provided in the accommodation. Trailerized or portable accommodation shall include tables, benches, light, heat maintained at a minimum sixty-eight (68) degrees Fahrenheit, proper access and egress, and shall not be used for material storage.

28.4 The Employer will provide, where practical, clean, heated, lighted and ventilated facilities containing flush toilets and hand basins.

Section 29

RADIATION WORK

29.1 The Employer will, upon request, make available to the Union the OPGI Radiation Protection Procedures.

29.2 Each employee will have access to his personal radiation exposure record.

29.3 Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

29.4 Short-term employees will be given a guaranteed period of employment at their time of hire.

29.5 Employees working in a radiation area, in plastic suits or replacement material of the fully enveloping type with an independent air supply, will receive $8.00 per day. A day for the purpose of this item shall be defined as any period up to twelve (12) hours.
Section 30

ABORIGINAL CONTENT COMMITMENT

30.1 Where an aboriginal commitment has been established on a project, the Union will cooperate in meeting the content commitments.

30.2 For projects, or jobs within a project, that are less than $100,000 field labour, and have aboriginal content commitments, the terms of the collective agreement will not apply to these aboriginal commitments.

Dated at Toronto, this 7th day of October, 2001.

LETTER OF UNDERSTANDING NO.2

Between

ONTARIO POWER GENERATION INC.

And The

CANADIAN UNION OF SKILLED WORKERS

The Parties recognize that the continued existence of CUSW is directly related to providing employment opportunities to CUSW members.

The parties agree as follows:

(a) Effective July 14, 2000, OPG will not contract out work at Nuclear facilities involving the use of tradespersons as identified in 2.4 unless at least one hundred (100) “direct hire” employees are employed by OPGI.

(b) Effective July 1, 2001, the number of “direct hire” employees associated with the above provision will be reduced to fifty (50).

(c) The provision outlined in (b) above expires December 31, 2001

(d) When OPG transfers operation of Bruce Nuclear to another company, the number of “direct hire” employees contemplated by (a) above will be reduced to sixty (60).

This new company will not be bound in any way by this Agreement.

WORK REQUEST PROCEDURE

1. This procedure shall become effective July 14, 2000.

2. The parties agree the Employer may request twenty-five percent (25%) of the certified tradespeople hired. The number of tradespeople requested shall not exceed twenty-five percent (25%) of the total.

3. The option to request individual certified tradespersons will apply to each request and will not carry forward to future requests.

4. Reductions of staff will ensure that the individual certified tradespersons are laid off in the same manner in which the hiring occurred.

5. A spreadsheet shall be set up on a depersonalized basis to track the hiring and layoff procedure. The following can be used as guiding principles:

<td>Article 1</td>
<td>Hours of Work</td>
<td>31</td>
</tr>
<tr>
<td>Article 2</td>
<td>Travel and Room and Board</td>
<td>33</td>
</tr>
</tbody>
</table>
Article 1

HOURS OF WORK

1.1 A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked, excluding Saturdays, Sundays and Recognized Holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the balance of the four (4) consecutive shifts that would have been worked had the employee not been reassigned to another shift.

1.2 It may be necessary from time to time to vary the hours of work established in this Section. Any amendments to the hours of work will be established by mutual agreement between the Employer and the Union.

1.3 One (1) or Two (2) Shift Operation

1.3.1 The weekly hours of work shall consist of forty (40) hours for all employees of the Employer covered by this agreement and working on a one (1) or two (2) shift operation.

1.3.2 The weekly hours of work (Monday to Friday inclusive) may be arrived at by having the employees work four (4) consecutive ten-hour shifts or by having the employees work five (5) consecutive eight-hour shifts.

1.3.3 Weekly hours of work will be established for a minimum period of thirty (30) days.

1.3.4 If a project site intends to change the weekly hours of work, a minimum of two (2) weeks written notice shall be sent to the Union.

1.3.5 The start time for the day shift shall be 8:00 a.m. with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one-half (1/2) hour either way to coincide with the end of the day shift.

1.3.6 The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) of the Base Hourly Rate for scheduled hours worked on that shift.

1.4 Three (3) Shift Operation

1.4.1 When a three (3) shift operation is established by the Employer, the following conditions will apply:

1.4.2 Those employees working on the day shift shall work eight (8) hours at the straight time rate.

1.4.3 Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift. A shift differential of one-seventh (1/7) of the Base Hourly Rate shall be paid for all normal scheduled shift hours worked.
1.4.4 Those employees working on the night shift shall work seven (7) hours per shift. A shift differential of one-fifth (1/5) of the Base Hourly Rate shall be paid for all normal scheduled shift hours worked.

1.5 All Shifts – One, Two or Three Shift Operations

1.5.1 The rate for the shift will be based on the day in which the shift begins.

1.5.2 An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

1.5.3 It may be necessary, from time to time, to vary the shift starting times, with a possible variance of one (1) hour either way. When this occurs, a revised shift arrangement will be established.

1.6 Seven (7) Day Operation

1.6.1 When working under the provisions of this 7-day shift schedule all conditions listed below will supersede those contained in the other Sections of this collective agreement. Where this shift schedule is silent, the appropriate Section in the collective agreement applies.

1.6.2 This shift schedule is intended for work greater than four (4) weeks in duration, however, it is recognized that unforeseen circumstances may require the cancellation of this shift schedule.

1.6.3 If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours pay. This does not apply to those employees who are laid off during or at the end of the schedule.

1.6.4 The employee(s) shift schedule consists of four consecutive ten (10) hour shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

1.6.5 Shift work may be established by the employer to provide seven days per week work coverage, on a one, two, or three shift per day basis. When this occurs, a specific shift arrangement will be established by the employer detailing the shift schedule to be worked. The employer will provide the Union with at least 48 hours notice prior to the implementation of these shift provisions.

1.6.6 First Shift

Regularly scheduled hours of work Monday to Friday inclusive shall be paid at straight time hourly rates.

1.6.7 Second Shift

Regularly scheduled hours of work Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-seventh (1/7) of the Base Hourly Rate.
1.6.8 Third Shift

Regularly scheduled hours of work Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-fifth (1/5) of the Base Hourly Rate.

1.7 All Shifts – 7 Day Operation

1.7.1 Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at two times the straight time hourly rate. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

Article 2

TRAVEL AND ROOM AND BOARD ALLOWANCE

2.1 Travel Allowance

2.1.1 Upon application, payment of Travel Allowance will be issued for the first two pay periods. Failure to provide satisfactory proof of eligibility during this period, will result in cessation of payments and the recovery in two equal amounts. In the event of termination for any reason before full recovery, any balance owing will be deducted from the final pay.

2.1.2 The daily travel allowance will be paid by the Employer to the employees who are not receiving room and board allowance as referred to in Subarticle 2.2, on the following basis:

(i) If an employee lives within forty (40) radius kilometers* of the project, no travel allowance will be paid.

(ii) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002, $20.35 effective May 1, 2003) travel allowance for each day worked or reported for.

(iii) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) travel allowance for each day worked or reported for.

(iv) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) travel allowance for each day worked or reported for.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.
(v) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Subarticle 2.2 below, he shall receive $ 29.85 per day ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) travel allowance for each day worked or reported for provided he continues to travel greater than 97 radius kilometers daily.

2.1.3 When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee’s travel allowance entitlement, board allowance entitlement and initial and return allowance entitlement.

2.1.4 A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

Note: Bruce G.S. "A", Bruce G.S. "B" and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce Complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.

2.2 Room and Board Allowance

2.2.1 Upon application, payment of Room and Board will be issued for the first two pay periods. Failure to provide satisfactory proof of eligibility during this period, will result in cessation of payments and the recovery in two equal amounts. In the event of termination for any reason before full recovery, any balance owing will be deducted from the final pay.

2.2.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(i) An Employer may supply either:

(a) free room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or
(b) a subsistence allowance; or
(c) a travel allowance.

* An Employee’s "Regular Residence" is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee obtains temporary accommodation for that work location.
2.2.3 An employee may exercise his option not to stay in a camp or accept free room and board. An employee who exercises this option shall receive a room and board allowance as follows:

(i) When an employee's regular residence is more than 97 radius kilometers from a Project located North of the French River and the employee maintains temporary accommodation at or near the Project, the employee shall be paid a subsistence allowance of $70.00 per day ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for.

(ii) When an employee's regular residence is more than 97 radius kilometers from a Project located South of the French River and the employee maintains temporary accommodation at or near the project, the employee shall be paid a subsistence allowance of $57.00 per day ($59.00 effective May 1, 2001, $61.00 effective May 1, 2002, $63.00 effective May 1, 2003) for each day worked or reported for, subject to 2.2.3 (iv) below.

(iii) When an employee's regular residence is more than 97 radius kilometers from the Project and the employee commutes to work on a daily basis, the employee shall receive $30.10 per day ($30.60 effective May 1, 2001, $31.10 effective May 1, 2002, $31.60 effective May 1, 2003) for each day worked or reported for.

(iv) At the Pickering and Darlington Projects, employees who live beyond 97 radius kilometers from the Project, shall receive $45.00 per day ($48.00 effective May 1, 2001, $51.00 effective May 1, 2002, $54.00 effective May 1, 2003) for each day worked or reported for.

2.2.4 An employee shall not qualify for daily travel allowance or room and board allowance when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of the Employer. Such permission shall not be unreasonably denied.

2.2.5 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(i) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by an authorized representative of the Employer.

(ii) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.
(iii) An employee who remains in camp and who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(iv) An employee who remains in camp and who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
PRINCIPAL AGREEMENT

for

Generation Projects Construction

in the

Electrical Power Systems Sector

made and entered into

between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and

THE IBEW
ELECTRICAL POWER COUNCIL OF ONTARIO
representing the following affiliated Local Unions
105, 115, 120, 303, 353, 402, 530, 586,
773, 804, 894, 1687, 1739
(hereinafter called the "Union")

May 1, 2000 - April 30, 2004
This Collective Agreement distinguishes between two broad categories of work; namely, work that is covered by the "modified provisions" of this construction agreement and work that is not. "Modified provisions" apply to most work on existing generating sites. Following is a more detailed explanation:

The "Modified Provisions" of this Construction Agreement will apply to:

- all work on existing generating sites except the construction of:
  - a new facility which provides a new function
  - a new (ie. additional) generating unit

Appendix A contains the "Modified Provisions of this Construction Agreement". All terms of this collective agreement shall apply to work covered by Appendix A, with the exception of Section 8 - Hours of Work and Section 11 - Travel and Room and Board Allowance. The above Sections 8 and 11 do not apply when working under the terms and conditions of the "modified provisions", as these Sections are replaced by Articles 1 and 2 of Appendix A.

When work does not fall within the scope of Appendix A, all terms of this agreement, with the exception of Appendix A, apply.

A chart to illustrate the above applications follows:

<table>
<thead>
<tr>
<th>Generating - Existing Sites Excluding construction of new facility (new function) &amp;/or new (additional) generating unit(s)</th>
<th>Generating - Existing Sites Involving construction of new facility (new function) &amp; /or new (additional) generating unit(s)</th>
<th>Generating - New Sites (ie. Greenfield Work)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use Appendix A - Modified Provisions for Hours of Work, and Travel &amp; Room &amp; Board Allowance.</td>
<td>Use all the provisions of the collective agreement, except Appendix A.</td>
<td>Use all the provisions of the collective agreement, except Appendix A.</td>
</tr>
</tbody>
</table>

PREAMBLE

100
Witnesseth

A. WHEREAS EPSCA is an Association formed to represent Employers engaged in construction industry work in the electrical power systems sector in collective bargaining and on their behalf enter into collective agreements covering those of their employees in the bargaining unit as hereinafter defined; and

WHEREAS the Union, as defined in the covering page of this Collective Agreement, has in its membership competent, skilled and qualified journeymen and apprentices to perform work coming within the trade and craft jurisdiction; and

WHEREAS EPSCA and the Union desire to mutually establish and stabilize wages, hours and working conditions for journeymen and apprentices employed by Employers within the electrical power systems sector of the construction industry, and further, to encourage closer co-operation and understanding between EPSCA and the Union to the end that a satisfactory, continuous and harmonious relationship will exist between the parties to this Agreement.

NOW THEREFORE, EPSCA and the Union mutually agree that the working conditions as set out below shall be applicable throughout the Province of Ontario.

SECTION 2

200
Recognition

SCOPE OF AGREEMENT

A. (i) EPSCA recognizes the Union as the exclusive collective bargaining agency for a bargaining unit as defined in Section 200 A (ii) engaged in construction industry work performed on Ontario Power Generation Inc. (OPGI) facilities.

(ii) The bargaining unit shall comprise the classifications of electrician journeyman (including foreman and subforeman), electrician welder, electrician apprentice and communications electrician. If additional classifications are required, they will be negotiated as appropriate for work on Ontario Power Generations Inc. (OPGI) property.
(iii) Ontario Power Generations Inc. (OPGI) generating facilities shall mean generating stations, hydraulic works, heavy water facilities, microwave and repeater stations and Miscellaneous Hydraulic Projects located on Ontario Power Generation Inc. (OPGI) property but excludes the building of commercial-type office facilities at locations remote from operating facilities.

B. The terms and conditions of this Agreement will apply when contracts are awarded by Ontario Power Generation Inc. (OPGI) to Employers in contractual relations with the IBEW, or otherwise required to apply the terms of this Agreement.

C. The Union recognizes EPSCA as the sole and exclusive collective bargaining agency for all of the Employers covered by this Agreement, and in all matters pertaining to the administration of this Collective Agreement.

D. The term "employee" shall include all employees of the Employers in the classifications as set out in Item A (ii) above.

E. A subforeman is an individual who exercises supervisory responsibility and may use the tools of the trade.

F. The term "Employers" shall include individual members of EPSCA and any company, partnership, sole proprietorship, joint venture, contractor, subcontractor or any person that agrees to be bound by the terms and conditions of this Agreement.

G. Notwithstanding the provisions contained in this Subsection, this Agreement does not alter existing agreements and practices operative between individual Employers and the Union with respect to General Foremen.

H. The classifications referred to in Item A (ii) do not establish craft jurisdiction. Such jurisdiction is established in accordance with Section 4 of this Collective Agreement.

I. EPSCA and the Union agree that the use of nomenclature is meant to refer to both genders.
A. This Agreement shall consist of a master portion of general
application to the construction field forces represented by
the Union together with the following Appendices and/or wage
schedules of particular application to employees represented by the
Union at Projects or in areas as noted in Subsection 202 below, and
shall also be deemed to include any additional Appendix and/or wage
schedule added, as the said Appendices and/or wage schedules may
be revised by EPSCA and the Union from time to time.

</table>

**SECTION 3**

**DURATION OF AGREEMENT**

A. This Agreement shall become effective May 1, 2000 and will expire on April 30, 2004.

A. Either party to this Agreement may give notice in writing to the other party not more than 90 days prior to the expiry date and not less than 30 days prior to the expiry date of this Agreement and negotiations must begin within 15 days of the giving of notice. If there is no notice given of change or termination of this Agreement, as mentioned in this Section, this Agreement shall remain in effect from term to term thereafter.
A. This Agreement shall be subject to amendment at any time by mutual consent of the parties hereto. Any such amendment agreed upon shall be reduced to writing, signed by the parties hereto and approved by the International Office of the Union, the same as this Agreement.

SECTION 4

WORK ASSIGNMENT

400
Advance
Notice

A. EPSCA will advise the Union of all new construction work coming under the scope of this Agreement for the construction field forces of the Employers.

EPSCA will convene a prejob conference before work commences to discuss the preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the Project.

B. Subsequent prejob conferences will be convened by EPSCA before specific portions of work commence to discuss the final details of the work and to establish conditions in accordance with this Agreement for that work.

C. Upon the request of the Union a prejob conference will be convened by EPSCA.

D. EPSCA will provide written notice to the Union as far in advance as possible of new work and prejob conferences as noted in Item A and Item B above.

401
Work
Assignment

A. The Employer who has the responsibility for the work shall make a proposed assignment of the work involved. The Employer shall be responsible for providing copies of proposed assignments to the Union (International Office and Local Union Office). The Employer will specify a time limit for the Union to submit evidence supporting its claims. The Employer will evaluate all evidence submitted and make a final assignment of the work involved. This final assignment will be in accordance with the procedural rules established by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. The Employer will advise the Union of the final assignments prior to the work commencing.
When a jurisdictional dispute exists between unions and upon request by the IBEW, the Employer shall furnish the IBEW International Office a signed letter from a duly authorized official of the company on employer stationery, stating whether or not the Union was employed on specific types of work on a given project. The Employer agrees to consider evidence of established practices within the construction industry generally when making jurisdictional assignments.

B. A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of the markup process is to indicate to the Union the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes.

When work is to be performed on a project site and it meets the following criteria; same employer, same work, same project site, the markup process will not be required. This procedure shall not preclude the Union’s right to contest previously disputed work. In the Electricity Production Zones when work falls within this criteria the EPSCA Office will send out a “Notification of Work” along with a copy of the original minutes of mark-up meeting(s) to the Local Unions prior to work commencing. This procedure shall not preclude the Unions’ right to contest previously assigned work, if the work is in a Local Union jurisdiction other than the one it was marked up in.

When an Employer has work that is less than a three (3) week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Union will be notified of the scope of work and the Employer’s proposed work assignments. The Union will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Union of the final work assignments prior to the commencement of the work.

All work that does not meet the criteria set out in paragraphs 2 and 3 above, will be reviewed and assigned at a markup meeting.

EPSCA will provide written notice to the Union (International Office and Local Union Office) as far in advance as possible of markup meetings. The Union may attend these markup meetings and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

* For the purposes of this Section, Nanticoke, Lambton, Bruce Nuclear Power Development (BNPD), Darlington, Pickering, Lakeview/Hearn and the five (5) Electricity Production Zones are each considered one project site.
The EPSCA representative will record the proposed assignments and jurisdictional claims and forward a copy of them within fifteen (15) working days to the Union (International Office and Local Union Office).

The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the mark-up process may not be practical or possible. However, reasonable effort will be made by the Employer to adhere to the jurisdiction of the IBEW.

A. The jurisdiction of the Union shall be that jurisdiction established by agreements between International Unions claiming the work or decisions of record recognized by the AFL-CIO for the various classifications and the character of work performed.

B. In the event that a jurisdictional dispute arises over a work assignment, the Employer will make an assignment for the work to be done. If any Union or Unions disagree with such a work assignment, the parties will settle such jurisdictional dispute in accordance with procedure as outlined by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry, or any successor thereto.

C. In the event that a jurisdictional dispute cannot be settled on a local basis by the Unions involved, it shall be submitted to the International Unions involved for settlement without permitting it to interfere in any way with the progress of the work at any time. In the event the dispute is not settled by the International Unions involved, it shall then be submitted to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry for resolution. The International Representative of the Union will advise EPSCA in writing of his intent to submit a jurisdictional dispute to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry and will identify in detail the work in question. The decision of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry will be final and binding to the parties to this Agreement.

D. EPSCA shall have direct recourse to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry when the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry has under its consideration a dispute involving the assignment of work being done by employees who are covered by this Agreement.
SECTION 5

UNION RIGHTS AND REPRESENTATIVES

500
Accredited
Union
Representatives

A. The Union will designate local Union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two representatives from the Union for each Project. The Union will notify the General Manager of EPSCA in writing of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Upon entering the job site, such representatives after identifying themselves to the EPSCA Representative and the authorized representative of the Employer, will be free to observe the progress and conduct of the work and to conduct normal union business associated with the administration of this Collective Agreement. The Union undertakes that these representatives will not unduly interfere in any way with said work.

501
Union
Stewards

A. The Accredited Union Representative reserves the right to appoint or remove a steward or stewards on any job where workmen are employed under the terms of this Agreement.

B. The EPSCA Representative and the Employer shall be notified in writing when a steward is appointed and when such stewards cease to act as stewards.

C. The steward will be responsible for his regularly assigned work on behalf of his Employer.

D. Such stewards shall be allowed sufficient time to see that the provisions of this Agreement are observed.

E. No steward shall be discriminated against by the Employer because of the performance of his duties as a steward.

F. Provided he is qualified to perform the work, the steward shall have the opportunity to work on all overtime. The steward shall be notified in advance of all overtime.

G. Where appropriate and where more than one steward is required, one steward shall be appointed Chief Steward.
H. The Chief Steward shall not have his employment terminated without the consent of the Accredited Union Representative until as near as possible to the completion of the job, unless with just cause. Where an Employer has only one steward appointed for a job, such steward will receive the same consideration given a Chief Steward as noted above.

I. The Employer shall receive the approval of the Accredited Union Representative prior to transferring a steward to another Project.

502 Health & Safety Representatives

A. As the parties recognize the responsibilities of the Health and Safety Representative/Joint Health & Safety Committee member, this individual will be among the last five (5) employees kept on a project, providing s/he is capable of performing the remaining work.

B. If management feels that the Health and Safety representative/Joint Health & Safety Committee member is not discharging his/her health and safety duties in a manner that follows the intent and spirit of the legislation, the Employer may refer the issue to the Executive Committee for resolution. If the matter cannot be resolved by the Executive Committee, the grievance procedure may be invoked.

SECTION 6

EMPLOYEE DESIGNATION

600 Foremen and Subforemen

A. It is understood that foremen and subforemen hold responsible positions in the relationship between the Employers and the Union. Both parties agree that every effort should be made to recruit and retain foremen and subforemen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of the Union, the Employers and the Union will make every effort to minimize problems that may arise which concern the relationship between the foremen and subforemen, the Employers and the Union.

B. The parties recognize the responsibilities of foremen and subforemen to discharge their managerial duties. If the Union feels that the foreman or subforeman is not discharging his managerial duties in a manner that is fair and equitable, or if an Employer feels that the Union is interfering with the foreman or subforeman in the performance of his managerial duties, the Employer or the Union may refer the problem to the Executive Committee referred to in Section 14 - Committees, Subsection 1400 - Executive Committee, for resolution. If the matter cannot be resolved by the Executive Committee, the grievance procedure may be invoked by either party.
C. The selection and retention of foremen and subforemen will be the responsibility of the Employers. When making appointments to the foreman and subforeman level, the Employers will give consideration to those journeymen they presently employ, however this consideration does not create an obligation to make an appointment from these employees.

D. Such foremen and subforemen shall be members of the IBEW and shall register at the local union office and shall be issued with clearance cards.

E. In the interest of efficiency and productivity, the Employer shall have the right to move foremen and subforemen from construction site to construction site.

F. The foremen's differential shall be the greater of $3.00 or the established percentage above the journeyman rate differential as set out in the existing wage schedules. The subforemen's differential shall be the greater of $2.00 or the established percentage differential above the journeyman rate as set out in the existing wage schedules. The rates of pay for all foremen and subforemen covered by this Agreement will be set forth in the current wage schedules. EPSCA will provide the Union with current wage schedules.

G. For conditions applying to General Foremen, refer to Subsection 200, Item G.

H. Where the crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade.

SECTION 7

700 Employment Practices

EMPLOYMENT PRACTICES/HIRING

A. For purposes of this Section, a geographic area will be established for each Project in accordance with the geographic jurisdiction established in Section 2, Subsection 202, of this Agreement.

B. An office will be established by EPSCA, or by the Employer with the approval of EPSCA, for each Project. A purpose of this office will be to coordinate employment as specified in this Section.

C. EPSCA, or the Employer with the approval of EPSCA, and the Union will exchange the names of their representatives in each of the areas described in Item A who will be responsible for co-operating in the referral and employment of reliable and competent Union members.
D. EPSCA will notify the Union of future manpower requirements for all employees coming within the scope of this Agreement.

E. The Union recognizes that where key tradesmen are required, the number will be jointly determined at a prejob conference provided for in Section 4, Subsection 400, of this Agreement.

701 Hiring

A. The employment and layoff of tradesmen and apprentices, excluding key key tradesmen, shall be carried out on the following basis and sequence:

(i) The Employer agrees to hire and employ only members of the International Brotherhood of Electrical Workers on all electrical work. The EPSCA office, or the Employer's office will request the appropriate Local Union office for certified tradesmen and apprentices required and no one will be employed unless they are in possession of a clearance card from the Local Union office.

REV

(ii) If the Local Union is unable to furnish certified Local Union members to the Employer within three (3) working days of the time the Local Union office receives the request for tradesmen (except Saturdays, Sundays and Holidays), the Employer has the right to transfer Union members already in its employ to the project, subject to 701 A (iii). Following this, the Local Union will furnish travel card members as available. Then the Employer shall be afforded the right to employ travel card or permit holders as available. The Local Union will issue clearance cards to those hired in these circumstances. All employees will report to the EPSCA Office, or the Employer's office, prior to commencing work. Travel card members may be replaced by Local Union members and permit holders may be replaced by Local Union members or travel card members who maintain a regular residence in the geographic area of the project after three (3) working days' notice to the Employer, but in no case until a tradesman has worked a minimum of one (1) week.

NEW

(iii) It is agreed that when the Local Union cannot supply local members to a job or project, the employer will be allowed to transfer current employees who have been in their employ for a minimum of one (1) year, to the site or project. The employer must notify the union when placing a call of the number of current employees eligible for transfer to the site.

B. In all cases of layoff, the Employer shall layoff its employees in the following sequence:

(i) permit holders;
(ii) travel card members from Local Unions outside Ontario;
(iii) travel card members from Local Unions within Ontario;
(iv) Applicable Local Union members.
C. When possible, the Employer shall notify the Local Union Office three (3) days prior to layoff but no later than by the day of the layoff. Failure of the Employer to notify the Union office by the day of layoff will entitle the Employee to an additional one (1) hour's pay.

D. Notwithstanding 701 A, 701 B and 701 C, re-employment as required by the Workplace Safety and Insurance Board shall not be a violation of this collective agreement nor be subject to the provisions of Section 7.

E. Any Employer undertaking electrical work within the jurisdiction of a Local Union shall be allowed two (2) Key Trades Persons. Such Key Trades Person(s) shall be Members of the IBEW and shall notify the Local Union Office in the appropriate jurisdiction, prior to commencing work. Such Key Trades Person(s) shall be issued a referral(s). Upon completion of said work the Key Trades Person(s) shall notify the applicable Local Union in the area where the work was completed of his/her departure. Should additional Key Trades Person(s) be required, the number will be determined by mutual agreement.

SECTION 8

HOURS OF WORK

Section 8 is applicable to work which is not covered by Appendix A - Modified Provisions of this Construction Agreement. Please refer to the GENERAL NOTE preceding the Index Page of this Agreement

800

A. The normal weekly hours of work for all employees of Employers covered by this Agreement shall be thirty-eight (38) except as described in subsection 800B below. The weekly hours shall be worked in four (4) eight (8) hour days, Monday to Thursday inclusive, with the remaining six (6) hours to be worked on Friday.

B. The normal hours of work for employees working the third shift shall be thirty-two and one-half (32-1/2) made up of five (5) days of six and one-half (6-1/2) hours each. The hours of work on Miscellaneous Projects (excluding Lakeview and R.L. Hearn Generating Stations) shall be forty (40) hours per week made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.
A Miscellaneous Project is any work which will require less than one year to complete and comprise a total Employers' work force of not more than one hundred employees at one time.

801 Daily Hours

A. The normal starting time for day work hours shall be 8:00 a.m. By mutual agreement between EPSCA and the Union, the starting time may be varied by one-half (1/2) hour either way. This variance will be established at the prejob conference or while the job is in progress.

802 Rest Periods

A. For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, for each half shift worked. Where a half shift is less than four (4) hours, there shall be no rest period excluding the third shift.

B. For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

C. For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two hours of overtime worked.

803 Reporting Pay

A. An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of three (3) hours' pay plus his appropriate daily travel or board allowance at the applicable rate when he reports for work but is unable to commence or continue to work because of circumstances beyond his control. An employee will not receive this allowance if he is unable to complete his shift as a result of inclement weather.

B. Notwithstanding Subsection 803, Item A above, when an Employer considers it necessary to shut down a job to avoid the possible loss of human life, because of an emergency situation that could endanger the life and safety of an employee, in such cases, employees will be compensated only for the actual time worked.

804 Inclement Weather Pay

A. An employee who reports for work at the beginning of a shift and is unable to commence work due to inclement weather will receive three (3) hours' pay at the applicable rate. To qualify, the employee must remain at a protected place or area as designated by the Employer for three (3) hours unless excused by an authorized representative of his Employer.
B. An employee who reports for and commences work but is unable to continue work due to inclement weather shall receive three (3) hours' pay at the applicable rate or pay for the actual time worked for that shift, whichever is the greater.

C. An employee in receipt of inclement weather pay shall also receive travel or board allowance if applicable.

A. The holidays recognized under this Agreement are:

<table>
<thead>
<tr>
<th>New Year's Day</th>
<th>Civic Holiday</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good Friday</td>
<td>Labour Day</td>
</tr>
<tr>
<td>Easter Monday</td>
<td>Thanksgiving Day</td>
</tr>
<tr>
<td>Victoria Day</td>
<td>Christmas Day</td>
</tr>
<tr>
<td>Canada Day</td>
<td>Boxing Day</td>
</tr>
</tbody>
</table>

B. EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

C. Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed either on the preceding Friday or following Monday.

D. EPSCA reserves the right to change the day of observation of a recognized holiday when such holiday falls on a Tuesday or Thursday.

806 Overtime Rates

A. Overtime shall be paid at two times the straight time rate for all work performed outside of normal hours as defined in Section 8 and for work performed on Saturday, Sunday and the recognized holidays listed in Subsection 805, Item A above.

B. When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of his shift and after approximately two (2) hours has been worked, he shall be provided with a lunch and allowed thirty (30) minutes to consume same and be paid at the base hourly rate of pay. After each additional four (4) hours is worked, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and a lunch when work is required beyond that four (4) hour period. Where an employee has been notified the previous day, no lunch will be provided, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay.
When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

To qualify for the above-noted provisions, on a Friday, an employee will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays and Recognized Holidays.

**807 Call-In Pay**

A. When an employee is called in to work outside of his normal hours of work, he shall receive a minimum of two (2) hours' work at the appropriate premium rate plus travel allowance where applicable.

B. If the employee's normal hours of work commences within this two (2) hour period, the employee will be paid premium time for the actual hours worked and revert to his normal rate at the commencement of his normal hours of work.

**808 Shift Work**

A. (i) Shift work may be established providing there are at least four (4) consecutive days of shifts to be worked excluding Saturdays, Sundays and Recognized Holidays.

(ii) Where shift work is established, the normal shift hours shall be the same as the day hours. The third shift hours shall be worked between 1:00 a.m. and 8:00 a.m. Monday through Friday with an unpaid one-half (1/2) hour lunch period.

(iii) The normal starting time for day shift hours shall be the same as the day work hours described in Subsection 801.

(iv) On Monday to Thursday inclusive, the second shift hours shall start at 4:30 p.m. or a variance of one-half (1/2) hour either way to coincide with the end of the day shift. On Friday, the second shift hours may start at 4:30 p.m. or at the end of the day shift.

B. (i) Employees required to work shift work on the second shift of a two or three-shift operation shall receive a shift differential of time and one-seventh (1/7) for normal scheduled shift hours worked. Employees required to work shift work on the third shift shall receive a shift differential of time and one-fifth (1/5) for normal scheduled shift hours worked.
(ii) No employee shall be required to work more than one shift in any twenty-four (24) hour period unless the overtime rate is paid.

(iii) The shift rate will be based on the day in which the shift begins.

809 Special Circumstances

A. The normal days of work and normal hours of work established in the Subsections 800, 801 and 808 may be varied. Any amendments to the hours of work or working days will established by mutual agreement between the Local Union, the Employer and EPSCA.

SECTION 9

WAGES AND PAY PROCEDURE

900 Wages

A. The rates of pay for employees in the classifications listed in Subsection 200, Item B, of this Agreement and working on Generation Station Projects shall be as set forth in the wage schedules attached hereto.

B. When properly authorized by the Local Union, EPSCA shall increase or decrease all Union benefit funds once per contract year as well as at previously negotiated wage rate change dates. Adjustments shall be made to the wage schedules in such a manner that the overall monetary package does not change. EPSCA shall be given a minimum notice of two (2) months if such a change is contemplated.

901 Pay Procedure

A. Normal

(i) Employees shall be paid weekly and payment for any given week will be made not later than the sixth working day after the close of the payroll period, but in any event not later than Thursday of the following week.

(ii) Wages shall be paid by the employers on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. The employer may implement direct deposit pay by mutual agreement. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee, setting forth:
(a) the period of time or the work for which the wages are being paid;

(b) the rate of wages to which the employee is entitled;

(c) the amount of wages to which the employee is entitled;

(d) the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;

(e) any allowance or other payment to which the employee is entitled;

(f) the amount of vacation pay for which the employee is being credited;

(g) the amount of recognized holiday pay for which the employee is being credited; and

(h) the net amount of money being paid to the employee.

(iii) In cases of inclement weather being declared on pay day, employees will receive their pay before leaving the site provided it is available on the site.

B. On Termination

(i) An employee who voluntarily terminates his employment will be provided his final pay on the next regular pay day.

(ii) In all cases of layoff at work locations where the employer does not have an on-site pay office, an employee will have his final pay and termination documents mailed to his residence within two (2) business days of his termination by Express Post. At work locations where the employer has an on-site pay office, the employee shall receive his final pay and record of employment on the day of layoff.

(iii) An employee who is discharged shall be provided with his final pay immediately if the Employer's pay facilities are on site or as per Item B (ii) above if the Employer's pay facilities are not on site.
Failure of the Employer to comply with the requirements in Clause 901 B (i), (ii) and (iii) will entitle the employee to two (2) hours at the straight time rate for each normal work day of non-compliance.

A. The vacation and recognized holiday pay rate shall be ten (10) percent of hourly earnings. For conditions applying to vacation and recognized holiday pay, refer to Section 10, Subsection 1001.

SECTION 10

1000 Benefit Funds

A. The Employer agrees to pay into operative welfare, pension and S.U.B. plans the amounts specified by the IBEW-EPCO and identified in the wage schedules attached hereto. Payment to the above-noted funds shall be based on each hour earned.

NEW

B. To reduce administrative costs the parties agree that the number of monthly separate remittance and deduction cheques will be kept to a minimum.

1001 Vacation and Recognized Holiday Pay

A. The Employer agrees to pay vacation and recognized holiday pay on a weekly basis. The vacation pay rate shall be four (4) percent of hourly earnings and the recognized holiday pay rate shall be six (6) percent of hourly earnings.

1002 Union Funds

A. The Employer agrees to deduct from wages and remit to the Union, Union Funds. The amounts to be deducted and remitted will be as set out in the wage schedules attached hereto.

1003 Administration

A. The Union agrees to supply the Employers with administrative material and information regarding the Funds identified in this Section.

1004 Assignment of Benefits

A. The trustees of the employee benefit plans referred to in this collective agreement shall promptly notify the union of the failure by any employer to pay any employee benefit contributions required to be made under this collective agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.
SECTION 11

REV

1100
Daily Travel Allowance

TRAVEL AND ROOM AND BOARD ALLOWANCE

A. The daily travel allowance will be paid by the Employers to their employees who are not receiving room and board allowance as referred to in Subsection 1101, on the following basis:

(i) If an employee lives within 20 radius kilometers* of the project, no travel allowance will be paid.

(ii) If an employee lives within 20 to 40 radius kilometers of the project, he shall receive $15.60 per day travel allowance effective May 1, 2000, ($16.10 effective May 1, 2001, $16.60 effective May 1, 2002 and $17.10 effective May 1, 2003) for each day worked or reported for.

(iii) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day travel allowance effective May 1, 2000, ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002 and $20.35 effective May 1, 2003) for each day worked or reported for.

(iv) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day travel allowance effective May 1, 2000, ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002 and $23.60 effective May 1, 2003) for each day worked or reported for.

(v) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day travel allowance effective May 1, 2000, ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002 and $27.10 effective May 1, 2003) for each day worked or reported for.

* For the purpose of this Section, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

Note: Bruce G.S. "A", Bruce G.S. "B" and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce Complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A' and Bruce G.S. "B" turbine halls.
If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Subsection 1101 below, he shall receive $29.85 per day travel allowance effective May 1, 2000, ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002 and $31.35 effective May 1, 2003) for each day worked or reported for provided he continues to travel greater than 97 radius kilometers daily.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement, board allowance entitlement and initial and return allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

Upon application, payment of Room and Board/Travel Allowance will be issued for the first two pay periods. Failure to provide satisfactory proof of eligibility during this period, will result in cessation of payments and the recovery in two equal amounts. In the event of termination for any reason before full recovery, any balance owing will be deducted from the final pay.

When the employee is in receipt of Room & Board Allowance on remote projects, where the roads from the temporary accommodation to the work location are loose surface and where the nearest place of accommodation is in excess of twenty (20) radius kilometres from the job, the employer shall have the option of providing transportation from the temporary accommodation, or paying travel allowance in accordance with Section 1100 A (i) to (viii).

The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

* An Employee's "Regular Residence" is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee obtains temporary accommodation for that work location.
(i) An Employer may supply either:
   (a) free room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or
   (b) a subsistence allowance; or
   (c) a travel allowance.

(ii) An employee may exercise his option not to stay in a camp or accept free room and board. An employee who exercises this option shall receive a room and board allowance as follows:

   (a) When an employee's regular residence is more than 97 radius kilometers from a Project located North of the French River and the employee maintains temporary accommodation at or near the Project, the employee shall be paid a subsistence allowance of $70.00 per day effective May 1, 2000, ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002 and $76.00 effective May 1, 2003) for each day worked or reported for.

   (b) When an employee's regular residence is more than 97 radius kilometers from a Project located South of the French River and the employee maintains temporary accommodation at or near the project, the employee shall be paid a subsistence allowance of $57.00 per day effective May 1, 2000, ($59.00 effective May 1, 2001, $61.00 effective May 1, 2002 and $63.00 effective May 1, 2003) for each day worked or reported for, subject to (d) below.

   (c) When an employee's regular residence is more than 97 radius kilometers from the Project and the employee commutes to work on a daily basis, the employee shall receive $31.10 per day effective May 1, 2000, ($33.10 effective May 1, 2001, $35.10 effective May 1, 2002 and $37.10 effective May 1, 2003) for each day worked or reported for.

   (d) At the Pickering and Darlington Projects, employees who live beyond 97 radius kilometers from the Project, shall receive $45.00 per day effective May 1, 2000, ($48.00 effective May 1, 2001, $51.00 effective May 1, 2002 and $54.00 effective May 1, 2003) for each day worked or reported for.

B. An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Subsection 1100 and Subsection 1101, Item A above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.

C. The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:
(i) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the Project medical attendant or an authorized representative of his Employer.

(ii) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(iii) An employee who remains in camp and who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(iv) An employee who remains in camp and who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

1102 Initial and Return Travel and Transportation

A. On recruitment of tradesmen who live between 97 and 161 radius kilometers from the project, the Employer shall pay $21.00 effective May 1, 2000, ($22.00 effective May 1, 2001, $23.00 effective May 1, 2002 and $24.00 effective May 1, 2003) for the initial trip to the project.

B. On recruitment of tradesmen who live beyond 161 radius kilometers from the project, the Employer shall pay $0.34 effective May 1, 2000, ($0.35 effective May 1, 2001, $0.36 effective May 1, 2002 and $0.37 effective May 1, 2003) per radius kilometer plus travel time based on one hour's pay for each 80 radius kilometers of travel, or part thereof, to a maximum of 8 hours' pay for the initial trip to the project from where the tradesman lives or the Local Union Referral Hall for the project, whichever is closer to the project.

C. To qualify for payment in Items A or B, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of the job, whichever is lesser.

D. On termination of employment due to a reduction of staff, an employee entitled to payment under Items A or B shall be entitled to return expenses calculated in the same manner as in Items A or B above for the return trip from the project to where the tradesman lives or place of recruitment, whichever is closer to the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.
E. (i) On the Thunder Bay Project and Atikokan Project, an employee shall qualify for a return trip from the Project to his regular residence for each thirty (30) days worked on the Project providing his regular residence is more than four hundred (400) radius kilometers from the Project.

(ii) For each entitlement, the Employer shall pay travel expenses on the basis of the equivalent cost of public transportation plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel, or part thereof, to a maximum of eight (8) hours' pay.

A. An employee who is requested or receives approval from an authorized representative of his Employer to use his personal vehicle for the convenience of his Employer shall be reimbursed $0.37 per kilometer travelled effective May 1, 2000, ($0.38 effective May 1, 2001, $0.39 effective May 1, 2002 and $0.40 effective May 1, 2003) for such use of his vehicle.

SECTION 12

TOOLS AND CLOTHING

1200 Tools and Clothing

A. Employees shall be required to provide themselves with the ordinary hand tools of the trade as specified in the attached tool list. The Employer will provide insofar as is practical, separate facilities for storing the tools, but shall not be held responsible for losses, except as noted hereunder:

(i) When personal tools valued in excess of $15.00 are lost due to fire, the Employer will consider replacement or payment value to a maximum of $500.00 based on the merit of each case. This will include only personal tools that a tradesman is required to have to perform his normal duties with the Employer.

(ii) The Employer agrees to compensate employees for tools lost by theft, as supported by claims submitted in writing with substantiating evidence to establish theft resulting from forcible entry to locked storage provided by the Employer to a maximum of $500.00.

(iii) In the event of a loss by fire at a work location, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $500.00 for the loss of personal clothing will be made.
(iv) In the event of a loss by fire at an Employer operated camp, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $750.00 for the loss of personal clothing will be made.

B. Employees who have obtained tools from the Employer's tool crib shall be allowed sufficient time, in the opinion of Management, to return such tools to the tool crib during working hours. Employees receiving tools from such tool crib shall be held responsible for the return of such tools in good condition, subject to normal wear and tear. On layoff, employees will be allowed reasonable time to return tools to the tool crib.

C. Gang tools are tools which are issued to a foreman and are used by one or more members of the crew. Such tools are not identified on trade tool lists, nor are they the tools and equipment identified in Items A and B of this Section. Such tools shall be the responsibility of the Employer.

D. Employees eligible for payment under A above shall be reimbursed within 60 days after the date of submitting a claim. The Employer shall provide tools for the employee to use during the replacement period.

1201
Protective Clothing and Equipment

A. Employees are required to wear protective clothing and use protective equipment appropriate for the work being done. The Employer shall supply employees working in close proximity to obvious fire hazards (i.e. open flame) with fire retardant coveralls.

On abnormally dirty and/or corrosive work, in which the employee's clothing may be excessively or permanently damaged, the Employer will supply protective clothing and equipment (including gloves and coveralls where appropriate) at no cost to the employee.

B. Employees shall supply themselves with, and wear at all times on the job, an approved safety helmet and safety shoes.

When an Employer wishes an employee to wear a specifically identified safety helmet, the Employer shall provide it on loan, complete with a new liner.
C. Protective clothing and equipment (including gloves, coveralls and fire retardant coveralls) and rainwear that is provided by the Employer will be charged out to an employee and the employee shall be responsible for the return of such protective clothing and equipment (including gloves, coveralls and fire retardant coveralls) and rainwear upon completion of the work involved.

SECTION 13  

GRIEVANCES AND ARBITRATIONS

A. Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by EPSCA and the Union. In the interests of expediting the procedure, the parties shall process grievances in the following manner.

B. PRELIMINARY DISCUSSION

Disputes arising out of the interpretation or alleged violation of this Agreement shall, if possible, be settled by discussion between the employee and/or his steward and the employee's supervisor.

C. FIRST STEP

If a dispute cannot be resolved by this method, the Accredited Union Representative for the Union may file a formal grievance on the prescribed form with the Manager of Construction. Such grievance shall be filed within fifteen (15) working days of the alleged grievous act.

Within ten (10) working days of the filing of the grievance, the Manager of Construction shall investigate the grievance and convene a meeting which he or the Accredited Union Representative considers necessary to resolve it. The Manager of Construction shall give his reply on the prescribed form to the Accredited Union Representative within five (5) working days from the date of the First Step meeting.
Copies of completed grievance forms signed by the appropriate parties shall be filed by the Manager of Construction with the General Manager of EPSCA and by the Accredited Union Representative with the Secretary of the IBEW Electrical Power Council of Ontario.

If a First Step grievance meeting is considered appropriate, the Management Committee shall comprise the Manager of Construction plus two Management officials, one of whom shall be a representative of the Employer against whom the grievance has been filed. The Union Committee shall comprise the Accredited Union Representative plus two additional Union officials.

D. SECOND STEP

If a dispute has not been resolved at the first Step of the grievance procedure, the Accredited Union Representative may refer the grievance on the prescribed form to EPSCA's Grievance Officer. Such grievances shall be referred within ten (10) working days after the disposition has been issued under the First Step of this procedure. A copy of the grievance form shall be forwarded by the Accredited Union Representative to the Secretary of the IBEW Electrical Power Council of Ontario.

The EPSCA Grievance Officer shall investigate the grievance and convene a meeting which he or the Secretary of the IBEW Electrical Power Council of Ontario considers necessary to resolve it and give his reply on the prescribed form to the Secretary of the IBEW Electrical Power Council of Ontario within five (5) working days from the receipt of the grievance form which was completed at First Step.

If a Second Step grievance meeting is considered appropriate, the Management Committee shall comprise the EPSCA Grievance Officer plus two other Management representatives, one of whom shall be a representative of the Employer against whom the grievance has been filed. The Union Committee shall comprise three persons, including one of the Secretary-Treasurer, Chairman or a designate appointed by the Secretary-Treasurer or Chairman of the IBEW Electrical Power Council of Ontario and the Accredited Representative for the grievor, plus one other representative of the Union.
E. EPSCA OR UNION GRIEVANCES

The processing of EPSCA grievances shall begin at the Second Step. EPSCA may submit either policy or specific grievances. The Union may also institute policy grievances at this Step. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.

F. TIME LIMITS

The time limits as to both documents and procedure set out in the above Subsections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree in writing in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, the employee concerned, the Union or EPSCA shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been withdrawn and ineligible for arbitration.

G. Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at First Step.

H. Disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement shall not be processed under Section 133 of the Labour Relations Act of Ontario by either party until the provisions set forth in this Section for the resolution of such disputes have been fully exhausted.

I. GRIEVANCE FACILITIES

EPSCA shall provide the necessary facilities for all grievance meetings.

1301
Arbitrations

A. If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Subsection 1300, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either EPSCA or the Union to a Board of Arbitration for adjudication. The party desiring to submit the dispute to arbitration shall notify the other party in writing of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working
days, inform the other party of the name of its nominee to the arbitration board. The two nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, or if the nominees fail to agree upon a Chairman, the appointment shall be made by the Minister of Labour for Ontario upon the request of either party. The arbitration board, when selected or appointed, will proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. The decision of a majority is the decision of the arbitration board, but if there is no majority, the decision of the Chairman governs.

B. The arbitration board shall have no power to add to or subtract from or modify any of the terms of this Agreement. The arbitration board shall not substitute its discretion for that of the parties except where the board determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the arbitration board may substitute such other penalty for the discharge or discipline as to the arbitration board seems just and reasonable in all circumstances. The arbitration board shall not exercise any responsibility or function of the parties. The arbitration board shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.

C. In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario, and the fees and expenses of the Chairman shall be shared equally by the parties.

D. The time limits as to both documents and procedure set out in this Subsection shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree in writing in respect to an extension or waiver of any of the time limits imposed.

A. There shall be no strikes or lockouts so long as this Agreement continues to operate.
SECTION 14

COMMITTEES

1400
Executive Committee

A. To advance harmonious relations between EPSCA, the Employers, the Union, and the employees, EPSCA and the Union shall each appoint an Executive Committee. The Executive Committee of EPSCA shall consist of the Board of Directors and Officers of the Association. The Executive Committee of the Union shall consist of the IBEW Electrical Power Council of Ontario.

The Committee shall meet together at least annually to review matters associated with the administration of this Collective Agreement with the intent of achieving uniformity of application of this Agreement wherever employees are working in the Province.

The Committees may also consider matters related to construction safety.

1401
Apprenticeship Committee

A. An Apprenticeship Council shall be established within each Local Union's jurisdictional area and shall meet on a regular basis. This Council shall consist of an equal number of members of the Local Union and representative of the Employers from the area covered by the Local Union. Where applicable, a representative of the Apprenticeship Branch of the Ontario Government may also be appointed as an advisor to the regular Council members.

B. The Joint Apprenticeship Council shall be responsible for the establishment and maintenance of an apprenticeship training program, as well as adopting operating rules and conditions with respect thereto which are complementary to and in keeping with the intent of the Apprenticeship and Tradesmen's Qualification Act R.S.O. 1970 as amended.

C. All founding documents and/or agreements, and terms of reference establishing and guiding the activities of the local Apprenticeship Councils shall be registered with the Provincial Joint Council.

D. Apprentices shall be hired by the Employers, as and when required, from a pool of qualified apprentices established by the local JAC (or LAC) in accordance with the procedures established under the local JAC (LAC) Terms of Reference.

E. All apprentices shall be governed by the Ontario Apprenticeship and Tradesman's Qualification Act and Regulations but the ratio of apprentices to journeymen may be set from time to time by the Executive Committee.
F. In order to expedite the Apprentice's entrance into Journeyman status, the following policy shall apply:

(i) The Apprentice must apply to the Apprenticeship Branch to write his examination as soon as possible after he has reached his total hours, less 300.

(ii) The Apprentice will give the LAC/JAC two weeks' notice that he is going to write his examination.

(iii) After writing the examination, the Apprentice will check his hours in his Progress Record Book, with LAC/JAC.

(iv) The Employer will commence paying the Journeyman's rate of pay the day after the Apprentice completes his hours and providing the following conditions have been met:

(a) The Employer is satisfied that the Apprentice has completed his hours. If there is a question concerning the completion of hours, confirmation will be supplied by the LAC/JAC and/or the Union, and,

(b) The Employer is shown written proof of Certification from the Apprenticeship Branch, or has verbal confirmation from the LAC/JAC and/or the Union, and

(c) The Apprentice has passed his examination for his Certification of Qualification (C of Q).

G. In the event that an Apprentice fails his examination for his C of Q, he will be paid the journeyman rate of pay from the day he passes any future examinations.

H. Where the Apprenticeship Council is unable to reach an agreement on any matter concerning apprenticeship, the issue shall be referred to the Executive Committee for their decision.
SECTION 15  LUNCHROOM FACILITIES

1500 Lunchroom Facilities

A. Adequately heated accommodation separate from changerooms and washrooms shall be provided by the Employer on each project when necessary and where such accommodation can be reasonably provided for. Such accommodation shall be weatherproof and shall be kept reasonably clean. A table and sufficient benches or seats for the employees on the job shall be provided in the accommodation. Trailerized or portable accommodation shall include tables, benches, light, heat maintained at a minimum sixty-eight (68) degrees Fahrenheit, proper access and egress, and shall not be used for material storage.

B. The Employer will provide, where practical, clean, heated, lighted and ventilated facilities containing flush toilets and hand basins.

SECTION 16  ASSOCIATION FUND

1600 Association Fund

A. Each Employer bound by this agreement shall contribute to the Electrical Power Systems Construction Association Fund, the amount specified on the wage schedules attached hereto for each hour worked by each employee covered by this Agreement.

The Employer shall remit such contribution to EPSCA together with the supporting information as required on the reporting forms.

SECTION 17  RADIATION WORK

1700

A. A copy of Ontario Power Generation Radiation Protection Procedures and any revisions will be made available to the Local Union.

B. Each employee will have access to his personal radiation exposure record.

C. Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

D. Short-term employees will be given a guaranteed period of employment at their time of hire.
E. Employees working in a radiation area, in plastic suits or replacement material of the fully enveloping type with an independent air supply, will receive $8.00 per day. A day for the purpose of this item shall be defined as any period up to twelve (12) hours.

SECTION 18

ABORIGINAL CONTENT COMMITMENT

1800

A. Where an aboriginal commitment has been established on a project, the Union will cooperate in meeting the content commitments.

For projects, or jobs within a project, that are less than $100,000 field labour, and have aboriginal content commitments, the terms of the collective agreement will not apply to these aboriginal commitments.

Dated at Toronto, this 17th day of May, 2000.

TOOL LIST

All journeymen electricians are required to have the following tools:

1 Centre Punch
1 1/2" Cold Chisel
1 Half-round File
1 Ball Peen Hammer
1 Adjustable Hacksaw Frame
1 Knife
1 Medium Level
5 Prs. of Pliers -
8" Sidecutters, Diagonal, Longnose and 2 pairs of Channelock
6 Screwdrivers, Robertson and Standard types
1 6" Square or Combination Square
1 Steel Tape, 10 or 12-foot
1 Small Tap Wrench
1 Tool box
1 Tool Pouch and belt for hand tools
APPENDIX A

MODIFIED PROVISIONS
OF THIS CONSTRUCTION AGREEMENT

1. These provisions will apply to:

   (a) All work on existing generating sites except the construction of:

       • a new facility which provides a new function
       • a new (i.e. additional generating unit

2. Definitions:

   Facility Something that is built composed of multi-systems which serves a specific function

   Function Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

3. Dispute Resolution Process

   A dispute as to whether the "Modified Provisions of this Construction Agreement" apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.

   All terms of this collective agreement shall apply to work covered by Appendix A, with the exception of Section 8 - Hours of Work, and Section 11 - Travel and Room and Board Allowance.

HOURS OF WORK

A. A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked, excluding Saturdays, Sundays and Recognized Holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the balance of the four (4) consecutive shifts that would have been worked had the employee not been reassigned.

It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Union.

B. One (1) or Two (2) Shift Operation

The weekly hours of work shall consist of forty (40) hours for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.

The weekly hours of work (Monday to Friday inclusive) for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts or by having the employees work five (5) consecutive eight-hour shifts. Each Employer will notify the Local Union of the weekly hours of work that the site has elected to work (4 days x 10 hours per day or 5 days x 8 hours per day).

Weekly hours of work will be established for a minimum period of two (2) weeks.

If an Employer intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.

The start time for the day shift shall be 8:00 a.m. with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one (1) hour either way to coincide with the end of the day shift.
The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

C. Three (3) Shift Operation

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift. A shift differential of one-seventh (1/7) shall be paid for all normal scheduled shift hours worked.

Those employees working on the night shift shall work seven (7) hours per shift. A shift differential of one-fifth (1/5) shall be paid for all normal scheduled shift hours worked.

101 Rest Periods

A. For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, for each half shift worked. Where a half shift is less than four (4) hours, there shall be no rest period excluding the third shift.

B. For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

C. For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two hours of overtime worked.

102 Reporting Pay

A. An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of three (3) hours' pay plus his appropriate daily travel or board allowance at the applicable rate when he reports for work but is unable to commence or continue to work because of circumstances beyond his control. An employee will not receive this allowance if he is unable to complete his shift as a result of inclement weather.

B. Notwithstanding Subsection 102, Item A above, when an Employer considers it necessary to shut down a job to avoid the possible loss of human life, because of an emergency situation that could endanger the life and safety of an employee, in such cases, employees will be compensated only for the actual time worked.

A. An employee who reports for work at the beginning of a shift and is unable to commence work due to inclement weather will receive three (3) hours' pay at the applicable rate. To qualify, the employee must remain at a protected place or area as designated by the Employer for three (3) hours unless excused by an authorized representative of his Employer.

B. An employee who reports for and commences work but is unable to continue work due to inclement weather shall receive three (3) hours' pay at the applicable rate or pay for the actual time worked for that shift, whichever is the greater.

C. An employee in receipt of inclement weather pay shall also receive travel or board allowance if applicable.

104 Recognized Holidays

A. The holidays recognized under this Agreement are:

<table>
<thead>
<tr>
<th>New Year's Day</th>
<th>Civic Holiday</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good Friday</td>
<td>Labour Day</td>
</tr>
<tr>
<td>Easter Monday</td>
<td>Thanksgiving Day</td>
</tr>
<tr>
<td>Victoria Day</td>
<td>Christmas Day</td>
</tr>
<tr>
<td>Canada Day</td>
<td>Boxing Day</td>
</tr>
</tbody>
</table>

B. EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

C. Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed either on the preceding Friday or following Monday.

D. EPSCA reserves the right to change the day of observation of a recognized holiday when such holiday falls on a Tuesday or Thursday.
105
Overtime
Rates

A. When working on an eight (8) hour day and five (5) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of 10 hours per day shall be paid at two (2) times the base hourly rate.

When working on a ten (10) hour day and four (4) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the base hourly rate.

Overtime work performed on Saturday, Sunday, Recognized Holidays and non-shift days shall be paid at two (2) times the basic hourly rate.

B. When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of his shift and after approximately two (2) hours has been worked, he shall be provided with a lunch and allowed thirty (30) minutes to consume same and be paid at the base hourly rate of pay.

After each additional four (4) hours is worked, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and a lunch when work is required beyond that four (4) hour period. Where an employee has been notified the previous day, no lunch will be provided, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays and Recognized Holidays.

106
Call-In
Pay

A. When an employee is called in to work outside of his normal hours of work, he shall receive a minimum of two (2) hours' work at the appropriate premium rate plus travel allowance where applicable.
B. If the employee's normal hours of work commences within this two (2) hour period, the employee will be paid premium time for the actual hours worked and revert to his normal rate at the commencement of his normal hours of work.

**TRAVEL AND ROOM AND BOARD ALLOWANCE**

A. The daily travel allowance will be paid by the Employers to their employees who are not receiving room and board allowance as referred to in Article 201, on the following basis:

(i) If an employee lives within forty (40) radius kilometers* of the project, no travel allowance will be paid.

(ii) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day travel allowance effective May 1, 2000, ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002 and $20.35 effective May 1, 2003) for each day worked or reported for.

(iii) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day travel allowance effective May 1, 2000, ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002 and $23.60 effective May 1, 2003) for each day worked or reported for.

(iv) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day travel allowance effective May 1, 2000, ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002 and $27.10 effective May 1, 2003) for each day worked or reported for.

(v) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Subsection 1101 below, he shall receive $29.85 per day travel allowance effective May 1, 2000, ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002 and $31.35 effective May 1, 2003) for each day worked or reported for provided he continues to travel greater than 97 radius kilometers daily.

* For the purpose of this Section, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

**Note:** Bruce G.S. "A", Bruce G.S. "B" and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce Complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
(vi) When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee’s travel allowance entitlement, board allowance entitlement and initial and return allowance entitlement.

(vii) A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

(viii) Upon application, payment of Room and Board/Travel Allowance will be issued for the first two pay periods. Failure to provide satisfactory proof of eligibility during this period, will result in cessation of payments and the recovery in two equal amounts. In the event of termination for any reason before full recovery, any balance owing will be deducted from the final pay.

NEW

B. When the employee is in receipt of Room & Board Allowance on remote projects, where the roads from the temporary accommodation to the work location are loose surface and where the nearest place of accommodation is in excess of forty (40) radius kilometres from the job, the employer shall have the option of providing transportation from the temporary accommodation, or paying travel allowance in accordance with Article 200 A (i) to (vii).

201 Room and Board Allowance

A. The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(i) An Employer may supply either:

(a) free room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

* An Employee's "Regular Residence" is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee obtains temporary accommodation for that work location.
(b) a subsistence allowance; or
(c) a travel allowance.

(ii) An employee may exercise his option not to stay in a camp or accept free room and board. An employee who exercises this option shall receive a room and board allowance as follows:

(a) When an employee's regular residence is more than 97 radius kilometers from a Project located North of the French River and the employee maintains temporary accommodation at or near the Project, the employee shall be paid a subsistence allowance of $70.00 per day effective May 1, 2000, ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002 and $76.00 effective May 1, 2003) for each day worked or reported for.

(b) When an employee's regular residence is more than 97 radius kilometers from a Project located South of the French River and the employee maintains temporary accommodation at or near the project, the employee shall be paid a subsistence allowance of $57.00 per day effective May 1, 2000, ($59.00 effective May 1, 2001, $61.00 effective May 1, 2002 and $63.00 effective May 1, 2003) for each day worked or reported for, subject to (d) below.

(c) When an employee's regular residence is more than 97 radius kilometers from the Project and the employee commutes to work on a daily basis, the employee shall receive $31.10 per day effective May 1, 2000, ($33.10 effective May 1, 2001, $35.10 effective May 1, 2002 and $37.10 effective May 1, 2003) for each day worked or reported for.

(d) At the Pickering and Darlington Projects, employees who live beyond 97 radius kilometers from the Project, shall receive $45.00 per day effective May 1, 2000, ($48.00 effective May 1, 2001, $51.00 effective May 1, 2002 and $54.00 effective May 1, 2003) for each day worked or reported for.

(e) When an employee's regular residence is more than five hundred (500) radius kilometres from the project, and the job or project is worked on a four ten (4 x 10's) hour work week, the employee shall receive room and board on a five (5) day basis for a regular work week. If the employee is required to work an additional ten (10) hour shift(s) beyond the normal four ten (4 x 10) hour shift, the employee will be entitled to room and board for an additional ten (10) hour shift worked to a maximum of seven (7) days room and board in a week.

B. An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Article 200 and Article 201, Item A above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.
C. The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(i) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the Project medical attendant or an authorized representative of his Employer.

(ii) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(iii) An employee who remains in camp and who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(iv) An employee who remains in camp and who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

A. On recruitment of tradesmen who live between 97 and 161 radius kilometers from the project, the Employer shall pay $21.00 effective May 1, 2000, ($22.00 effective May 1, 2001, $23.00 effective May 1, 2002 and $24.00 effective May 1, 2003) for the initial trip to the project.

B. On recruitment of tradesmen who live beyond 161 radius kilometers from the project, the Employer shall pay $0.34 effective May 1, 2000, ($0.35 effective May 1, 2001, $0.36 effective May 1, 2002 and $0.37 effective May 1, 2003) per radius kilometer plus travel time based on one hour's pay for each 80 radius kilometers of travel, or part thereof, to a maximum of 8 hours' pay for the initial trip to the project from where the tradesman lives or the Local Union Referral Hall for the project, whichever is closer to the project.

C. To qualify for payment in Items A or B, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of the job, whichever is lesser.
D. On termination of employment due to a reduction of staff, an employee entitled to payment under Items A or B shall be entitled to return expenses calculated in the same manner as in Items A or B above for the return trip from the project to where the tradesman lives or place of recruitment, whichever is closer to the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.

E. (i) On the Thunder Bay Project and Atikokan Project, an employee shall qualify for a return trip from the Project to his regular residence for each thirty (30) days worked on the Project providing his regular residence is more than four hundred (400) radius kilometers from the Project.

(ii) For each entitlement, the Employer shall pay travel expenses on the basis of the equivalent cost of public transportation plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel, or part thereof, to a maximum of eight (8) hours' pay.

A. An employee who is requested or receives approval from an authorized representative of his Employer to use his personal vehicle for the convenience of his Employer shall be reimbursed $0.37 per kilometer travelled effective May 1, 2000, ($0.38 effective May 1, 2001, $0.39 effective May 1, 2002 and $0.40 effective May 1, 2003) for such use of his vehicle.
These provisions would only apply to work covered by the "Modified Provisions of this Construction Agreement."

When working under the provisions of this appendix all conditions listed below will supersede those contained in the main agreement. Where this appendix is silent, the appropriate article in the collective agreement applies.

NEW  The overtime rates will be as per the Modified Provisions.

This shift schedule is intended for work greater than four (4) weeks in duration, however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

It in the transition onto or off this 7 day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours pay. This does not apply to those employees who are laid off during or at the end of the schedule. The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the employer to provide seven (7) days per week work coverage, on a one (1), two (2), or three (3) shift per day basis. When this occurs, a specific shift arrangement will be established by the employer detailing the shift schedule to be worked. The employer will provide the Union with forty-eight (48) hours notice prior to the implementation of these shift provisions.

**Day Shift**

Regularly scheduled hours of work Monday to Friday inclusive shall be paid at straight time hourly rates.

**Afternoon Shift**

Regularly scheduled hours of work, Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-seventh (1/7) of the straight time hourly rate.
Night Shift

Regularly scheduled hours of work, Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-fifth (1/5) of the straight time hourly rate.

All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at two (2) times the straight time hourly rate. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half (1/2) hour shall be allowed to be taken no later than five (5) hours after the commencement of a shift.

For employees working regularly scheduled hours, two (2) fifteen (15) minute rest periods will be allotted at a time and location directed by the employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
LETTER #1

June 23 1992

Mr. J. SPRACKETT
President,
Electrical Power Systems
Construction Council of Ontario
International Brotherhood of
Electrical Workers
61 International Blvd.
Toronto, Ontario

Dear Mr. Sprackett:

Room & Board Allowance Understanding
North of the French River

This letter will confirm an understanding reached at current bargaining between EPSCA and the IBEW EPSCCO ("Generation Project") as follows:

Individuals in the 80-97 kilometre radius ring working north of the French River will be eligible for room and board allowance if their actual road kilometres travelled exceed their radius distance by more than thirty-three (33%) percent.

Yours truly,

[Signature]

V.W. Medri
Secretary-Treasurer
LETTER OF UNDERSTANDING #1

Employment Referrals to Nuclear Generating Facilities

It is agreed by the parties to this understanding that, prior to any member being referred for employment at a nuclear generating facility, the member must submit to a security check. Only members who successfully obtain security clearance will be referred to the facility for employment. Once these referrals have been hired on, they will be paid fifty ($50.00) dollars on their first week’s pay cheque, in consideration of their time spent filling out the security clearance forms.

The Union will be notified, as soon as possible, whether or not an individual has successfully obtained security clearance. This pre-clearance process does not prohibit the Union from filing a grievance against the Employer on behalf of any member who is refused employment due to his/her failure to obtain security clearance.

Dated at Toronto this 23rd Day of April, 1999

LETTER OF UNDERSTANDING #2

As discussed during negotiations, in order to ensure an adequate supply of qualified tradesmen for employment opportunities, it is agreed that the IBEW and/or Local Union(s) will cooperate in a training process as follows:

When it is determined that a requirement can be foreseen for IBEW/Local Union members with particular skills or qualifications, the Employer will provide the instructor(s) and the facilities at his cost and the IBEW members, on their own time, will attend such training courses to acquire such skills and/or qualifications.

AND

THE IBEW CONSTRUCTION COUNCIL OF ONTARIO (IBEW CCO)

Mr. Barry Roberts, Chairman
EPSCA Negotiating Committee

Dear Sir:

The IBEW CCO/EPSCA Negotiating Committees agree to the following:

Regarding: SECTOR TO SECTOR 'TRANSFERS'

It is agreed for Local Union jurisdictions which do not permit 'transfers' from Sector to Sector, that the following conditions shall apply; for work requiring one month or less to complete, the Employer will be allowed to 'transfer' six (6) employees, who shall be Members of the Local Union, already in their employ.

For Local Union jurisdictions that do allow Sector to Sector 'transfers' they may continue to do so, as is their practice.

Dates this 23rd Day of April 1999

Expiry: Duration of this Collective Agreement.

MEMORANDUM OF SETTLEMENT

BETWEEN

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

THE IBEW ELECTRICAL POWER
COUNCIL OF ONTARIO
representing the following affiliated Local Unions
105, 115, 120, 303, 353, 402, 530, 586,
773, 804, 894, 1687, 1739

Dated this 15th day of May, 2004
It is agreed that the existing agreement between the parties which expires April 30, 2004 will be renewed with the following amendments:

SECTION 2  **SCOPE OF AGREEMENT**

Amend Section 200 – Recognition, to add Bruce Power LP

Amend Section 202 – Geographic Jurisdiction, to accept Union proposal dated May 12, 2004 (see attached document)

SECTION 3  **DURATION OF AGREEMENT**

Amend Section 300 to read as follows:

“This agreement shall become effective May 1, 2004 and will expire on April 30, 2010.”

SECTION 7  **EMPLOYMENT PRACTICES/HIRING**

Add NEW sentence to 701 A (ii) as follows:

“On Nuclear sites only, local members replacing travel cards must be security cleared prior to hire and possess the same owner specific nuclear training as the employee being replaced. On Nuclear sites only, replacement of travel cards will not occur during outages.”

SECTION 8  **HOURS OF WORK**

New Section 8 proposed. See attached EPSCA document.

SECTION 9  **WAGES AND PAY PROCEDURE**

**WAGES:**

Effective May 1, 2004 – Increase journeyman TWP by $1.10
Effective May 1, 2005 – Increase journeyman TWP by $1.10
Effective May 1, 2006 – Increase journeyman TWP by $1.20

Additional ICI wage increase - effective date of ICI increase

ICI increase/date for the following three years of agreement.
Replace 900 B with the following:

"Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. The effective date of such changed wage schedules, dues and remittances shall be the date of issuance."

Add to 901 A (i) the following:

"Failure by the Employer to comply with the requirements of this clause will entitle the employee to one (1) hour’s pay at the straight time rate."

Add to 901 A (ii) the following:

"In the case of a holiday falling on a Thursday or Friday, the employee shall be paid on the Wednesday prior to this holiday."

SECTION 10 UNION AND BENEFIT FUNDS

Amend 1004 to indicate most current ESA reference.

SECTION 11 TRAVEL AND ROOM AND BOARD ALLOWANCE

Amend Section 1101 - Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

- May 1, 2004 – 4%
- May 1, 2005 – 2%
- May 1, 2006 – 2%
- May 1, 2007 – 4%
- May 1, 2008 – 2%
- May 1, 2009 – 2%

Amend Section 1102 A as follows:

- May 1, 2004 – $25.00
- May 1, 2005 – $26.00
- May 1, 2006 – $27.00
- May 1, 2007 – $28.00
- May 1, 2008 – $29.00
- May 1, 2009 – $30.00
Amend Section 1102 B as follows:

- May 1, 2004 – 40 cents
- May 1, 2006 – 42 cents
- May 1, 2008 – 44 cents

SECTION 17 RADIATION WORK

Amend 1700 E to $12.00 per day

NEW F. Add the following language:

Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person (Greenman) who has achieved the full radiation qualification via (i) the approved Ontario Power Generation Inc. and/or Bruce Power Training Program, (ii) has successfully completed the construction R.P.A. training and checkouts, and (iii) has performed R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

The Employer will select for Greenman training only those employees who are members of the Local Union for the Project.

R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

In the case of a recall to work, Employers reserve the right to recall qualified Greenmen in sequence from the out-of-work list to the location from where they were laid off. Recalled Greenmen will perform sufficient Greenman work to maintain their skill level.

APPENDIX A INDEX

Revise Modified Provisions Index - Article 1 replace Hours of Work to read Overtime Rates.
ARTICLE 1  

OVERTIME RATES

NEW Article 1 as follows:

When working on an eight (8) hour day and five (5) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of 10 hours per day shall be paid at two (2) times the base hourly rate.

When working on a ten (10) hour day and four (4) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the base hourly rate.

Overtime work performed on Saturday, Sunday, Recognized Holidays and non-shift days shall be paid at two (2) times the basic hourly rate.

B. When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of his shift and after approximately two (2) hours has been worked, he shall be provided with a lunch and allowed thirty (30) minutes to consume same and be paid at the base hourly rate of pay.

After each additional four (4) hours is worked, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and a lunch when work is required beyond that four (4) hour period. Where an employee has been notified the previous day, no lunch will be provided, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays and Recognized Holidays.
ARTICLE 2  TRAVEL AND ROOM AND BOARD ALLOWANCE

Amend Article 200. Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

- May 1, 2004 – 4%
- May 1, 2005 – 2%

- May 1, 2004 – .40 cents
- May 1, 2006 – .42 cents
- May 1, 2008 – .44 cents
HOURS OF WORK

A. One (1) or Two (2) Shift Operation

The weekly hours of work Monday to Friday inclusive shall consist of forty (40) hours for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.

The weekly hours of work may be arrived at by having the employees work either:

- four (4) consecutive ten-hour shifts, Monday to Thursday or;
- four (4) consecutive ten-hour shifts, Tuesday to Friday or;
- five (5) consecutive eight-hour shifts

but not concurrently on the same work program.*

Each Employer will notify the Local Union of the weekly hours of work for each work program* at the site.

Weekly hours of work will be established for a minimum period of two (2) weeks.

If an Employer intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.

The start time for the day shift shall be 8:00 a.m. with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours to coincide with the end of the day shift.

The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

*For the purposes of this section, a work program will be defined as work taking place on a site that includes the following:

- Outages,
- Specific contracted scopes of work,
- Various and different modifications in an operating plant where the owner dictates the hours of work, or
- Subcontracts for a prime contractor where the prime contractor dictates the hours of work.
B. Three (3) Shift Operation

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 \( \frac{1}{2} \)) hours per shift. A shift differential of one-seventh (1/7) shall be paid for all normal scheduled shift hours worked.

Those employees working on the night shift shall work seven (7) hours per shift. A shift differential of one-fifth (1/5) shall be paid for all normal scheduled shift hours worked.

C. A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked, excluding Saturdays, Sundays and Recognized Holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the balance of the four (4) consecutive shifts that would have been worked had the employee not been reassigned.

D. The shift rate will be based on the day in which the shift begins.

E. IBEW members assigned to fire watch duties may commence work after the start of the rest of the crew. In these cases, normal scheduled hours of work beyond the quit time of the rest of the crew will not be subject to overtime rate of pay.

F. It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Union.

801
Rest
Periods

A. For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, for each half shift worked. Where a half shift is less than four (4) hours, there shall be no rest period excluding the third shift.

B. For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

C. For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two hours of overtime worked.
An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of three (3) hours' pay plus his appropriate daily travel or board allowance at the applicable rate when he reports for work but is unable to commence or continue to work because of circumstances beyond his control. An employee will not receive this allowance if he is unable to complete his shift as a result of inclement weather.

Notwithstanding Subsection 802, Item A above, when an Employer considers it necessary to shut down a job to avoid the possible loss of human life, because of an emergency situation that could endanger the life and safety of an employee, in such cases, employees will be compensated only for the actual time worked.

An employee who reports for work at the beginning of a shift and is unable to commence work due to inclement weather will receive three (3) hours' pay at the applicable rate. To qualify, the employee must remain at a protected place or area as designated by the Employer for three (3) hours unless excused by an authorized representative of his Employer.

An employee who reports for and commences work but is unable to continue work due to inclement weather shall receive three (3) hours' pay at the applicable rate or pay for the actual time worked for that shift, whichever is the greater.

An employee in receipt of inclement weather pay shall also receive travel or board allowance if applicable.

The holidays recognized under this Agreement are:

New Year's Day 
Good Friday 
Easter Monday 
Victoria Day 
Canada Day

Civic Holiday 
Labour Day 
Thanksgiving Day 
Christmas Day 
Boxing Day

B. EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

C. Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed on the preceding Friday or following Monday.

D. EPSCA reserves the right to change the day of observation of a recognized holiday when such holiday falls on a Tuesday or Thursday.
Call-In Pay

A. When an employee is called in to work outside of his normal hours of work, he shall receive a minimum of two (2) hours' work at the appropriate premium rate plus travel allowance where applicable.

B. If the employee's normal hours of work commences within this two (2) hour period, the employee will be paid premium time for the actual hours worked and revert to his normal rate at the commencement of his normal hours of work.
806 Overtime Rates

A. Overtime shall be paid at two times the straight time rate for all work performed outside of normal hours as defined in Section 8 and for work performed on Saturday, Sunday and the recognized holidays listed in Subsection 804, Item A above.

B. When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of his shift and after approximately two (2) hours has been worked, he shall be provided with a lunch and allowed thirty (30) minutes to consume same and be paid at the base hourly rate of pay. After each additional four (4) hours is worked, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and a lunch when work is required beyond that four (4) hour period. Where an employee has been notified the previous day, no lunch will be provided, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

To qualify for the above-noted provisions, on a Friday, an employee will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays and Recognized Holidays.
LETTER OF UNDERSTANDING #6

BETWEEN

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION (EPSCA)

AND

THE IBEW CONSTRUCTION COUNCIL OF ONTARIO (IBEW CCO)

Clarification Note – Replacement of Travel card members

As discussed in negotiations, in cases relating to Article 701 A (ii), the Local Union will notify the Employer and the EPSCA Office in writing at the time it seeks to replace a travel card with a Local Union member who does not possess the owner specific training required.

In these instances, the Employer will provide such training when the training is available and Local member, on his own time, will complete such training before he can replace a travel card.

Dated this 15th day of May, 2004 at Toronto, Ontario.

FOR EPSCA

FOR the IBEW CCO
LETTER OF UNDERSTANDING #7

BETWEEN

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION (EPSCA)

AND

THE IBEW CONSTRUCTION COUNCIL OF ONTARIO (IBEW CCO)

Re: Payment of Board Allowance North of the French River

During current negotiation discussions, the Union raised concerns about room and board/travel at certain Generating sites north of the French River.

The Parties agree to meet by the end of July 2004 to identify those Generating stations where the Union has issues and reach a mutual agreement as to appropriate compensation for Room and Board/Travel at those sites.

Dated this 15th day of May, 2004 at Toronto, Ontario.

FOR EPSCA

FOR the IBEW CCO
- Letters of Understanding 1 through 5 to be renewed.
The parties agree to recommend this settlement for ratification. This agreement is conditional upon ratification by June 22, 2004. Following ratification, all terms and conditions will become effective May 1, 2004 (unless otherwise noted) and shall form the new agreement between the Parties.

Dated this 15th day of May, 2004 at Toronto, Ontario.

</tbody>
</table>

(1) = per hour worked; (2) = per hour paid
OVERTIME:
Mon-Fri: 1 1/2 times for up to and including 2 hours beyond the normal daily scheduled number of hours. This applies for both 4 day x 10 hours per day schedule and 5 day by 8 hour per day schedule.
Non-Scheduled Work Days - 2 times for all hours worked.
Sat: 2 times for all hours worked.
Sun & Hol: 2 times for all hours worked.

UNION FUNDS
Union Funds include the following items:
- Union Dues - $0.74 per hour paid
- DeNovo - $0.02 per hour paid (includes $0.01 per hour employee deduction and $0.01 per hour employer contribution)
- IBEW/EPSCA - $0.04 per hour paid
- Retiree's Fund - $0.02 per hour paid
- RRSP (non-taxable): - $2.58 per hour paid
  - $3.68 per hour paid - effective May 1, 2005
  - $4.88 per hour paid - effective May 1, 2006

NOTE: Stabilization Fund is not included in Union Funds
Stabilization Fund amount is one hour's pay, at the Base Hourly Rate, per week. This amount is to be deducted for each classification. This amount to be deducted when an employee works more than 16 hours in a pay week. Tax is to be paid on the deduction; a T4 slip will be issued at year end for the total amount deducted.

UNION DUES
Union Dues are included in Union Funds for this Local.

BENEFITS
All remittances (employer contributions, employee deductions and Union Dues), excluding the EPSCA Association Fund, are to be sent to:
- IBEW Local Union 303 Administrator
  - P.O. Box 68
  - THOROLOD, ON
  - L2V 1Y7

GEOGRAPHIC AREA: Niagara (RM); in Haldimand-Norfolk (RM), the Town of Dunnville
MASTER PORTION

The amendments contained in the Statement of Settlement, dated May 12, 2000 have been incorporated into the Master Portion of the Collective Agreement in accordance with Article 33.1 of the Collective Agreement negotiated between the Senior Bargaining Committees of The Electrical Power Systems Construction Association and the Power Council of Unions.
REV

This Collective Agreement distinguishes between two broad categories of work; namely, work that is covered by the “modified provisions” of this construction agreement and work that is not. “Modified provisions” apply to all work on Lines & Stations and most work on existing generating sites. Following is a more detailed explanation:

The “Modified Provisions” of this Construction Agreements will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:
   • a new facility which provides a new function
   • a new (i.e. additional) generating unit

Appendix D - contains the “Modified Provisions of this Construction Agreement”. All terms of this collective agreement shall apply to work covered by Appendix D, with the exception of Article 16 – Reporting Pay, Article 17 - Generation Projects Daily Travel Allowance and Room and Board, Article 23 – Meals on Overtime and Article 26 - Hours of Work. Articles 16, 17, 23 and 26 do not apply when working under the terms and conditions of the “modified provisions”, as they are replaced by Sections 1 through 4 of Appendix D.

When work does not fall within the jurisdiction of Appendix D, all terms of this agreement, with the exception of Appendix D, apply.

A chart to illustrate the above applications follows:

<table>
<thead>
<tr>
<th>Lines &amp; Stations - Existing and New Sites</th>
<th>Generating - Existing Sites Excluding construction of new facility (new function) &amp;/or new (additional) generating unit(s)</th>
<th>Generating - Existing Sites Involving construction of new facility (new function) &amp;/or new (additional) generating unit(s)</th>
<th>Generating - New Sites (i.e. Greenfield Work)</th>
</tr>

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

POWER COUNCIL OF UNIONS
(hereinafter called the "Council")

WHEREAS EPSCA is an Association formed to represent Employers in collective bargaining and on their behalf enter into collective agreements covering those of their employees in the bargaining unit as hereinafter defined;

AND WHEREAS the Council is formed to represent the Unions listed in Article 2 in collective bargaining with EPSCA and to enter into collective agreements on their behalf and on behalf of their members in the bargaining unit as hereinafter defined;

AND WHEREAS it is the desire of the parties to conclude an agreement with a new concept designed to bring stability, harmony, and an effective method to amicably resolve problems in the electrical power systems sector of the construction industry, in the Province of Ontario;

NOW THEREFORE the parties hereby agree as follows:
Article 1

RECOGNITION

1.1 EPSCA recognizes the Council as the exclusive bargaining agency for a bargaining unit comprising employees as defined in Section 1.4 and foremen as defined in Section 1.5 engaged in all construction industry work* performed in the Province of Ontario on Ontario Power Generation Inc (OPGI) and Hydro One property for the bulk power system, save and except the building of commercial-type office facilities at urban locations remote from operating facilities.

For the purpose of clarity, the bulk power system comprises generating stations, hydraulic works, heavy water facilities, transmission lines (voltages over 50 kV), transmission stations, microwave and repeater stations.

1.2 The work described in Section 1.1 shall also include work on property acquired by Ontario Power Generation Inc (OPGI) and Hydro One for:

(a) the supply of aggregate and concrete used in the construction of said facilities; and

(b) ancillary material yards which are defined as property acquired by Ontario Power Generation Inc (OPGI) and Hydro One for the storage of materials to be used on a project by Employers.

1.3 The Council recognizes EPSCA as the exclusive bargaining representative for all Employers in respect of work performed by their respective employees in the bargaining unit set forth in Section 1.1.

1.4 The term "employee" shall include all employees of the Employers in the classifications set out in the trade appendices provided in Article 4, Sections 4.1 and 4.2, save and except those described hereunder:

(a) Carpenters and Laborers employed by an Employer signatory to the National Agreement for Canada, Stacks-Chimneys-Silos, when performing work covered by the scope of that agreement; and

* For the purpose of The Electrical Power Systems Construction Association, the work performed is deemed to be under the responsibility of the Engineering and Construction Services Branch. The work encompasses:

- construction of new facilities
- additions to existing facilities
- major modifications
- rehabilitation
- reconstruction of existing facilities
(b) Operating Engineers employed by an Employer signatory to the Crane and Equipment Rental Agreement with Local Union 793, when performing work covered by the scope of that agreement; and

The term "employee" includes foremen in Articles 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24.1(b), 24.1(c), 26, and in the applicable Vacation Pay and Statutory Holiday Articles in each Appendix.

1.5 The term "foreman" shall include all foremen of the Employers between the ranks of, but not including, working foreman and general foreman, save and except those described hereunder:

(a) Carpenter foremen and Laborer foremen employed by an Employer signatory to the National Agreement for Canada, Stacks-Chimneys-Silos, when performing work covered by the scope of that agreement; and

(b) Operating Engineer foremen employed by an Employer signatory to the crane and Equipment Rental Agreement with Local Union 793, when performing work covered by the scope of that agreement; and

1.6 The term "Employers" shall include individual members of EPSCA and any company, partnership, sole proprietorship, joint venture, contractor, subcontractor or any person that is bound by the terms and conditions of this Agreement.

1.7 EPSCA and the Council agree the use of nomenclature is meant to refer to both genders.

Article 2

MEMBERS OF THE COUNCIL

2.1 It is recognized that the Council comprises certain International Unions whose names are listed hereunder:

International Union of Operating Engineers
Laborers' International Union of North America
United Brotherhood of Carpenters and Joiners of America

2.2 Individual Unions of the Council shall be hereinafter called the "Union".
Article 3

FORM OF AGREEMENT

3.1 This Agreement shall consist of a master portion which shall apply to employees and to foremen who work for Employers while such employees and foremen are engaged in work as described in Article 1, Recognition. There shall be one appendix negotiated by and for each member Union of the Council and one appendix for foremen. The appendices shall apply province-wide.

Article 4

APPENDICES

4.1 The trade appendix applicable to each member Union of the Council will contain those provisions which are not common to all member Unions of the Council, and those provisions will apply to appropriate members of each International Union as provided in its appendix while they are working under the terms of this Collective Agreement. Such appendices shall be deemed to be part of this Agreement.

4.2 Items which can be included in the trade appendices are:

- wages
- classifications
- benefits (pension, welfare and supplementary unemployment benefits)
- hours of work not covered in the master portion of this Agreement
- overtime rate
- premiums
- shift differential rate
- inclement weather pay
- apprenticeship and training programs
- seniority
- supply of tools
- key tradesmen
- protective clothing and equipment
- welding tests
- travel and transportation
- employer's responsibility
- vacation pay
- statutory holidays
4.3 Because a variety of practices exist in the construction industry regarding representation of foremen, an appendix applicable to foremen shall form part of this Agreement. The Foreman Appendix will be negotiated by the executive officers of EPSCA and the Council.

4.4 The "classifications" referred to in Subsection 4.2 appearing in the trade appendices do not establish craft jurisdiction. Such jurisdiction is established in accordance with Articles 10 and 11 of this Collective Agreement.

Article 5

EXECUTIVE COMMITTEES

5.1 The Council and EPSCA shall each appoint an Executive Committee. The Executive Committee of EPSCA shall consist of the Board of Directors and the officers of EPSCA. The Executive Committee of the Council shall consist of the officers of the Council and the senior representative of each Union. The Committees will meet together at least annually to review matters associated with the administration of this Collective Agreement, with the intent that administrative policies will be formulated for consideration by each Executive Committee. The Executive Committees will also meet together to receive reports of joint committees established under this Agreement.

Article 6

PROJECT COMMITTEES

6.1 A Project Committee shall be established for each of the Major Projects and the Construction and Services Division.

6.2 The Committee will be responsible for conducting EPSCA/Power Council of Unions concerns for each Major Project or Construction and Services Division and will meet quarterly or as necessary to deal with working and living conditions on the job, excluding matters which may be grieved or negotiated and disputes involving work assignments.

6.3 On the part of EPSCA, each Project Committee shall comprise the appropriate Manager of Construction, General Superintendent, EPSCA Representative, and a like number of contractor representatives elected from among and by the contractors on each particular Major Project or Construction and Services Division. In addition, the officers of EPSCA are ex officio members of this Committee.

6.4 On the part of the Council, each Project Committee shall comprise the appropriate accredited Union Representative for each Major Project or Construction and Service
Division, as defined in Article 7, and may include the senior union representatives. In addition, the officers of the Council are ex officio members of this Committee.

6.5 The chairman of each EPSCA Project Committee shall be the Manager of Construction for the appropriate Major Project or Construction and Services Division, as the case may be.

6.6 The chairman of each Council Project Committee shall be appointed by the Council members.

6.7 Chairmanship of the meetings will alternate between the EPSCA Project Committee chairman and the Council Project Committee chairman.

6.8 Answers to questions raised by either party shall be given, in writing, within five (5) working days of the meeting by the party answering the questions to the party who raised the questions.

6.9 When an urgent answer is needed to a problem not relevant to negotiation, grievance or work assignment, the Project Committee will be called to meet within forty-eight (48) hours, where practicable, to deal with the problem. The Committee's answer will be given, in writing, to the party raising the question within forty-eight (48) hours of the meeting.

6.10 EPSCA and the Power Council of Unions will set the time and place of all Project Committee meetings.

**Article 7**

**ACCREDITED UNION REPRESENTATIVES**

7.1 The senior representative of each Union will designate local union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two representatives from each Union for each Major Project and a suitable number for the Construction and Services Division. The Council will notify the General Manager of EPSCA, in writing, of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Such representatives, after identifying themselves to the EPSCA representative upon entering the job site, will be free to observe the progress and conduct of the work and to conduct normal union business. The Council undertakes that these representatives will not hinder or interfere in any way with the said work.
7.2 An Accredited Union Representative may be appointed by the International Representative to be his designate in matters requiring the involvement of the International Representative.

The International Representative will inform EPSCA, in writing, of the name, duration of, appointment and function of such designate.

Article 8

UNION STEWARDS

8.1 Accredited Union Representatives shall inform the appropriate EPSCA Representative and the Employer of the steward, in writing, of the names of all stewards, one of whom shall be designated Chief Steward, as they are appointed and when they cease to act as stewards. A steward, other than a Chief Steward, shall exercise his duties only in respect to employees of his Employer. A Chief Steward, in order to carry out his duties in respect to employees of other than his Employer, shall first involve the EPSCA Representative. A steward shall obtain permission from his immediate supervisor before leaving his work area for union business. Such permission shall not be unreasonably denied.

Except at Bruce Nuclear Power Development (BNPD):

Only in situations where an accredited Union Representative is unable to attend pre-job and/or mark-up meetings, may the Chief Steward be designated and attend, as part of the Chief Steward's duties, on behalf of the accredited union representative.

8.2 The appropriate Union shall receive written notice before the employment of a steward is terminated by his Employer, and provided the steward is able to perform the work required, he will be the last employee to be retained by his Employer in a layoff/standoff situation.

8.3 The chief steward will be informed of all scheduled overtime. Where practical, a steward, in accordance with practices set out in individual trade appendices, shall be given the first opportunity to work the overtime providing he is qualified to perform the work.

8.4 No foreman or subforeman shall be permitted to act as a steward.
Article 9

ADVANCE NOTICE

9.1 EPSCA will advise the Council of all new Generation Station Projects and Lines and Stations Construction Projects coming under the provisions of this Agreement for the construction field forces of the Employers.

Upon the request of the Council, EPSCA will convene a prejob conference before work commences to discuss preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the project. EPSCA will record the minutes of prejob conferences and forward them within fifteen (15) working days to the Council and those affiliates in attendance at the conference.

9.2 Subsequent prejob conferences will be convened by EPSCA before specific portions of work commence to discuss the final details of the work and to establish conditions in accordance with this agreement for that work.

9.3 EPSCA will provide written notice to the Council as far in advance as possible of new work and prejob conferences as noted in Sections 9.1 and 9.2 above. For work of less than one week's duration and requiring five (5) or less employees, prejob meetings must be arranged with as much advance notice as possible by the office of the General Manager of EPSCA, but without formal notice, in writing, unless the prejob meeting has been waived by the parties.

Article 10

WORK ASSIGNMENT

10.1 The jurisdiction of the Unions shall be that jurisdiction established by Agreements between International Unions claiming the work or Decisions of Record recognized by the AFL-CIO for the various classifications and the character of work performed, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction. An Agreement or Decision of Record is one that is published by the Building and Construction Trades Department, AFL-CIO (Agreement and Decisions Rendered Affecting the Building Industry).

Where no Decision or Agreement applies, the Employer agrees to consider evidence of established practices within the industry when making jurisdictional assignments.
10.2 (a) A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of this markup process is to indicate to the Council and union affiliates the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes.

(b) When work is to be performed on a project site and it meets the following criteria: same employer, same work, same project site, the markup process will not be required. This procedure shall not preclude a Union’s right to contest previously disputed work.

In the Electricity Production Zones when work falls within this criteria the EPSCA Office will send out a “Notification of Work” along with a copy of the original minutes of mark-up meeting(s) to the Local Unions prior to work commencing. This procedure shall not preclude the Union’s right to contest previously assigned work, if the work is in a Local Union jurisdiction other than the one it was marked up in.

(c) When an Employer has work that is less than a 3 week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Council and union affiliates will be notified of the scope of work and the Employer’s proposed work assignments. The Unions will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Council and Union affiliates of the final work assignments prior to the commencement of the work.

(d) All work that does not meet the criteria set out in clauses 10.2(b) or 10.2(c) will be reviewed and assigned at a markup meeting.

(e) EPSCA will provide written notice to the Council as far in advance as possible of markup meetings. The Unions may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

(f) The Employer who has the responsibility for the work shall make a proposed assignment of the work involved. The Employer shall be responsible for providing copies of proposed assignments to the Council and union affiliates in attendance at the markup meeting. The Employer will specify a reasonable time limit for the Unions involved to submit evidence of their claims. The Employer will evaluate all evidence submitted and make a final assignment of the work involved. This final assignment will be in accordance with the procedural rules established by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. The Employer will advise the Unions of the final assignments prior to the work commencing.

REV * For the purposes of this Article, Nanticoke, Lambton, Lakeview/Hearn, BNPD, Pickering, Darlington, Lines and Stations and the 5 Electricity Production Zones are each considered individual project sites.
(g) The EPSCA representative will record the proposed assignments and
jurisdictional claims and forward a copy of them within fifteen (15) working days
to the Council and Union affiliates.

(h) The parties recognize that circumstances may arise, particularly with discovery
and emergency work, where the process set out above may not be practical or
possible, however reasonable effort will be made by the Employer to adhere to the
appropriate trade jurisdiction.

Article 11

JURISDICTIONAL DISPUTES

11.1 (a) In the event there is a jurisdictional dispute which cannot be settled on a local
basis by the Unions involved, it shall be submitted to the International Unions
involved for settlement without permitting it to interfere in any way with the
progress of the work at any time.

Any Union shall have the right to elect to pursue or respond to any jurisdictional
disputes at the Plan for the Settlement of Jurisdictional Disputes in the
Construction Industry. In the event the Union elects to pursue or respond to the
jurisdictional disputes at the Plan for the Settlement of Jurisdictional Disputes in
the Construction Industry, clauses 11.1(b), 11.2, 11.3, and 11.4 will apply.

In the event another Union (or other Unions) not signatory to this collective
agreement has (have) the option to pursue jurisdictional disputes at the Ontario
Labour Relations Board, the Council Affiliates shall have the right to pursue or
respond to any jurisdictional disputes at the Ontario Labour Relations Board
when these Unions are involved in the jurisdictional dispute.

In the event the Union elects to pursue or respond to the jurisdictional dispute at the
Ontario Labour Relations Board, clauses 11.1(b), 11.2, 11.3, and 11.4 will NOT apply.

(b) In the event that a jurisdictional dispute arises over a work assignment, the
Employer will make an assignment for the work in dispute in accordance with
the Procedural Rules and Regulations of the Plan for the Settlement of
Jurisdictional Disputes in the Construction Industry. Any Union which protests
that a contractor has failed to assign work in accordance with the procedures
specified above, shall remain at work and process the complaint through its
international office. The parties will settle such jurisdictional dispute in
accordance with procedure as outlined by the Plan for the Settlement of
Jurisdictional Disputes in the Construction Industry of the Building Trades
Department, AFL-CIO or any successor agency of the Impartial Jurisdictional
Disputes Board authorized by the Building Trades Department.
In the event the dispute is not settled by the International Unions involved, it shall then be submitted to the Administrator of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry for resolution. In the event that the International Office of the Union elects not to file with the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry, EPSCA agrees to file the dispute at the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry at the request of the International Representative of the Union. Those Unions and Employers involved shall advise the Council and EPSCA respectively, in writing, of an intent to submit a jurisdictional dispute to the Impartial Jurisdictional Disputes Board and will identify the work in question. An arbitration decision under the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry will be final and binding to the parties to this Agreement with no further recourse to the Ontario Labour Relations Board on the issue decided by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry.

EPSCA shall have direct recourse to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry when the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry has under its consideration a dispute involving the assignment of work being done by employees who are covered by this Agreement.

In the event that an arbitration decision under the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry is not rendered within sixty (60) days of the disputed assignment being referred to the Plan, EPSCA and/or the Council Affiliates shall have recourse to the Ontario Labour Relations Board for a decision provided it is processed as a jurisdictional dispute.

When a jurisdictional dispute exists in the electrical power systems sector, upon request by the International Representative of either of the Unions involved, Employers shall furnish the International Representative with a letter from a duly authorized official of the Employer on the Employer's stationery, stating that the Union requesting the letter was employed on specific types of work on a given project. The Union requesting the information will supply the Employer with the name of the other Union involved in the dispute and the Employer will provide that Union's International Representative with a copy of the letter being given to the requesting Union.

When a jurisdictional dispute exists in the electrical power system sector between Unions and upon written request by the International Representative of the Union, the Employer shall supply the International Representative of the Union involved with a copy of the evidence submitted by the other Union(s) involved along with drawings and/or prints plus a description of the work or process in dispute.
11.6 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Ontario Labour Relations Board as governed by 11.4 above, the arbitration board panel appointed by the Ontario Labour Relations Board pursuant to the Act is not authorized to award damages in respect of a mis-assignment of work only in circumstances where the other union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However this clause 11.6 shall not apply where the Jurisdictional Dispute and the mis-assignment of work involves the same employer and the same work, and on the same job previously the subject of a Jurisdictional Dispute before the Ontario Labour Relations Board or the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry.

11.7 The board panel appointed by the Ontario Labour Relations Board will govern its decision pursuant to its normal criteria.

11.8 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Ontario Labour Relations Board as governed by 11.4 above, the decision of the panel of the Ontario Labour Relations Board will be final and binding upon the parties to this agreement with no further recourse to the Plan on the issue decided by the Ontario Labour Relations Board.

Article 12

UNION SECURITY

12.1 UNION MEMBERSHIP

(a) Employees

As a condition of employment, all employees covered by this Agreement shall either be members of, or will apply for membership in, the appropriate member Union of the Council within seven (7) days of employment. It shall also be a condition of continued employment that employees maintain their union membership in good standing.

(b) Foremen

As a condition of employment, all foremen covered by this Agreement shall either be members of, or will apply for membership in, the appropriate member Union of the Council within seven (7) days of employment. It shall also be a condition of continued employment that foremen maintain their union membership in good standing.
12.2 CHECKOFF

The Employers shall deduct union initiation fees and dues from their employees' and foremen's wages. Such fees and dues will be deducted weekly or monthly and transmitted to the designated officials of the Unions, on or before the 15th day of the month following the month in which deductions are made, together with full checkoff lists of employees and foremen subject to checkoff.

The Council and member Unions shall indemnify EPSCA and the Employers for any liability arising from the deduction of initiation fees and dues.

The Union, through its International Office, will notify EPSCA, in writing, of the appropriate initiation fees and Union dues and of any changes to such fees and dues. Within three (3) weeks of receipt of an acceptable written notice, any changes to such fees and dues will be implemented. The effective date will be the date of implementation.

The Employer will check off initiation fees on receipt from the Union of authorization signed by the employee.

12.3 The Union may designate dues from any of the following options:

- a fixed dollar amount per month,

- a fixed percentage of vacationable gross earnings (as defined in the applicable Article in each Appendix) per month,

- a fixed cents per hour worked or paid,

- a fixed cents per hour worked or paid plus a fixed dollar amount per week or month,

- a fixed dollar amount per month plus a percentage of vacationable gross earnings.

Regardless of the option selected, the Employer will only remit monies to a single location. Any redistribution is the responsibility of the Union. By mutual agreement with the Union, an Employer may elect to continue current administrative practices relative to the deduction of union dues.
Article 13

EMPLOYMENT

13.1 (a) For purposes of this Article, a geographic area will be established for each Major Project and geographic areas for the Construction and Services Division. The size of these geographic areas will be dependent upon the location of the work and the trade concerned.

(b) The boundaries of the geographic areas will be jointly established at prejob conferences.

13.2 An office will be established by EPSCA, or the Employer with the approval of EPSCA, for each Major Project and the Construction and Services Division. A purpose of this office will be to co-ordinate employment as specified in this Article.

13.3 EPSCA, or the Employer with the approval of EPSCA, and the Council will exchange the names of their representatives in each of the areas described in 13.1(a), who will be responsible for co-operating in the referral and employment of reliable and competent union members.

13.4 EPSCA, or the Employer with the approval of EPSCA, will notify the appropriate Unions of future manpower requirements for all employees coming within the scope of this Agreement.

13.5 Where key tradesmen are required, Employers reserve the right to employ and transfer key tradesmen to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation projects and transmission and transformation construction.

The employment of key tradesmen and tradesmen employed through the Employment Request Article will be negotiated between EPSCA and the Union for each trade and will be contained in the trade appendices.

13.6 The employment of additional tradesmen and apprentices, excluding key tradesmen and tradesmen employed through the Employment Request Article, shall be carried out on the following basis and sequence:

(a) The EPSCA office, or the Employer with the approval of EPSCA, will request the appropriate local union office for tradesmen and apprentices required. The request will include a description of the work, the number of qualified tradesmen and apprentices required, and the name of the Employer for whom the tradesmen and apprentices will be working.
The Union members who are resident in the designated geographic area will be referred by the Union for employment through the EPSCA office. As much as their out-of-work lists will permit, the Unions will supply members on a fan-out basis from the project or work location.

The Employers will either hire such persons or substantiate their reasons, in writing, for not doing so.

The Union will co-operate with the Employer and advise the EPSCA office of the name, address and telephone number of members being referred for work with Lines and Stations Construction as soon as they are known.

If, after a request has been made, the Union is unable to supply sufficient tradesmen and apprentices to meet the manpower requirements of the Employers, the Employers may employ tradesmen and apprentices who are resident within the geographic area. Such tradesmen and apprentices shall comply with the requirements of Article 12 of this Agreement. EPSCA shall promptly notify the Accredited Union Representative, in writing, of the names, addresses, date of hire, social insurance numbers, telephone numbers, job location and classification of the persons hired.

Once the supply of suitable tradesmen and apprentices within the geographic area has been exhausted and additional tradesmen and apprentices are required, EPSCA will contact the International Representative for the trade concerned, or his designee, in order to determine whether suitable union tradesmen and apprentices are available outside of the geographic area. EPSCA will co-operate in providing employment to such union tradesmen and apprentices on the basis that they be supplied from the nearest location where they are available.

13.7 Notwithstanding the provisions of Articles 13.5 and 13.6, re-employment as required by the Workers Compensation Board shall not be a violation of this collective agreement nor be subject to the provisions of Articles 27 and 28.

**Article 14**

**PAY PROCEDURE**

14.1 NORMAL

(a) Employees shall be paid weekly and payment for any given week will be made not later than the sixth working day after the close of the payroll period, but in any event not later than Thursday of the following week. Except as provided for in 14.1(c) employees who are at work on Thursday and are not paid will be paid on Friday. Such employees will be released one (1) hour, with pay, prior to normal quitting time on Friday to enable them to cash their cheque.
(b) Wages shall be paid by the Employers on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee, setting forth:

(i) the period of time or the work for which the wages are being paid;
(ii) the rate of wages to which the employee is entitled;
(iii) the amount of wages to which the employee is entitled;
(iv) the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;
(v) any allowance or other payment to which the employee is entitled;
(vi) the amount of vacation pay for which the employee is being credited;
(vii) the amount of statutory holiday pay for which the employee is being credited; and
(viii) the net amount of money being paid to the employee.

(c) In cases of inclement weather being declared on payday, employees will receive their pay before leaving the site provided it is available on the site.

14.2 ON TERMINATION

(a) An employee who voluntarily terminates his employment will be provided his final pay on the next regular payday.

(b) An employee who is laid off from a Generation Project will have his final pay and termination documents mailed to his last known address on file with the Employer by Priority Post within five (5) working days of termination. An employee who is laid off from a Lines and Stations construction site will have his final pay and termination documents mailed to his last known address on file with the Employer within eight (8) working days of termination. This does not preclude an employee being issued his final pay and termination documents on the job prior to the five or eight-day period. After 48 hours of notifying the Employer, the Employee will be entitled to four (4) hours at straight time for each normal workday for which there is non-compliance thereafter.

(c) An employee who is discharged shall be provided with his final pay immediately if the Employer's pay facilities are on site or as per 14.2(b) if the Employer's pay facilities are not on site.

(d) Employers will provide one hour's notice of layoff or one hour's pay in lieu of notice to employees who are to be laid off.

When possible, the Employer shall notify the Local Union three (3) days prior to layoff.

(e) When an employee is laid off, he will be paid for a reasonable amount of time by the Employer if he is required to travel or wait unduly before he receives his final pay.
(f) In established cases of long-term sickness, compensable accident or jury duty, an employee will be maintained on the Employer's payroll until his normal date of layoff.

Article 15

CALL-IN PAY

15.1 When an employee is called in to work outside of his normal hours of work, he shall receive a minimum of four (4) hours' work at the appropriate premium rate plus travel allowance where applicable.

If the employee's normal hours of work commence within this four (4) hour period, the employee will be paid premium time from the time he commences work until the start of his normal hours and will revert to his normal hourly rate at the commencement of his normal hours of work.

Article 16

REPORTING PAY

Article 16 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 3, Appendix D – Modified Provisions of this Construction Agreement.

16.1 An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of four (4) hours' pay at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for work for any part of the first half of a shift and an additional four (4) hours on the first and second shifts or two and one-half (2-1/2) hours on the third shift will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Article that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

16.2 An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

16.3 Notwithstanding that work is available and an employee is able to commence or continue work, the Employer may shut down a job to avoid the possible loss of human life because of an emergency situation such as H₂S leaks, bomb threats, fire, etc., that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked.
Article 17

GENERATION PROJECTS DAILY TRAVEL ALLOWANCE
AND ROOM AND BOARD

Article 17 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e. Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 1, Appendix D - Modified Provisions of this Construction Agreement.

DAILY TRAVEL ALLOWANCE

17.1 The daily travel allowance will be paid by the Employers to employees who are not receiving room and board as referred to in Section 17.2, on the following basis:

   (a) If an employee lives within twenty (20) radius kilometers* of the project, no travel allowance will be paid.

   (b) If an employee lives within 20 to 40 radius kilometers of the project, he shall receive $15.60 per day travel allowance effective May 1, 2000 ($16.10 effective May 1, 2001, $16.60 effective May 1, 2002, $17.10 effective May 1, 2003) for each day worked or reported for.

   (c) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day travel allowance effective May 1, 2000 ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002, $20.35 effective May 1, 2003) for each day worked or reported for.

   (d) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day travel allowance effective May 1, 2000 ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) for each day worked or reported for.

   (e) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day travel allowance effective May 1, 2000 ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) for each day worked or reported for.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

Bruce G.S. "A", Bruce G.S. "B", and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 17.2 below, he will receive $29.85 per day travel allowance effective May 1, 2000 ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

**ROOM AND BOARD**

17.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(a) An Employer may supply either:

(i) Room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;

subject to Sections 17.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $56.00 per day effective May 1, 2000 ($58.00 effective May 1, 2001, $60.00 effective May 1, 2002, $62.00 effective May 1, 2003) for each day worked or reported for when employed at a location south of the French River and $70.00 per day effective May 1, 2000 ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for when employed at a location north of the French River subject to Sections 17.2(c) and 17.2(d) below.

*An employee's 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.
(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near a project. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled $31.60 per day effective May 1, 2000 ($33.60 effective May 1, 2001, $35.60 effective May 1, 2002, $37.60 effective May 1, 2003) worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for a subsistence allowance as provided for above shall receive a subsistence allowance of $41.50 per day effective May 1, 2000 ($44.50 effective May 1, 2001, $47.50 effective May 1, 2002, $49.50 effective May 1, 2003) worked or reported for.

17.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 17.1 and 17.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

17.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

17.5 The Council recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
Article 18

LINES AND STATIONS CONSTRUCTION
DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

Article 18 is applicable to all work on Lines & Stations at both existing and new sites

DAILY TRAVEL ALLOWANCE

18.1 The daily travel allowance will be paid by the Employers to their employees who are not living in camp or receiving a subsistence allowance as referred to in Section 18.3 on the following basis:

(a) Effective May 1, 1996, if an employee lives within forty (40) radius kilometers of the work location or declared assembly point, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the work location or declared assembly point, he shall receive $18.60 per day travel allowance effective May 1, 2000 ($19.10 effective May 1, 2001, $19.60 effective May 1, 2002, $20.10 effective May 1, 2003) for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the work location or declared assembly point, he shall receive $22.10 per day travel allowance effective May 1, 2000 ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the work location or declared assembly point, he shall receive $25.60 per day travel allowance effective May 1, 2000 ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) for each day worked or reported.

(e) If an employee lives greater than 97 radius kilometers from the work location or declared assembly point, and does not qualify for subsistence allowance under Section 18.3 below, he shall receive $28.85 per day travel allowance effective May 1, 2000 ($29.35 effective May 1, 2001, $29.85 effective May 1, 2002, $30.35 effective May 1, 2003) provided he continues to travel greater than 97 radius kilometers daily for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement. A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.
18.2 The Employer reserves the right to base daily travel allowance on the distance in radius kilometers from where an employee lives to either the work location or declared assembly point, depending on where the employee is directed to report.

ROOM AND BOARD

18.3 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the work location:

(a) An employer may supply either:

(i) room and board in camp or a good standard of board and lodging; or

(ii) a subsistence allowance;

subject to Sections 18.3(b) and (c) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $69.00 per effective May 1, 2000 ($71.00 effective May 1, 2001, $73.00 effective May 1, 2002, $75.00 effective May 1, 2003) for each day worked or reported for subject to Section 18.3(c) below.

* An employee's 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.

3. For metro areas (Toronto and Hamilton) the calculation of distance shall be from the employee's regular residence.

4. For all other areas, the calculation of distance shall be based on the location of the city or town hall of the municipality where an employee maintains a self-contained domestic establishment described above. In those municipalities where a city or town hall does not exist, then the post office serving his regular residence will apply.
To qualify for subsistence allowance an employee must maintain temporary accommodation at or near the work location. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled to $29.85 per day effective May 1, 2000 ($31.85 effective May 1, 2001, $33.85 effective May 1, 2002, $35.85 effective May 1, 2003) for each day worked or reported for.

NEW  When an employee's regular residence is more than five hundred (500) radius kilometers from the project, and the job or project is worked on a four ten (4x10) hour work week, the employee shall receive room and board allowance on a five day basis for a regular work week. If the employee is required to work an additional ten (10) hour shift beyond the normal four ten (4x10) hour shift, the employee will be entitled to room and board allowance for an additional ten (10) hour shift worked to a maximum of seven (7) days room and board in a week.

18.4  An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 18.1 and 18.3 above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.

18.5  An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

18.6  The Council recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a)  An employee who remains in camp on a normally scheduled workday on which he does not work will be charged $25.00 per day unless he is excused from work by an authorized representative of his Employer.

(b)  An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c)  An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d)  An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
Article 19

LINES AND STATIONS CONSTRUCTION
DAILY TRAVEL TIME

19.1 All travel time will be outside of normal working hours.

19.2 (a) An employee will be paid his straight-time rate for all time spent travelling from his assembly point to his work location on normal working days.

An employee will be paid premium time for all time spent travelling from his assembly point to his work location on days other than normal working days.

(b) An employee will travel up to a maximum of one hour on his own time when returning from his work location to his assembly point. An employee will be paid his straight-time rate for all time spent travelling in excess of one hour.

19.3 All time in excess of one hour spent travelling from the work location to the assembly point on non-working days shall be compensated for at the appropriate premium rates of pay.

19.4 The Employer will supply transportation between the assembly points and work locations.

Article 20

STANDOFF

20.1 When unable to proceed with his work, an Employer may elect to Standoff part or all of his crew. The parties agree Standoff is not intended to circumvent the layoff procedure.

The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel allowance will be paid to an employee for the Standoff period.

20.2 An employee who qualifies for subsistence allowance and who is placed on Standoff will be paid subsistence allowance up to a maximum of ten (10) consecutive working days.
20.3 If Standoff continues beyond ten (10) consecutive working days, an employee, at his option, may elect to remain on Standoff for an additional twenty (20) consecutive working days or be removed from Standoff. The Employer retains recall rights on employees electing to continue on Standoff. Subsistence allowance will cease after ten (10) consecutive working days on Standoff.

20.4 If an employee elects layoff beyond the tenth (10th) consecutive working day, it shall be carried out in accordance with the terms of the Layoff/Seniority provisions of the appropriate Trade Appendix of this Agreement. An employee laid off will be issued a Record of Employment form on his date of layoff indicating “Layoff – Shortage of Work”. The Employer does not retain recall rights if the employee elects Layoff.

20.5 Standoff shall only continue beyond thirty (30) consecutive working days with the mutual consent of the Employer and the Union, in writing.

- For the purpose of this Article, when working on a 4 x 10 hour shift arrangement, the following will apply:
  
- eight (8) scheduled working days will be considered the equivalent of ten (10) consecutive working days.

- sixteen (16) scheduled working days will be considered the equivalent of twenty (20) consecutive working days.

- twenty-four (24) scheduled working days will be considered the equivalent of thirty (30) consecutive working days.

Article 21

REST PERIOD

21.1 For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time and in a reasonable location as directed by the Employer, for each half shift worked. Where a half shift is less than four (4) hours, there shall be no rest period.

21.2 For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

21.3 For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two hours of overtime worked.
Article 22

LUNCHROOM FACILITIES

22.1 Adequately heated accommodation separate from changerooms and washrooms shall be provided by the Employer on each project when necessary and where such accommodation can be reasonably provided for. Such accommodation shall be weatherproof and shall be kept reasonably clean. A table and sufficient benches or seats for the employees on the job shall be provided in the accommodation. Trailerized or portable accommodation shall include tables, benches, light, heat maintained at a minimum sixty-eight (68) degrees Fahrenheit, proper access and egress, and shall not be used for material storage.

Article 23

MEALS ON OVERTIME

Article 23 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 4, Appendix D – Modified Provisions of this Construction Agreement.

23.1 If an employee is notified during the time he is working that he will be required to continue working for more than two (2) hours past the normal quitting time of the first or second shifts or for more than three and one-half (3-1/2) hours beyond the normal quitting time of the third shift, the Employer will provide a free meal to the employee after approximately two (2) hours of overtime worked (first or second shifts) or three and one-half (3-1/2) hours of overtime worked (third shift) and for each four (4) hours of overtime worked thereafter. The employee will be allowed thirty (30) minutes paid at the straight time rate to eat each meal at the time directed by the Employer. When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period. The Employer will supply a hot meal when possible. When a free meal is not provided, the Employer will pay the employee one-half (1/2) hour at his appropriate rate.

To qualify for the above-noted on a Friday for work on the first and second shifts, an employee will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Statutory Holidays for employees who normally work the first or second shifts, nor is it applicable to the first six and one-half (6-1/2) hours worked on Sundays or recognized holidays for employees who normally work the third shift.
23.2 Where an employee has been notified the previous day, no meal will be provided but the employee will be allowed thirty (30) minutes paid at the straight time rate to eat each meal at the time directed by the Employer.

Article 24

TOOLS AND CLOTHING

24.1 An employee shall be required to provide himself with the ordinary hand tools of his trade, based on established trade union practices at the time of signing of this Agreement. EPSCA and the Council shall establish an appropriate tool list for each trade. Each Employer will provide, insofar as is practical, separate facilities for storing the tools of each trade, but shall not be held responsible for losses, except as noted hereunder:

(a) When personal tools valued in excess of $15.00 are lost due to fire, the Employer will consider the full estimated value on the merit of each case in determining replacement or payment. This will include only personal tools that a tradesman is required to have to perform his normal duties with his Employer.

(b) Each Employer will compensate his employees for ordinary hand tools and clothing lost by theft from locked storage provided by him for his employees. Claims must be submitted, in writing, and must provide substantiating evidence of forcible entry to locked storage. Payment or replacement for personal clothing lost by theft on the work site shall be limited to clothing that a tradesman is required to have to perform his normal duties with his Employer.

(c) In the event of loss by fire at an Employer's camp or on the work site in an Employer designated storage area, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $500.00 for the loss of personal clothing will be made by the Employer. Payment or replacement for personal clothing lost by fire on the work site shall be limited to clothing that a tradesman is required to have to perform his normal duties with his Employer.

24.2 An employee who has obtained tools from his Employer shall be allowed sufficient time, in the opinion of Management, to return such tools to his Employer during working hours. An employee receiving tools from his Employer shall be held responsible for the return of such tools in good condition, subject to normal wear and tear. On layoff, an employee will be allowed reasonable time to return tools to his Employer.
24.3 Gang tools as described in the appendices shall be the responsibility of the Employer.

24.4 Employees working in a radiation area, in plastic suits or replacement material of the fully enveloping type with an independent air supply, will receive $8.00 per day. A day for the purposes of this item shall be defined as any period up to twelve (12) hours.

Article 25

APPRENTICESHIP AND TRADES TRAINING

25.1 Apprenticeship and other training programs should be instituted as required to maintain an adequate skilled and competent work force to perform work within the electrical power systems sector by apprenticeship training programs, upgrading programs and retraining programs.

25.2 Where a ratio of apprentices to journeymen employed has been established in a trade appendix, this ratio shall be maintained.

Article 26

HOURS OF WORK

Article 26 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e. Greenfield Work).

For work at Existing and New Lines & Stations Sites and at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 2, Appendix D - Modified Provisions of this Construction Agreement.

26.1 The normal weekly hours of work for all employees of Employers covered by this Agreement shall be thirty-eight (38), except as described in Sections 26.2, 26.3, 26.4, 26.5, 26.6 and 26.7.

The weekly hours shall be worked in four (4) eight (8) hour days, Monday to Thursday inclusive, with the remaining six (6) hours to be worked on Friday.
26.2 The hours of work for such work as driveway and parking lot construction, railroad construction, landscaping, tunnelling, precast concrete erection, fencing or demolition, shall be as established in applicable local agreements for the class and character of work.

An applicable local agreement shall be an agreement between a local of any union signatory to this Agreement and a builders' exchange, contractors' association or contractor applicable in the locality of the project for the class and character of the work.

26.3 The weekly hours of work for structural steel erection shall be forty (40) hours made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.

26.4 The weekly hours of work for site preparation and earth dams shall be 45 hours made up of five (5) days of nine (9) hours each, Monday to Friday inclusive.

26.5 The weekly hours of work for Watchmen shall be as set forth in the Laborers' International Union of North America Appendix, attached hereto.

26.6 The weekly hours of work for Operating Engineers engaged in tunnel work shall be as set forth in the International Union of Operating Engineers' Appendix attached hereto.

26.7 The normal weekly hours of work for employees working the third shift shall be thirty-two and one-half (32-1/2), made up of five (5) days of six and one-half (6-1/2) hours each.

The hours of work at all Lines and Stations Construction locations and Miscellaneous Projects (excluding Lakeview and R.L. Hearn Generating Stations), except those set forth in Sections 26.2 and 26.4, shall be 40 hours per week made up of five (5) days of eight (8) hours each, Monday to Friday inclusive. The normal daily hours are to be worked between 7:30 am and 5:00 pm.

A Miscellaneous Project is any work undertaken by Ontario Power Generation Inc’s Generation Projects Division which will require less than one year to complete and comprise a total project work force of not more than one hundred men at one time.

26.8 PROJECT DAILY HOURS

(a) Day Work Only

The normal starting time for day work hours shall be 8:00 a.m. By mutual agreement between EPSCA and the Council, the starting time may be varied by one-half hour either way. This variance will be established at the prejob conference or while the job is in progress.
(b) Shift Work

(i) Shift work will be deemed to be established providing there are at least four consecutive days of shifts to be worked excluding Saturdays, Sundays and Statutory Holidays.

(ii) The normal starting time for day shift hours shall be the same as the day work hours described in Section 26.8(a).

(iii) Where shift work is established, the normal shift hours for the first (day) and second shifts shall be the same as the day hours. The third shift normal hours shall be six and one-half (6-1/2) hours' work, to be worked between 1:00 a.m. and 8:00 a.m., with an unpaid one-half (1/2) hour lunch period.

(iv) On Monday to Thursday inclusive, the second shift hours shall start at 4:30 p.m. or a variance of one-half hour either way, to coincide with the end of the day shift. On Friday, the second shift hours may start at 4:30 p.m. or at the end of the day shift.

(v) The third shift to start at 1:00 a.m. Monday.

(vi) Where the third shift is established as starting at 1:00 a.m. Monday, it shall be worked between 1:00 a.m. and 8:00 a.m. Monday, Tuesday, Wednesday, Thursday and Friday.

(c) Hours of Work - Special Circumstances

It may be necessary from time to time to vary the hours of work established in Sections 26.8(a) and (b). Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Council at the prejob conference or while the job is in progress.

26.9 The shift rate will be based on the day in which the shift begins.

26.10 LUNCH PERIODS FOR MAJOR PROJECTS, AND CONSTRUCTION AND SERVICES DIVISION

A lunch period will be given no earlier than four (4) hours and no more than five (5) hours after the start of the shift and will be one-half (1/2) hour in duration.

A lunch period will be given no earlier than three and one-half (3-1/2) hours and no more than five (5) hours after the start of the third shift and will be one-half (1/2) hour in duration.
26.11 When an employee is required to return to work without an eight (8) hour break, all work performed shall be at the premium rate until such time as the employee receives an eight (8) hour break. This provision does not apply when a change in an employee's normal shift (as defined in this Article) occurs or to call-in situations.

Article 27

GRievANCE PROCEDURE

27.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by EPSCA and the appropriate Union. In the interests of expediting the procedure, the parties shall process grievances in the following manner:

The grievance procedure and arbitration procedure in Article 27 do not apply to jurisdictional disputes.

27.2 PRELIMINARY DISCUSSION

Disputes arising out of the interpretation or alleged violation of this Agreement should, if possible, be settled by discussion between the employee and/or his steward and the employee's supervisor. If the employee affected is a foreman, the preliminary discussion will be between the Accredited Union Representative and the foreman's supervisor.

27.3 FIRST STEP

If a dispute cannot be resolved by this method, the Accredited Union Representative for the trade concerned may file a formal grievance on the prescribed form with the Manager of Construction or the Field Construction Manager within fifteen (15) working days of the alleged grievous act.

Within ten (10) working days of the filing of the grievance, the Manager of Construction or Field Construction Manager shall investigate the grievance and convene a First Step meeting which he or the Accredited Union Representative considers necessary to resolve it.
The Management Committee shall be comprised of the Manager of Construction or the Field Construction Manager or their designate plus at least one representative of the Employer named in the grievance. The Union Committee shall include at least two persons, one of whom shall be the Accredited Union Representative for the grievor.

The Manager of Construction or Field Construction Manager shall give his reply on the prescribed form to the Accredited Union Representative within five (5) working days from the date of the First Step meeting.

Copies of completed grievance forms signed by the appropriate parties shall be filed by the Manager of Construction or the Field Construction Manager with the General Manager of EPSCA. The Accredited Union Representative for the grievor will file a copy with the Council.

The EPSCA Representative will send a copy of any signed first step grievance settlement between the Accredited Union Representative and EPSCA to the Power Council of Unions and EPSCA office.

27.4 SECOND STEP

Within ten (10) working days after the disposition has been issued under the First Step of this procedure, the Accredited Union Representative may refer the grievance on the prescribed form to EPSCA's Grievance Officer. A copy of the grievance form shall be forwarded by the Accredited Union Representative to the International Representative of the Union.

The EPSCA Grievance Officer shall investigate the grievance and convene a meeting which he or the International Representative considers necessary to resolve it and give his reply on the prescribed form to the International Representative of the Union within five (5) working days from the receipt of the grievance form which was completed at First Step.

The Management Committee shall comprise the EPSCA Grievance Officer plus two other Management Representatives, one of whom shall be a representative of the Employer named in the grievance. The Union Committee shall be comprised of at least the International Representative or his designate for the grievor. If the International Representative elects to appoint a designate, he shall inform EPSCA, in writing, of the name of the designate and the duration of appointment.

27.5 EPSCA OR COUNCIL GRIEVANCES

The processing of EPSCA or Council grievances will begin at the Second Step. EPSCA or the Council may submit either policy or specific grievances. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.
27.6 TIME LIMITS

The time limits as to both documents and procedures set out in the above sections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, the employee concerned, the Union, the Council or EPSCA shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been settled and ineligible for arbitration.

27.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at First Step.

27.8 GRIEVANCE FACILITIES

EPSCA shall provide the necessary facilities for all grievance meetings.

Article 28

ARBITRATION

28.1 If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Article 27, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either EPSCA or the Council to a Board of Arbitration for adjudication.

The party desiring to submit the dispute to arbitration shall notify the other party, in writing, of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, or if the nominees fail to agree upon a Chairman, the appointment shall be made by the Minister of Labour for Ontario upon the request of either party. The arbitration board, when selected or appointed, will proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. The decision of a majority is the decision of the arbitration board, but if there is no majority, the decision of the Chairman governs.
28.2 The arbitration board shall have no power to add to or subtract from or modify any of the terms of this Agreement. The arbitration board shall not substitute its discretion for that of the parties except where the board determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the arbitration board may substitute such other penalty for the discharge or discipline as to the arbitration board seems just and reasonable in all circumstances. The arbitration board shall not exercise any responsibility or function of the parties. The arbitration board shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.

28.3 In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario, and the fees and expenses of the Chairman shall be shared equally by the parties.

28.4 The time limits as to both documents and procedure set out in the above sections shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed.

**Article 29**

**NO STRIKE - NO LOCKOUT**

29.1 There shall be no strikes or lockouts so long as this Agreement continues to operate.

**Article 30**

**ASSOCIATION FUND**

30.1 Each Employer bound by this agreement shall contribute to the Electrical Power Systems Construction Association Fund, the amount specified on the wage schedules attached hereto for each hour worked by each employee covered by this agreement.

The Employer shall remit such contribution together with the supporting information as required on the reporting forms.

EPSCA shall indemnify the Council and member Unions for any liability arising from an Employer's failure to remit such contributions.
Article 31

RADIATION WORK

31.1 (a) Local Union to be provided with a copy of Ontario Power Generation Inc Radiation Protection Regulations and any revisions.

(b) Local Union to be provided with a copy of Ontario Power Generation Inc Radiation Protection Procedures and any revisions.

(c) Each employee will have access to his personal radiation exposure record.

(d) Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

(e) Short-term employees will be given a guaranteed period of employment at their time of hire.

Article 32

ABORIGINAL CONTENT COMMITMENT

Where an aboriginal commitment has been established on a project, the Union will co-operate in meeting the content commitments.

For a project, or jobs within a project, that are less than $100,000 field labour, and have aboriginal content commitments, the terms of the collective agreement will not apply to those aboriginal content commitments.

Article 33

TERM OF AGREEMENT

33.1 This Agreement shall continue in full force and effect from May 1, 2000 until April 30, 2004 inclusive, and thereafter it shall be considered automatically renewed for successive periods of two (2) years unless at least sixty (60) days prior to the end of any two (2) year period, either party serves written notice upon the other that it desires termination, revision or modification of any provision or provisions of this Agreement."
In Witness Whereof, EPSCA and the Union have caused this Agreement to be executed in their names by duly authorized representatives at Toronto this 10th day of April 2001.

APPENDIX A

MOOSE RIVER BASIN: NORTHERN ONTARIO

Where the Employer elects to establish a camp, the following conditions will apply for employees working in the Moose River Basin:

Camp Conditions

(a) An Employer may elect to provide free room and board in camp at no cost to the employee. Where the Employer elects to provide a camp such employees will not be entitled to receive a daily travel or room & board allowance.

(b) When an Employer does not elect to provide free room and board in camp, the employee will be entitled to receive a daily travel or room and board allowance as set out in Articles 17.1 and 17.2.

(c) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(d) An employee who is absent from work without approval and who remains in camp and is still absent from work the following day without approval will be charged $25.00 for the day of absence and each successive day of unapproved absence.

Hours of Work

(1) The hours of work will consist of a 21 day cycle of fourteen (14) consecutive work days followed by seven (7) consecutive days off.

(2) Regularly scheduled hours of work of ten (10) hours per day shall be paid at straight time hourly rates.

(3) Regularly scheduled hours of work on Saturday, Sunday, Recognized Holidays, and the fifth (5th) consecutive weekday shall be paid at two times the straight time hourly rate.
Wrap Around

An employee shall qualify for a return trip from the project every second twenty-one (21) day cycle he is on the project on the following basis:

(a) If an employee lives within 161 radius kilometres from the project, the Employer shall pay forty dollars ($40.00).

(b) If an employee lives greater than 161 radius kilometres from the project, the Employer shall pay as an allowance, forty dollars ($40.00) plus travel time based on the equivalent of one (1) hour's base rate of pay for each eighty (80) kilometres from where the employee lives or place of recruitment, whichever is closer to the project.
APPENDIX B

7-DAY COVERAGE

NUCLEAR SITES

When working under the provisions of this 7-day shift schedule, all conditions listed below will supersede those in the other Articles/Sections of this Collective Agreement. Where this shift schedule is silent, the appropriate Article/Section in the Collective Agreement applies.

REV These provisions would only apply to work performed on a Nuclear Facility and the work must be covered by the “Modified Provisions of this Construction Agreement.

This shift schedule is intended for work of at least five (5) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours’ pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a two or three ten (10) hour per day shift basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked.

Notice Provision

If this shift schedule is to be used for work on a “planned outage”, the Employer will provide the Union with two (2) weeks’ notice prior to the implementation of these shift provisions.

Shift Provisions

Day Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates.
Afternoon Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.

Night Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.

All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at the appropriate overtime rate for that trade. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
APPENDIX C

7-DAY COVERAGE

HYDRO ONE (LINES AND STATIONS)

This shift schedule is intended for work greater than two (2) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

These provisions will only apply to work performed on Lines and Stations as follows:

“for emergency work until the system is restored to the pre-emergent state”

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours’ pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a one, two, or three shift per day basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked. The Employer will provide the Union with 48 hours’ notice prior to the implementation of these shift provisions.

First Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates.

Second Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.

Third Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.
All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid the appropriate overtime rate for that trade. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

Definitions:

**Facility**  
Something that is built composed of multi-systems which serves a specific function

**Function**  
Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the 'Modified Provisions of this Construction Agreement' apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within 5 (five) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within 10 (ten) working days for a final and binding resolution. The arbitrator shall give an oral decision within 5 (five) working days, and a written decision, if requested, within 20 (twenty) working days.

**REV** All terms of this collective agreement shall apply to work covered by this Appendix, with the exception of Article 16 – Reporting Pay, Article 17 – Generation Projects Daily Travel Allowance and Room and Board, Article 23 – Meals on Overtime and Article 26 – Hours of Work.

Section 1

GENERATION PROJECTS
DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

DAILY TRAVEL ALLOWANCE

1.1 The daily travel allowance will be paid by the Employers to employees who are not receiving room and board as referred to in Section 1.2, on the following basis:

(a) If an employee lives within forty (40) radius kilometers* of the project, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day travel allowance effective May 1, 2000 ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002, $20.35 effective May 1, 2003) for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day travel allowance effective May 1, 2000 ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day travel allowance effective May 1, 2000 ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) for each day worked or reported for.

(e) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 17.2 below, he will receive $29.85 per day travel allowance effective May 1, 2000 ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

Bruce G.S. "A", Bruce G.S. "B", and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
ROOM AND BOARD

1.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(a) An Employer may supply either:

(i) Room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;

subject to Sections 1.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $56.00 per day effective May 1, 2000 ($58.00 effective May 1, 2001, $60.00 effective May 1, 2002, $62.00 effective May 1, 2003) for each day worked or reported for when employed at a location south of the French River and $70.00 per day effective May 1, 2000 ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for when employed at a location north of the French River subject to Sections 1.2(c) and 1.2(d) below.

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near a project. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled $31.60 per day effective May 1, 2000 ($33.60 effective May 1, 2001, $35.60 effective May 1, 2002, $37.60 effective May 1, 2003) worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for a subsistence allowance as provided for above shall receive a subsistence allowance of $41.50 per day effective May 1, 2000 ($44.50 effective May 1, 2001, $47.50 effective May 1, 2002, $49.50 effective May 1, 2003) worked or reported for.

*An employee's 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.
1.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 1.1 and 1.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

1.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

1.5 The Council recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

Section 2

HOURS OF WORK

2.1 One (1) or Two (2) Shift Operation

The weekly hours of work shall consist of forty (40) hours, worked between Monday and Friday, for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation except as described in Sections 2.2, 2.3, 2.4, 2.5 and 2.6.
The weekly hours of work for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts, either Monday–Thursday or Tuesday–Friday but not concurrently on the same project, or by having the employees work five (5) consecutive eight-hour shifts. Weekly hours of work will be established for a minimum period of thirty (30) days. If an employer, with the approval of the owner, intends to change the weekly hours of work, a minimum of fifteen (15) days written notice shall be sent to the Local Union.

The start time for the day shift shall be 8:00 a.m. with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one (1) hour either way to coincide with the end of the day shift.

The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

**Three (3) Shift Operation**

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours per shift at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift at the straight time plus the appropriate shift differential as set out in the trade appendices.

Those employees working on the night shift shall work seven (7) hours per shift plus the appropriate shift differential as set out in the trade appendices.

2.2 The hours of work for such work as driveway and parking lot construction, railroad construction, landscaping, tunnelling, precast concrete erection, fencing or demolition, shall be as established in applicable local agreements for the class and character of work.

An applicable local agreement shall be an agreement between a local of any union signatory to this Agreement and a builders' exchange, contractors' association or contractor applicable in the locality of the project for the class and character of the work.
2.3 The weekly hours of work for structural steel erection shall be forty (40) hours made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.

2.4 The weekly hours of work for site preparation and earth dams shall be 45 hours made up of five (5) days of nine (9) hours each, Monday to Friday inclusive.

2.5 The weekly hours of work for Watchmen shall be as set forth in the Laborers' International Union of North America Appendix, attached hereto.

2.6 The weekly hours of work for Operating Engineers engaged in tunnel work shall be as set forth in the International Union of Operating Engineers' Appendix attached hereto.

2.7 **Shift Change**

A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked excluding Saturdays, Sundays and recognized holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the balance of the four (4) consecutive shifts that would have been worked had the employee not been reassigned.

2.8 It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Council.

2.9 **LUNCH PERIODS FOR MAJOR PROJECTS, AND CONSTRUCTION AND SERVICES DIVISION**

A lunch period will be given no earlier than four (4) hours and no more than five (5) hours after the start of the shift and will be one-half (1/2) hour in duration.

A lunch period will be given no earlier than three and one-half (3-1/2) hours and no more than five (5) hours after the start of the third shift and will be one-half (1/2) hour in duration.

2.10 When an employee is required to return to work without an eight (8) hour break, all work performed shall be at the premium rate until such time as the employee receives an eight (8) hour break. This provision does not apply when a change in an employee's normal shift (as defined in this Article) occurs or to call-in situations.
Section 3

REPORTING PAY ON 8 HOUR AND 10 HOUR SHIFTS

3.1 An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of a half shifts pay (4 hours or 5 hours) at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for any part of the first half of a shift and an additional half shifts pay (4 hours or 5 hours) will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Section that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

3.2 An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

3.3 Notwithstanding that work is available and an employee is able to commence or continue work, the Employer may shut down a job to avoid the possible loss of human life because of an emergency situation such as H2S leaks, bomb threats, fire, etc., that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked.

Section 4

MEALS ON OVERTIME

Scheduled Eight (8) Hour Shifts

When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of the first or second shifts or for more than three and one half (3 ½) hours beyond the normal quitting time of the third shift, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the base hourly rate of pay. This meal break will be taken following the first two (2) hours of overtime worked. After each additional four (4) is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided after the first two (2) hours of overtime worked, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal.
When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first or second shifts.

The above-noted is not applicable to the first six and one half (6 ½) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the third shift.

Scheduled Ten (10) Hour Shifts

When an employee has not been notified the previous day that he will be required to work beyond his normal quitting time, prior to commencing the overtime work, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided prior to commencement of overtime work, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal.

The above-noted is not applicable to the first ten (10) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first and second shifts.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.
STATEMENT OF UNDERSTANDING NO. 1

Notwithstanding Article 1, Recognition, of the Collective Agreement between The Electrical Power Systems Construction Association and the Ontario Allied Construction Trades Council, it is recognized and agreed by The Electrical Power Systems Construction Association and the Ontario Allied Construction Trades Council that employees of Ontario Hydro, who, at April 30, 1953, possessed full regular status and who are engaged on property acquired for Ontario Hydro, are exempt from the provisions of this Agreement and that the Council or member Unions of the Council will not attempt to either negotiate for these employees, unless bargaining rights are obtained, or restrict their movements or work on such property.

Dated at Rexdale, Ontario, this 28th day of August, 1974.

EMPLOYMENT REFERRALS

It is agreed by the Parties to this understanding, that prior to any member being referred for employment under this agreement, the member must submit to a security check. Only members who successfully obtain security clearance will be referred for employment. Once a member has been hired on, they will receive an allowance of $50.00 on their first weeks pay cheque, in consideration of their time spent filling out the security clearance forms.

The union will be notified, as soon as possible, whether or not an individual has successfully obtained security clearance. This pre-clearance does not prohibit the Union from filing a grievance against the Employer on behalf of any member who is refused employment due to his/her failure to obtain security clearance.

EPSCA
STATEMENT OF UNDERSTANDING NO.7

Between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

And

THE INTERNATIONAL UNION OF OPERATING ENGINEERS
LABOURERS INTERNATIONAL UNION OF NORTH AMERICA
UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA

Re: Late Payment of Board Allowance

During the current negotiation discussions, the Unions raised concerns about the late payment of board allowance. It was unclear to what extent payments were being delayed. In order to assess how much of a problem this is, EPSCA agrees to investigate the payment process by June 15, 2000 to determine the extent of the problem and to pinpoint the cause. Once the investigation is complete and the Parties have determined that a problem exists, the Parties agree to re-open negotiations to negotiate an appropriate penalty clause.

Dated this 12th of May 2000.

ROOM AND BOARD ALLOWANCE

NORTH OF THE FRENCH RIVER

The Parties agree that individuals in the 80-97 kilometre radius ring working north of the French River will be eligible for room and board allowance if their actual road kilometres travelled exceeds 120 kilometres.

Dated at Toronto, this 26th day of April, 2000.

The amendments contained in the Statement of Settlement, effective May 12, 2000, have been incorporated into the Foreman Appendix in accordance with the "Term of Agreement" article contained in the Master Portion of this Agreement.
FOREMAN APPENDIX

to the

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

(hereinafter called "EPSCA")

and the

POWER COUNCIL OF UNIONS
(hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to foremen.

Article 1

1.1 It is understood that foremen hold a key position in the relationship between the Employers and the Unions. Both parties agree that every effort should be made to recruit and retain foremen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of a Union, the Employers, the Council and the Unions will make every effort to minimize problems that may arise which concern the relationship between the foremen, the Employers and the Unions.

Article 2

2.1 Foremen are the first level of management supervision and, as such, are management representatives. In this capacity, they will exercise duties and responsibilities, as established by their Employers, and will not work with the tools of the trade, except as provided for in the individual trade appendices' articles.
The parties recognize the responsibility of foremen to discharge their managerial duties. If a Union feels that a foreman is not discharging his managerial duties in a manner that is fair, equitable and without bias, or if an Employer feels that a Union is interfering with a foreman in the performance of his managerial duties, the Employer or the Union may refer the problem to the Project Committee for resolution. If the matter cannot be resolved by the Project Committee, the grievance procedure may be invoked by either party.

Article 3

EMPLOYERS' RIGHT TO SELECT

3.1 The selection and retention of foremen will be the responsibility of the Employers. When making appointments to the foreman level, the Employers will give consideration to those journeymen they presently employ. The appointment of foremen in charge of composite or mixed crews will take into account the nature of the work to be done.

Article 4

UNION AFFILIATION

4.1 In accordance with the "Union Security" article of the Master Portion, and in accordance with Article 3, Employers' Right to Select, contained in this Appendix, the appropriate Union affiliation for foremen shall be determined, as follows:

(a) Foremen appointed by internal promotion shall retain the Union membership held prior to appointment.

(b) Foremen recruited externally shall:

   (i) if a Union member, continue that Union membership; or

   (ii) if not a Union member, join the appropriate Union in keeping with the nature of the work to be done.
Article 5

WAGES

5.1 (a) The rates of pay for foremen covered by this Appendix shall be the greater of:

(i) $3.00 per hour above the journeyman rate; or

(ii) the Employer's current practice; or

(iii) the rate negotiated in appropriate local agreements; except, as noted, in (b) hereunder:

(b) The rates of pay for foremen engaged in the supervision of work covered by the "exceptions" contained in the Operating Engineer and Laborer Appendices shall be the greater of:

(i) the Employer's current practice; or

(ii) the locally negotiated rate for work of the same class and character.

Article 6

WEEKLY HOURS OF WORK

6.1 When the normal weekly hours of work are amended by the "exceptions" recognized under this Agreement, the weekly hours of work for foremen shall be the same as for the tradesmen represented by the Unions with which the foreman is affiliated.

Article 7

SHIFT DIFFERENTIAL RATE

7.1 Foremen required to work shift work other than the regular day shift shall receive the same shift differential rate as the tradesmen represented by the Union with which the foreman is affiliated.
Article 8

OVERTIME RATES

8.1 Overtime rates for work performed outside normal hours as defined in the "Hours of Work" article contained in the Master Portion of this Agreement and outside hours of work amended by the "exceptions" recognized under this Agreement, shall be the same as for tradesmen represented by the Union with which the foreman is affiliated.

Article 9

BENEFITS

9.1 The Employer agrees to pay into operative welfare, pension, and supplementary unemployment benefit plans on behalf of foremen covered by this Appendix. Payments will be made on the same basis and in the same amounts as are paid on behalf of tradesmen represented by the Unions with which the foremen are affiliated.

Article 10

MOBILITY

10.1 To maintain efficiency and productivity, an Employer shall have the right to move foremen from construction site to construction site, as determined at the pre-job conference.

Article 11

APPRENTICESHIP AND TRAINING PROGRAMS

11.1 The Employer agrees to pay into operative apprenticeship and training funds on behalf of foremen covered by this Appendix. Payments will be made on the same basis and in the same amounts as are paid on behalf of tradesmen represented by the Unions with which the foremen are affiliated.

Article 12

TOOLS AND CLOTHING

12.1 On a charge-out basis, the Employer shall supply foremen with protective clothing appropriate for the conditions under which the work is being done.

12.2 Foremen shall be accountable, but not liable, for gang tools used by their crew.
MASTER PORTION

The amendments contained in the Statement of Settlement, dated January 28, 1999 have been incorporated into the Master Portion of the Collective Agreement in accordance with Article 34.5 of the Collective Agreement negotiated between the Senior Bargaining Committees of The Electrical Power Systems Construction Association and the Ontario Allied Construction Trades Council.
This Collective Agreement distinguishes between two broad categories of work; namely, work that is covered by the “modified provisions" of this construction agreement and work that is not. “Modified provisions" apply to all work on Lines & Stations and most work on existing generating sites. Following is a more detailed explanation:

The “Modified Provisions” of this Construction Agreements will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:
   - a new facility which provides a new function
   - a new (i.e. additional) generating unit

Article 33 - contains the “Modified Provisions of this Construction Agreement”. All terms of this collective agreement shall apply to work covered by Article 33, with the exception of Article 17 - Generation Projects Daily Travel Allowance and Room and Board and Article 26 - Hours of Work. Articles 17 and 26 do not apply when working under the terms and conditions of the “modified provisions”, as they are replaced by Articles 33.5 and 33.6 respectively.

When work does not fall within the jurisdiction of Article 33, all terms of this agreement, with the exception of Article 33, apply.

A chart to illustrate the above applications follows:

<table>
<thead>
<tr>
<th>Lines &amp; Stations - Existing and New Sites</th>
<th>Generating - Existing Sites Excluding construction of new facility (new function) &amp;/or new (additional) generating unit(s)</th>
<th>Generating - Existing Sites Involving construction of new facility (new function) &amp;/or new (additional) generating unit(s)</th>
<th>Generating - New Sites (i.e. Greenfield Work)</th>

ADDENDUM

to the

Collective Agreement

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

and the

ONTARIO ALLIED CONSTRUCTION TRADES COUNCIL

May 1, 1974 - April 30, 2000

WHEREAS the Operative Plasterers' and Cement Masons' International Association of the United States and Canada sent a letter to the Ontario Allied Construction Trades Council, dated May 9, 1977, requesting that it be accepted as an affiliate of the Council and thereby become a party to the Collective Agreement in effect between the Ontario Allied Construction Trades Council and The Electrical Power Systems Construction Association; and

WHEREAS the Ontario Allied Construction Trades Council notified The Electrical Power Systems Construction Association by letter, dated June 2, 1977, that the Operative Plasterers' and Cement Masons' International Association of the United States and Canada is a member of said Council;

THEREFORE, the Operative Plasterers' and Cement Masons' International Association of the United States and Canada is represented by the Ontario Allied Construction Trades Council and is a party to the Ontario Allied Construction Trades Council Agreement with The Electrical Power Systems Construction Association, which is attached hereto and which consists of a Master Portion including Statements of Understanding Nos. 1 and 2, a Foreman Appendix, and individual Trade Appendices applicable to the members of the Ontario Allied Construction Trades Council, including the Operative Plasterers' and Cement Masons' International Association of the United States and Canada.
IN WITNESS WHEREOF, the parties through their duly authorized officers have executed this Agreement, this 12th day of December, 1977.

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

ONTARIO ALLIED CONSTRUCTION TRades COUNCIL
(hereinafter called the "Council")

WHEREAS EPSCA is an Association formed to represent Employers in collective bargaining and on their behalf enter into collective agreements covering those of their employees in the bargaining unit as hereinafter defined;

AND WHEREAS the Council is formed to represent the Unions listed in Article 2 in collective bargaining with EPSCA and to enter into collective agreements on their behalf and on behalf of their members in the bargaining unit as hereinafter defined;

AND WHEREAS it is the desire of the parties to conclude an agreement with a new concept designed to bring stability, harmony, and an effective method to amicably resolve problems in the electrical power systems sector of the construction industry, in the Province of Ontario;

NOW THEREFORE the parties hereby agree as follows:

Article 1

1
RECOGNITION

1.1 EPSCA recognizes the Council as the exclusive bargaining agency for a bargaining unit comprising employees as defined in Section 1.4 and foremen as defined in Section 1.5 engaged in all construction industry work* performed in the Province of Ontario on Ontario Hydro property for the bulk power system, save and except the building of commercial-type office facilities at urban locations remote from operating facilities.

For the purpose of clarity, the bulk power system comprises generating stations, hydraulic works, heavy water facilities, transmission lines (voltages over 50 kV), transmission stations, microwave and repeater stations.

1.2 The work described in Section 1.1 shall also include work on property acquired by Ontario Hydro for:

(a) the supply of aggregate and concrete used in the construction of said facilities; and

(b) ancillary material yards which are defined as property acquired by Ontario Hydro for the storage of materials to be used on a project by Employers.

1.3 The Council recognizes EPSCA as the exclusive bargaining representative for all Employers in respect of work performed by their respective employees in the bargaining unit set forth in Section 1.1.

1.4 The term "employee" shall include all employees of the Employers in the classifications set out in the trade appendices provided in Article 4, Sections 4.1 and 4.2, save and except those described hereunder:

(a) Carpenters and Laborers employed by an Employer signatory to the National Agreement for Canada, Stacks-Chimneys-Silos, when performing work covered by the scope of that agreement; and

* For the purpose of The Electrical Power Systems Construction Association, the work performed is deemed to be under the responsibility of the Engineering and Construction Services Branch. The work encompasses:

- construction of new facilities
- additions to existing facilities
- major modifications
- rehabilitation
- reconstruction of existing facilities
(b) Operating Engineers employed by an Employer signatory to the Crane and Equipment Rental Agreement with Local Union 793, when performing work covered by the scope of that agreement; and

(c) When hiring trucks the Employer will give preference to Employers with contractual relations with the Teamsters Union provided they have suitable equipment and the rates are competitive.

The term "employee" includes foremen in Articles 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24.1(b), 24.1(c), 26, and in the applicable Vacation Pay and Statutory Holiday Articles in each Appendix.

1.5 The term "foreman" shall include all foremen of the Employers between the ranks of, but not including, working foreman and general foreman, save and except those described hereunder:

(a) Carpenter foremen and Laborer foremen employed by an Employer signatory to the National Agreement for Canada, Stacks-Chimneys-Silos, when performing work covered by the scope of that agreement; and

(b) Operating Engineer foremen employed by an Employer signatory to the crane and Equipment Rental Agreement with Local Union 793, when performing work covered by the scope of that agreement; and

1.6 The term "Employers" shall include individual members of EPSCA and any company, partnership, sole proprietorship, joint venture, contractor, subcontractor or any person that is bound by the terms and conditions of this Agreement.

1.7 EPSCA and the Council agree the use of nomenclature is meant to refer to both genders.

Article 2

MEMBERS OF THE COUNCIL

2.1 It is recognized that the Council comprises certain International Unions whose names are listed hereunder:

  International Association of Heat and Frost Insulators and Asbestos Workers
  International Brotherhood of Painters and Allied Trades
  International Brotherhood of Teamsters
International Union of Operating Engineers

Laborers' International Union of North America

Operative Plasterers' and Cement Masons' International Association of the United States and Canada

United Brotherhood of Carpenters and Joiners of America

2.2 Individual Unions of the Council shall be hereinafter called the "Union".

Article 3

FORM OF AGREEMENT

3.1 This Agreement shall consist of a master portion which shall apply to employees and to foremen who work for Employers while such employees and foremen are engaged in work as described in Article 1, Recognition. There shall be one appendix negotiated by and for each member Union of the Council and one appendix for foremen. The appendices shall apply province-wide.

Article 4

APPENDICES

4.1 The trade appendix applicable to each member Union of the Council will contain those provisions which are not common to all member Unions of the Council, and those provisions will apply to appropriate members of each International Union as provided in its appendix while they are working under the terms of this Collective Agreement. Such appendices shall be deemed to be part of this Agreement.

4.2 Items which can be included in the trade appendices are:

• wages
• classifications
• benefits (pension, welfare and supplementary unemployment benefits)
• hours of work not covered in the master portion of this Agreement
• overtime rate
• premiums
• shift differential rate
- inclement weather pay
- apprenticeship and training programs
- seniority
- supply of tools
- key tradesmen
- protective clothing and equipment
- welding tests
- travel and transportation
- employer's responsibility
- vacation pay
- statutory holidays

4.3 Because a variety of practices exist in the construction industry regarding representation of foremen, an appendix applicable to foremen shall form part of this Agreement. The Foreman Appendix will be negotiated by the executive officers of EPSCA and the Council.

4.4 The "classifications" referred to in Subsection 4.2 appearing in the trade appendices do not establish craft jurisdiction. Such jurisdiction is established in accordance with Articles 10 and 11 of this Collective Agreement.

Article 5

EXECUTIVE COMMITTEES

5.1 The Council and EPSCA shall each appoint an Executive Committee. The Executive Committee of EPSCA shall consist of the Board of Directors and the officers of EPSCA. The Executive Committee of the Council shall consist of the officers of the Council and the senior representative of each Union. The Committees will meet together at least annually to review matters associated with the administration of this Collective Agreement, with the intent that administrative policies will be formulated for consideration by each Executive Committee. The Executive Committees will also meet together to receive reports of joint committees established under this Agreement.
Article 6

PROJECT COMMITTEES

6.1 A Project Committee shall be established for each of the Major Projects and the Construction and Services Division.

6.2 The Committee will be responsible for conducting EPSCA/OACTC concerns for each Major Project or Construction and Services Division and will meet quarterly or as necessary to deal with working and living conditions on the job, excluding matters which may be grieved or negotiated and disputes involving work assignments.

6.3 On the part of EPSCA, each Project Committee shall comprise the appropriate Manager of Construction, General Superintendent, EPSCA Representative, and a like number of contractor representatives elected from among and by the contractors on each particular Major Project or Construction and Services Division. In addition, the officers of EPSCA are ex officio members of this Committee.

6.4 On the part of the Council, each Project Committee shall comprise the appropriate accredited Union Representative for each Major Project or Construction and Service Division, as defined in Article 7, and may include the senior union representatives. In addition, the officers of the Council are ex officio members of this Committee.

6.5 The chairman of each EPSCA Project Committee shall be the Manager of Construction for the appropriate Major Project or Construction and Services Division, as the case may be.

6.6 The chairman of each Council Project Committee shall be appointed by the Council members.

6.7 Chairmanship of the meetings will alternate between the EPSCA Project Committee chairman and the Council Project Committee chairman.

6.8 Answers to questions raised by either party shall be given, in writing, within five (5) working days of the meeting by the party answering the questions to the party who raised the questions.

6.9 When an urgent answer is needed to a problem not relevant to negotiation, grievance or work assignment, the Project Committee will be called to meet within forty-eight (48) hours, where practicable, to deal with the problem. The Committee's answer will be given, in writing, to the party raising the question within forty-eight (48) hours of the meeting.

6.10 EPSCA and the OACTC will set the time and place of all Project Committee meetings.

Article 7
ACCREDITED UNION REPRESENTATIVES

7.1 The senior representative of each Union will designate local union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two representatives from each Union for each Major Project and a suitable number for the Construction and Services Division. The Council will notify the General Manager of EPSCA, in writing, of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Such representatives, after identifying themselves to the EPSCA representative upon entering the job site, will be free to observe the progress and conduct of the work and to conduct normal union business. The Council undertakes that these representatives will not hinder or interfere in any way with the said work.

7.2 An Accredited Union Representative may be appointed by the International Representative to be his designate in matters requiring the involvement of the International Representative.

The International Representative will inform EPSCA, in writing, of the name, duration of, appointment and function of such designate.

Article 8

UNION STEWARD

8.1 Accredited Union Representatives shall inform the appropriate EPSCA Representative and the Employer of the steward, in writing, of the names of all stewards, one of whom shall be designated Chief Steward, as they are appointed and when they cease to act as stewards. A steward, other than a Chief Steward, shall exercise his duties only in respect to employees of his Employer. A Chief Steward, in order to carry out his duties in respect to employees of other than his Employer, shall first involve the EPSCA Representative. A steward shall obtain permission from his immediate supervisor before leaving his work area for union business. Such permission shall not be unreasonably denied.

Except at Bruce Nuclear Power Development (BNPD):

Only in situations where an accredited Union Representative is unable to attend pre-job and/or mark-up meetings, may the Chief Steward be designated and attend, as part of the Chief Steward's duties, on behalf of the accredited union representative.
8.2 The appropriate Union shall receive written notice before the employment of a steward is terminated by his Employer, and provided the steward is able to perform the work required, he will be the last employee to be retained by his Employer in a layoff/standoff situation.

8.3 The chief steward will be informed of all scheduled overtime. Where practical, a steward, in accordance with practices set out in individual trade appendices, shall be given the first opportunity to work the overtime providing he is qualified to perform the work.

8.4 No foreman or subforeman shall be permitted to act as a steward.

Article 9

ADVANCE NOTICE

9.1 EPSCA will advise the Council of all new Generation Station Projects and Lines and Stations Construction Projects coming under the provisions of this Agreement for the construction field forces of the Employers.

Upon the request of the Council, EPSCA will convene a prejob conference before work commences to discuss preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the project. EPSCA will record the minutes of prejob conferences and forward them within fifteen (15) working days to the Council and those affiliates in attendance at the conference.

9.2 Subsequent prejob conferences will be convened by EPSCA before specific portions of work commence to discuss the final details of the work and to establish conditions in accordance with this agreement for that work.

9.3 EPSCA will provide written notice to the Council as far in advance as possible of new work and prejob conferences as noted in Sections 9.1 and 9.2 above. For work of less than one week's duration and requiring five (5) or less employees, prejob meetings must be arranged with as much advance notice as possible by the office of the General Manager of EPSCA, but without formal notice, in writing, unless the prejob meeting has been waived by the parties.
Article 10

WORK ASSIGNMENT

10.1 The jurisdiction of the Unions shall be that jurisdiction established by Agreements between International Unions claiming the work or Decisions of Record recognized by the AFL-CIO for the various classifications and the character of work performed, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction. An Agreement or Decision of Record is one that is published by the Building and Construction Trades Department, AFL-CIO (Agreement and Decisions Rendered Affecting the Building Industry).

Where no Decision or Agreement applies, the Employer agrees to consider evidence of established practices within the industry when making jurisdictional assignments.

10.2 (a) A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of this markup process is to indicate to the Council and union affiliates the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes.

(b) When work is to be performed on a project site and it meets the following criteria: same employer, same work, same project site, the markup process will not be required. This procedure shall not preclude a Union’s right to contest previously disputed work.

(c) When an Employer has work that is less than a 3 week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Council and union affiliates will be notified of the scope of work and the Employer’s proposed work assignments. The Unions will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Council and Union affiliates of the final work assignments prior to the commencement of the work.

(d) All work that does not meet the criteria set out in clauses 10.2(b) or 10.2(c) will be reviewed and assigned at a markup meeting.

* For the purposes of this Article, Lines and Stations will be considered a single project site and the Bruce Nuclear Power Development (BNPD) will be considered a single project site.
(e) EPSCA will provide written notice to the Council as far in advance as possible of markup meetings. The Unions may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

(f) The Employer who has the responsibility for the work shall make a proposed assignment of the work involved. The Employer shall be responsible for providing copies of proposed assignments to the Council and union affiliates in attendance at the markup meeting. The Employer will specify a reasonable time limit for the Unions involved to submit evidence of their claims. The Employer will evaluate all evidence submitted and make a final assignment of the work involved. This final assignment will be in accordance with the procedural rules established by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. The Employer will advise the Unions of the final assignments prior to the work commencing.

(g) The EPSCA representative will record the proposed assignments and jurisdictional claims and forward a copy of them within fifteen (15) working days to the Council and Union affiliates.

(h) The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the process set out above may not be practical or possible, however reasonable effort will be made by the Employer to adhere to the appropriate trade jurisdiction.

Article 11

JURISDICTIONAL DISPUTES

11.1  (a) In the event there is a jurisdictional dispute which cannot be settled on a local basis by the Unions involved, it shall be submitted to the International Unions involved for settlement without permitting it to interfere in any way with the progress of the work at any time.

Any Union shall have the right to elect to pursue or respond to any jurisdictional disputes at the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. In the event the Union elects to pursue or respond to the jurisdictional disputes at the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry, clauses 11.1(b), 11.2, 11.3, and 11.4 will apply.
In the event another Union (or other Unions) not signatory to this collective agreement has (have) the option to pursue jurisdictional disputes at the Ontario Labour Relations Board, the Council Affiliates shall have the right to pursue or respond to any jurisdictional disputes at the Ontario Labour Relations Board when these Unions are involved in the jurisdictional dispute.

In the event the Union elects to pursue or respond to the jurisdictional dispute at the Ontario Labour Relations Board, clauses 11.1(b), 11.2, 11.3, and 11.4 will NOT apply.

(b) In the event that a jurisdictional dispute arises over a work assignment, the Employer will make an assignment for the work in dispute in accordance with the Procedural Rules and Regulations of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. Any Union which protests that a contractor has failed to assign work in accordance with the procedures specified above, shall remain at work and process the complaint through its international office. The parties will settle such jurisdictional dispute in accordance with procedure as outlined by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry of the Building Trades Department, AFL-CIO or any successor agency of the Impartial Jurisdictional Disputes Board authorized by the Building Trades Department.

11.2 In the event the dispute is not settled by the International Unions involved, it shall then be submitted to the Administrator of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry for resolution. In the event that the International Office of the Union elects not to file with the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry, EPSCA agrees to file the dispute at the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry at the request of the International Representative of the Union. Those Unions and Employers involved shall advise the Council and EPSCA respectively, in writing, of an intent to submit a jurisdictional dispute to the Impartial Jurisdictional Disputes Board and will identify the work in question. An arbitration decision under the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry will be final and binding to the parties to this Agreement with no further recourse to the Ontario Labour Relations Board on the issue decided by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry.

11.3 EPSCA shall have direct recourse to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry when the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry has under its consideration a dispute involving the assignment of work being done by employees who are covered by this Agreement.
11.4 In the event that an arbitration decision under the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry is not rendered within sixty (60) days of the disputed assignment being referred to the Plan, EPSCA and/or the Council Affiliates shall have recourse to the Ontario Labour Relations Board for a decision provided it is processed as a jurisdictional dispute.

11.5 When a jurisdictional dispute exists in the electrical power systems sector, upon request by the International Representative of either of the Unions involved, Employers shall furnish the International Representative with a letter from a duly authorized official of the Employer on the Employer's stationery, stating that the Union requesting the letter was employed on specific types of work on a given project. The Union requesting the information will supply the Employer with the name of the other Union involved in the dispute and the Employer will provide that Union's International Representative with a copy of the letter being given to the requesting Union.

When a jurisdictional dispute exists in the electrical power systems sector between Unions and upon written request by the International Representative of the Union, the Employer shall supply the International Representative of the Union involved with a copy of the evidence submitted by the other Union(s) involved along with drawings and/or prints plus a description of the work or process in dispute.

11.6 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Ontario Labour Relations Board as governed by 11.4 above, the arbitration board panel appointed by the Ontario Labour Relations Board pursuant to the Act is not authorized to award damages in respect of a mis-assignment of work only in circumstances where the other union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However this clause 11.6 shall not apply where the Jurisdictional Dispute and the mis-assignment of work involves the same employer and the same work, and on the same job previously the subject of a Jurisdictional Dispute before the Ontario Labour Relations Board or the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry.

11.7 The board panel appointed by the Ontario Labour Relations Board will govern its decision pursuant to its normal criteria.

11.8 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Ontario Labour Relations Board as governed by 11.4 above, the decision of the panel of the Ontario Labour Relations Board will be final and binding upon the parties to this agreement with no further recourse to the Plan on the issue decided by the Ontario Labour Relations Board.
Article 12

UNION SECURITY

12.1 UNION MEMBERSHIP

(a) Employees

As a condition of employment, all employees covered by this Agreement shall either be members of, or will apply for membership in, the appropriate member Union of the Council within seven (7) days of employment. It shall also be a condition of continued employment that employees maintain their union membership in good standing.

(b) Foremen

As a condition of employment, all foremen covered by this Agreement shall either be members of, or will apply for membership in, the appropriate member Union of the Council within seven (7) days of employment. It shall also be a condition of continued employment that foremen maintain their union membership in good standing.

12.2 CHECKOFF

The Employers shall deduct union initiation fees and dues from their employees' and foremen's wages. Such fees and dues will be deducted weekly or monthly and transmitted to the designated officials of the Unions, on or before the 15th day of the month following the month in which deductions are made, together with full checkoff lists of employees and foremen subject to checkoff.

The Council and member Unions shall indemnify EPSCA and the Employers for any liability arising from the deduction of initiation fees and dues.

The Union, through its International Office, will notify EPSCA, in writing, of the appropriate initiation fees and Union dues and of any changes to such fees and dues. Within three (3) weeks of receipt of an acceptable written notice, any changes to such fees and dues will be implemented. The effective date will be the date of implementation.

The Employer will check off initiation fees on receipt from the Union of authorization signed by the employee.
12.3 The Union may designate dues from any of the following options:

- a fixed dollar amount per month,
- a fixed percentage of vacationable gross earnings (as defined in the applicable Article in each Appendix) per month,
- a fixed cents per hour worked or paid,
- a fixed cents per hour worked or paid plus a fixed dollar amount per week or month,
- a fixed dollar amount per month plus a percentage of vacationable gross earnings.

Regardless of the option selected, the Employer will only remit monies to a single location. Any redistribution is the responsibility of the Union. By mutual agreement with the Union, an Employer may elect to continue current administrative practices relative to the deduction of union dues.

**Article 13**

**EMPLOYMENT**

13.1 (a) For purposes of this Article, a geographic area will be established for each Major Project and geographic areas for the Construction and Services Division. The size of these geographic areas will be dependent upon the location of the work and the trade concerned.

(b) The boundaries of the geographic areas will be jointly established at prejob conferences.

13.2 An office will be established by EPSCA, or the Employer with the approval of EPSCA, for each Major Project and the Construction and Services Division. A purpose of this office will be to co-ordinate employment as specified in this Article.

13.3 EPSCA, or the Employer with the approval of EPSCA, and the Council will exchange the names of their representatives in each of the areas described in 13.1(a), who will be responsible for co-operating in the referral and employment of reliable and competent union members.
13.4 EPSCA, or the Employer with the approval of EPSCA, will notify the appropriate unions of future manpower requirements for all employees coming within the scope of this Agreement.

13.5 Where key tradesmen are required, Employers reserve the right to employ and transfer key tradesmen to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation projects and transmission and transformation construction.

The employment of key tradesmen and tradesmen employed through the Employment Request Article will be negotiated between EPSCA and the Union for each trade and will be contained in the trade appendices.

13.6 The employment of additional tradesmen and apprentices, excluding key tradesmen and tradesmen employed through the Employment Request Article, shall be carried out on the following basis and sequence:

REV (a) The EPSCA office, or the Employer with the approval of EPSCA, will request the appropriate local union office for tradesmen and apprentices required. The request will include a description of the work, the number of qualified tradesmen and apprentices required, and the name of the Employer for whom the tradesmen and apprentices will be working.

(b) The Union members who are resident in the designated geographic area will be referred by the Union for employment through the EPSCA office. As much as their out-of-work lists will permit, the Unions will supply members on a fan-out basis from the project or work location.

The Employers will either hire such persons or substantiate their reasons, in writing, for not doing so.

The Union will co-operate with the Employer and advise the EPSCA office of the name, address and telephone number of members being referred for work with Lines and Stations Construction as soon as they are known.

(c) If, after a request has been made, the Union is unable to supply sufficient tradesmen and apprentices to meet the manpower requirements of the Employers, the Employers may employ tradesmen and apprentices who are resident within the geographic area. Such tradesmen and apprentices shall comply with the requirements of Article 12 of this Agreement. EPSCA shall promptly notify the Accredited Union Representative, in writing, of the names, addresses, date of hire, social insurance numbers, telephone numbers, job location and classification of the persons hired.

(d) Once the supply of suitable tradesmen and apprentices within the geographic area has been exhausted and additional tradesmen and apprentices are required,
EPSCA will contact the International Representative for the trade concerned, or his designee, in order to determine whether suitable union tradesmen and apprentices are available outside of the geographic area. EPSCA will co-operate in providing employment to such union tradesmen and apprentices on the basis that they be supplied from the nearest location where they are available.

13.7 Notwithstanding the provisions of Articles 13.5 and 13.6, re-employment as required by the Workers Compensation Board shall not be a violation of this collective agreement nor be subject to the provisions of Articles 27 and 28.

Article 14

PAY PROCEDURE

14.1 NORMAL

(a) Employees shall be paid weekly and payment for any given week will be made not later than the sixth working day after the close of the payroll period, but in any event not later than Thursday of the following week. Except as provided for in 14.1(c) employees who are at work on Thursday and are not paid will be paid on Friday. Such employees will be released one (1) hour, with pay, prior to normal quitting time on Friday to enable them to cash their cheque.

(b) Wages shall be paid by the Employers on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee, setting forth:

(i) the period of time or the work for which the wages are being paid;
(ii) the rate of wages to which the employee is entitled;
(iii) the amount of wages to which the employee is entitled;
(iv) the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;
(v) any allowance or other payment to which the employee is entitled;
(vi) the amount of vacation pay for which the employee is being credited;
(vii) the amount of statutory holiday pay for which the employee is being credited; and
(viii) the net amount of money being paid to the employee.

(c) In cases of inclement weather being declared on payday, employees will receive their pay before leaving the site provided it is available on the site.
14.2 ON TERMINATION

(a) An employee who voluntarily terminates his employment will be provided his final pay on the next regular payday.

(b) An employee who is laid off from a Generation Project will have his final pay and termination documents mailed to his last known address on file with the Employer by Priority Post within five (5) working days of termination. An employee who is laid off from a Lines and Stations construction site will have his final pay and termination documents mailed to his last known address on file with the Employer within eight (8) working days of termination. This does not preclude an employee being issued his final pay and termination documents on the job prior to the five or eight-day period. After 48 hours of notifying the Employer, the Employee will be entitled to four (4) hours at straight time for each normal workday for which there is non-compliance thereafter.

(c) An employee who is discharged shall be provided with his final pay immediately if the Employer's pay facilities are on site or as per 14.2(b) if the Employer's pay facilities are not on site.

(d) Employers will provide one hour's notice of layoff or one hour's pay in lieu of notice to employees who are to be laid off.

When possible, the Employer shall notify the Local Union three (3) days prior to layoff.

(e) When an employee is laid off, he will be paid for a reasonable amount of time by the Employer if he is required to travel or wait unduly before he receives his final pay.

(f) In established cases of long-term sickness, compensable accident or jury duty, an employee will be maintained on the Employer's payroll until his normal date of layoff.

Article 15

CALL-IN PAY

15.1 When an employee is called in to work outside of his normal hours of work, he shall receive a minimum of four (4) hours' work at the appropriate premium rate plus travel allowance where applicable.
If the employee's normal hours of work commence within this four (4) hour period, the employee will be paid premium time from the time he commences work until the start of his normal hours and will revert to his normal hourly rate at the commencement of his normal hours of work.

**Article 16**

**REPORTING PAY**

16.1 An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of four (4) hours' pay at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for work for any part of the first half of a shift and an additional four (4) hours on the first and second shifts or two and one-half (2-1/2) hours on the third shift will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Article that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

16.2 An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

16.3 Notwithstanding that work is available and an employee is able to commence or continue work, the Employer may shut down a job to avoid the possible loss of human life because of an emergency situation such as H₂S leaks, bomb threats, fire, etc., that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked.

**Article 17**

**GENERATION PROJECTS DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD**

*Article 17 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e. Greenfield Work).*

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to *Article 33 - Modified Provisions of this Construction Agreement.* (Article 33.5)
DAILY TRAVEL ALLOWANCE

17.1 The daily travel allowance will be paid by the Employers to employees who are not receiving room and board as referred to in Section 17.2, on the following basis:

(a) If an employee lives within twenty (20) radius kilometers* of the project, no travel allowance will be paid.

(b) If an employee lives within 20 to 40 radius kilometers of the project, he shall receive $14.60 per day travel allowance for each day worked or reported for.

(c) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $17.85 per day travel allowance for each day worked or reported for.

(d) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $21.10 per day travel allowance for each day worked or reported for.

(e) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $24.60 per day travel allowance for each day worked or reported for.

(f) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 17.2 below, he will receive $28.85 per day travel allowance provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

Bruce G.S. "A", Bruce G.S. "B", and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
ROOM AND BOARD

17.2 * The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(a) An Employer may supply either:

(i) Room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;

subject to Sections 17.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $54.00 per day for each day worked or reported for when employed at a location south of the French River and $68.00 per day for each day worked or reported for when employed at a location north of the French River subject to Sections 17.2(c) and 17.2(d) below.

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near a project. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled to $29.60 per day worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for a subsistence allowance as provided for above shall receive a subsistence allowance of $38.05 per day for each day worked or reported for.

* An employee's 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.
17.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 17.1 and 17.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

17.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

17.5 The Council recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
**Article 18**

**LINES AND STATIONS CONSTRUCTION**

**DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD**

*Article 18 is applicable to all work on Lines & Stations at both existing and new sites*

---

**DAILY TRAVEL ALLOWANCE**

18.1 The daily travel allowance will be paid by the Employers to their employees who are not living in camp or receiving a subsistence allowance as referred to in Section 18.3 on the following basis:

(a) Effective May 1, 1996, if an employee lives within forty (40) radius kilometers of the work location or declared assembly point, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the work location or declared assembly point, he shall receive $17.60 per for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the work location or declared assembly point, he shall receive $21.10 per day for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the work location or declared assembly point, he shall receive $24.60 per day for each day worked or reported for.

(e) If an employee lives greater than 97 radius kilometers from the work location or declared assembly point, and does not qualify for subsistence allowance under Section 18.3 below, he shall receive $27.85 per day provided he continues to travel greater than 97 radius kilometers daily for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement. A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.
18.2 The Employer reserves the right to base daily travel allowance on the distance in radius kilometers from where an employee lives to either the work location or declared assembly point, depending on where the employee is directed to report.

ROOM AND BOARD

18.3 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the work location:

(a) An employer may supply either:

(i) room and board in camp or a good standard of board and lodging; or

(ii) a subsistence allowance;

subject to Sections 18.3(b) and (c) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $67.00 per day for each day worked or reported for subject to Section 18.3(c) below.

* An employee's 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.

3. For metro areas (Toronto and Hamilton) the calculation of distance shall be from the employee's regular residence.

4. For all other areas, the calculation of distance shall be based on the location of the city or town hall of the municipality where an employee maintains a self-contained domestic establishment described above. In those municipalities where a city or town hall does not exist, then the post office serving his regular residence will apply.
(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near the work location. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled to $27.85 per day for each day worked or reported for.

18.4 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 18.1 and 18.3 above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.

18.5 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

18.6 The Council recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled workday on which he does not work will be charged $25.00 per day unless he is excused from work by an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
Article 19

LINES AND STATIONS CONSTRUCTION
DAILY TRAVEL TIME

19.1 All travel time will be outside of normal working hours.

19.2 (a) An employee will be paid his straight-time rate for all time spent travelling from his assembly point to his work location on normal working days.

An employee will be paid premium time for all time spent travelling from his assembly point to his work location on days other than normal working days.

(b) An employee will travel up to a maximum of one hour on his own time when returning from his work location to his assembly point. An employee will be paid his straight-time rate for all time spent travelling in excess of one hour.

19.3 All time in excess of one hour spent travelling from the work location to the assembly point on non-working days shall be compensated for at the appropriate premium rates of pay.

19.4 The Employer will supply transportation between the assembly points and work locations.

Article 20

STANDOFF

REV

20.1 When unable to proceed with his work, an Employer may elect to Standoff part or all of his crew. The parties agree Standoff is not intended to circumvent the layoff procedure.

The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel allowance will be paid to an employee for the Standoff period.

20.2 An employee who qualifies for subsistence allowance and who is placed on Standoff will be paid subsistence allowance up to a maximum of ten (10) consecutive working days.
20.3 If Standoff continues beyond ten (10) consecutive working days, an employee, at his option, may elect to remain on Standoff for an additional twenty (20) consecutive working days or be removed from Standoff. The Employer retains recall rights on employees electing to continue on Standoff. Subsistence allowance will cease after ten (10) consecutive working days on Standoff.

20.4 If an employee elects layoff beyond the tenth (10th) consecutive working day, it shall be carried out in accordance with the terms of the Layoff/Seniority provisions of the appropriate Trade Appendix of this Agreement. An employee laid off will be issued a Record of Employment form on his date of layoff indicating “Layoff – Shortage of Work”. The Employer does not retain recall rights if the employee elects Layoff.

20.5 Standoff shall only continue beyond thirty (30) consecutive working days with the mutual consent of the Employer and the Union, in writing.

- For the purpose of this Article, when working on a 4 x 10 hour shift arrangement, the following will apply:

  - eight (8) scheduled working days will be considered the equivalent of ten (10) consecutive working days.
  - sixteen (16) scheduled working days will be considered the equivalent of twenty (20) consecutive working days.
  - twenty-four (24) scheduled working days will be considered the equivalent of thirty (30) consecutive working days.

**Article 21**

**REST PERIOD**

21.1 For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time and in a reasonable location as directed by the Employer, for each half shift worked. Where a half shift is less than four (4) hours, there shall be no rest period.

21.2 For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

21.3 For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two hours of overtime worked.
Article 22

LUNCHROOM FACILITIES

22.1 Adequately heated accommodation separate from changerooms and washrooms shall be provided by the Employer on each project when necessary and where such accommodation can be reasonably provided for. Such accommodation shall be weatherproof and shall be kept reasonably clean. A table and sufficient benches or seats for the employees on the job shall be provided in the accommodation. Trailerized or portable accommodation shall include tables, benches, light, heat maintained at a minimum sixty-eight (68) degrees Fahrenheit, proper access and egress, and shall not be used for material storage.

Article 23

MEALS ON OVERTIME

23.1 If an employee is notified during the time he is working that he will be required to continue working for more than two (2) hours past the normal quitting time of the first or second shifts or for more than three and one-half (3-1/2) hours beyond the normal quitting time of the third shift, the Employer will provide a free meal to the employee after approximately two (2) hours of overtime worked (first or second shifts) or three and one-half (3-1/2) hours of overtime worked (third shift) and for each four (4) hours of overtime worked thereafter. The employee will be allowed thirty (30) minutes paid at the straight time rate to eat each meal at the time directed by the Employer. When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period. The Employer will supply a hot meal when possible. When a free meal is not provided, the Employer will pay the employee one-half (1/2) hour at his appropriate rate.

To qualify for the above-noted on a Friday for work on the first and second shifts, an employee will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Statutory Holidays for employees who normally work the first or second shifts, nor is it applicable to the first six and one-half (6-1/2) hours worked on Sundays or recognized holidays for employees who normally work the third shift.

23.2 Where an employee has been notified the previous day, no meal will be provided but the employee will be allowed thirty (30) minutes paid at the straight time rate to eat each meal at the time directed by the Employer.

Article 24
TOOLS AND CLOTHING

24.1 An employee shall be required to provide himself with the ordinary hand tools of his trade, based on established trade union practices at the time of signing of this Agreement. EPSCA and the Council shall establish an appropriate tool list for each trade. Each Employer will provide, insofar as is practical, separate facilities for storing the tools of each trade, but shall not be held responsible for losses, except as noted hereunder:

(a) When personal tools valued in excess of $15.00 are lost due to fire, the Employer will consider the full estimated value on the merit of each case in determining replacement or payment. This will include only personal tools that a tradesman is required to have to perform his normal duties with his Employer.

(b) Each Employer will compensate his employees for ordinary hand tools and clothing lost by theft from locked storage provided by him for his employees. Claims must be submitted, in writing, and must provide substantiating evidence of forcible entry to locked storage. Payment or replacement for personal clothing lost by theft on the work site shall be limited to clothing that a tradesman is required to have to perform his normal duties with his Employer.

(c) In the event of loss by fire at an Employer's camp or on the work site in an Employer designated storage area, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $500.00 for the loss of personal clothing will be made by the Employer. Payment or replacement for personal clothing lost by fire on the work site shall be limited to clothing that a tradesman is required to have to perform his normal duties with his Employer.

24.2 An employee who has obtained tools from his Employer shall be allowed sufficient time, in the opinion of Management, to return such tools to his Employer during working hours. An employee receiving tools from his Employer shall be held responsible for the return of such tools in good condition, subject to normal wear and tear. On layoff, an employee will be allowed reasonable time to return tools to his Employer.

24.3 Gang tools as described in the appendices shall be the responsibility of the Employer.

24.4 Employees working in a radiation area, in plastic suits or replacement material of the fully enveloping type with an independent air supply, will receive $8.00 per day. A day for the purposes of this item shall be defined as any period up to twelve (12) hours.
Article 25

APPRENTICESHIP AND TRADES TRAINING

25.1 Apprenticeship and other training programs should be instituted as required to maintain an adequate skilled and competent work force to perform work within the electrical power systems sector by apprenticeship training programs, upgrading programs and retraining programs.

25.2 Where a ratio of apprentices to journeymen employed has been established in a trade appendix, this ratio shall be maintained.

Article 26

HOURS OF WORK

*Article 26 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e. Greenfield Work).*

For work at Existing and New Lines & Stations Sites and at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to *Article 33 - Modified Provisions of this Construction Agreement.*

(Article 33.6)

26.1 The normal weekly hours of work for all employees of Employers covered by this Agreement shall be thirty-eight (38), except as described in Sections 26.2, 26.3, 26.4, 26.5, 26.6 and 26.7.

The weekly hours shall be worked in four (4) eight (8) hour days, Monday to Thursday inclusive, with the remaining six (6) hours to be worked on Friday.

26.2 The hours of work for such work as driveway and parking lot construction, railroad construction, landscaping, tunnelling, precast concrete erection, fencing or demolition, shall be as established in applicable local agreements for the class and character of work.
An applicable local agreement shall be an agreement between a local of any union signatory to this Agreement and a builders' exchange, contractors' association or contractor applicable in the locality of the project for the class and character of the work.

26.3 The weekly hours of work for structural steel erection shall be forty (40) hours made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.

26.4 The weekly hours of work for site preparation and earth dams shall be 45 hours made up of five (5) days of nine (9) hours each, Monday to Friday inclusive.

26.5 The weekly hours of work for Watchmen shall be as set forth in the Laborers' International Union of North America Appendix, attached hereto.

26.6 The weekly hours of work for Operating Engineers engaged in tunnel work shall be as set forth in the International Union of Operating Engineers' Appendix attached hereto.

26.7 The normal weekly hours of work for employees working the third shift shall be thirty-two and one-half (32-1/2), made up of five (5) days of six and one-half (6-1/2) hours each.

The hours of work at all Lines and Stations Construction locations and Miscellaneous Projects (excluding Lakeview and R.L. Hearn Generating Stations), except those set forth in Sections 26.2 and 26.4, shall be 40 hours per week made up of five (5) days of eight (8) hours each, Monday to Friday inclusive. The normal daily hours are to be worked between 7:30 am and 5:00 pm.

A Miscellaneous Project is any work undertaken by Ontario Hydro's Generation Projects Division which will require less than one year to complete and comprise a total project work force of not more than one hundred men at one time.

26.8 PROJECT DAILY HOURS

(a) Day Work Only

The normal starting time for day work hours shall be 8:00 a.m. By mutual agreement between EPSCA and the Council, the starting time may be varied by one-half hour either way. This variance will be established at the prejob conference or while the job is in progress.
(b) **Shift Work**

(i) Shift work will be deemed to be established providing there are at least four consecutive days of shifts to be worked excluding Saturdays, Sundays and Statutory Holidays.

(ii) The normal starting time for day shift hours shall be the same as the day work hours described in Section 26.8(a).

(iii) Where shift work is established, the normal shift hours for the first (day) and second shifts shall be the same as the day hours. The third shift normal hours shall be six and one-half (6-1/2) hours' work, to be worked between 1:00 a.m. and 8:00 a.m., with an unpaid one-half (1/2) hour lunch period.

(iv) On Monday to Thursday inclusive, the second shift hours shall start at 4:30 p.m. or a variance of one-half hour either way, to coincide with the end of the day shift. On Friday, the second shift hours may start at 4:30 p.m. or at the end of the day shift.

(v) The third shift to start at 1:00 a.m. Monday.

(vi) Where the third shift is established as starting at 1:00 a.m. Monday, it shall be worked between 1:00 a.m. and 8:00 a.m. Monday, Tuesday, Wednesday, Thursday and Friday.

(c) **Hours of Work - Special Circumstances**

It may be necessary from time to time to vary the hours of work established in Sections 26.8(a) and (b). Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Council at the prejob conference or while the job is in progress.

26.9 The shift rate will be based on the day in which the shift begins.

26.10 **LUNCH PERIODS FOR MAJOR PROJECTS, AND CONSTRUCTION AND SERVICES DIVISION**

A lunch period will be given no earlier than four (4) hours and no more than five (5) hours after the start of the shift and will be one-half (1/2) hour in duration.

A lunch period will be given no earlier than three and one-half (3-1/2) hours and no more than five (5) hours after the start of the third shift and will be one-half (1/2) hour in duration.
26.11 When an employee is required to return to work without an eight (8) hour break, all work performed shall be at the premium rate until such time as the employee receives an eight (8) hour break. This provision does not apply when a change in an employee's normal shift (as defined in this Article) occurs or to call-in situations.

**Article 27**

**GRIEVANCE PROCEDURE**

27.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by EPSCA and the appropriate Union. In the interests of expediting the procedure, the parties shall process grievances in the following manner:

The grievance procedure and arbitration procedure in Article 27 do not apply to jurisdictional disputes.

27.2 **PRELIMINARY DISCUSSION**

Disputes arising out of the interpretation or alleged violation of this Agreement should, if possible, be settled by discussion between the employee and/or his steward and the employee's supervisor. If the employee affected is a foreman, the preliminary discussion will be between the Accredited Union Representative and the foreman's supervisor.

27.3 **FIRST STEP**

If a dispute cannot be resolved by this method, the Accredited Union Representative for the trade concerned may file a formal grievance on the prescribed form with the Manager of Construction or the Field Construction Manager within fifteen (15) working days of the alleged grievous act.

Within ten (10) working days of the filing of the grievance, the Manager of Construction or Field Construction Manager shall investigate the grievance and convene a First Step meeting which he or the Accredited Union Representative considers necessary to resolve it.
The Management Committee shall be comprised of the Manager of Construction or the Field Construction Manager or their designate plus at least one representative of the Employer named in the grievance. The Union Committee shall include at least two persons, one of whom shall be the Accredited Union Representative for the grievor.

The Manager of Construction or Field Construction Manager shall give his reply on the prescribed form to the Accredited Union Representative within five (5) working days from the date of the First Step meeting.

Copies of completed grievance forms signed by the appropriate parties shall be filed by the Manager of Construction or the Field Construction Manager with the General Manager of EPSCA. The Accredited Union Representative for the grievor will file a copy with the Council.

The EPSCA Representative will send a copy of any signed first step grievance settlement between the Accredited Union Representative and EPSCA to the OACTC and EPSCA office.

27.4 SECOND STEP

Within ten (10) working days after the disposition has been issued under the First Step of this procedure, the Accredited Union Representative may refer the grievance on the prescribed form to EPSCA's Grievance Officer. A copy of the grievance form shall be forwarded by the Accredited Union Representative to the International Representative of the Union.

The EPSCA Grievance Officer shall investigate the grievance and convene a meeting which he or the International Representative considers necessary to resolve it and give his reply on the prescribed form to the International Representative of the Union within five (5) working days from the receipt of the grievance form which was completed at First Step.

The Management Committee shall comprise the EPSCA Grievance Officer plus two other Management Representatives, one of whom shall be a representative of the Employer named in the grievance. The Union Committee shall be comprised of at least the International Representative or his designate for the grievor. If the International Representative elects to appoint a designate, he shall inform EPSCA, in writing, of the name of the designate and the duration of appointment.

27.5 EPSCA OR COUNCIL GRIEVANCES

The processing of EPSCA or Council grievances will begin at the Second Step. EPSCA or the Council may submit either policy or specific grievances. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.

27.6 TIME LIMITS
The time limits as to both documents and procedures set out in the above sections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, the employee concerned, the Union, the Council or EPSCA shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been settled and ineligible for arbitration.

27.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at First Step.

27.8 GRIEVANCE FACILITIES

EPSCA shall provide the necessary facilities for all grievance meetings.

Article 28

ARBITRATION

28.1 If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Article 27, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either EPSCA or the Council to a Board of Arbitration for adjudication.

The party desiring to submit the dispute to arbitration shall notify the other party, in writing, of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, or if the nominees fail to agree upon a Chairman, the appointment shall be made by the Minister of Labour for Ontario upon the request of either party. The arbitration board, when selected or appointed, will proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. The decision of a majority is the decision of the arbitration board, but if there is no majority, the decision of the Chairman governs.
28.2 The arbitration board shall have no power to add to or subtract from or modify any of the terms of this Agreement. The arbitration board shall not substitute its discretion for that of the parties except where the board determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the arbitration board may substitute such other penalty for the discharge or discipline as to the arbitration board seems just and reasonable in all circumstances. The arbitration board shall not exercise any responsibility or function of the parties. The arbitration board shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.

28.3 In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario, and the fees and expenses of the Chairman shall be shared equally by the parties.

28.4 The time limits as to both documents and procedure set out in the above sections shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed.

Article 29

NO STRIKE - NO LOCKOUT

29.1 There shall be no strikes or lockouts so long as this Agreement continues to operate.

Article 30

ASSOCIATION FUND

30.1 Each Employer bound by this agreement shall contribute to the Electrical Power Systems Construction Association Fund, the amount specified on the wage schedules attached hereto for each hour worked by each employee covered by this agreement.

The Employer shall remit such contribution together with the supporting information as required on the reporting forms.

EPSCA shall indemnify the Council and member Unions for any liability arising from an Employer's failure to remit such contributions.
Article 31

RADIATION WORK

31.1 (a) Local Union to be provided with a copy of Ontario Hydro Radiation Protection Regulations and any revisions.

(b) Local Union to be provided with a copy of Ontario Hydro Radiation Protection Procedures and any revisions.

(c) Each employee will have access to his personal radiation exposure record.

(d) Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

(e) Short-term employees will be given a guaranteed period of employment at their time of hire.

Article 32

ABORIGINAL CONTENT COMMITMENT

Where an aboriginal commitment has been established on a project, the Union will co-operate in meeting the content commitments.

For a project, or jobs within a project, that are less than $100,000 field labour, and have aboriginal content commitments, the terms of the collective agreement will not apply to those aboriginal content commitments.
Article 33

MODIFIED PROVISIONS OF THIS CONSTRUCTION AGREEMENT

33.1 These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

33.2 Definitions:

Facility Something that is built composed of multi-systems which serves a specific function

Function Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

33.3 Dispute Resolution Process

A dispute as to whether the 'Modified Provisions of this Construction Agreement' apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within 5 (five) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within 10 (ten) working days for a final and binding resolution. The arbitrator shall give an oral decision within 5 (five) working days, and a written decision, if requested, within 20 (twenty) working days.

33.4 All terms of this collective agreement shall apply to work covered by this Article, with the exception of Article 17 - Generation Projects Daily Travel Allowance and Room and Board and Article 26 - Hours of Work.
DAILY TRAVEL ALLOWANCE

33.5.1 The daily travel allowance will be paid by the Employers to employees who are not receiving room and board as referred to in Article 33.5.2, on the following basis:

(a) Effective May 1, 1996, if an employee lives within forty (40) radius kilometers* of the project, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $17.85 per day travel allowance for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $21.10 per day travel allowance for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $24.60 per day travel allowance for each day worked or reported for.

(e) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 33.5.2 below, he will receive $28.85 per day travel allowance provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

Bruce G.S. "A", Bruce G.S. "B", and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
ROOM AND BOARD

33.5.2 The following conditions will apply for employees whose regular residence* is more
than 97 radius kilometers from the project:

(a) An Employer may supply either:

(i) Room and board in camp or a good standard of board and
lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;

subject to Sections 33.5.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and
board. An employee who exercises this option and qualifies for subsistence
allowance shall receive a subsistence allowance of $54.00 per day for each day
worked or reported for when employed at a location south of the French River
and $68.00 per day for each day worked or reported for when employed at a
location north of the French River subject to Sections 33.5.2(c) and 33.5.2(d)
below.

(c) To qualify for subsistence allowance an employee must maintain temporary
accommodation at or near a project. Employees who travel daily to locations
beyond 97 radius kilometers from the project will be entitled to $29.60 per day
worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for
a subsistence allowance as provided for above shall receive a subsistence
allowance of $38.05 per day for each day worked or reported for.

* An employee’s 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a
dwelling house, apartment or similar place of residence where a person generally
eats and sleeps and for which he can show proof of financial commitment). This is
in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time
when, because of the location of the work, the employee is forced to obtain
temporary accommodation at that work location.
33.5.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 33.5.1 and 33.5.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

33.5.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

33.5.5 The Council recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

---

33.6

HOURS OF WORK

The effective date of this Article is to be determined by the Employer. The Employer agrees to notify the Council prior to implementing this Hours of Work Article.

33.6.1 One (1) or Two (2) Shift Operation

The weekly hours of work shall consist of forty (40) hours, worked between Monday and Friday, for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation except as described in Sections 33.6.2, 33.6.3, 33.6.4, 33.6.5 and 33.6.6.
The weekly hours of work for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts, either Monday-Thursday or Tuesday-Friday but not concurrently on the same project, or by having the employees work five (5) consecutive eight-hour shifts. On ratification of this agreement, each project site will notify the Local Union of the weekly hours of work that the site has elected to work (4 days x 10 hours per day or 5 days x 8 hours per day). Weekly hours of work will be established for a minimum period of thirty (30) days. If a project site intends to change the weekly hours of work, a minimum of fifteen (15) days written notice shall be sent to the Local Union.

The start time for the day shift shall be 8:00 AM with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one-half hour either way to coincide with the end of the day shift.

The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

Three (3) Shift Operation

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours per shift at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift at the straight time plus the appropriate shift differential as set out in the trade appendices.

Those employees working on the night shift shall work seven (7) hours per shift plus the appropriate shift differential as set out in the trade appendices.

33.6.2 The hours of work for such work as driveway and parking lot construction, railroad construction, landscaping, tunnelling, precast concrete erection, fencing or demolition, shall be as established in applicable local agreements for the class and character of work.

An applicable local agreement shall be an agreement between a local of any union signatory to this Agreement and a builders' exchange, contractors' association or contractor applicable in the locality of the project for the class and character of the work.
33.6.3 The weekly hours of work for structural steel erection shall be forty (40) hours made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.

33.6.4 The weekly hours of work for site preparation and earth dams shall be 45 hours made up of five (5) days of nine (9) hours each, Monday to Friday inclusive.

33.6.5 The weekly hours of work for Watchmen shall be as set forth in the Laborers' International Union of North America Appendix, attached hereto.

33.6.6 The weekly hours of work for Operating Engineers engaged in tunnel work shall be as set forth in the International Union of Operating Engineers' Appendix attached hereto.

33.6.7 Shift Change

A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked excluding Saturdays, Sundays and recognized holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the balance of the four (4) consecutive shifts that would have been worked had the employee not been reassigned.

33.6.8 It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Council.

33.6.9 LUNCH PERIODS FOR MAJOR PROJECTS, AND CONSTRUCTION AND SERVICES DIVISION

A lunch period will be given no earlier than four (4) hours and no more than five (5) hours after the start of the shift and will be one-half (1/2) hour in duration.

A lunch period will be given no earlier than three and one-half (3-1/2) hours and no more than five (5) hours after the start of the third shift and will be one-half (1/2) hour in duration.

33.6.10 When an employee is required to return to work without an eight (8) hour break, all work performed shall be at the premium rate until such time as the employee receives an eight (8) hour break. This provision does not apply when a change in an employee's normal shift (as defined in this Article) occurs or to call-in situations.
Article 34

TERM OF AGREEMENT

34.1 Subject to the contract opener provision of this Article, this Agreement shall continue in full force and effect for a term of twenty-six (26) years, from the first day of May, 1974 to the thirtieth day of April, 2000, inclusive, and thereafter it shall be considered automatically renewed for successive periods of two (2) years unless, at least sixty (60) days prior to the end of any two (2) year period, either party serves written notice upon the other that it desires termination, revision or modification of any provision or provisions of this Agreement.

The provisions of the contract opener will not apply for the term beginning May 1, 1998 until April 30, 2000.

34.2 IN-TERM MEETINGS

This Agreement may be re-opened at the request of EPSCA or the Union to discuss appendix items only commencing the second year of operation of the Agreement.

The parties will meet for negotiations when written notice of the amendment or amendments requested has been submitted at least thirty (30) days prior to an eligible date for a negotiating meeting. Proposed amendments received less than thirty (30) days before an eligible date for a negotiating meeting will be dealt with at the next eligible date for a negotiating meeting.

34.3 Proposed amendments to the master portion of this Agreement shall be negotiated by the Senior Bargaining Committees which are the executive officers of EPSCA and the Council respectively.

34.4 Proposed amendments to the Appendices to this Agreement shall be considered by the Trade Bargaining Committees named by the Board of Directors of EPSCA and the Officers of the Council. Amendments agreed upon through Trade Appendix negotiations are subject to approval by the EPSCA Board of Directors and the Officers of the Council.

34.5 The proposed amendment or amendments agreed upon, in writing, at the bargaining sessions provided above will be incorporated as a revision on the date agreed to by the EPSCA Board of Directors and the Officers of the Council.
34.6 CONTRACT REOPENER

If the parties fail to reach settlement through the process of negotiation described above, the proposed amendment or amendments may be submitted by either party to the other sixty (60) days prior to the second or each succeeding anniversary date of the Agreement. When such a request is submitted by either party, the agreement will automatically become open at such anniversary date for negotiation of the submitted amendment or amendments. If agreement cannot be reached, the parties may refer the matter to conciliation and the provisions of The Labour Relations Act shall apply as it would on the final anniversary date. All provisions of this Agreement will continue to operate until:

(a) agreement is reached on the disputed provision or provisions, or

(b) until conciliation procedures have been concluded and either party may, under The Labour Relations Act of Ontario, resort to the sanctions provided under the Act. If settlement is not reached by the time the conciliation procedures have been concluded, this Agreement will be conclusively deemed to have been terminated.

34.7 Any changes to this Agreement or any renewal or successor Collective Agreement will be confined to the specific amendments in respect of which submissions were made under Article 34.6.
IN WITNESS WHEREOF the parties through their duly authorized officers have executed this Agreement, this 28th day of August, 1974.

APPENDIX A

MOOSE RIVER BASIN: NORTHERN ONTARIO

Where the Employer elects to establish a camp, the following conditions will apply for employees working in the Moose River Basin:

Camp Conditions

(a) An Employer may elect to provide free room and board in camp at no cost to the employee. Where the Employer elects to provide a camp such employees will not be entitled to receive a daily travel or room & board allowance.

(b) When an Employer does not elect to provide free room and board in camp, the employee will be entitled to receive a daily travel or room and board allowance as set out in Articles 17.1 and 17.2.

(c) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(d) An employee who is absent from work without approval and who remains in camp and is still absent from work the following day without approval will be charged $25.00 for the day of absence and each successive day of unapproved absence.

Hours of Work

(1) The hours of work will consist of a 21 day cycle of fourteen (14) consecutive work days followed by seven (7) consecutive days off.

(2) Regularly scheduled hours of work of ten (10) hours per day shall be paid at straight time hourly rates.

(3) Regularly scheduled hours of work on Saturday, Sunday, Recognized Holidays, and the fifth (5th) consecutive weekday shall be paid at two times the straight time hourly rate.
Wrap Around

An employee shall qualify for a return trip from the project every second twenty-one (21) day cycle he is on the project on the following basis:

(a) If an employee lives within 161 radius kilometres from the project, the Employer shall pay forty dollars ($40.00).

(b) If an employee lives greater than 161 radius kilometres from the project, the Employer shall pay as an allowance, forty dollars ($40.00) plus travel time based on the equivalent of one (1) hour’s base rate of pay for each eighty (80) kilometres from where the employee lives or place of recruitment, whichever is closer to the project.
APPENDIX B

7-DAY COVERAGE

NUCLEAR SITES

NEW

When working under the provisions of this 7-day shift schedule, all conditions listed below will supersede those in the other Articles/Sections of this Collective Agreement. Where this shift schedule is silent, the appropriate Article/Section in the Collective Agreement applies.

These provisions would only apply to work performed on a Nuclear facility.

This shift schedule is intended for work of at least five (5) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours’ pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a two or three ten (10) hour per day shift basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked.

Notice Provision

If this shift schedule is to be used for work on a “planned outage”, the Employer will provide the Union with two (2) weeks’ notice prior to the implementation of these shift provisions.

Shift Provisions

Day Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates.
Afternoon Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.

Night Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.

All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at the appropriate overtime rate for that trade. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
APPENDIX C

7-DAY COVERAGE

ONTARIO HYDRO SERVICES COMPANY (LINES AND STATIONS)

NEW

This shift schedule is intended for work greater than two (2) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

These provisions will only apply to work performed on Lines and Stations as follows:

“for emergency work until the system is restored to the pre-emergent state”

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours’ pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a one, two, or three shift per day basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked. The Employer will provide the Union with 48 hours’ notice prior to the implementation of these shift provisions.

First Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates.

Second Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.

Third Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found in the appropriate trade appendix for this shift.
All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid the appropriate overtime rate for that trade. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
STATEMENT OF UNDERSTANDING NO. 1

Notwithstanding Article 1, Recognition, of the Collective Agreement between The Electrical Power Systems Construction Association and the Ontario Allied Construction Trades Council, it is recognized and agreed by The Electrical Power Systems Construction Association and the Ontario Allied Construction Trades Council that employees of Ontario Hydro, who, at April 30, 1953, possessed full regular status and who are engaged on property acquired for Ontario Hydro, are exempt from the provisions of this Agreement and that the Council or member Unions of the Council will not attempt to either negotiate for these employees, unless bargaining rights are obtained, or restrict their movements or work on such property.

Dated at Rexdale, Ontario, this 28th day of August, 1974.

STATEMENT OF UNDERSTANDING NO. 2

It is recognized and agreed by The Electrical Power Systems Construction Association and the Ontario Allied Construction Trades Council that foremen covered by the Collective Agreement between The Electrical Power Systems Construction Association and the Ontario Allied Construction Trades Council who are employed by Ontario Hydro and who possess full regular status will not be required to comply with subsection (b) section .1 of Article 12, Union Security, of the Master Portion of the Collective Agreement. However, if any of these foremen join a member Union of the Council they will be put on checkoff and will be required to maintain their membership in the Union.

FOREMAN APPENDIX

The amendments contained in the Statement of Settlement, effective January 28, 1999, have been incorporated into the Foreman Appendix in accordance with the "Term of Agreement" article contained in the Master Portion of this Agreement.
FOREMAN APPENDIX

to the

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

(hereinafter called "EPSCA")

and the

ONTARIO ALLIED CONSTRUCTION TRADES COUNCIL
(hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to foremen.

Article 1

1.1 It is understood that foremen hold a key position in the relationship between the Employers and the Unions. Both parties agree that every effort should be made to recruit and retain foremen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of a Union, the Employers, the Council and the Unions will make every effort to minimize problems that may arise which concern the relationship between the foremen, the Employers and the Unions.

Article 2

2.1 Foremen are the first level of management supervision and, as such, are management representatives. In this capacity, they will exercise duties and responsibilities, as established by their Employers, and will not work with the tools of the trade, except as provided for in the individual trade appendices' articles.
The parties recognize the responsibility of foremen to discharge their managerial duties. If a Union feels that a foreman is not discharging his managerial duties in a manner that is fair, equitable and without bias, or if an Employer feels that a Union is interfering with a foreman in the performance of his managerial duties, the Employer or the Union may refer the problem to the Project Committee for resolution. If the matter cannot be resolved by the Project Committee, the grievance procedure may be invoked by either party.

Article 3

EMPLOYERS' RIGHT TO SELECT

3.1 The selection and retention of foremen will be the responsibility of the Employers. When making appointments to the foreman level, the Employers will give consideration to those journeymen they presently employ. The appointment of foremen in charge of composite or mixed crews will take into account the nature of the work to be done.

Article 4

UNION AFFILIATION

4.1 In accordance with the "Union Security" article of the Master Portion, and in accordance with Article 3, Employers' Right to Select, contained in this Appendix, the appropriate Union affiliation for foremen shall be determined, as follows:

(a) Foremen appointed by internal promotion shall retain the Union membership held prior to appointment.

(b) Foremen recruited externally shall:

(i) if a Union member, continue that Union membership; or

(ii) if not a Union member, join the appropriate Union in keeping with the nature of the work to be done.
Article 5

WAGES

5.1 (a) The rates of pay for foremen covered by this Appendix shall be the greater of:

(i) $2.75 per hour above the journeyman rate; or

(ii) the Employer's current practice; or

(iii) the rate negotiated in appropriate local agreements; except, as noted, in (b) hereunder:

(b) The rates of pay for foremen engaged in the supervision of work covered by the "exceptions" contained in the Operating Engineer, Teamster and Laborer Appendices shall be the greater of:

(i) the Employer's current practice; or

(ii) the locally negotiated rate for work of the same class and character.

Article 6

WEEKLY HOURS OF WORK

6.1 When the normal weekly hours of work are amended by the "exceptions" recognized under this Agreement, the weekly hours of work for foremen shall be the same as for the tradesmen represented by the Unions with which the foreman is affiliated.

Article 7

SHIFT DIFFERENTIAL RATE

7.1 Foremen required to work shift work other than the regular day shift shall receive the same shift differential rate as the tradesmen represented by the Union with which the foreman is affiliated.
Article 8

OVERTIME RATES

8.1 Overtime rates for work performed outside normal hours as defined in the "Hours of Work" article contained in the Master Portion of this Agreement and outside hours of work amended by the "exceptions" recognized under this Agreement, shall be the same as for tradesmen represented by the Union with which the foreman is affiliated.

Article 9

BENEFITS

9.1 The Employer agrees to pay into operative welfare, pension, and supplementary unemployment benefit plans on behalf of foremen covered by this Appendix. Payments will be made on the same basis and in the same amounts as are paid on behalf of tradesmen represented by the Unions with which the foremen are affiliated.

Article 10

MOBILITY

10.1 To maintain efficiency and productivity, an Employer shall have the right to move foremen from construction site to construction site, as determined at the pre-job conference.

Article 11

APPRENTICESHIP AND TRAINING PROGRAMS

11.1 The Employer agrees to pay into operative apprenticeship and training funds on behalf of foremen covered by this Appendix. Payments will be made on the same basis and in the same amounts as are paid on behalf of tradesmen represented by the Unions with which the foremen are affiliated.

Article 12

TOOLS AND CLOTHING

12.1 On a charge-out basis, the Employer shall supply foremen with protective clothing appropriate for the conditions under which the work is being done.

12.2 Foremen shall be accountable, but not liable, for gang tools used by their crew.
UNITED BROTHERHOOD OF
CARPENTERS AND JOINERS
OF AMERICA APPENDIX

The amendments contained in the Statement of Settlement, dated May 10, 2000, have been incorporated into the Carpenters' Appendix in accordance with the "Term of Agreement" article contained in the Master Portion of this Agreement.

UNIONED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA APPENDIX

to the

Collective Agreement

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION (hereinafter called "EPSCA")

and the

POWER COUNCIL OF UNIONS (hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to employees in classifications listed in Article 1 of this Appendix.

Article 1

CLASSIFICATIONS

1.1 The following is a list of classifications covered by this Appendix:

- Carpenter (includes Timberman, Cribman, Sawfiler, and Pile Driver)
- Carpenter Welder and Burner
- Diver
- Diver Welder and Burner
- Acoustic and Drywall Worker
- Acoustic and Drywall Welder and Burner
- Resilient Floor Worker and Carpet Layer
- Subforeman
- Apprentice
- Pile Driver Welder

1.2 If additional classifications are required, they will be negotiated as appropriate for work in the electrical power systems sector.
Article 2

WAGES

2.1 The rates of pay for employees in the classifications listed in Article 1 of this Appendix shall be as set forth in the wage schedules.

2.2 Rates of pay for Acoustic and Drywall Workers and Resilient Floor Worker and Carpet Layers shall be as set out in the wage schedules attached hereto and will maintain the existing differentials between these trades and the Carpenter Journeyman rate where applicable.

2.3 The rate for subforemen covered by this Appendix shall be the appropriate journeyman rate plus $1.75 per hour.

2.4 Effective May 1, 2000 and until April 30, 2004, the rates of pay for employees listed in the classifications listed in Article 1 shall be as set forth in the wage schedules attached hereto.

2.5 EPSCA will provide the Council with the current wage schedules.

Article 3

SHIFT DIFFERENTIAL RATE

3.1 Employees required to work shift work, other than the regular day shift, shall receive a shift differential of one-seventh (1/7) for normal scheduled shift hours worked.

Employees required to work shift work on the third shift of a three shift operation shall receive a shift differential of one-fifth (1/5) for normal scheduled shift hours worked.
Article 4

OVERTIME RATES

4.1 Overtime rates are paid for work performed outside of normal hours as defined in the "Hours of Work" article of the Master Portion of this Agreement and for work performed on Saturday, Sunday and the Statutory Holidays listed in Article 17 of this Appendix. Overtime rates shall be calculated as a premium over the appropriate shift rate.

4.2 Overtime rates of pay for employees listed in Article 1 of this Appendix shall be as set forth in the wage schedules.

4.3 Overtime rates for divers as per the classifications listed in Article 1 of this Appendix shall be two times the appropriate shift rate paid for all hours worked outside of the normal hours in any one day, Monday to Friday, and for all hours worked on Saturday, Sunday and the Statutory Holidays listed in Article 17 of this Appendix.

4.4 The overtime rates for Resilient Floor Worker and Carpet Layers shall be as set forth in wage schedules attached hereto.

4.5 When overtime work is required Monday to Friday, a minimum of one-half (1/2) hour's work will be provided at the appropriate rate of pay.

4.6 Effective May 1, 2000 and until April 30, 2004, the overtime rates shall be as set forth in wage schedules attached hereto, except for Divers.

4.7 EPSCA will provide the Council with current wage schedules.

4.8 The Chief Steward will be informed of all overtime and shall be given the opportunity to work. In the event, he declines the work; he shall be responsible to designate a steward to work the overtime who is qualified to perform the available work.

Article 5

BENEFITS

5.1 The Employer agrees to pay into operative welfare, pension and supplementary unemployment benefit plans, the hourly or monthly amounts, whether in addition to the wage rates or deducted from the wage rates, for employees covered by this Appendix. The amounts will be as set out in the wage schedules attached hereto.

The Employer also agrees to follow the administrative practices associated with such plans.
5.2 In the event an Employer is more than fifteen (15) days in arrears of the requirement to forward contributions and/or deductions to the Trustees by the fifteenth of the month following, the Employer shall pay as liquidated damages and not as a penalty an amount equal to two (2%) percent (equivalent to 24% per annum) for each month or part thereof that the contributions and/or deductions are in default for greater than fifteen (15) days provided the Employer has received five (5) days' written notice to correct such default. The trustees may require a delinquent Employer to pay for the costs, legal or otherwise, of collecting the amount owing, as outlined in the operative benefit plan trust documents.

5.3 The Trustees of the Employee Benefit Plans referred to in this Collective Agreement shall promptly notify the Union of the failure by any Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the Employment Standards Act 1991, as amended, in relation to the Employee Wage Protection Program.

5.4 The Union agrees to supply the Employer with all information regarding the welfare, pension and supplementary unemployment benefit plans and also all administrative material that is required for the implementation of them.

5.5 In any area where the rate of pay for Resilient Floor Worker and Carpet Layer has been established as 85 percent (85%) of the EPSCA Carpenter Journeyman rate for that area, the Employer will pay to the Resilient Floor Worker and Carpet Layer as a special allowance the amount of welfare, pension and supplementary unemployment benefits that has been established by EPSCA as payable on behalf of Carpenter Journeymen when employed in that area.

5.6 Any changes in welfare, pension or S.U.B. plan contributions during the term of this Agreement will be confirmed, in writing, by the Union to EPSCA before such changes are put into effect. Within three (3) weeks of receipt of an acceptable written notice, such changes will be implemented. The effective date will be the date of implementation. Any changes in contributions will reflect an adjustment of the base rate; the total package will not be changed.

Article 6

INCLEMENT WEATHER PAY

6.1 When an employee reports at the beginning of a shift but is unable to commence work because weather conditions are unsuitable, he shall receive two (2) hours' pay at the appropriate straight-time rate plus shift differential if on shift or the appropriate premium rate if on overtime, plus travel allowance where applicable. The employee shall remain at his place of work for two (2) hours unless he is permitted to leave by his Employer.
Article 7

PREMIUMS

7.1 When an employee covered by this Appendix is required to work from a bosun chair or swing stage, he will receive an additional fifty-five (55) cents per hour for each hour worked.

7.2 When an employee covered by this Appendix is required to erect or dismantle suspended or free-hanging scaffold, he shall receive an additional forty-five (45) cents per hour for each hour worked. This premium shall only apply when employees are required to perform the erection or dismantling of this scaffold above a working floor or platform. This premium shall not apply to foremen engaged in the supervision of this work.

7.3 Notwithstanding Section 2.3 of the "Wages" article of this Appendix, when an employee is required to work as a Diver, he shall receive sixty dollars ($60.00) per day over and above the journeyman rate, provided he has carried out a diving function during that day.

Diving conditions shall be in accordance with the "Occupational Safety Code for Diving Operations" established by the Canadian Standards Association.

7.4 Divers and Tenders shall have complete Provincial mobility. A Diver and Tender shall register by telephone with the Local Union or District Council having jurisdiction over the area where the work is to be performed.

7.5 Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person who has achieved the full radiation qualification via the approved Ontario Power Generation Inc (OPGI) Training Program. This requires successful completion of the construction R.P.A. training and checkouts and the performance of R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

Article 8

KEY TRADESMEN

8.1 The Employer reserves the right to transfer two (2) key tradesmen from one location to another to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.
8.2 The right to transfer is subject to the proviso that the two (2) key tradesmen will not represent more than 50% of the Employer's total required work force.

Article 9

TRAVEL AND TRANSPORTATION

9.1 INITIAL EMPLOYMENT

REV

On recruitment of tradesmen who live between 97 and 162 radius kilometers from the project, the Employer shall pay $26.00 effective May 1, 2000 ($27.00 effective May 1, 2001, $28.00 effective May 1, 2002, $29.00 effective May 1, 2003) for the initial trip to the project.

9.2 REV

On recruitment of tradesmen who live in Ontario but beyond 162 radius kilometers from the project, the Employer shall pay 27¢ per radius kilometer (28¢ effective May 1, 2001, 29¢ effective May 1, 2002, 30¢ effective May 1, 2003) plus an allowance for travel time equivalent to one hour's pay for each 81 radius kilometers of travel to a maximum of 8 hours' pay for the initial trip to the project from where the tradesman lives.

9.3 REV

On recruitment of tradesmen who live outside Ontario and beyond 162 radius kilometers from the project, the Employer shall pay the equivalent of the cost of public transportation plus an allowance for travel time equivalent to one hour's pay for each 81 radius kilometers of travel to a maximum of 8 hours' pay for the initial trip to the project from where the tradesman lives or place of recruitment, whichever is closer to the project.

9.4 To qualify for payment in 9.1, 9.2 and 9.3, the employee must be available for work for a minimum of fifteen (15) working days or the duration of the job, whichever is lesser.

9.5 On termination of employment due to a reduction of staff, an employee entitled to payment under 9.1, 9.2, or 9.3 will be entitled to return expenses calculated in the same manner as in 9.1, 9.2, or 9.3 above, for the return trip from the project. An employee whose employment terminates for any reason other than reduction of staff will not be eligible for return payment.

9.6 TRANSFER

When transferring employees the Employer will pay the equivalent of the cost of public transportation for the initial trip to the project from the employee's most recent work location. In addition, the Employer will pay an allowance for travelling time equivalent to the straight-time rate up to a maximum of 8 hours.
Article 10

TOOLS

10.1 In accordance with the "Tools and Clothing" article of the Master Portion of this Agreement, employees shall be required to provide themselves with the ordinary hand tools of their trade as specified in the Tool List attached hereto.

10.2 Employees who report to work and are not in possession of the ordinary hand tools of the trade shall not be eligible for employment and the employer shall have the right to refuse employment or to continue to employ such employees. In the latter instance, the employer shall not be required to pay reporting pay as established in Article 16.

10.3 The employer shall supply the necessary equipment for use by an employee or outside services to keep employee's tools in good condition. If an employee is required to maintain his own tools in good condition, he shall be allowed to do so during working hours.

Article 11

PROTECTIVE CLOTHING AND EQUIPMENT

11.1 Employees must, at their own expense, provide suitable clothing for the performance of their regular duties.

11.2 Employees are required to wear protective clothing and use protective equipment, as determined by the Employer, for the work being done.

11.3 The Employer shall provide suitable rainwear when required.

11.4 The protective clothing and equipment that is provided by the Employer shall be charged out to an employee and the employee shall be responsible for the return of such clothing and equipment to his Employer.

11.5 On abnormally dirty and/or corrosive work in which employees' clothes may be permanently damaged, the Employer shall supply and maintain the appropriate protective clothing at no cost to the employee. Such protective clothing will remain the property of the Employer and will be returned by the employee upon completion of the work involved.

Article 12

WELDING TESTS

12.1 On hire, welders must possess the qualifications and class of welding ticket specified by the Employer. It will be at the Employer's discretion whether a welder who does not possess the qualifications and class of welding ticket specified will be hired.

12.2 A welder referred to the Employer by the Union who has never had a welding certificate will take the applicable test on his own time and pay for such test.
12.3 Employees required to take welding tests at time of hire or at any other time during their period of employment will be paid their normal wages for the time required to take such tests.

12.4 When an employee is required to perform welding work, the Employer where required shall supply, at no cost to the employee, welding gloves, welding helmets, welding and burning goggles, welding sleeve leathers and welding jacket.

Article 13

APPRENTICESHIP AND TRAINING PROGRAMS

13.1 The Employer agrees to pay into operative apprenticeship or training funds the amount specified for apprenticeship or training as set forth in the wage schedules attached hereto.

13.2 The Union agrees to supply EPSCA with all pertinent information regarding these funds including all administrative material that is required for their implementation.

13.3 Training programs established by the Employers to provide skills required in the electrical power systems sector shall be funded by reducing the Employer's contribution to the training fund in the specific locality where the training is taking place by an amount of money equivalent to the cost of such programs.

13.4 Both parties to this Agreement acknowledge the Employer's and the Union's responsibilities, respectively, in the training of apprentices to meet the Employer's current and future needs. To this end the Employer and the Union agree to participate in an apprenticeship program under the auspices of the Employment Training Branch, Ministry of Skills and Development. The Employer agrees to maintain a training program appropriate to his needs and class and character of work.

The number of apprentices who may be employed by an Employer shall not exceed:

(a) Where an employer is a journeyman in the trade, one apprentice plus an additional apprentice for each five journeymen employed by that Employer in the trade and with whom the apprentice is working; and

(b) Where the Employer is not a journeyman in the trade, one apprentice for the first journeyman employed by the Employer plus an additional apprentice for each five journeymen employed by that Employer in the trade and with whom the apprentice is working.
Article 14

PROJECT LAYOFF PROCEDURE

14.1 The layoff of employees covered by this Appendix shall be governed by the following:

(a) For the purpose of this Article, there shall be three (3) groups of employees:

(i) Employees working under a Union Work Permit.

(ii) Employees who are non-members of the appropriate local union.

(iii) Employees who are members of the appropriate local union.

The Union will be responsible for advising an Employer regarding the group status of individual employees.

(b) During a reduction of staff, layoff will commence with category (i) and progress through categories (ii) and (iii) respectively.

In established cases of compensable accident, or long-term sickness*, an employee will be maintained on the employer's payroll until fit to return to normal duties or until his normal date of layoff, whichever occurs first.

(c) Within category (iii) layoff will be carried out on a project seniority basis for employees having 3 months or more project service providing the remaining employees can perform the work yet to be completed.

For the purpose of this Article, project seniority shall be defined as the length of continuous service at the project in the bargaining unit classifications covered by this Appendix only.

14.2 Subject to Article 10.1 of the Foreman's Appendix to the EPSCA/Power Council of Unions Master Portion collective agreement, the employer shall have the right to move foremen from construction site to construction site.

When a requirement for foremen no longer exists, the treatment of foremen shall be as follows:

* A long-term sickness is that which is 30 calendar days or more in duration. In order to remain eligible, an employee on long-term sickness will provide the employer with medical evidence before this period has expired and for every subsequent 30-day period indicating the expected date of return to work.
(i) Foremen who are transferred into, or hired as a Foreman at an Ontario Power Generation Inc or Hydro One construction site as a foreman shall be laid off as a foreman or transferred out to another Ontario Power Generation Inc or Hydro One construction site as a foreman.

(ii) An employee who has been promoted to the foreman level by the Employer during the course of his employment on an Ontario Power Generation Inc or Hydro One construction site, shall not be subject to (i) above and will be reduced to a working position at such site. For layoff purposes the employee will than be subject to Article 14.1.

Article 15

RECALL

15.1 The Employer may recall former employees who had previously been on the payroll of the Employer.

REV A member, at date of recall, must be in good standing in the Union and be registered as unemployed with the local union or District Council having jurisdiction where the work is to be performed. Before commencing work, the member must be given a referral slip. To qualify for recall a former employee must be requested within six (6) calendar months of termination. The former employee must have been on the payroll of the Employer for at least thirty (30) calendar days in order to be eligible for recall. In order to use this Recall Article, an Employer must have previously worked under this Collective Agreement.

15.2 In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers in sequence from the out of work list to the location from where they were laid off. Recalled Greenmen will perform only Greenman work and will not work with the tools as a Carpenter.

Article 16

VACATION PAY

16.1 The Vacation Pay rate shall be four (4) percent of vacationable gross earnings*. Payment shall be made weekly on the employee’s regular pay cheque.

* "Vacationable gross earnings" means pay for regular hours, overtime, premium pay, shift differential, lines and stations daily travel time, retroactive pay adjustments, reporting pay, inclement weather pay, call-in pay, Saturday and Sunday premiums and trade training, but does not include payment for initial and return travel.
A three (3) week leave of absence for the purpose of taking an annual vacation will be granted in the calendar year in which the employee completes one year of service*. In special circumstances, where the work schedule permits, additional time off may be granted an employee. The additional time off will not be unreasonably denied.

Article 17

STATUTORY HOLIDAYS

17.1 The Statutory Holiday pay rate shall be six (6) percent of vacationable gross earnings. Payment shall be made weekly on the employee’s regular pay cheque.

The Statutory Holidays recognized under this Agreement are:

- New Year’s Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year’s Day falls on a Saturday or Sunday, it shall be observed on either the preceding Friday or the following Monday.

EPSCA reserves the right to change the day of observance of a Statutory Holiday when such a holiday falls on a Tuesday or Thursday.

Article 18

EMPLOYEE TRANSFER PROVISIONS

NEW

18.1 The parties agree an employer is allowed to transfer employees within the geographic area of the Local Union for projects covered by this collective agreement.

Employees transferred must have been on the payroll of the employer for at least fourteen (14) calendar days. The number of employees transferred under this provision shall not exceed 50%.

* Service will be calculated based on an employee's length of continuous service with his Employer.
The incorporated specific Statement of Settlement amendments to the United Brotherhood of Carpenters and Joiners of America Carpenters' Appendix of the Collective Agreement between The Electrical Power Systems Construction Association and The Power Council of Unions have been agreed to by the bargaining committees of the Carpenters and The Electrical Power Systems Construction Association. These proposed amendments are herewith recommended to the EPSCA Board of Directors and the Officers of the Council in accordance with Article 33.1 of the Master Portion of the Collective Agreement for approval and incorporation into the Carpenters' Appendix of the Collective Agreement.

Dated this 10th day of May, 2000.

ADDENDUM 1

MODIFIED PROVISIONS
OF THIS CONSTRUCTION APPENDIX

These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

Definitions:

Facility  Something that is built composed of multi-systems which serves a specific function

Function  Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the 'Modified Provisions of this Construction Agreement' apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.

All terms of this appendix shall apply to work covered by Addendum 1.

WORKING FOREMEN

1.1 When the crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade. The foreman if not already eligible to act as a working foreman on the shift will not be used to replace a journeyman on overtime.

Section 2

LINES AND STATIONS FOREMEN RATE

2.1 The rate of pay for Foremen working in Lines and Stations under the Modified Provisions of this construction agreement shall be $3.00 per hour above the journeyman rate. (Article 5 – Wages – Foreman Appendix, Master Portion does not apply).
UNITED BROTHERHOOD OF CARPENTERS' AND JOINERS OF AMERICA APPENDIX

TOOL LIST

Tools listed below must be supplied by the tradesmen as required to perform assigned tasks.

CARPENTERS

1 Tool Box with lock and key
1 Wrecking Bar
1 7/8" to 3" expansion bit
1 Ratchet Brace
1 set Wood Bits, 1/4" to 1", plus extension
1 each Wood Chisels, 1/4", 1/2", 3/4" and 1"
* 1 set Twist Drills, up to 1/4" (replaceable by company)
1 Hack Saw, 10" or adjustable
1 Claw Hammer
1 Axe, Short Handle
* 1 Spirit Level, 30" or longer
1 Chalk Line
1 Block Plane and Smooth Plane
1 Plier
1 Plumb Bob with line
* 1 Steep Tape, minimum 16'
1 Key Hole Saw
2 Cross Cut Saws
1 Utility Knife
2 Nail sets
( 3 Screwdrivers, flat blade, 4", 8" and 12")
( or equivalent
(1 set Robertson Screwdrivers
(1 set Phillips Screwdrivers
1 Tinner's Snips, 10" or equivalent
* 1 24" Carpenter's Square
1 Combination Square
1 Bevel
1 Oil Stone
* 1 100' Steel Tape
1 12" Crescent Wrench, adjustable
1 Vise Grip
1 Torpedo Level
1 Leather Apron

* See Page 2
CARPENTERS' APPENDIX
TOOL LIST (continued)

* On jobs which require metric tools, the tool list is adjusted as follows:

- 1 set Twist Drills from 1.5 mm to 6.5 mm diameter in 0.5 mm steps (replaceable by company)
- 1 Spirit Level, 600 mm or longer
- 1 Steel Tape, minimum 3 m
- 1 Carpenter's Square, 600 mm x 400 mm
- 1 15 m Steel Tape

RESILIENT FLOOR WORKERS

All Mechanics shall provide themselves with the following list of tools in a suitable grip:

- Hammer
- Dividers
- Hack Saw
- Files
- Snips
- Hand Saw
- Cold Chisel
- Scribers
- Trowel
- Seam Rollers
- Pinch Bar
- Lino Knives
- Sharpening Stone
- Nail Sets
- Chalk Line
- Screwdrivers
- Adhesive Spreader
- Stanley Blade Knife
CARPENTERS’ APPENDIX
TOOL LIST (continued)

CARPET LAYERS

In addition, all Carpet Layers shall carry in their grip the following list of tools:

Magnetic Hammer
Carpet Kicker
Stair Tool
Carpet Knife
Pinch Bar
Shears
Trimming Scissors
Protective Goggles
Trimmer
Napping Scissors
Smooth-edge Shears

ACOUSTIC AND DRYWALL WORKERS

Measuring Tape

Surform Tool
Drywall Saw
Aircraft Snips
Wallboard Hatchet
Crown Head Claw Hammer
Tin Snips
Plumb Bob
Chalk Box
Ball Peen Hammer
Magnetic Nail Holder
Cold Chisel
Hank Benders
Circle Cutter
Wallboard Stripper
Hack Saw
Bullnose Snippers
Wallboard Footlift
Pop Rivet Tool
MEMORANDUM OF SETTLEMENT

BETWEEN

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

CARPENTERS DISTRICT COUNCIL OF ONTARIO (CDC), UNITED
BROTHERHOOD OF CARPENTERS AND JOINERS
OF AMERICA

Dated this 28th day of July 2004
It is agreed that the existing agreement between the parties which expires April 30, 2004 will be renewed with the following amendments:

GENERAL

There is agreement to create a “free standing” collective agreement. Master Portion, Foreman’s Appendix, Carpenters Appendix and July 28, 2004 Memorandum of Settlement to be incorporated into one collective agreement.

Amend as necessary:

Change “Power Council of Unions” (hereinafter called the “Council”) to Carpenters District Council of Ontario (CDC), United Brotherhood of Carpenters and Joiners of America (hereinafter called the “Union”).

Delete all references to other members of the Power Council – e.g Delete 1.4 a) and b); Delete 1.5 a) and b); Article 2 etc…

Recognition clause to be amended as required – e.g. add Bruce Power LP

APPENDIX D MODIFIED PROVISIONS

Modified Provisions to apply as follows:

- Modified Articles – Hours of Work, Reporting Pay and Meals on Overtime from Master Portion and Working Foremen and Lines and Stations Foreman Rate from Carpenters Appendix to replace corresponding articles in main body of agreement

ARTICLE 5 EXECUTIVE COMMITTEES

Add NEW Article 5.2 as follows:

“In recognition of matters that may arise during the extended duration of this Collective Agreement the Executive Committee may deal with any issues brought forward by the parties that represent a significant change. Any alterations or modifications to this Agreement must be mutually agreed to by the Parties.”
ARTICLE 8

UNION STEWARDS

Add new paragraph as follows:

"The Accredited Union Representative may appoint one (1) Alternate Chief Steward to perform Chief Steward duties only when the regular Chief Steward is absent from work. Provided the Alternate Chief Steward is able to perform the work required, he will not be laid off until the manpower on site is reduced to ten (10) Carpenter members or less, unless by mutual consent between the accredited Union Representative and the Accredited Association Representative."

ARTICLE 12

UNION SECURITY

Add, where appropriate:

"Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. Within three (3) weeks of receipt of an acceptable written notice, any changes will be implemented. The effective date of such changed wage schedules, dues and remittances shall be the date of implementation. In bargaining years, the April window will be extended to allow wage schedule changes to take place once bargaining has concluded"

ARTICLE 14

WAGES AND PAY PROCEDURE

Add: "The Parties agree to direct deposit for direct hire employees of O.P.G., Hydro One, and Bruce Power L.P. An employer will provide assistance to employees who require assistance obtaining a bank account. Employers other than O.P.G., Hydro One and Bruce Power L.P. may implement direct deposit upon mutual consent in writing between the parties."
ARTICLE 17/ SECTION 1
GENERATION PROJECTS DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

- Effective August 1, 2004 – 4%
- May 1, 2005 – 2%
- May 1, 2006 – 2%
- May 1, 2007 – 4%
- May 1, 2008 – 2%
- May 1, 2009 – 2%

ARTICLE 18  LINES AND STATIONS CONSTRUCTION TRAVEL ALLOWANCE AND ROOM AND BOARD

Travel rings and Board to be increased as follows:

Travel:
Effective August 1, 2004 and May 1st in each subsequent year – 50 cents

Board:
Effective August 1, 2004 and May 1st in each subsequent year - $1.00

TRAVEL AND TRANSPORTATION

Increase amounts in Article 9 as follows:

$30.00  Effective May 1, 2005
$31.00  Effective May 1, 2007
$32.00  Effective May 1, 2009

31 cents  Effective May 1, 2005
32 cents  Effective May 1, 2007
33 cents  Effective May 1, 2009
ARTICLE 20  

(i) Amend 2nd paragraph of Article 20 as follows:

"The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel or subsistence allowance will be paid to an employee for the Standoff period."

(ii) Delete 20.2

(iii) Delete last sentence of Article 20.3

ARTICLE 24  

TOOLS AND CLOTHING

Amend 24.1 (c) as follows: increase current amount to $750.00

Amend 24.4 as follows:

".... will receive $6.00 for every half shift worked or portion thereof ($7.50 effective May 1, 2007)."

SECTON 2/ARTICLE 26  

HOURS OF WORK

Amend 2nd paragraph of Article 26/Section 2.1 as follows:

(i) The weekly hours of work Monday to Friday inclusive shall consist of forty (40) hours for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.

The weekly hours of work may be arrived at by having the employees work either:

- four (4) consecutive ten-hour shifts, Monday to Thursday or;
- four (4) consecutive ten-hour shifts, Tuesday to Friday or;
- five (5) consecutive eight-hour shifts

but not concurrently on the same work program.*
Employees will not be moved from work program to work program to circumvent overtime. Disputes arising from this Article are subject to the grievance procedure.

Each Employer will notify the Local Union of the weekly hours of work for each work program* at the site.

Weekly hours of work will be established for a minimum period of two (2) weeks.

If an Employer intends to change the weekly hours of work, a minimum of ten (10) days written notice shall be sent to the Local Union.

*For the purposes of this section, a work program may be defined as work taking place on a site that could include the following:

- Outages,
- Specific contracted scopes of work,
- Various and different modifications in an operating plant where the owner dictates the hours of work, or
- Subcontracts for a prime contractor where the prime contractor dictates the hours of work.

(ii) Amend start time in 3rd paragraph of Section 2.1 to read 7:00 am.

(iii) The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way of the end of the day shift.

(iv) Add the following new language:

“Carpenters assigned to fire watch duties may commence work after the start of the rest of the crew. In these cases, normal scheduled hours of work beyond the quit time of the rest of the crew will not be subject to overtime premiums.”

(v) Delete Articles 26.2 to 26.6 inclusive

ARTICLE 31 RADIATION WORK

Amend 31.1 (a) and (b) as follows:

Add: “Bruce Power LP”
ARTICLE 33

TERM OF AGREEMENT

Duration – Amend to read as follows:

“This Agreement shall continue in full force and effect from May 1, 2004 until April 30, 2010 inclusive…”

WAGES

Increase Foreman’s rate in 5.1 a) (i) and 2.1 (Lines and Stations) to $3.50 per hour effective May 1, 2007

Increase Subforeman’s rate in 2.3 to $2.00 per hour effective May 1, 2007.

Wage increases as follows - for all locals except Toronto (Local 27):

$1.10 effective August 1, 2004
$1.10 effective May 1, 2005
$1.10 effective May 1, 2006

For Toronto - Local 27 wage increases as follows:

$1.25 effective August 1, 2004
$1.25 effective May 1, 2005
$1.25 effective May 1, 2006

ICl increase/date for years 2007, 2008 and 2009.

ARTICLE 13 – CARPENTER APPENDIX

APPRENTICESHIP AND TRAINING PROGRAMS

Amend Article 13.4 to reflect the appropriate Government branch name.

Add new language: New 13.5

“The Union and the Employer agree that an apprentice who is laid off to attend Trade School shall not lose their seniority for the time spent to attend said schooling, and will retain their original placement on the site upon completion of Trade School.”

Amend Article 13.4 to reflect an apprentice ratio of 1 in 4.
ARTICLE 14 – PROJECT LAYOFF PROCEDURE
CARPENTER APPENDIX

Amend 14.1 (a) to add new category (ii): Employees who are members of the Union and their Local Union is outside of the Province of Ontario

Amend corresponding articles in 14.1 to reflect the above-noted change.

MISC

Amend wage schedule for Local 18 (Zones 1 and 2) to reflect the following:
- welfare for apprentice from day one
- no pension for apprentice for 1st 450 hours
LETTER OF UNDERSTANDING

Between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

CARPENTERS DISTRICT COUNCIL, UNITED BROTHERHOOD OF
CARPENTERS AND JOINERS OF AMERICA

RE: BOARD/TRAVEL AT NORTHERN SITES

During current negotiation discussions, the Union raised concerns about room and board/travel at certain northern sites.

The Parties agree to meet by the end of October 2004 to identify those sites where the Union has issues and discuss appropriate compensation for Room and Board/Travel at those sites.

Dated this 28th day of July, 2004.

EPSCA

Carpenters
LETTER OF UNDERSTANDING

CONSTRUCTION ASSOCIATION

AND

CARPENTERS DISTRICT COUNCIL, UNITED BROTHERHOOD OF
CARPENTERS AND JOINERS OF AMERICA

RE: GRIEVANCE PROCEDURE

During bargaining, the Union raised concerns to EPSCA regarding the grievance process and timelines in which grievances are being heard. In recognition of this, the Parties agree to meet by the end of October 2004 to discuss a suitable process that will be adopted that is mutually acceptable to the Parties.

Dated this 28th day of July, 2004.

EPSCA                                      Carpenters
LETTER OF UNDERSTANDING

AND

CARPENTERS DISTRICT COUNCIL, UNITED BROTHERHOOD OF
CARPENTERS AND JOINERS OF AMERICA

RE: DEFINITION OF THE POWER SECTOR

In the event the Minister of Labour defines the Power Sector, or there is a
decision of the Ontario Labour Relations Board that impacts on the definition of
the Power Sector, the parties agree to meet to investigate the impacts of the
definition on this agreement and consider the possibility of applying this
agreement in the context of this definition.

Dated this 28th day of July, 2004.

_________________________  _________________________
EPSCA                                Carpenters
The parties agree to recommend this settlement for ratification.

This agreement is conditional upon ratification by EPSCA. All terms in this settlement shall form the new agreement between the Parties. All terms and conditions will be effective date of signing unless otherwise noted.

Dated this 28th day of July, 2004 at Toronto, Ontario.

Union Funds include the following items:
- Welfare:
  - $2.10 per hour paid
  - $2.31 per hour paid - effective May 1, 2005
  - $2.52 per hour paid - effective May 1, 2006
- Pension:
  - $5.70 per hour paid
  - $5.80 per hour paid - effective May 1, 2005
  - $5.90 per hour paid - effective May 1, 2006
- Training & Upgrading Fund:
  - $0.70 per hour paid
  - $0.78 per hour paid - effective May 1, 2005
  - $0.86 per hour paid - effective May 1, 2006

**Union Dues**
- Union Dues Checkoff:
  - $1.00 per hour paid
  - $1.10 per hour paid - effective May 1, 2005
  - $1.20 per hour paid - effective May 1, 2006
- Union Administration:
  - $0.50 per hour paid

Union Dues Checkoff and Union Administration are not included in above noted Union Funds. Union Dues Checkoff and Union Administration are to be deducted from the Base Hourly Rate.

**Benefits**
All remittances (employer contributions, employee deductions and dues) are to be sent to:
Local 18 Administrator
c/o CIBC
305 Milnar Ave., 7th Floor
SCARBOROUGH, ON

MILLWRIGHTS’ APPENDIX

The amendments contained in the Statement of Settlement, dated May 10, 2000, have been incorporated into the Millwrights' Appendix in accordance with the "Term of Agreement" article contained in the Master Portion of this Agreement.
This Appendix distinguishes between two broad categories of work; namely, work which is covered by the "modified provisions" of this Appendix and work that is not. "Modified provisions" apply to all work on Lines & Stations and most work on existing generating sites. Following is a more detailed explanation:

The "Modified Provisions" of this Appendix will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:
   • a new facility which provides a new function
   • a new (i.e. additional) generating unit

Addendum 1 contains the "Modified Provisions of this Construction Appendix". All terms of this appendix shall apply to work covered by Addendum 1, with the exception of Article 1 - Classifications and Article 4 - Overtime Rates. The above Articles 1 and 4 do not apply when working under the terms and conditions of the "modified provisions", as these Articles are replaced by Sections 1 and 2 of Addendum 1.

When work does not fall within the scope of Addendum 1, all terms of this appendix, with the exception of Addendum 1, apply.

A chart to illustrate the above applications follows:

<table>
<thead>
<tr>
<th>Lines &amp; Stations - Existing and New Sites</th>
<th>Generating - Existing Sites - Excluding construction of new facility (new function) &amp;/or new (additional) generating unit(s)</th>
<th>Generating - Existing Sites - Involving construction of new facility (new function) &amp;/or new (additional) generating unit(s)</th>
<th>Generating - New Sites (i.e. Greenfield Work)</th>
</tr>
</thead>
</table>

UNITED BROTHERHOOD OF
CARPENTERS AND JOINERS OF AMERICA

MILLWRIGHTS’ APPENDIX

to the

Collective Agreement

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

POWER COUNCIL OF UNIONS
(hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to employees in classifications listed in Article 1 of this Appendix.

Article 1

CLASSIFICATIONS

Article 1 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e.: Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 1, Addendum 1 – Modified Provisions of this Construction Appendix.

1.1 The conditions set forth in this Millwrights’ Appendix shall apply to the classification of Millwright.

1.2 Reference to Millwright in Article 1.1 above shall include welders, burners, subforemen, journeymen and apprentices employed in the Millwright trade.

1.3 Working Foremen:
Where the crew size is five (5) or less, the foreman may work with the tools on mutual agreement of EPSCA and the local Business Manager.
Article 2

WAGES

2.1 Effective May 1, 2000 and until April 30, 2004, the rates of pay for employees in the classifications listed in Article 1 of this Appendix shall be set forth in the wage schedules, attached hereto.

EPSCA will provide the Council with the current wage schedules.

Article 3

SHIFT DIFFERENTIAL RATE

3.1 Employees required to work shift work, other than the regular day shift, will receive a shift differential of one-fifth (1/5) for normal scheduled shift hours worked.

Article 4

OVERTIME RATES

Article 4 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 2, Addendum 1 – Modified Provisions of this Construction Appendix.

4.1 Overtime will be paid at two times the base rate for work performed outside of normal hours as defined in the "Hours of Work" article of the Master Portion of this Agreement and for work performed on Saturday, Sunday and the Statutory Holidays listed in Article 15 of this Appendix.

4.2 Overtime rates will be set out on the wage schedules, attached hereto.

4.3 The Chief Steward/and or Job Steward will be informed of all overtime and shall be given the opportunity to work. In the event he declines the work, he shall be responsible to designate a steward to work the overtime who is qualified to perform the available work. Wherever practical, overtime shall be divided as equally as possible amongst all employees.

Article 5

BENEFITS

5.1 The Employer agrees to pay into operative welfare, pension and supplementary unemployment benefit plans, whether in addition to the wage rates or deducted from the wage rates, for employees covered by this Appendix. The amounts shall be as set out in the wage schedules, attached hereto.
5.2 The Union agrees to supply the Employer with all information regarding the welfare, pension and supplementary unemployment benefit plans and also all administrative material that is required for the implementation of them.

5.3 The Trustees of the Employee Benefit Plans referred to in this Collective Agreement shall promptly notify the Union of the failure by any Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the *Employment Standards Amendment Act, 1991* in relation to the Employee Wage Protection Program.

5.4 In the event an Employer is more than fifteen (15) days in arrears of the requirement to forward contributions and/or deductions to the Trustees by the fifteenth of the month following, the Employer shall pay as liquidated damages and not as a penalty an amount equal to two (2%) percent (equivalent to 24% per annum) for each month or part thereof that the contributions and/or deductions are in default for greater than fifteen (15) days provided the Employer has received five (5) days' written notice to correct such default. The trustees may require a delinquent Employer to pay for the costs, legal or otherwise, of collecting the amount owing, as outlined in the operative benefit plan trust documents.

**Article 6**

**INCLEMENT WEATHER PAY**

6.1 An employee who reports for work at the beginning of a shift and is unable to commence work due to inclement weather, will receive two (2) hours' pay at the applicable rate. To qualify, the employee must remain on the job site for two (2) hours, unless excused earlier by an authorized representative of the Employer.

6.2 An employee who reports for and commences work but is unable to continue work due to inclement weather shall receive four (4) hours' pay at the applicable rate or pay for the actual time worked for that shift, whichever is greater.

6.3 An employee who qualifies for inclement weather pay shall also receive travel or board allowance, if applicable.
Article 7

KEY EMPLOYEES

7.1 The parties agree that an Employer shall be allowed to transfer from one project to another two (2) key employees in order to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.

If the Employer finds it necessary to transfer additional key employees, the number shall be mutually agreed to by the Employer and the Union.

7.2 After the work force of an Employer reaches twenty (20) Millwrights, the total number of key employees to be transferred will be based on a ratio of 1 to 10, but in no case will exceed 10.

7.3 An apprentice shall not be considered a key employee for the purposes of this Article.

7.4 Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person who has achieved the full radiation qualification (Green) via the approved Health and Safety Division Training Program, plus has successfully completed the Construction R.P.A. (Green Manning) training and checkouts, also has performed R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the equivalent to the appropriate foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

7.5 In the case of a recall to work, the Employer reserves the right to recall qualified Greemen in sequence from the out of work list to the location from which they were laid off. Recalled Greemen will perform sufficient Greeman work to maintain their skill levels.
Article 8

TRAVEL AND TRANSPORTATION

8.1 INITIAL EMPLOYMENT

REV

On recruitment of tradesmen whose regular residence* is between 80 to 160 radius kilometers from the project, the Employer shall pay $26.00 effective May 1, 2000 ($27.00 effective May 1, 2001, $28.00 effective May 1, 2002, $29.00 effective May 1, 2003) for the initial trip to the project.

8.2 REV

On recruitment of tradesmen whose regular residence is in Ontario but beyond 160 radius kilometers from the project, the Employer shall pay 27¢ per radius kilometer effective May 1, 2000 (28¢ effective May 1, 2001, 29¢ effective May 1, 2002, 30¢ effective May 1, 2003) plus an allowance for travel time equivalent to one hour's pay for each 80 radius kilometers of travel to a maximum of 8 hours' pay for the initial trip to the project from the tradesman's regular residence.

8.3 REV

On recruitment of tradesmen whose regular residence is outside Ontario and beyond 160 radius kilometers from the project, the Employer shall pay the equivalent of the cost of public transportation plus an allowance for travel time equivalent to one hour's pay for each 80 radius kilometers of travel to a maximum of 8 hours' pay for the initial trip to the project from the tradesman's regular residence or place of recruitment, whichever is closer to the project.

8.4 REV

To qualify for payment in 8.1, 8.2 or 8.3, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of his job, whichever is lesser.

8.5 REV

On termination of employment due to a reduction of staff, an employee entitled to payment under 8.1, 8.2, or 8.3 shall be entitled to return expenses calculated in the same manner as in 8.1, 8.2, or 8.3 above for the return trip from the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.

8.6 REV

TRANSFER

When transferring employees the Employer shall pay the equivalent of the cost of public transportation for the initial trip to the project from the employee's most recent work location. In addition, the Employer shall pay an allowance for travelling time equivalent to the straight-time rate up to a maximum of eight (8) hours.

* As defined in Article 17 or Article 18 of the Master Portion of this Agreement, whichever is applicable.
Article 9

TOOLS

9.1 In accordance with the "Tools and Clothing" article of the Master Portion of this Agreement, employees shall be required to provide themselves with the ordinary hand tools of their trade as specified in the Tool List, attached to this Appendix.

9.2 Employers may supply additional tools and equipment to employees, when required. Employees receiving such tools or equipment shall be responsible for them in accordance with the "Tools and Clothing" article of the Master Portion of this Agreement.

9.3 Employees will immediately report the loss of any Employer-supplied tools or equipment.

Article 10

PROTECTIVE CLOTHING AND EQUIPMENT

10.1 Employees are required to wear protective clothing and use protective equipment, as determined by the Employer, for the work being done.

10.2 The protective clothing and equipment covered in 10.1 of this Article that is provided by the Employer shall be charged out to an employee. Employees will not be held liable for items which are returned in reasonable condition or which are lost or damaged under conditions where no employee negligence is evident and where the loss or damage is reported immediately. Where negligence is determined, the employee will be charged for the cost of repair or replacement.

10.3 If job conditions necessitate coveralls and gloves, as determined by the Employer, the Employer shall supply and maintain the necessary protective clothing at no cost to the employee.

Article 11

WELDING TESTS

11.1 On hire, welders must possess the qualifications and class of welding ticket specified by the Employer. It will be at the Employer's discretion whether a welder who does not possess the qualifications and class of welding ticket specified will be hired.

11.2 A welder who has been referred to the Employer by the Union and who has never had a welding certificate will take an applicable test on his own time and pay for such test.
11.3 An employee who possesses a current welding ticket and is required to take a test at the
time of hire shall be paid his normal wages for the time to take such a test. Any employee
who fails to pass the welding test will not have benefits or other added costs paid on his
behalf.

Article 12

APPRENTICESHIP AND TRAINING PROGRAMS

12.1 The Employer agrees to pay into operative apprenticeship or training funds the amounts
specified for apprenticeship or training as set forth in the wage schedules, attached hereto,
for employees covered by this Appendix during the time they are employed.

12.2 The Union agrees to supply EPSCA with all administrative material that is required for
implementation of these funds.

12.3 Training programs established by the Employers to provide skills required in the electrical
power systems sector shall be funded by reducing the Employers' contributions to the
training fund in the specific locality where the training is taking place by an amount of
money equivalent to the cost of such programs.

12.4 Where training programs are established, the Employer shall ensure that sufficient
journeymen are available and supervision is provided so that the apprentice has ample
opportunity to obtain his related training and work experience to the degree possible
during the Employer's tenure on site.

12.5 Both parties acknowledge the Employer's and the Union's responsibilities, respectively, in
the training of apprentices to meet the Employer's current and future needs.

Apprentices, when available, shall be employed on work covered by this agreement in the
ratio of one (1) Apprentice to four (4) Journeymen. When requested, the first Apprentice
shall be a fourth or third year Apprentice, if available.

12.6 Apprentices will not be required to work shift work when it interferes with attendance at
classes endorsed by the Local Apprenticeship training program.

Article 13

RADIATION INFORMATION

13.1 Each employee will have access to his personal radiation exposure record.
Article 14

VACATION AND STATUTORY HOLIDAY PAY TRUST FUNDS

14.1 Each Employer shall contribute to The Millwright Benefit Plan Trust Funds, ten percent (10%) of the vacationable gross earnings* of each employee covered by this Agreement. The money is to be distributed by the Fund in the following manner: five percent (5%) Vacation Pay to be paid out in June of each calendar year and five percent (5%) Statutory Holiday Pay to be paid out in November of each calendar year.

Each Employer shall remit contributions on behalf of his employees into The Millwright Benefit Plan Trust Funds by the 15th day of the month, following the month in which the hours were earned to the Administrator. At no time will any contributions be paid directly to the employee.

Any Employer in default more than fifteen (15) days in remitting payment, shall pay to the Trustees, as liquidated damages and not as penalty, the amount equal to two percent (2%) of the arrears for each month or part thereof in which he is in default. In addition, the defaulting Employer shall be liable to pay and agrees to pay interest at the rate of 1 1/2% per month on any unpaid arrears including the liquidated damages specified herein.

A three (3) week leave of absence for the purpose of taking an annual vacation will be granted in the calendar year in which the employee completes one year of service*. In special circumstances, where the work schedule permits, additional time off may be granted an employee. The additional time off will not be unreasonably denied.

Article 15

STATUTORY HOLIDAYS

15.1 The Statutory Holidays recognized under this Agreement are:

<table>
<thead>
<tr>
<th>New Year’s Day</th>
<th>Civic Holiday</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good Friday</td>
<td>Labour Day</td>
</tr>
<tr>
<td>Easter Monday</td>
<td>Thanksgiving Day</td>
</tr>
<tr>
<td>Victoria Day</td>
<td>Christmas Day</td>
</tr>
<tr>
<td>Canada Day</td>
<td>Boxing Day</td>
</tr>
</tbody>
</table>

EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

* "Vacationable gross earnings" means pay for regular hours, overtime, premium pay, shift differential, lines and stations daily travel time, retroactive pay adjustments, reporting pay, inclement weather pay, call-in pay, Saturday and Sunday premiums and trade training, but does not include payment for initial and return travel.

* Service will be calculated based on an employee’s length of continuous service with his Employer.
Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year’s Day falls on a Saturday or Sunday, it shall be observed on either the preceding Friday or the following Monday.

EPSCA reserves the right to change the day of observance of a Statutory Holiday when such a holiday falls on a Tuesday or Thursday.

**Article 16**

**EMPLOYEE TRANSFERS**

**NEW**

16.1 The parties agree an employer is allowed to transfer employees within the geographic area of the Local Union for projects covered by this collective agreement.

The incorporated specific Statement of Settlement amendments to the United Brotherhood of Carpenters and Joiners of America Millwrights' Appendix of the Collective Agreement between The Electrical Power Systems Construction Association and The Power Council of Unions have been agreed to by the bargaining committees of the Millwrights and The Electrical Power Systems Construction Association. These proposed amendments are herewith recommended to the EPSCA Board of Directors and the Officers of the Council in accordance with Article 33.1 of the Master Portion of the Collective Agreement for approval and incorporation into the Millwrights' Appendix of the Collective Agreement.

Dated this 10th day of May, 2000.

For: The Millwright

Bargaining Committee

_Claude Cournoyer_

Approved for incorporation into the Millwrights' Appendix effective this 10th day of April, 2001.

For: The Electrical Power Systems Construction Association

ADDENDUM 1

MODIFIED PROVISIONS
OF THIS CONSTRUCTION APPENDIX

These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

Definitions:

*Facility* Something that is built composed of multi-systems which serves a specific function

*Function* Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the ‘Modified Provisions of this Construction Agreement’ apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.

All terms of this appendix shall apply to work covered by Addendum 1, with the exception of Article 1 - Classifications and Article 4 - Overtime Rates.

Section 1

CLASSIFICATIONS

1.1 The conditions set forth in this Millwrights’ Appendix shall apply to the classification of Millwright.

1.2 Reference to Millwright in section 1.1 above shall include welders, burners, subforemen, journeymen and apprentices employed in the Millwright trade.

1.3 Working Foremen:
Where the crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade.

Section 2

OVERTIME RATES

2.1 When working on an eight (8) hour day and five (5) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1-1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of ten (10) hours per day shall be paid at two (2) times the basic hourly rate.

When working on a ten (10) hour day and four (4) day per week work schedule (Monday to Friday inclusive) overtime work shall be paid at one and one-half (1-1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of two (2) hours per day. All hours in excess of twelve (12) hours per day shall be paid at two (2) times the basic hourly rate.

2.2 Overtime work performed on Saturday, Sunday, non-shift days, and the Statutory Holidays listed in Article 15 of this Appendix shall be paid at two (2) times the basic hourly rate.

2.3 The Chief Steward/and or Job Steward will be informed of all overtime and shall be given the opportunity to work. In the event he declines the work he shall be responsible to designate a steward to work the overtime who is qualified to perform the available work. Wherever practical, overtime shall be divided as equally as possible amongst all employees.
Section 3

EMPLOYMENT REQUESTS

3.1 The Employer shall have the right to request Union members from that Local having jurisdiction for the geographic area by name, in writing, who shall be issued a referral slip by the Local Union. The number of employees so requested shall not exceed twenty-five percent (25%) of the employees supplied to the job by the Local Union. Upon layoff, the ratio of name hires to those members referred off the list (excluding foremen and key tradespersons) shall be maintained.
UNITED BROTHERHOOD OF
CARPENTERS AND JOINERS OF AMERICA

MILLWRIGHTS' APPENDIX

TOOL LIST

The Millwright will supply, on reasonable notice, the following list of ordinary hand tools of the trade when required in the performance of his normal duties.

1 carry-type tool box with lock and key
1 set feeler gauges, .0015 to .035 inches
1 outside micrometer 0 to 1 inch
1 6-inch calipers (inside and outside)
1 6-inch or 9-inch machinist's level
1 combination square with protractor
2 scribes
1 set centre punches
1 set 1/2-inch drive sockets, 3/8-inch to 1-1/4 inch, consisting of:
  10-inch reversible ratchet
    5-inch extension
    10-inch extension
    universal joint
    flex handle
    extra-deep sockets, 3/16-inch,
      7/8-inch, 15/16-inch
1 set combination wrenches 3/8-inch to 1-1/4-inch or 1 set box-end and 1 set open-end
1 set regular screwdrivers (3)
1 offset screwdriver
1 set Phillips screwdrivers
1 set Robertson screwdrivers
1 set Allen wrenches 1/8-inch to 1/2-inch
1 set taper punches
1 set pin punches
1 set chisels
1 vise grip pliers
1 6-inch diagonal cutting pliers
1 10-inch rib joints pliers
1 needle nose pliers
1 8-inch adjustable wrench
1 12-inch adjustable wrench
2 ball peen hammers
Millwrights’ Appendix Tool List (continued)

1 pry bar
1 hack saw
1 tin snips
1 hole magnet
1 rawhide hammer
1 pocket knife
1 flat scraper
1 bearing scraper
1 chalk line
1 vernier calipers 6-inch
1 set thread gauges
1 set depth gauges
1 flashlight
1 inspection mirror
1 adjustable steel tape, 8-foot minimum
1 oil stone
1 50-foot steel tape
1 set dividers
1 plumb bob with line
LETTER OF UNDERSTANDING

between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

and the

MILLWRIGHT DISTRICT COUNCIL OF ONTARIO,
UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA

It is agreed by the parties that if an Employer under this agreement assigns layout/survey type work to the Millwright District Council of Ontario, United Brotherhood of Carpenters and Joiners of America, the Employer will pay those Millwrights in accordance with the Journeymen rates listed in the appropriate EPSCA wage schedules. EPSCA Vacation and Statutory Holiday Pay entitlement shall be calculated in the amount of ten percent (10%) of the base hourly rate. Welfare, Pension and Training Fund amounts shall be as set out in the appropriate EPSCA wage schedule. All other conditions contained the the EPSCA Collective Agreement apply.

DATED AT Toronto, THIS 5th DAY OF Nov, 1990.

FOR: EPSCA BARGAINING COMMITTEE: FOR: MILLWRIGHT DISTRICT COUNCIL OF ONTARIO BARGAINING COMMITTEE:

THIS AGREEMENT made and entered into this 1st day of May, 2001.

BETWEEN:

THE HEAVY CONSTRUCTION ASSOCIATION OF TORONTO

(hereinafter called the "Association")

OF THE FIRST PART

- and -

UNIVERSAL WORKERS UNION, L.I.U.N.A. LOCAL 183

(hereinafter called the "Union")

OF THE SECOND PART

WHEREAS the Association has been accredited by the Ontario Labour Relations Board;

NOW THEREFORE, the parties hereto agree as follows:

ARTICLE 1 - GENERAL PURPOSE

The general purpose of this agreement is to establish mutually satisfactory relations between the Employers and their employees, and to provide a means for a prompt and equitable disposition of grievances, and to establish and maintain satisfactory working conditions, hours of work and wages within the geographical area hereinafter set out for all construction employees performing work under the classifications listed in the Schedules forming part of the agreement, in the employ of the Employers while employed in the Heavy Engineering Sector or engaged in such other work as has traditionally been performed under this Collective Agreement, as described in Article 3 hereafter, save and except construction employees covered by collective agreements respecting road building, sewer and watermain construction, and save and except non-working foremen
and persons above the rank of non-working foreman.

The geographic area covered by this agreement is defined as Board Areas #8, 9, 10, 11 & 18, set out by the Ontario Labour Relations Board, subject to any existing bargaining rights held by any other trade union.

The terms and conditions for Simcoe County are in Schedule “F”; the terms and conditions for construction labourers in Board Areas #9, 10, 11 and the District of Muskoka are as negotiated by Local 183 and the Oshawa Signatory Contractors and are attached as Appendix 1 which also forms part of this Agreement.

ARTICLE 2 - TERM OF AGREEMENT

(a) This agreement shall be effective and operative from May 1st, 2001 and shall remain in full force and effect until the 30th day of April, 2004.

(b) Should the Union or the Association desire to change, add to, amend or terminate this agreement, written notice to that effect will be given not more than one hundred and twenty (120) days and not less than sixty (60) days prior to the termination of this agreement. On receipt of such notice, the parties to the agreement shall convene a meeting within fifteen (15) days and bargain in good faith to endeavour to reach an agreement. If no such notice is given, this agreement shall continue in force thereafter for a further three (3) year period unless either party shall furnish the other with desire to change, add to, amend or terminate this Agreement within any like period of that set out above, in any third year thereafter.

ARTICLE 3 - RECOGNITION AND SCOPE

(a) The Association recognizes the Universal Workers Union, L.I.U.N.A., Local 183 as the sole and exclusive bargaining agent for all construction employees coming within the jurisdiction of this Agreement while working in the Heavy Engineering Sector, as defined by Article 1 of this Agreement and as further defined by Section (b) of this Article, or while engaged in any other work which has been traditionally performed under the terms and conditions of this Collective Agreement and such other construction employees covered by the collective agreements set out in Article 3(c); save and except non-working foremen, persons above the rank of non-working foreman, office and clerical staff, shop and yard employees, engineering staff and security guards. The Union recognizes the Association as the bargaining representative for all Employers for whom it has authority to bargain by virtue of it being the accredited bargaining representative for the Heavy Engineering Sector, or otherwise, but recognizes such representation is without liability against the Association for violations of the Agreement by individual Employers.
(b) It is agreed that this Collective Agreement applies to all work falling within the Heavy Engineering Sector (which, for the purposes of this Agreement includes all work traditionally performed under the terms and provisions of this Collective Agreement) in Ontario Labour Relations Board Geographic Areas #8, 9, 10, 11 & 18, subject to any existing bargaining rights held by any other trade union, performed by members of the bargaining unit including, but not limited to, the construction, reconstruction, demolition, construction maintenance, rehabilitation, repair and, except as specifically excluded below, all associated work traditionally related thereto, of the following:

1. Bridges, including pedestrian bridges, underpasses and overpasses.
2. Retaining walls (all types), slurry walls and abutments associated with bridges, underpasses and overpasses.
3. All structures in connection with dams, docks, wharves and breakwaters.
4. Gabion work carried out on heavy construction work.
5. Precast rip-rap installations and all slopes retaining work directly associated with bridge construction.
6. Tunnels, save and except cable conduits (utilities), pipelines and sewer and watermain tunnels.
7. Structural work on reservoirs and pumping stations, and sewage and water treatment plants.
8. Installation and/or removal of piles, shoring, anchors, caissons and underpinning, including all welding related thereto.
9. Structures on transit systems (heavy rail or light rail) and on express-ways, including all welding related thereto.
10. Structures involved in river channelization and flood control projects, except structural work traditionally carried out by the roads or sewers industry.
11. Box culverts over 15 feet in overall surface span (the calculation of the span excludes intermediate piers or supports).
12. All T.T.C. projects including structural work on stations and sewer and
watermain work on these projects, save and except work carried out according to past practices on stations by architectural and finishing trades and on roadways by road builders.

13. Field precast manufacturing operations as defined in Schedule "C" of this agreement.

14. Erection, installation and finishing of precast concrete products directly associated with heavy construction work.

15. Cement lining of watermains.

16. All work involved in or related to the erection or dismantling of scaffolding including high load shoring systems or any of the above-noted works, projects or undertakings.

17. All work involved in or related to the installation, removal and operation of glycol circulated ground heating systems on any of the above noted works, projects or undertakings.

(c) If an Employer covered by this Agreement engages in work other than that falling within the Heavy Engineering Sector and/or work which has traditionally been performed under the terms of this Collective Agreement and such other work comes within the purview of any of the collective agreements set out in Schedule "E", then all terms and conditions of the applicable collective agreements shall apply.

ARTICLE 4 - UNION SECURITY

(a) The Employers agree to employ only members in good standing of the Union for work covered by this agreement.

(b) As a condition of continued employment, all employees shall maintain in good standing their membership in the Union.

(c) The Union agrees that no discrimination shall be shown against any non-working foreman who elects to retain Union membership while functioning in this management capacity.

(d) Except as provided for hereafter, the Employers agree to sublet all work covered by this agreement to companies which are bound to the terms and provisions of this Collective Agreement, and such work will be performed under the terms and provisions of this Collective Agreement by such subcontractors.
(e) (i) Except as provided in (e) (ii) the Employers agree to sublet all sewer and watermain work and all road construction work and all work falling under the Railroad Agreement (i.e. "Violin"), on the project within the jurisdiction of Universal Workers Union, Local 183, only to subcontractors who are in contractual relationship with the Union or other Locals of the Labourers’ International Union of North America which have jurisdiction over the work.

(ii) The Employers agree to sublet work falling within the scope of this agreement in the erection, installation and finishing of precast products, sound wall and fencing of all types only to such contractors who are party to or bound by a collective agreement binding upon the Union and who employ only members of Local 183 to perform such work.

(iii) The Employers agree to subcontract utility construction work (as described by the collective agreement binding upon The Utility Contractors’ Association of Ontario, Inc. and the Union) in connection with the construction of any structure or bridge only to contractors who are party to or bound by a collective agreement with or binding upon the Union and who shall perform such work under such collective agreement.

(iv) The Employers agree to sublet all landscaping work only to contractors who are party to or bound by a collective agreement binding upon the Union.

(f) Each employee shall, when working in a position within the bargaining unit described in Article 3 above, be required as a condition of employment to have his regular monthly union dues and any required working dues checked off and the Union agrees to duly inform the Employer of the amounts of such union dues and working dues and any changes in the amounts. The Employer agrees to make such deductions from the first pay issued to the employees each calendar month and remit the same to the Union not later than the fifteenth (15th) day of the following month to the Secretary-Treasurer of the Union. The Employers shall, when remitting such dues, name the employees and their social insurance numbers from whose pay such deductions have been made. It is further agreed and understood that the Employers will receive at least 30 days notice of any changes in the amounts of working dues. It is also agreed and understood that this clause shall apply to all Schedules of this Collective Agreement.

(g) The Employers further agree that off-duty policemen will be used only where necessary or stipulated by contract specifications.
ARTICLE 5 - HIRING OF EMPLOYEES

(a) For T.T.C. projects and for mixed projects where fifty percent (50%) or more of the work falls within the Heavy Engineering Sector, the Employer agrees to call the Union Hall by 1:00 p.m. for his needed supply of men for the following day. All employees hired through the Union Hall shall present to the Employer a referral slip from the Union prior to commencing employment. It is understood that if the Union, having been requested by 1:00 p.m. to supply men, is unable to confirm by 4:30 p.m. of the same day that the required men will report at the job site ready for work at the starting time the following work day, the Employer is free to hire such local labour as is available without payment of any travel allowance. Any local labour so hired shall apply to the Union for membership within fifteen (15) calendar days of hiring, and as a condition of continued employment shall maintain membership in good standing in the Union.

(b) For mixed projects where less than fifty percent (50%) of the work falls within the Heavy Engineering Sector:

(i) The Employers shall have the right to hire up to fifty percent (50%) of the required work force on the project from any available source, provided however, that any employee so hired will be required to apply for a clearance slip from the Union before starting work. It is further agreed that when a new employee is hired, he will be required to apply for a clearance slip from the Union before starting work, except in emergency circumstances where the Employer requires the employee to start work immediately, in which event the employee must apply for clearance at the Union Hall not later than the Saturday following commencement of employment. The Employer shall supply a letter to the employee confirming he has been hired.

(ii) The balance of the required work force shall be hired through the Union Hall in accordance with Section (a) above.

(iii) The sequence and order of hiring employees under the provisions of sub-sections (i) and (ii) above shall be as mutually agreed from time to time between the Employer and the Union.

(c) It is further agreed that any employee hired under the provisions of Section (a) or (b) above can be transferred to any project of the Employer and assigned to work on any aspect of the said project, except that only employees who have been hired with a referral slip from the Union {Section (a) above} may be transferred to a T.T.C. project. It is further agreed that on a project where fifty percent (50%) or more of the work falls within
the Heavy Engineering Sector, no more than twenty-five percent (25%) of the total number of employees engaged on that project and covered by this agreement shall be key employees of the Employer who have been transferred from other projects of the Employer where such employees were originally hired by clearance slip from the Union.

(d) It is agreed that should an Employer violate any of the terms and provisions set out above with respect to the hiring of employees, then, without prejudice to any other claim for damages which the Union may have, the Employer will pay to the Union general damages in an amount equal to all amounts which would have been paid to employees (whether members of the Union or not) and/or the Union and/or others on behalf of the Union and such employees had the Employer not violated the hiring provisions of this Agreement.

ARTICLE 6 - MANAGEMENT RIGHTS

The Union agrees that it is the exclusive function of the Employer:

(a) To conduct its business in all respects in accordance with its commitments and responsibilities, including the right to manage the jobs, locate, extend, curtail or cease operations, to determine the number of men required at any and all operations, to determine the kinds and locations of equipment to be used and the schedules of production, to judge the qualifications of the employees and to maintain order, discipline and efficiency.

(b) To hire, discharge, classify, transfer, promote, demote, layoff, suspend or otherwise discipline employees, provided that a claim by an employee that he has been discharged, suspended disciplined or disciplinarily demoted without reasonable cause, shall be subject to the provisions of the Grievance Procedure.

(c) To make, alter from time to time, and enforce reasonable rules of conduct and procedure to be observed by the employees.

(d) It is agreed that these functions shall not be exercised in a manner which is inconsistent with the express provisions of this Agreement or which is arbitrary, discriminatory or in bad faith.

ARTICLE 7 - CO-OPERATION

(a) The Employers agree to advise the Union when any major change is being made to working systems or working rules on the project and will discuss the intended changes with the Union.
(b) In the event new classifications are introduced under the scope of this agreement, the parties shall meet and negotiate the applicable wage rates which shall bear a proper ranking relationship to the wage rates set up in the Schedules of this agreement.

(c) A pre-job conference may be called at the option of either party on all T.T.C. projects and mixed projects.

ARTICLE 8 - WORK JURISDICTION, HOURS OF WORK, OVERTIME AND WAGE RATES

Attached hereto are Schedules of hours of work, overtime, wage rates and classifications, which are hereby made a part of this agreement.

ARTICLE 9 - JURISDICTIONAL DISPUTES

When a work claim dispute arises between the Union which is a party to this agreement and any other union, person or organization, which cannot be settled to the satisfaction of all parties concerned, such dispute shall immediately be processed as a complaint to the Ontario Labour Relations Board requesting an order from that Board as outlined in Section 99 of the Labour Relations Act, R.S.O. 1995, Chapter 228, as amended, and in the meantime, work will continue as assigned by the Employer until otherwise directed by the Ontario Labour Relations Board.

ARTICLE 10 - HOLIDAYS

All work performed on Sundays, and the following holidays:

New Year's Day  
Good Friday  
Victoria Day  
Civic Holiday  
Canada Day  
Labour Day  
Thanksgiving Day  
Christmas Day  
Boxing Day

Or any other statutory holidays legally declared by the Provincial or Federal Government, shall be deemed overtime work and paid for at the rate of double the regular day shift rate.

ARTICLE 11 - VACATION PAY AND STATUTORY HOLIDAY PAY

(a) Vacation and statutory holiday credits shall be paid to employees covered by this collective agreement at the rate of ten percent (10%) of the gross wages earned. It
is understood and agreed that five percent (5%) is to be considered in lieu of statutory holiday pay.

(b) During the term of any one year, by mutual arrangement between an Employer and employee only two (2) weeks' vacation without pay will be taken by an employee, exclusive of statutory holidays. Vacation may be taken at any time during the calendar year at such time as may be most convenient to the Employer, but every effort shall be made to schedule vacation at times suitable to the employee.

(c) Vacation and statutory holiday pay as aforesaid shall be paid into Local 183 Civil Engineering Vacation Pay Trust Fund, jointly administered by an equal number of Employer and Union trustees, which Employer trustees shall be appointed by the Greater Toronto Sewer and Watermain Contractors' Association, the Utility Contractors' Association of Ontario and the Heavy Construction Association of Toronto. One of the said Employer trustees shall be appointed by the Association. Payments into the Fund shall be made monthly and the interest earned by the investment of the monies in such fund shall be firstly applied against the administration costs of the Fund and secondly, against any deficit caused by the delinquency of a contributing Employer and the balance shall be paid to the Association pro-rated on the basis of contributions into the Fund made by all Employers covered by this agreement, on account of the Association's costs of negotiating and administering this agreement. Payments into the Fund shall be made by the fifteenth (15th) day of the month following the month for which payment is due. The Chairmanship of the Trust Fund shall alternate annually between the Union and the Employer trustees.

Vacation with Pay Trust Fund surplus to be distributed as follows:

(i) Administration costs;

(ii) Deficits;

(iii) A reserve fund shall be established and maintained based on the past history of deficiencies as agreed by the trustees.

(iv) The surplus, if any, to be distributed equally to the Association and the Union on an annual basis.

ARTICLE 12 - MERGER OF VACATION PAY FUNDS

The Universal Workers Union, Local 183 and the Association agree to merge the Local 183 Members' Vacation Pay Trust Fund and the Local 183 Civil Engineering Vacation with Pay Trust Fund, subject to acceptance and adoption by the Trustees thereof, in accordance with Section 6.03 of the Trust Agreements establishing
both Funds.

ARTICLE 13 - PAYMENT OF WAGES

(a) All time books are to be closed weekly.

(b) Employees shall be paid weekly. In the event that payment is by cheque, pay day shall not be later than Thursday. Payment shall be accompanied by a slip outlining all hours of work, overtime hours, hourly rate, deduction for income tax, unemployment insurance, pension, etc. where applicable.

(c) In the case of layoff or dismissal, all employees will receive one hour's notice in advance. When an employee quits a job, he shall give the Employer one hour's notice.

(d) Whenever an Employment Insurance Separation Certificate and pay cheque is not given to employees at the time of termination, they shall be sent by the Employer to the employee by registered mail to his last known address within seventy-two (72) hours from the time of termination.

ARTICLE 14 - SAFETY, SANITATION AND SHELTER

(a) Every Employer shall provide a proper and adequate place of shelter sufficiently heated and securely locked in which the employees may eat their lunch and store their clothing. It is further agreed that the lunch room facilities shall be separated by a partition from the area in which the clothing is stored. Water, towels and soap shall be available at all times. It is clearly understood that the place of shelter shall not be used for any other purpose, such as storage of tools, etc. Sanitary toilets shall be provided in accordance with the regulations of the Occupational Health and Safety Act, as amended, and if located near the lunch room, shall be separated by a partition. The Employers agree to provide the above facilities before production work commences on the project. It is agreed that these facilities shall be on or in the vicinity of the working area.

Without in anyway limiting the generality of the above, in the case of welders, employed by the Employer, the special clothing and protective equipment which the Employer is required to supply shall include the following:

- Suitable gloves for welding
- Leather sleeved or welding jackets
- Safety helmets and welding masks
- Cutting goggles
- All equipment required for normal welding duties
(b) In co-operation with the Employer's overall program of Accident Control and Prevention, the Job Steward and Health and Safety Representative may report to the Foreman for immediate corrective action of any unsafe conditions, unsafe acts or violation of safety regulations. Safe working conditions are primarily the responsibility of Management; therefore all supervisory personnel shall be made aware of all safety regulations and see that they are carried out.

(c) Every employee shall, as a condition of employment, be required to wear a Safety Helmet of an approved type. The Employers agree said helmets will be supplied by them at no cost to the employee. If an employee at termination of employment does not return said helmet, he shall be charged at cost.

(d) Every employee shall, as a condition of employment, own and wear suitable protective footwear. The Employer shall supply protective equipment required in the normal course of the employee's duties including special clothing such as suitable gloves, at no cost to the employee. The Employer shall provide leather safety boots to the employees covered by this agreement at cost, which will be deducted from the employee's pay. It is further agreed that the Employer shall provide free of cost, rubber safety boots when necessary. The Union recognizes the right of Employers to economically supervise the distribution of the clothing provided and will co-operate with the Employers to prevent wasteful practices.

(e) A Safety Committee is to be established. This Committee will be composed of two members of Universal Workers Union, Local 183, and two representatives from the Association. Safety meetings, not to exceed one per month, will be held and may be called by either party. A Safety Committee may be established by the Union on projects with twenty (20) employees or more coming within the jurisdiction of this agreement, provided that there is no more than one committee per project.

(f) The Employer shall, at his own expense, furnish to any workman injured in his employment who is in need of it, immediate conveyance and transportation to a hospital or to a physician. It is further agreed that an ambulance shall be used where necessary and possible.

(g) An employee who is injured during working hours and who is required to leave for treatment, or is sent home for such injury, shall receive payment for the remainder of the shift at his regular rate of pay.

(h) Locktenders' shift reports will be kept in ink.

(i) The trucks to be used to transport employees will be enclosed and tools will be secured in tool boxes. No materials will be carried in the trucks in a manner endangering the safety of the employees being transported.
(j) No employee will be discharged by his Employer because he fails to work in unsafe conditions as set out in government safety regulations. Any refusal by an employee to abide by such regulations after being duly warned, will be sufficient cause for dismissal.

(k) On projects where the Company is required under Article 13 (a) to provide locked up facilities for employees to store their tools and clothing the Company will reimburse an employee up to three hundred and fifty dollars ($350.00) for loss due to fire, or theft resulting from a break-in to such locked up facilities. In all cases the employee must provide a written and signed statement substantiating the amount of the loss.

ARTICLE 15 - ERGONOMICS TRAINING

(a) As a condition of employment, newly hired employees shall be required to attend and complete the ergonomics training course offered by the Labourers' Local 183 Members Training Fund.

(b) On site supervisory personnel of any Employer shall be required to attend and complete the ergonomics training course offered by the Labourers' Local 183 Members Training Fund.

(c) Union Stewards shall be required to attend and complete the ergonomics training course offered by the Labourers' Local 183 Members' Training Fund.

(d) The Union shall ensure that in issuing a referral slip under Article 3, the employee has taken the ergonomics training course or that arrangements have been made to comply with (a) hereof.

(e) All of the above training shall not be performed on company time.

ARTICLE 16 - THE OCCUPATIONAL AND REHABILITATION HEALTH CLINIC FUND

The Employer agrees to co-operate with the programs established by the Soft Tissue Rehabilitation Clinic and the Occupational Health Clinic, and, in particular, to require his employees to attend at the Occupational Health Clinic for the requisite testing at least once every three (3) years and further, to notify the Soft Tissue Clinic of any Soft Tissue injury sustained by any of his employees, including the address and telephone number of such employee, within three (3) days of the Employer being advised that said employee sought medical attention.
ARTICLE 17 - BUSINESS AGENT AND SHOP STEWARD

The business agent of the Union shall have access to all jobs during working hours, but in no case shall his visits interfere with the progress of the work. When visiting a job, he will first advise the superintendent or other supervisory personnel of the Employer.

No discrimination shall be shown against any Shop Steward for carrying out his duties but in no case shall his duties interfere with the progress of the work. It is agreed that a Shop Steward may be appointed on all jobs of an Employer by a business agent of the Union on the basis of one (1) Shop Steward to twenty (20) employees or major fraction thereafter [on tunnel projects one (1) Shop Steward for up to two (2) mining crews per shift will be recognized] and shall notify the job Superintendent at once (or the Foreman on the job if there is no job Superintendent) before he can be recognized. Such appointment shall be confirmed by the Union in writing to the Employer within seven (7) working days thereafter. By mutual agreement of the parties, where conditions require it, additional Stewards may be appointed. The Shop Steward, all other things being equal, shall be one of the last two men retained by the Employer on the shift if competent to perform the available work remaining. The Shop Steward on each job will be responsible for reporting any disputes to the Employer and Union Representative, so that these can be taken up in the proper manner without delay.

It is agreed that the Shop Steward will not be excluded from a gang for overtime work, provided he is able to do the work required. It is further agreed that there will be at least one (1) Shop Steward (or Acting Shop Steward) on the project at all times while work is in progress provided that the Steward (or Acting Steward) is able to do the work required. The Union will be notified when a Shop Steward is to be laid off or discharged.

ARTICLE 18 - NO STRIKES, NO LOCKOUTS

18.01 In view of the Grievance and Arbitration Procedures provided in this agreement, there shall be no strikes or lockouts so long as this agreement continues to operate.

ARTICLE 19 - GRIEVANCE PROCEDURE

19.01 The parties to this agreement agreed that it is of the utmost importance to adjust complaints and grievances as quickly as possible.

19.02 Grievances properly arising under this agreement shall be adjusted and settled as follows:
STEP NO. 1

Within twenty (20) working days after the circumstances giving rise to the grievance occurred or originated, [save and except grievances arising out of discharge cases in which case the grievance shall be brought forward within ten (10) working days of the employee being notified of his discharge, and save and except monetary and benefit grievances as defined in Section 19.03 (a) and administered under Section 19.03 (b) and 19.03 (c) below], the aggrieved employee, with his business representative, may present his grievance, which shall be reduced to writing, to the Employer. Should no settlement satisfactory to the employee be reached within ten (10) full working days, the next step in the grievance procedure may be taken at any time within ten (10) working days thereafter.

STEP NO. 2

The Union Grievance Committee, if it considers it a valid grievance, may submit the grievance to a committee of the Association and the respective committees shall meet within five (5) working days thereafter in an endeavour to settle the grievance. If a satisfactory settlement is not reached within five (5) working days from this meeting, the grievance may be submitted to arbitration as provided in Article 20 below at any time within twenty (20) working days thereafter or referred to the Ontario Labour Relations Board for arbitration pursuant to Section 133 of the Labour Relations Act within reasonable time which shall not be more than twenty (20) working days thereafter.

19.03 (a) Monetary grievances are defined as those arising under this Agreement involving payment for hours of work, rates of pay, overtime, shift premiums, travelling expenses, room and board allowances and reporting allowances, but do not include grievances arising out of classification assignment. Benefit grievances are defined as those arising under this Agreement involving payment of pension and welfare contributions, union dues, working dues, industry and training fund, and vacation and statutory holiday pay.

(b) Monetary grievances shall be brought forward at Step 1 within three (3) months after the circumstances giving rise to the grievance became known or ought reasonably to have become known to the Union. It is further understood that the adjustment of any such grievance shall be retroactive to the first day of the alleged violation within the three (3) month period.

(c) Benefit grievances shall be brought forward at Step 1 within twelve (12) months after the circumstances giving rise to the grievance became known or ought reasonably to have become known to the Union. It is further understood that the adjustment of any such grievance shall be retroactive to the first day of the alleged violation within the twelve (12) month period.
ARTICLE 20 - ARBITRATION

20.01 The parties to this agreement agree that any grievance concerning the interpretation or alleged violation of this agreement, which has been properly carried through all the steps of the grievance procedure outlined in Article 19 above which has not been settled, will be referred to a Board of Arbitration at the request of either of the parties hereto.

20.02 The Board of Arbitration will be composed of one person appointed by the Association, one person appointed by the Union and a third person to act as Chairman chosen by the other two members of the Board.

20.03 The party requesting arbitration shall name its appointee at the time of requesting arbitration, and the other party shall name its appointee within two (2) working days thereafter.

20.04 Should the person chosen by the Association to act on the Board and the person chosen by the Union fail to agree on a third member as Chairman within five (5) days of the notification mentioned above, the Minister of Labour of the Province of Ontario will be asked to nominate an impartial person to act as Chairman.

The decisions of the Board of Arbitration or a majority of such Board constituted in the above manner shall be binding on the employee, the Union, the Association and the Employers.

The Board of Arbitration shall not have any power to alter or change any of the provisions of this agreement or to substitute any new provisions for any existing provisions, nor to give any decision inconsistent with the terms and provisions of this agreement.

Each of the parties to this agreement will bear the expense of the arbitrator appointed by it, and the parties will jointly bear the expense, if any, of the Chairman.

(a) The nature of the grievance, the remedy sought and the section or sections of the agreement which are alleged to have been violated, shall be set out in the written record of the grievance and not be subject to change in later steps;

(b) In determining the time which is allowed in the various steps, Sunday and Statutory Holidays shall be excluded, and any time limits may be extended by agreement in writing;

(c) If advantage of the provisions of Article 19 and 20 hereof is not taken within the time limits specified therein or as extended in writing as set out above, the grievance shall be deemed to have been abandoned and may not be reopened.
ARTICLE 21 - MANAGEMENT GRIEVANCES AND UNION GRIEVANCES

(a) It is understood that an Employer and/or the Association may file a grievance with the Union, and that if such complaint is not settled to the satisfaction of the parties concerned, it may be treated as a grievance and referred to arbitration in the same way as a grievance of any employee. Such grievance shall be processed at Step No. 2 of the Grievance Procedure set out in Article 19 hereof.

(b) A Union grievance which is defined as an alleged violation of this agreement involving all or a number of employees in the bargaining unit in regard to which a number of employees have signified an intention to grieve, or a grievance involving the Union itself, including the application or interpretation of this agreement, may be brought forward in writing in the same manner and within the same time limits as in the case of an employee grievance. Such grievance shall be processed at Step No. 1 of the Grievance Procedure as set out in Article 19 hereof. If it is not settled, it may go to a Board of Arbitration in the same manner as a grievance of an employee.

ARTICLE 22 - GOVERNMENT LEGISLATION

In the event that any of the provisions of this agreement are found to be in conflict with any valid and applicable Federal or Provincial law now existing or hereinafter enacted, it is agreed that such law shall supersede the conflicting provision without in any way affecting the remainder of the agreement.

ARTICLE 23 - PRODUCTIVITY

The Union and the Association recognize the mutual value of improving by all proper and reasonable means the productivity of the individual workman, and both will undertake individually and jointly to promote such increased productivity.

ARTICLE 24 - REPORTING ALLOWANCE

24.01 (a) An employee who reports for work at an Employer's job site or shop, unless directed not to report the previous day by his Employer, and for whom no work is available due to reasons other than inclement weather, shall receive a minimum of four (4) hours reporting time and shall remain at other work if requested to do so by the Foreman.

(b) Two (2) hour's pay shall be paid by the Employer when an employee covered by this agreement reports for work at the Employer's shop or job site but work is not available due to inclement weather, provided the employee remains on the job for two (2) hours after 7:00 a.m. or remains on the job for two (2) hours after his designated starting
time. However, no reporting pay shall be allowed where an employee has been informed not to report for work and such information has been given to him before quitting time on the previous day. When work starts late but within two (2) hours of the normal starting time, employees shall be paid from the normal starting time. If work starts later than two (2) hours after the normal starting time, employees shall be paid from the actual time work started, plus two (2) hour's reporting time.

In the event the employee commences work and work cannot proceed for any reason then the employee shall receive four (4) hours' pay.

(c) An employee directed to work after the noon lunch period and who commences to work shall receive four (4) hours' pay at the applicable hourly rate and shall also remain at other work if requested by the foreman. This provision does not apply when lack of work results from inclement weather. *

*Note: See Letter of Understanding No. 11

(d) An employee directed to wait on the job site by his Employer will be paid for such waiting time.

**ARTICLE 25 - COFFEE AND LUNCH BREAKS**

(a) An employee will be allowed to have one coffee break of ten (10) minutes during each half of his working shift. An employee will be allowed a ten (10) minutes' rest period if required to work more than two hours beyond the end of his shift.

(b) Regular day shift employees shall be allowed one half-hour lunch break between 12:00 noon and 1:00 p.m., except where different hours are being worked on a two or three shift operation. It is understood that no employee shall be required to work more than five (5) consecutive hours without a meal break.

An employee required to work more than two (2) hours beyond the end of his shift shall be allowed to have one additional break of ten (10) minutes.

**ARTICLE 26 - WELFARE AND PENSION**

(a) Employers agree to pay for each hour worked, into Local 183 Members' Benefit Fund jointly administered by an equal number of Employer and union trustees, for the purpose of purchasing weekly indemnity, life insurance, dental, medical and similar benefits, for the employees covered by this agreement, represented by Local 183, Labourers' International Union of North America.
(i) Effective Jan. 1st, 2001, an amount of one dollar and sixty cents ($1.60) per hour for each hour worked by each employee represented by the Union shall be paid by the Employers to the Local 183 Members Benefit Fund.

(ii) Effective Nov. 1st, 2001, an amount of one dollar and eighty cents ($1.80) per hour for each hour worked by each employee represented by the Union shall be paid by the Employers to the Local 183 Members' Benefit Fund.

(iii) Effective May 1st, 2002, the amount shall be increased to two dollars ($2.00) per hour.

(iv) Effective Jan. 1st, 2004, the amount shall be further increased to two dollars and twenty-five cents ($2.25) per hour.

(v) It is understood that the above-mentioned amount in Article 26 (a) (i) includes five cents (5¢) per hour into the Tri-Fund.

(vi) It is understood that the above-mentioned amount in Article 26 (a) (i) includes ten cents (10¢) per hour into the Seniors Fund.

(vii) It is understood that the above-mentioned amounts in Article 26 (a) (ii) (iii) and (iv) includes (10¢) per hour in each year into the Long Term Care Fund.

(viii) It is understood that the above-mentioned amount in Article 26 (a) (iv) includes (5¢) per hour into the Camping Ground Fund.

(b) Effective Jan. 1st, 2001, the Employers agree to pay the sum of three dollars and thirty cents ($3.30) for each hour worked by employees represented in the Collective Agreement by Universal Workers Union, Local 183 into a Central and Eastern Canada Labourers' International Union Pension Fund, jointly administered by an equal number of employee and union trustees. Effective from July 3rd, 2001, the Employer's contribution shall be increased to three dollars and eight cents ($3.08) for each hour worked and effective from May 1st, 2002, the amount shall be further increased to four dollars and thirty cents ($4.30) for each hour worked. Effective May 1st, 2003, the amount shall be increased to four dollars and eighty cents ($4.80) for each hour worked.

(c) Payments into the Welfare Fund and Pension Fund are to be made by the 15th day of the month following the month for which payment is due.

(d) The Employers shall inform the trustees of the Welfare Fund and the Pension Fund of any worker who is absent from work because of injury and who is entitled to receive benefits under the "Workplace Safety & Insurance Act 1997" as a result of an
accident by including the following information on the next monthly contribution reports filed with the administrators of the said Fund following the accident, namely:

(i) the name, social insurance number and last known address of such worker;
(ii) the date when and the location where the accident occurred;
(iii) the Workplace Safety & Insurance Board claim number for such worker and proof from the said Board that the worker is entitled to receive benefits under the Workers' Compensation Amendment Act, 1989.

(e) It is agreed that by joint agreement the Trustees of the Benefit Fund shall be empowered to charge interest at the rate of two percent (2%) per month on failure of an Employer to make payment due to the Benefit Fund in accordance with Article 26 (a). It is further agreed that by joint agreement of the Union and the Association, interest at the rate of two percent (2%) per month may be charged on failure of an Employer to make payments due to the Pension Fund in accordance with Article 26 (b). Interest charged shall not exceed twenty-four percent (24%) per annum.

ARTICLE 27 - PREPAID LEGAL PLAN

(a) The Employer agrees to pay the sum of ten cents (10¢) for each hour worked by each employee represented by Local 183 to the Local 183 Prepaid Legal Benefits Fund, jointly administered by an equal number of Employer and union Trustees, for the purpose of providing legal benefits to such employees and their beneficiaries.

(b) The Employer shall remit contributions to the Local 183 Prepaid Legal Benefit Fund monthly, together with a duly completed employer's report form, by the 15th day of the month following the month for which the payment is due.

ARTICLE 28 - PROVINCIAL SALES TAX

28.01 The Employer agrees to pay provincial retail sales tax on contributions to the Local 183 Members' Benefit Fund and remit such taxes to the said Fund together with the contributions on which such tax is paid.

ARTICLE 29 - TRANSFER OF FUNDS

29.01 During the lifetime of this Agreement, the Union shall have the right, subject to the
approval of the Trustees, at any time to require the Employer to change the amounts of the contributions to any Trust Funds other than the Vacation with Pay Trust Fund by transferring any portion of the contribution required to be made to any particular Trust Fund to any other Trust Fund provided that there shall be no increase in the total monetary contributions required to be made under this Agreement and also provided that the Trust Fund to which contribution is redirected to, is part of this Collective Agreement.

ARTICLE 30 - AMENDMENT PROVISIONS OF TRUST AGREEMENTS

30.01 The Universal Workers Union, Local 183 and the Association agree to amend the following sections of the following Trust Funds:

(a) Section 8.01 of the Agreement of Declaration and Trust made as of October 1, 1980, as amended, establishing the Local 183 Members' Benefit Fund.

(b) Section 8.01 of the Agreement and Declaration of Trust made as of the 1st day of May, 1977 establishing the Local 183 Members' Training and Rehabilitation Fund, as amended.

(c) Local Union 183 Civil Engineering Vacation with Pay Trust Fund (the "Fund"), that Section 4.03 (h) of the Agreement and Declaration of Trust made as of the 1st day of July 1976, as amended, establishing the said Fund.

30.02 To provide that, with respect to the amendment of the Trust Agreement by the Union and the Party Associations, the Trust Agreement may be amended by the mutual agreement of the Union and at least sixty percent (60%) of the Party Associations provided that if the Trust Agreement is so amended by agreement involving at least sixty percent (60%) but less than one hundred percent (100%) of the Party Associations, any Association which claims it will suffer hardship as a result of such amendment may refer within fifteen (15) days the issue to an arbitrator appointed by mutual agreement, in which case the arbitrator shall have the authority to rescind the amendment if the grieving Association can substantiate its claim. If the parties cannot agree upon an arbitrator, the Office of Arbitration will be asked to appoint an arbitrator for them within fifteen (15) days hereafter.

ARTICLE 31 - REINSTATEMENT OF EMPLOYEES UPON RETURN FROM INDUSTRIAL ACCIDENT

(a) An employee injured in the performance of his duties will resume his regular work when medically fit to do so if work is available and he applies. The job of an injured worker shall be deemed to be available if upon his return any work within his classification on any project under this agreement, is being performed by an employee who, subsequent
to the time of injury was hired by the Employer or transferred or otherwise assigned to perform any work within the said classification on any project covered by this agreement. An employee who claims he has been denied employment contrary to this provision may have recourse to the Grievance and Arbitration procedures as set out in Articles 19 and 20 of this agreement.

The above shall not apply if the injury is attributable solely to the wilful misconduct of the employee.

(b) The parties agree to the establishment within three (3) months of the signing of this agreement, of a joint committee of equal representatives of the Toronto and Area Road Builders' Association, The Greater Toronto Sewer and Watermain Contractors' Association, The Heavy Construction Association of Toronto and The Utility Contractors' Association of Ontario and the Union, for the purpose of exploring the possibilities of finding light work within the industry for injured workers. Any decisions reached by the said joint committee and approved by the Association and the Union shall be binding upon all Employers bound by this or a similar or like collective agreement.

**ARTICLE 32 - INDUSTRY AND TRAINING**

32.01 Each Employer bound by this agreement or a like agreement adopting in substance but not necessarily in form, the terms and conditions herein, shall contribute the sum of thirty-five cents (35¢) per hour for each hour worked by each employee covered by this agreement or such like agreement, and remit monthly to the Local 183 Members Training and Rehabilitation Fund such contributions together with a duly completed Employer's report form, by the 15th day of the month following the month for which the payments are due.

(a) The sum of ten cents (10¢) per hour for each hour worked by each employee covered by this agreement or such like agreement to the Local 183 Members Training and Rehabilitation Fund. Such amounts shall be immediately paid to the Association by the Trustees of the Local 183 Members Training and Rehabilitation Fund as such Employer's contribution to the cost of negotiating and administering this agreement.

(b) The sum of twenty-five cents (25¢) for each hour worked by each employee covered by this agreement or such like agreement, into the Local 183 Members Training and Rehabilitation Fund, jointly administered by an equal number of management and union trustees one of which management trustees shall be appointed by the Association.

(c) The parties agreed that a joint committee shall be struck to initiate an apprenticeship programme in conjunction with the Ministry of Education and Training which shall include an appropriate training procedure with hours and rates of pay within ninety (90) days of the signing of this Collective Agreement.
ARTICLE 33 - INDUSTRY GRADING

33.01 The parties agree to continue with the joint committee of equal representatives of
the Association and the Union for the purpose of issuing recognized identification cards
noting the employee’s classification. The issuance of such cards will be based upon the
certifications given by Employers in the Heavy Engineering Sector and/or such criteria or
such standards as the Committee may adopt from time to time. The Committee shall
continue to determine which classifications contained in the groups in Schedule "A" and
"B" hereto shall be subject to this procedure. See letter attached to this agreement.

ARTICLE 34 - TRAVEL ALLOWANCE

34.01 The geographic area of this agreement will be divided into the following zones:

(a) Zone 1 - The area bounded on the east by the west boundary of Markham
Road, on the west by the west boundary of the Highway 427, and on the north by the south
boundary of Steeles Avenue. No travel expenses will be paid for work done within Zone
1.

(b) Zone 2 - In regard to travelling expense for work outside Zone 1, but within
a 50-kilometre radius including the Town of Newmarket, employees will be granted $10.00
per day travelling allowance when company transportation is not supplied. No travelling
expenses will be paid to employees whose normal place of residence is in the same
township as that in which the job is located.

(c) Zone 3 - In regard to travelling expense in the fringe area, outside the 50-
kilometre radius including the Town of Newmarket and up to 100 kilometres, the employee
will be paid at the rate of thirty-five cents (35¢) per road kilometre one way, from the
Toronto City Hall to the job site. Such payment is in lieu of room and board and is not paid
when company transportation to the job is supplied and straight time is paid to the
employee.

(d) Room and Board - It is understood that if the Employer requires an employee
to be out of town overnight, the Employer will provide suitable room and board for the
employee up to maximum of seventy ($70.00) per day with no limit.

(e) It is understood and agreed that when an employee works in a Board
Area (including Board Areas not otherwise referred to herein), in which he does not
regularly work, all terms and conditions set out in this Collective Agreement will be
maintained and the employee will continue to receive his wage rate, hours of work
and fringe benefits, as provided for in this Collective Agreement and that are
applicable in the Board Area in which he regularly works, unless the employee is
working in a Board Area where such terms and conditions are specifically governed
by a Schedule forming part of this Collective Agreement and which provides for more beneficial terms and conditions for the employee, in which case the more beneficial terms and conditions shall apply.

(f) Where the Employer supplies transportation and where an employee is required by his Employer to report to a yard or assembly point within Toronto before going to a job outside of Toronto, the employee will be paid at straight time while travelling to and from the job in excess of fifteen (15) minutes each way.

34.02 Downtown Parking: Employees required to work on projects within the downtown area of Toronto, (defined as that area bounded by Dufferin Street on the West, Bloor Street on the North and Don Valley Parkway on the East,) and for whom no transportation is provided, the Employer shall provide parking or refund to the employee upon presentation of a valid receipt for parking expenses paid by the employee the amount of the receipt to a maximum of seven dollars and fifty cents ($7.50) per day.

ARTICLE 35 - DEEMED ASSIGNMENT OF COMPENSATION UNDER THE

EMPLOYMENT STANDARDS AMENDMENT ACT, 1991

35.01 The Trustees of the employee benefit plans referred to in this Collective Agreement shall promptly notify the Association of the failure by any Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the Program Administrator of the Employee Wage Protection Program may deem that there has been an assignment of compensation under the said Program in compliance with the Regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

ARTICLE 36 - DELINQUENCY

(a) In the event an Employer fails to remit any contributions or deductions for the Benefit Plan, Pension Plan, Prepaid Legal, dues, fees, Training Fund, Working Dues Check-Off, or Industry Fund, the Employer shall pay to the appropriate fund as liquidated damages and not as a penalty an amount equal to two percent (2%) [twenty-four percent (24%) per annum] per month compounded monthly for any delinquent contributions, deductions or remittances fifteen (15) days in arrears calculated from the date due, provided the Employer has received five (5) days prior written notice to correct such delinquency and has not done so.

(b) With reasonable cause, the Trustees may request an Employer to submit to them within a stipulated period a certified audited statement of payroll contributions to these funds for a period not to exceed the period from the effective date of this Agreement until the date the audit takes place. Such statements shall reply to the questions submitted
to the Employer by the Trustees.

(c) If the Employer does not submit the certified audited statement as per Section 36 (b), the Trustees may appoint an independent chartered accountant or other qualified person to enter upon the Employer's premises during regular business hours to perform an audit of the Employer's records only with respect to the Employer's contributions or deductions to the required Employee Benefit Plan, Pension Plan, dues, fees, Working Dues Check-Off, and Industry Fund.

(d) Where the Trustees appoint an auditor, the cost shall be borne by the appropriate plan. In the event that the audit reveals discrepancies between the Employer's records and the contributions or deductions submitted, the cost shall be borne by the Employer.

(e) In the event such audit reveals that the Employer has failed to remit contributions in accordance with the provisions of this Agreement, the Employer shall, within five (5) days of receipt of written notice from the Trustees, remit all outstanding contributions together with any liquidated damages required under the terms of Section 36 (a) above and completed supporting contribution report forms as required by the Plan.

(f) When an Employer fails to remit all delinquent contributions, the provisions of Section 36 (e) shall apply to the Union, on instructions from the Trustees, shall immediately institute proceedings against the delinquent Employers under Section 126 of the Labour Relations Act of Ontario. All cost of such actions shall be borne by the appropriate plan or fund unless otherwise recoverable.

(g) Where the Union has taken prior proceedings and obtained a decision against an Employer for delinquent contributions, deductions or remittances, the Union may require the said Employer to post a cash bond or certified cheque not to exceed twenty thousand dollars ($20,000.00) to be held in trust by the Trustees for a period to be determined by the Trustees. In the event that the said Employer again becomes delinquent for contributions, deductions or remittances, the Union and/or the Trustees may apply the cash bond or certified cheque, or any portion thereof, to satisfy the delinquency and require the Employer to replenish the cash bond or certified cheque in a higher amount. In the event that the cash bond or certified cheque does not satisfy the full amount of the delinquency, the Union may take other proceedings to recover the balance.

(h) If an Employer does not have any employees in his employ, he shall submit a nil report in accordance with the provisions of Section 36 (e).
ARTICLE 37 - CONSTRUCTION CRAFT WORKER APPRENTICESHIP

37.01 The purpose of this Article is to provide a program to train skilled tradesmen by making provisions for Apprentices in the Heavy Construction sector as per Article 4 A, B & F of this Agreement.

37.02 Apprentice(s) means an employee(s) within the Local 183 classifications considered to be in the training stage of his (their) careers by Local 183. Except as allowed for in Article 37.07 and 37.08 below, all Apprentices shall be registered as such with Local 183 prior to being employed as Apprentices by any Employer.

37.03 When the Employer wishes to employ an Apprentice, the Employer shall make a request to the Local 183 Training Centre. The Training Centre shall make immediate efforts to dispatch an Apprentice within five (5) days of receipt of the request. Any person not dispatched in accordance with this Article shall not be considered to be an Apprentice for the purpose of this Agreement except as provided for in Article 37.06 and 37.07.

37.04 The said Apprentices shall be obliged to attend all relevant Health and Safety Training Programme offered at Local 183 Training Centre on their own time at no cost to the Employer.

37.05 Training Requirements:

<table>
<thead>
<tr>
<th>Phase</th>
<th>Rate</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Phase 1</td>
<td>60% of full rate</td>
<td>0 - 800 hours</td>
</tr>
<tr>
<td>Phase 2</td>
<td>75% of full rate</td>
<td>800 - 1600 hours</td>
</tr>
<tr>
<td>Phase 3</td>
<td>85% of full rate</td>
<td>1600 - 2400 hours</td>
</tr>
</tbody>
</table>

Above 2400 hours and successful completion of the exam, the full rate will apply.

37.06 If the Union cannot supply such Apprentices to the Employer under Article 37.03, the Employer has the right to employ Apprentices from other sources. Such persons shall, as a condition of employment, and continued employment, be required to apply for membership in Local 183 and become registered as Apprentices within ten (10) working days of hiring.

37.07 If Local 183 cannot supply such Apprentices resident in Simcoe County for work in Simcoe County to the Employer under Article 37.03, the Employer has the right to employ Apprentices from other sources. Such persons shall, as a condition of employment, and continued employment, be required to apply for membership in Local 183 and become registered as Apprentices within ten (10) working days of hiring.
37.08 The Employer has the right to hire one (1) Apprentice per five (5) employees in the Local 183 portion of the bargaining unit.

37.09 Any person who is not registered as an Apprentice in accordance with the provisions of Articles 37.02, 37.07 or 37.08 (whichever is applicable) shall receive the full rate for the relevant period of employment.

37.10 If the ratio set out in Article 37.08 is not complied with, then all Apprentices shall receive the full rate for the relevant period employment.

37.11 It is agreed that prior to laying off any full rate employees, all Apprentices will be laid off. It is further agreed that a full rated employees who have been laid off by the Company within two (2) months of the date of recalling or employing any Apprentice will be offered recall prior to recalling or employing an Apprentice. It is further agreed that prior to requesting or employing any new Apprentices, the Company will offer recall to any apprentices which it has laid off within two (2) months, providing that such apprentices are capable of performing the available work.

IN WITNESS WHEREOF the parties hereto have caused their duly authorized representatives to affix their signatures this day of , 2001.

SCHEDULE "A"

Applying to Heavy Construction work as defined in Article 3 of the agreement but excluding all tunnel work covered under Schedule "B" and Field Precast manufacturing work covered by Schedule "C" of this agreement attached hereto.

ARTICLE 1 - WORK WEEK, WORK DAY

The regular working day shall be eight and one half (8½) hours per day and subject to variation by mutual consent of the parties, shall be between 7:00 a.m. and 5:00 p.m., from Monday to Friday, inclusive. Any work done outside these hours shall be overtime or shift work. The maximum number of working hours per week shall be forty-two and one half (42½) hours and work outside these hours shall be overtime work, save and except the provisions of this agreement relating to shift work.

With regard to heaters and pumps being operated on a three shift basis, it is agreed that the first six shifts in each week (Monday to Saturday inclusive) will be paid at straight time. Sundays will be paid for at double time.

ARTICLE 2 - OVERTIME

All work performed in excess of the regular working day of eight and one-half (8½) hours from Monday to Friday inclusive, shall be deemed overtime work. The rate of wages shall be time and one half the regular day shift rate.

All work on Saturdays shall be paid for at double the regular day shift rate.

Where three shifts are working involving payment of Saturday or Sunday overtime under the provisions of this agreement, it is agreed that shift premium where applicable, will be paid in addition to overtime. It is further agreed and understood that on a two or three shift operation or shifts starting after 6:00 p.m., the tenth (10th) or fifteenth (15th) shift as the case may be, may be worked at straight time on Saturday until 7:00 a.m. provided, however, that the applicable shift premium shall be paid.

ARTICLE 3 - SHIFT WORK

All second (2nd) shift work to be paid at time and one-eighth (1/8) the regular day shift rate, and all third (3rd) shift work and shifts starting after 6:00 p.m. to be paid at time and one seventh (1 1/7) the regular day shift rate.
ARTICLE 4 - WAGES

Applying to heavy construction work as defined in Article 3 of the agreement, but excluding all tunnel work covered under Schedule "B" and Field Precast Manufacturing Work covered by Schedule "C" of this agreement attached hereto.

The rates of wages during regular day shift working period shall be:

<table>

</tr>
</tbody>
</table>

All working foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.

If an employee works more than fifty percent (50%) of his shift on a higher rated job than his regular classification, he will be paid the higher rate for the whole shift.

A qualified employee shall be paid the rate for the work to which he is assigned.
SCHEDULE "B"

Applying to Heavy Construction Tunnels
and T.T.C. Subway Tunnel Work

ARTICLE 1 - WORK WEEK

The regular work week will start not earlier than 7:00 a.m. on Monday, and the regular working day, subject to variation by mutual consent of the parties, shall be between 7:00 a.m. and 5:00 p.m. from Monday to Friday, inclusive. Any work done outside these hours shall be overtime or shift work. The maximum number of working hours per week shall be forty (40), and work outside these hours shall be overtime work, save and except the provisions of this agreement relating to shift work.

ARTICLE 2 - OVERTIME

All work performed in excess of the regular working day of eight (8) hours from Monday to Friday inclusive, shall be deemed overtime work. The rate of wages shall be time and one-half (1½) the regular day shift rate.

All work on Saturday shall be paid for at double (2) the regular day shift rate, except where shift work is in operation. Time worked after midnight Friday night shall be paid for at the rate of time and one-half (1½) in respect of a shift commencing Friday evening and terminating not later than 7:00 a.m. on Saturday morning. All work on Sundays and Statutory Holidays shall be paid for at double (2) the regular day shift rate.

ARTICLE 3 - SHIFT WORK

Where three shifts are worked, the shift times shall be as follows, subject to variation by agreement of the Union and an Employer:

<table>
<thead>
<tr>
<th>Shift</th>
<th>Times</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st shift</td>
<td>7:00 a.m. - 3:00 p.m.</td>
</tr>
<tr>
<td>2nd shift</td>
<td>3:00 p.m. - 11:00 p.m.</td>
</tr>
<tr>
<td>3rd shift</td>
<td>11:00 p.m. - 7:00 a.m.</td>
</tr>
</tbody>
</table>

On such three shift tunnelling operations, it is agreed the meal break will be paid.

Where three (3) shifts are working involving payment of Saturday or Sunday overtime under the provisions of this agreement, it is agreed that shift premium, where applicable, will be paid in addition to the overtime.

All second (2nd) shift work to be paid at time and one-eighth (1 1/8) the regular day shift rate, and all third (3rd) shift work to be paid at time and one-seventh (1 1/7) the regular day shift rate. On tunnel work all hours worked on a second (2nd) shift after 11:00 p.m. will be paid at third (3rd) shift premium rate (time and one-seventh) [1 1/7], but this does not apply when the regular quitting time for the second (2nd) shift is 12:00 midnight.
ARTICLE 4 - WAGES - TUNNEL WORK

The rates of wages during regular day shift working periods on tunnel work shall be:

<table>
<thead>
<tr>
<th>Wage Classification</th>
<th>July 3rd, 2001</th>
<th>May 1st, 2002</th>
<th>May 1st, 2003</th>

</tr>
<tr>
<td>Group 7 - Flagperson</td>
<td>$15.00</td>
<td>$15.32</td>
<td>$15.77</td>
</tr>
<tr>
<td>Group 8 - Watch Person (for 6 nights duty, 50 hours per week)</td>
<td>$670.00</td>
<td>$686.00</td>
<td>$708.50</td>
</tr>
</tbody>
</table>

All working foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.
If an employee works more than fifty percent (50%) of his shift on a higher rated job than his regular classification, he will be paid the higher rate for the whole shift.

A qualified employee shall be paid the rate for the work to which he is assigned.

When new types of equipment for which rates of pay are not established by this Agreement are put into operation and such similar equipment is being operated by members of the Union, the rates covering such operations shall be subject to negotiations between the parties and if such negotiations do not result in an agreement, the dispute will be settled as if it were a grievance arising under the provisions of the agreement.

ARTICLE 5 - PREMIUM RATES AND CONDITIONS IN COMPRESSED AIR

(a) The following sliding scale of premium rates shall apply to workers in compressed air. These rates are non-cumulative.

<table>
<thead>
<tr>
<th>Air pressure</th>
<th>Premium per Shift</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 14 lbs.</td>
<td>$16.00</td>
</tr>
<tr>
<td>15 - 20 lbs.</td>
<td>$19.50</td>
</tr>
<tr>
<td>21 lbs.</td>
<td>$23.50</td>
</tr>
</tbody>
</table>

For air pressure over twenty-one (21) pounds, the Employer agrees to pay two dollars ($2.00) per pound compressed air premium for each pound over twenty-one (21) pounds, in addition to the twenty-one (21) pound rate.

(b) Where employees are required to work in compressed air they shall receive a minimum nine (9) hours per day or shift; it being understood and agreed that the ninth (9th) hour shall be paid at straight time.

(c) Rest periods when working under air pressure are to be paid as specified by law, and no deduction will be made for a meal break falling in the rest period between the two working periods.

(d) Where employees are required to have their lunch break underground in compressed air, the Employer agrees that a proper sanitary lunchroom facility shall be provided, heated when necessary, and separate from the work area. Potable water shall be provided at all times. Sanitary toilets shall be provided and shall not be located in or near the lunchroom area.

(e) Hot beverages:

(i) The Employers shall, at their own expense, supply sugar and hot beverages for employees working in compressed air during rest periods;
(ii) Containers and cups for the beverages required as outlined above shall be maintained in a clean and sanitary condition and kept stored in a closed container.

ARTICLE 6 - PRODUCTIVITY PREMIUM

(a) The Employer agrees to negotiate with the Union any incentive bonus system before implementing it, provided that the Union's Negotiating committee will consist of, but not limited to, lead miners.

(b) It is further understood that any incentive bonus premium schedule is part of the collective agreement and therefore subject to the same provisions, such as grievance procedure, etc.

(c) Incentive bonus premium shall be paid over and above the employees' hourly rate, overtime premium, shift premium, compressed air premium, vacation with pay, travelling expense, welfare and pension contributions.

ARTICLE 7 - DECKMAN

It is agreed by the parties hereto, that on all tunnel projects there shall be a member of the Union at the top of the shaft employed as a deckman when work is in progress.
SCHEDULE "C"

A schedule applying to Field Precast Manufacturing Operations, which shall include work pertaining to: site preparation, site restoration, erection and dismantling of temporary facilities, and all operations pertaining to field manufacturing, yard storage and handling of precast concrete products and components for heavy construction. This schedule does not apply when precast units are supplied or purchased, provided such precast units are manufactured off site.

ARTICLE 1 - HIRING OF EMPLOYEES

As provided for in Article 5, Section (b) of the agreement.

ARTICLE 2 - WORK WEEK, WORK DAY

The regular working day shall be nine (9) hours per day and subject to variation by mutual consent of the parties, shall be between 7:00 a.m. and 7:00 p.m., from Monday to Friday, inclusive. Any work done outside these hours shall be overtime or shift work. The maximum number of working hours per week shall be forty-five (45) hours and work outside these hours shall be overtime work, save and except the provisions of this agreement relating to shift work. It is agreed and understood that the 10th shift of a two-shift operation and the 15th shift of a three-shift operation may be worked at straight time on Saturday until 7:00 a.m. provided, however, that the applicable shift premium shall be paid.

ARTICLE 3 - OVERTIME

All work performed in excess of the regular working day of nine (9) hours from Monday to Friday, inclusive, and all work performed on Saturday, shall be deemed overtime work. The rate of wages for overtime work shall be time and one-half (1½) the regular day shift rate.

Watchmen

Watchmen shall receive overtime payment at the rate of time and one-half (1½) the employee's current hourly rate for all work performed on such employee's seventh (7th) consecutive shift.

ARTICLE 4 - SHIFT WORK

Any shift or shifts falling between the hours of 7:00 a.m. and 7:00 p.m. shall be considered to be day shifts and shall attract no shift premium. Any shift or shifts commencing after twelve noon shall be considered to be an afternoon shift and a shift
premium of fifty cents (50¢) per hour shall be paid for all hours worked during such afternoon shifts. Any shift or shifts commencing after 10:00 p.m. shall be considered to be a night shift and a shift premium of fifty cents (50¢) per hour shall be paid for all hours worked during such night shifts.

<table>
<thead>
<tr>
<th>Wage Classification</th>
<th>July 3rd, 2001</th>
</tr>

<td>$24.35</td>
</tr>
<tr>
<td>Group 2 - Concrete worker; rigger and burner signalman.</td>
<td>$24.60</td>
</tr>
<tr>
<td>Group 3 - Carpenter, reinforced concrete worker; concrete cement finisher, welder (certified) rod or semi-automatic.</td>
<td>$24.95</td>
</tr>
<tr>
<td>Group 4 - Watch Person (for 6 nights duty, 10 hours per day, 50 hours per week).</td>
<td>$560.50</td>
</tr>
</tbody>
</table>

All working foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.
**SCHEDULE "D"**

This Schedule applies to employees in the classifications shown below assigned to the clean-up and removal of hazardous contaminated soil on sites as designated by the appropriate governmental authority.

The classifications and rates are as follows:

<table>
<thead>
<tr>
<th>Wage Classification</th>
<th>July 3rd, 2001</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group 1 - Labourers, operating all machine-driven tools by gas, air or electricity, including plate-tampers, operators of self-propelled hand compactors, burners, fence erectors - all types, sod layers, traffic control person.</td>
<td>$19.61</td>
</tr>
<tr>
<td>Group 2 - Labourers, operating high pressure water equipment, welders, fork lifts, farm-tractors, small trenchers, mini-skid steer loaders, and all other similar small equipment using attachments such as &quot;sweepers&quot;, york rakes, &quot;earth augers&quot;, &quot;pallet or utility forks&quot;, &quot;angle brooms&quot;, blade-backhoe or hydraulic breakers, sod or vibrator rollers, etc.</td>
<td>$20.36</td>
</tr>
</tbody>
</table>

Benefits for employees so assigned shall be as set out in Schedule "A" save that overtime work shall be paid only after fifty (50) hours worked with makeup time permitted on Saturdays. Employees working for his Employer under classifications and rates under Schedule "A" shall not have his rate of pay reduced, when assigned to work under this Schedule "D".

The Union agrees to train employees for this work in its recognized training school to standards established by the appropriate ministerial authority for the safety and health of employees.
SCHEDULE “E”

(a) “The Sewer and Watermain Agreement”, being a collective agreement between the Greater Toronto Sewer and Watermain Contractors’ Association and A Council of Trade Unions acting as the representative and agent of Teamsters’ Local 230 and the Union;

(b) “The Roads Agreement”, being a collective agreement between the Toronto and Area Road Builders’ Association and the Union;

(c) “The Forming Agreement”, being a collective agreement between the Ontario Formwork Association and the Formwork Council of Ontario;

(d) “The House Basements Agreement”, being a collective agreement between the Residential Low Rise Forming Contractors’ Association of Metropolitan Toronto and Vicinity and the Union;

(e) The Apartment Builders Agreement”, being a collective agreement between the Metropolitan Toronto Apartment Builders Association and the Union;

(f) “The House Builders Agreement”, being a collective agreement between the Toronto Residential Construction Labour Bureau and the Union;

(g) “The Concrete and Drain Agreement”, being a collective agreement between the Ontario Concrete and Drain Contractors’ Association and the Union;

(h) “The Utilities Agreement”, being a collective agreement between the Utility Contractors’ Association of Ontario and Labourers’ International Union of North America, Ontario Provincial District Council and its affiliated Local Unions;

(i) “The Carpentry Agreement”, being a collective agreement between The Residential Framing Contractors’ Association of Metropolitan Toronto and Vicinity and the Union;

(j) “The Landscaping Agreement”, being a collective agreement between the Landscaping Contractors in Ontario Labour Relations Board Area No. 8 and 18 and the Union;

(k) “The Agreement Covering Building Restorations and Associated Work”, being a collective agreement between the Building Restorations and Associated Work Contractors in Ontario Labour Relations Board Area No. 8 and the Union;

(l) “The Bricklaying and Masonry Residential Sector Agreement”, being a collective agreement between various independent bricklaying and masonry contractors and the Union;
(m) "The Marble, Tile, Terrazzo & Cement Masons Agreement", being a collective agreement between various independent marble, tile, terrazzo and cement masons contractors and the Union;

(n) "The Residential Plumbing Agreement", being a collective agreement between various independent plumbing contractors and the Union;

(o) "The Fencing Agreement", being a collective agreement between various independent fencing contractors and the Union;
ARTICLE 1 - WAGES - SIMCOE COUNTY

The rates of wages for all work performed in Simcoe County shall be:

All working foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.
LETTER OF UNDERSTANDING NO. 1

LETTER TO: The Heavy Construction Association of Toronto

FROM: Universal Workers Union, Local 183

RE: COLLECTIVE AGREEMENT, MAY 1ST, 2001

Further to the signing of the collective agreement between us, this letter will serve to confirm certain understandings which were reached in connection with the classifications of Reinforced Concrete Worker, Carpenter Improver and Pipelayer. It is understood that the classification of “Reinforced Concrete Worker” applies to those employees engaged within the jurisdiction of the agreement in laying reinforcing rod or mesh; similarly, the classification Carpenter Improver applies to those employees engaged within the jurisdiction of this agreement in the setting of travelling steel forms and wood forms. Further, the “Pipe Layer” classification is intended to apply to not more than one man per crew.

Dated at Toronto, this day of , 2001.

Signed on behalf of The Heavy Construction Association of Toronto

Signed on behalf of The Universal Workers Union, Local 183
LETTER OF UNDERSTANDING NO. 2

RE: COLLECTIVE AGREEMENT, MAY 1ST, 2001

Further to the signing of the collective agreement between us, this letter will serve to confirm certain understandings which were reached regarding the items falling within the Heavy Engineering Sector.

The parties agree that a Joint Committee shall be established between the Association and the Union to review any dispute arising out of the interpretation and meaning of any of the agreed-upon definitions and to decide upon the application of the same to any given project or part thereof. The Joint Committee shall consist of two members each from the Association and the Union. A majority decision of the Committee shall be binding upon the parties. Failing settlement of any dispute concerning interpretation of definitions, then the matter shall be referred to arbitration.

Dated at Toronto this day of , 2001.

Signed on behalf of The Heavy Construction Association of Toronto

Signed on behalf of the Universal Workers Union, Local 183
LETTER OF UNDERSTANDING NO. 3

RE: Collective Agreement, May 1st, 2001

The parties to this collective agreement agree that notwithstanding the provisions of the collective agreement the hours of work on bridge repairs shall be nine (9) hours per day and forty-five (45) hours per week.

If the project is the replacement of the total deck, the hours will be eight and one half (8½) hours per day as per Schedule "A".

RE: Collective Agreement, May 1st, 2001

Further to the signing of the collective agreement between us, letter will serve to confirm certain understandings between the parties:

1. The parties agree to establish a Joint Committee to meet with representatives of the T.T.C. to explain to them the amendments made to the former collective agreement which have been incorporated into the new collective agreement effective from May 1st, 2001 to April 30th, 2004 (the "collective agreement").

LETTER OF UNDERSTANDING NO. 5
RE: Classification Recognition Committee

(A) A Recognition Committee for classification purposes of two representatives of each party be established to accept Company certification cards of proficiency for the following classifications:

1. Miner
2. Lead Miner
3. Mucker
4. Tunnel Machine Operator

(B) Card must be clearly identifiable and contain member’s name, Social Security Number, date of birth, etc.

(C) Card to be used for Union Registration purpose only. Card will not be used in any grievance procedures, nor will it be used to increase any hourly rate of pay, (i.e. a certified pipelayer is hired as a Labourer, he shall receive Labourer’s rate of pay).

(D) Should there be any question of the Card holder’s capabilities or proficiency, any employee or Employer can make a request to the Committee for a review. The employee in question shall be sent to the Training Centre for a proficiency test.

Dated at Toronto, this day of , 2001.

FORKLIFT LETTER

Local 183 claims jurisdiction over the operation of forklifts and will take all necessary action to defend its jurisdictional claims.

Local 183 understands that other Unions may also claim jurisdiction over the operation of forklifts.

Therefore, Local 183 undertakes that should it be necessary to file a grievance with respect to this issue, it will not seek damages against an Employer unless there has been a previous decision award or agreement in relation to the specific Employer for the operation of forklift by members of Local 183.

Hiring

In order to ensure that the Employers bound to the terms and conditions of the Collective Agreement binding upon the Union and the Association continue to have access to an efficient and skilled work force in an expeditious manner, which the parties agree will benefit the unionized portion of this industry, and will thereby benefit all members of the Union, the parties hereby agree as follows:

a) Notwithstanding the provisions of Article 5 of the Collective Agreement requiring the Employer to obtain all, or some, of its work force from the Union’s Hiring Hall, the Employer may make a request of the Union to hire specific Union members, who have previously been employed by the Employer, under the provisions of this Collective Agreement, within a six (6) month period prior to the date of any such request. Should it receive such a request, the Union may, at its sole and exclusive discretion, allow some or all of the requested individuals to be hired by the employer notwithstanding the Hiring Hall provisions set out in the Collective Agreement depending upon all of the circumstances which the Union considers relevant, including, but not necessary limited to, the general state of the Heavy Engineering sector of the construction industry in the various areas covered by the Collective Agreement; the levels of employment amongst members of the Union; the particular skill levels of the requested employees; the Employer’s general compliance with the hiring and other provisions of the Collective Agreement whether or not any instances of non-compliance have resulted in grievances; and any other circumstances which the Union considers relevant;

b) Should the Union agree that the employer may hire some or all of the requested individuals, all other provisions set out in this Collective Agreement concerning hiring or otherwise, will apply and therefore, without limiting the generality of the foregoing, such individuals must be Union members in good standing and must have obtained referral slips from the Union prior to commencing work;
c) The parties agree that this Letter of Understanding forms part of the Collective Agreement binding upon them and is enforceable as such.

APPENDIX “A”

Applicable to the District of Muskoka and in
OLRB Areas No. 9, 10, 11, and
that portion of No. 12 west of the Trent-Severn Waterway
THIS AGREEMENT made as of the day of 2002.

BETWEEN:

(hereinafter called the "Employer")

OF THE FIRST PART

and

Universal Workers Union, Labourers' International Union of North America Local 183

(hereinafter called the "Union")

OF THE SECOND PART

WHEREAS the Contractor and the Union wish to make a common collective agreement with respect to certain employees of the Contractor engaged in road and parking lot construction, paving, sewers and watermains construction and heavy construction etc., and all work incidental thereto, and to provide for and ensure uniform interpretation and application in the administration of the Collective Bargaining Agreement;

NOW THEREFORE it is agreed as follows:

ARTICLE 1 - RECOGNITION

1.01 The Contractor recognizes the Union as the collective bargaining agent for all employees working in the District of Muskoka and in Ontario Labour Relations Board Geographic Areas No. 9, 10 and 11, and that portion of No. 12 west of the Trent-Severn Waterway, save and except foremen, non-working foremen, those above the rank of foreperson, office and clerical staff, temporary shop employees, engineering staff and security guards.

1.02 Anywhere in this Agreement, all references to the masculine gender shall be deemed to be references to the feminine gender as well, and similarly in the reverse.
ARTICLE 2 - UNION SECURITY

2.01 All employees hired by the Contractor after the date of signing of this Agreement shall when working in a position within the bargaining unit described in Article 2 hereof as a condition of employment, become or remain a member of the Union within fifteen (15) days of such employment and shall be required to maintain such membership while working within the bargaining unit for the duration of this Agreement.

2.02 It is expressly understood and agreed that no Contractor shall be required to discharge any employee for violation of the provisions of this Article for Union Security for any reason other than non-payment of regular monthly Union dues, and initiation fees where applicable, notwithstanding anything to the contrary herein contained.

2.03 All employees working in the bargaining unit described in Article 2 hereof shall be required as a condition of employment to have his regular monthly union dues and any required working dues checked off and the Union agrees to duly inform the Contractor of the amounts of such Union dues and working dues and any changes in the amounts. The Contractor agrees to make such deductions from the first pay issued to the employees each calendar month and remit the same to the Union not later than the fifteenth (15th) day of the following month to the Secretary/Treasurer of the Union. When remitting such dues, the Contractor shall name the employees and their Social Insurance Numbers from whose pay such deductions have been made, as well as the names and Social Insurance Numbers of employees who have left employment of the Contractor since the last payment.

2.04 The Employer shall show on the T-4 slips the amount of Union dues deducted from each employee.

ARTICLE 3 - MANAGEMENT RIGHTS

3.01 The Union agrees that it is the exclusive function of the Contractor:

a) to conduct its business in all respects in accordance with its commitments and responsibilities including the right to manage the jobs, locate, extend curtail or cease operations, to determine the number of men required at any or all operations, to determine the kinds and locations of machines, tools and equipment to be used and the schedules of production, to judge the qualifications of the employees, and to maintain order, discipline and efficiency;

b) to hire, discharge, classify, transfer, promote, demote lay off, suspend or otherwise discipline employees provided that a claim by an employee that he/she has been discharged without reasonable cause or subjected to disciplinary suspension or disciplinary demotion without reasonable cause shall be subject to the provisions of the grievance procedure;
c) to make, alter from time to time and enforce reasonable rules of conduct and procedure to be observed by the employees;

d) it is agreed that these functions shall not be exercised in a manner inconsistent with the express provisions of this Agreement.

ARTICLE 4 - GRIEVANCE PROCEDURE

4.01 The parties to this Agreement are agreed that it is of the utmost importance to adjust complaints and grievances as quickly as possible.

4.02 It is understood and agreed that an employee does not have a grievance until he/she has discussed the matter with his/her foreperson and given him/her an opportunity of dealing with the complaint. The employee may have his/her steward or business representative present if he/she so desires.

4.03 Grievances properly arising under this Agreement shall be adjusted and settled as follows:

STEP NO. 1

Within ten (10) working days after the circumstance giving rise to the grievance occurred or originated (save and except grievances arising out of discharge cases in which case the grievance shall be brought forward within five (5) days of the employee being notified of his/her discharge, and save and except grievances involving monetary items as defined in Section 4.04 below) the aggrieved employee with his/her business representative may present his/her grievance, which shall be reduced to writing, to the official of the Company named by the Company to handle grievances at this step. Should no settlement satisfactory to the employee be reached within five (5) full working days, the next step in the grievance procedure may be taken at anytime within five (5) full working days thereafter.

STEP NO. 2

The Union and the Contractor shall meet as promptly as possible thereafter in an endeavour to settle the grievance. If a satisfactory settlement is not reached within five (5) working days from this meeting and if the grievance is one which concerns the interpretation or alleged violation of the Agreement, the grievance may be submitted to arbitration as provided in Article 5 below at any time within ten (10) working days thereafter but not later.

4.04 Monetary grievances are defined as those involving payment for hours of work, rates of pay, overtime, vacation and statutory holiday pay, bonuses as referred to in Schedule "A", premiums (shift and compressed air), travelling expenses, room and board allowances, pension and welfare contributions, reporting allowances and dues, but not
including grievances arising out of classification assignments. Such grievances shall be brought forward at Step No. 1 within three (3) months after the circumstances giving rise to the grievance occurred or originated.

ARTICLE 5 - ARBITRATION

5.01 Both parties to this Agreement agree that any grievance concerning the interpretation or alleged violation of this Agreement which has been properly carried through all the steps of the grievance procedure outlined in Article 4 above and which has not been settled, will be referred to a board of arbitration at the request of either of the parties hereto.

5.02 The board of arbitration will be composed of one (1) person appointed by the Contractor, one (1) person appointed by the Union and a third person to act as Chairman chosen by the other two (2) members of the Board.

5.03 Within two (2) working days of the request by either party for a board, each party shall notify the other of the name of its appointee.

5.04 Should the person chosen by the Contractor to act on the board and the person chosen by the Union fail to agree on a third member as chairman within five (5) days of the notification mentioned in 4.03 above, the Minister of Labour of the Province of Ontario will be asked to nominate a member of the judiciary of the Province of Ontario to act as chairman.

5.05 The decisions of the board of arbitration or a majority of such board constituted in the above manner or if there is no majority, the decision of the chairman shall be binding upon the employees, the Union and the Contractor.

5.06 The board of arbitration shall not have any power to alter or change any of the provisions of this Agreement or to substitute any new provisions for any existing provisions nor to give any decision inconsistent with the terms and provisions of the Agreement.

5.07 Each of the parties to this Agreement shall bear the expense of the arbitrator appointed by it and the parties will jointly bear the expenses, if any, of the chairman.

5.08 a) The nature of the grievance, the remedy sought and the section or sections of the Agreement which are alleged to have been violated shall be set out in the written record of the grievance and may not be subject to change in later steps.

b) In determining the time which is allowed in the various steps, Sundays and Statutory Holidays shall be excluded, and any time limits may be extended by agreement in writing.

c) If advantage of the provisions of Articles 4 and 5 hereof is not taken within the time limits specified therein or as extended in writing as set out above, the grievance shall be deemed to have been abandoned and may not be re-opened.
ARTICLE 6 - MANAGEMENT GRIEVANCES AND UNION GRIEVANCES

6.01 It is understood that the Contractor on its own behalf may file a grievance with the Union and that if such complaint is not settled to the satisfaction of the parties concerned, it may be treated as a grievance and referred to arbitration in the same way as a grievance of an employee. Such grievance shall be processed at Step No. 2 of the grievance procedure set out in Article 4 hereof.

6.02 A Union policy grievance which is defined as an alleged violation of this Agreement involving all or a substantial number of employees in the bargaining unit in regard to which a substantial number of employees have signified an intention to grieve or a grievance involving the union itself, including the application or interpretation of this Agreement, may be brought forward in writing in the same manner and within the same time limits as in the case of an employee grievance. Such grievance shall be processed at Step No. 1 of the Grievance procedure as set out in Article 4 hereof. If it is not settled, it may go to a board of arbitration in the same manner as a grievance of an employee.

ARTICLE 7 - STATUTORY HOLIDAYS, VACATION ALLOWANCES, HOURS OF WORK, WAGE RATES, ETC.

7.01 Attached hereto are Schedules "A", "B" and "C" respecting Statutory Holidays, Vacation Allowances, Hours of Work, Wage Rates, etc which are hereby made a part of this Agreement.

7.02 No employee shall receive a reduction in wages or benefits as a result of the signing of this Agreement.

ARTICLE 8 - UNION REPRESENTATION

8.01 The Business Representative of the Union shall have access to all working areas during working hours as necessary for the administration of this Agreement but in no case shall his/her visits interfere with the progress of the work. When visiting a job, he/she will first advise the superintendent or other supervisory personnel as designated by the Employer. Where clearance is required from the owner it is the responsibility of the Union to obtain such clearance. The Union agrees to give such assistance as is required of it by the Employer to secure competent and qualified men.

8.02 The Contractor agrees to recognize such reasonable number of stewards as may from time to time be appointed by the Union, but shall not be obliged to recognize such stewards until informed in writing of the names of all stewards as they are appointed.

It is further agreed that all things being equal, a steward shall be one of the last four (4) men retained in employment if competent to perform the work available.
It is also agreed that a steward will not be excluded from overtime work provided he/she is able to do the work required.

ARTICLE 9 - PRODUCTIVITY

9.01 The Union and the Contractor recognizes the mutual value of improving by all proper and reasonable means, the productivity of the individual workman and both will undertake, individually and jointly to promote such increased productivity.

9.02 During the lifetime of this Agreement, the Union agrees there will be no strike, slow down or picketing or any other act which will interfere with the regular schedule of work, and the Contractor agrees that there shall be no lockout. The Company shall have the right to discharge or otherwise discipline employees who take part in or instigate any strike, picketing or slow down or any other act which interferes with the regular schedule of work.

9.03 The Union shall not involve the Contractor in any dispute which may arise between the Union and any other Company and the employees of such other company. The Union further agrees it will not condone a work stoppage or observe any picket line placed on a job site for jurisdictional purposes.

9.04 The Contractor agrees not to subcontract asphalt, concrete paving, curb and gutter work, bridges and reservoirs, or sewer and watermain work which the Company ordinarily performs itself or work for which the owner or general contractor requires the employment of Union members, to sub-contractors other than those who employ members of the Union.

9.05 If an Apprenticeship Program is established the parties agree to jointly participate in such Program.

ARTICLE 10 - PAYMENT OF WAGES

10.01 Wages shall be paid by cash or cheque on the job at the option of the Employer and shall be accompanied by a slip outlining all hours of work, overtime hours, deductions for income tax, unemployment insurance, pensions etc. where applicable. Wages may be paid by direct deposit provided that the employees agree.

10.02 In the case of lay off, all men shall receive one hour's notice in advance of the layoff.

10.03 Whenever Employment Insurance separation certificates are not given to employees at the time of termination, they shall be sent by the Contractor affected to the employee by registered mail to his/her last known address on file with the Company within seventy-two (72) hours of the time of termination. Further, an employee who is laid off will be sent his/her pay cheque and vacation pay credits within seventy-two (72) hours of layoff, and an employee who quits will be sent his/her pay cheque and vacation pay credits not later than the next regular pay day.
10.04 No employee will be discharged by his/her Employer because he/she fails to work in unsafe conditions as set out in government safety regulations. Any refusal by an employee to abide by such regulations after being duly warned will be sufficient cause for dismissal.

ARTICLE 11 - SAFETY, SANITATION & SHELTER

11.01 On all jobs where more than five (5) employees are continuously employed shelter (heated when necessary) will be provided for employees to eat their lunch and store their clothing. Sanitary toilets shall be provided in accordance with provisions of the Ontario Health and Safety Act before production work commences on the job. It is understood that the provisions of this section do not apply to jobs of short duration.

11.02 The Employer shall supply safety helmets to employees at no cost. If any employee at termination of employment does not return said helmet, he/she shall be charged at cost. If the helmet is returned and has been made unwearable from wilful neglect and abuse, the employee shall be charged for the full replacement value.

11.03 It is further agreed that drinking water and paper cups will be provided for employees on all jobs and that washing water will be provided where outlets are available to the Employer. Further, if a trailer is used at the job site for storage of tools and equipment in addition to use as lunchroom facilities, (heated when necessary) the tool storage area will be partitioned off.

11.04 A safety committee is to be established composed of two (2) members of the Union and two (2) representatives of the Contractor. Meetings, not to exceed one (1) per month, will be held when requested by either party.

11.05 When employees are required to perform their duties in wet weather, the Contractor agrees to supply suitable protective clothing including rubber boots which will be returned to the foreperson when the assigned duties are completed. It is understood that this provision does not apply to employees who are required to wear rubber boots in the normal course of their duties.

11.06 The Contractor shall at his/her own expense furnish to any employee injured in his/her employment who is in need of it immediate conveyance and transportation to a hospital or to a physician. It is further agreed that an ambulance shall be used where necessary and possible.

11.07 An employee who is injured during working hours in a compensable accident and is required to leave for treatment or is sent home because of such injury shall receive payment for the remainder of the shift at his/her regular rate of pay.

11.08 The trucks to be used to transport employees will be covered and tools will be secured in tool boxes. No materials will be carried in the trucks.
11.09 Employees shall be entitled to be reimbursed by the Contractor for loss of clothing due to fire on the Contractor's premises up to a maximum of two hundred fifty dollars ($250.00). In all cases, an employee must provide written evidence of such loss.

ARTICLE 12 - COFFEE AND LUNCH BREAK

12.01 Employees will be allowed one (1) coffee break in each half of the working shift.

12.02 Employees shall be allowed a one-half hour unpaid lunch break between 11:30 a.m. and 1:00 p.m. It is understood that no employee shall be required to work more than five (5) consecutive hours without a lunch break.

ARTICLE 13 - REINSTATEMENT OF EMPLOYEES UPON RETURN FROM INDUSTRIAL ACCIDENT

13.01 An employee injured in the performance of his/her duties will resume his/her regular work when medically fit to do so if work is available and he/she applies. The job of an injured worker shall be deemed to be available if upon his/her return any work within his/her classification on any project under this Agreement is being performed by an employee who, subsequent to the time of injury, was hired by the company or transferred or otherwise assigned to perform any work within the said classification on any project covered by this Agreement. Any employee who claims he/she has been denied employment contrary to this provision may have recourse to the grievance and arbitration procedures as set out in Articles 5 and 6 of this Agreement.

13.02 The above shall not apply if the injury is attributable solely to the wilful misconduct of the employee.

ARTICLE 14 - GOVERNMENT LEGISLATION

14.01 In the event that any of the provisions of this Agreement are found to be in conflict with any valid and applicable federal or provincial law now existing or hereinafter enacted, it is agreed that such law shall supersede the conflicting provision without in any way affecting the remainder of the Agreement.

ARTICLE 15 - DURATION

15.01 This Agreement shall be effective May 1st, 2002 and shall remain in effect until the 30th day of April, 2005, and shall continue in force from year to year thereafter, unless either party shall furnish the other with notice of termination of or proposed revision of this Agreement not more than one hundred twenty (120) days and not less than thirty (30) days before the 30th day of April, 2005 or in a like period in any year thereafter.
SCHEDULE "A"

1. HOURS OF WORK AND OVERTIME

a) The standard hours of work for all employees other than watchmen shall be based on fifty (50) hours per week exclusive of travelling time to and from the job.

b) Overtime at the rate of time and one-half (1½) the employee’s current hourly rate shall be paid to all employees other than watchmen for all work performed in excess of ten (10) hours per day or in excess of fifty (50) hours per week or on Saturdays. (Overtime will only be paid once for the same hour).

c) Overtime at the rate of double the employee’s current hourly rate shall be paid to all employees other than watchmen for all work performed on Sundays and on the following statutory holidays:

- New Year’s Day
- Good Friday
- Victoria Day
- Canada Day
- Flag Day when proclaimed
- Simcoe Day
- Labour Day
- Thanksgiving Day
- Christmas Day

The provisions of this sub-paragraph do not apply to repairers in emergency.

d) Watchmen shall receive overtime payment at the rate of time and one-half (1½) the employee’s current hourly rate for all work performed on such employee’s seventh consecutive shift.

2. REPORTING ALLOWANCE

a) An employee who reports for work at the Contractor’s job site or shop unless directed not to report the previous day by his/her Employer and for whom no work is available due to reasons other than inclement weather shall receive a minimum of four (4) hours; reporting time and shall remain at other work if requested to do so by the foreperson.

b) An employee who reports for work at the Contractor’s job site or shop unless directed not to report and for whom no work is available due to inclement weather shall receive a minimum of one (1) hour’s reporting time, provided the employee remains on the job for one (1) hour after his/her designated starting time if requested to do so by the foreperson.

c) An employee who in the course of his/her shift is directed by the Contractor to wait on a job or travel from one job site to another job site within Area 9 shall be paid for such waiting or travel time.
3. **SHIFT PREMIUMS**

A shift premium of fifty-cents ($0.50) per hour will be paid for all work performed on a second shift and a shift premium of fifty-five cents ($0.55) per hour will be paid for all work performed on a third shift.

4. **SPECIAL CONDITIONS**

Where due to customer demands, the work to be performed can only be performed at times which would initiate shift or overtime premiums, then the said work is to be done at straight times rates.

5. **VACATION PAY AND STATUTORY HOLIDAY PAY**

a) Vacation and statutory holiday credits shall be paid to employees covered by this Collective Agreement at the rate of ten per cent (10%) of the gross wages earned. It is understood and agreed that six per cent (6%) is to be considered in lieu of statutory holiday pay.

b) It is further understood and agreed that the vacation pay and statutory holiday pay will be paid to the employees on a weekly basis.

6. **TRAVEL AND LIVING EXPENSES**

a) When employees are required to report to or return to the yard before starting or at the conclusion of their days work, they shall be paid from the yard and at the premium rate where applicable.

b) Employees required to work beyond a radius of seventy-five (75) kilometres from the Company yard shall be paid at their straight time rate for any time required to travel to and from the seventy-five kilometre radius and in no event shall they be paid less than for one-half (½) hour.

c) Employees required to provide their own transportation shall be paid at the rate of forty cents ($0.40) per kilometre beyond a seventy-five (75) kilometre radius from the Company.

d) Employees who are requested to work outside the territorial jurisdiction covered by this Agreement and who are required to remain away overnight shall be allowed seventy dollars ($70.00) per day for room and board.

e) It is understood that when an employee is sent out of town by his/her Employer in the circumstances contemplated by paragraphs (c) and (d) above, the employer will maintain the rate of wages and hours of work for such employee as provided in the Collective Agreement.

f) Where a camp is provided, room and board will be supplied free in lieu of the room and board allowance under (d) herein.
7. **WELFARE BENEFIT**

Effective November 21, 2002, the Contractor agrees to pay the sum of one dollar and sixty cents ($1.60) per hour to the joint and equally trusted Local 183 Members Benefit Fund for each hour worked by the employees of the Contractor covered by the agreement for the purchase of benefits. Effective May 1st, 2003, the Contractor shall pay one dollar and seventy cents ($1.70) per hour and effective May 1st, 2004, the Contractor shall pay one dollar and eighty cents ($1.80) per hour for each hour worked by the employees of the Contractor covered by the agreement for the purchase of benefits.

8. **PENSION**

Effective November 21, 2002, the Contractor agrees to pay the sum of two dollars ($2.00) for each hour worked by employees represented in the Collective Agreement by the Union into the Central and Eastern Canada Labourers' International Union Pension Fund. Effective May 1st, 2003, the Contractor shall pay two dollars and ten cents ($2.10) for each hour worked and effective May 1st, 2004, the Contractor shall pay two dollars and twenty cents ($2.20) for each hour worked by employees represented by the Union into the Central and Eastern Canada Labourers' International Union Pension Fund.

Payments into the welfare fund and pension fund are to be made by the 15th day of the month following the month for which payment was made.

9. **WORKING DUES**

The Contractor agrees to deduct from the wages herein and pay on behalf of its employees covered by this Agreement working dues of two percent (2%) of the Base Rate per hour for each hour worked by them and to remit the same together with a list of the names, Social Insurance Number of each employee and the number of hours worked by each employee to the Secretary-Treasurer of the Union no later than the 15th day of the month for which they are due.

The Contractor also agrees to deduct and remit five cents ($.05) per hour for each hour worked by the said employees which shall be remitted monthly by the Local Union Secretary-Treasurer to the Labourers International Union of North America, Ontario Provincial District Union. It is agreed that the Contractor may use the Welfare Contribution Form with respect to the remittance of the working dues and information therein required

10. **INDUSTRY & TRAINING FUND**

Each Employer bound by this Agreement agrees to contribute the sum of five cents ($0.05) per hour for each hour worked by each employee covered by this Agreement and to remit same to the Labourer's Local 183 Members Training & Rehabilitation Fund. An additional ten cents ($0.10) per hour worked, per employee will be remitted along with the contributions for training, for the Oshawa Signatory Contractors Association's Industry Fund. The Local 183 Members Training & Rehabilitation Fund will forward all such amounts of industry funds received to the Oshawa Signatory Contractors Association.
SCHEDULE "B"
WAGES AND CLASSIFICATIONS
(Applicable to all work within the Regional Municipality of Durham, (except for the Towns of Ajax and Pickering) and all work on the Highway 407 Project.)

LABOURERS

1. Labourers (including wiremesh and steel rod reinforcing), operators of pumps (3 inch in diameter and under) and heaterpersons, interlocking brick setters (where the Company directly employs)

CASUAL WATCHPERSON

Watch person (for six (6) nights' duty - ten (10) hours per day - fifty-five (55) hours per week).

NOTE:

A) An employee working as a labourer who is required to do casual watching or work as a flagman on a casual or intermittent basis will not have his/her rate reduced thereby.

B) Where working forepersons are employed by a member company of the Association, they will receive a premium of a minimum of One Dollar ($1.00) per hour over the highest rate paid to employees in such sub-foreperson's regular and permanent crew.

C) A qualified employee shall be paid the rate for the work to which he/she is assigned.

TUNNEL, SUBWAY AND COMPRESSED AIR PRODUCTS

It is agreed that any Contractors undertaking this work will abide by the rates and conditions as are in existence with Local Union 183 and their Contractors in the Toronto area.

A schedule applying to tunnel work which is to be interpreted to mean a project called as a tunnel and may not include tunnel work which is incidental to open-cut work for sewer and watermain construction up to sixty-six feet (66').
LETTER OF UNDERSTANDING NO. 1

Universal Workers Union, Labourers' International Union of North America, Local 183

Dear Sirs:

Upon prior approval of the employees affected and the Union, work may be scheduled to exceed ten (10) hours per day Monday through Thursday to permit leaving early on Friday without payment of overtime. Such arrangements are not to be abused.

Yours very truly,

Signed at _____________ this ___________ day of _____________, 2002.

THE OSHAWA AREA SIGNATORY CONTRACTORS

LETTER OF UNDERSTANDING NO. 2

Remittances and Contributions

The Parties agree that during the lifetime of the Agreement the Union shall have the right, at any time, to require the Employer to change the amount of contributions to any of the employee benefit funds set out in this Collective Agreement, or which may be established hereafter by the Union, by transferring any portion of the contributions required to be made to any particular employee benefit fund (now existing or existing in the future), other than the Vacation Pay Fund, to any other employee benefit fund (now existing or existing in the future) provided that there shall be no increase in the total monetary contributions required to be made under this Agreement.

The Parties agree that this Letter forms part of the Collective Agreement and may be enforced as such.

Signed at _____________ this _________ day of __________________, 2002.

THIS AGREEMENT made and entered into this 1st day of May, 2004.

BETWEEN:

THE HEAVY CONSTRUCTION ASSOCIATION OF TORONTO
(hereinafter called the "Association")

OF THE FIRST PART

- and -

UNIVERSAL WORKERS UNION, L.I.U.N.A. LOCAL 183
(hereinafter called the "Union")

OF THE SECOND PART

WHEREAS the Association has been accredited by the Ontario Labour Relations Board;

NOW THEREFORE, the parties hereto agree as follows:

ARTICLE 1 - GENERAL PURPOSE

1.01 The general purpose of this Agreement is to establish mutually-satisfactory relations between the Employers and their employees, and to provide a means for a prompt and equitable disposition of grievances, and to establish and maintain satisfactory working conditions, hours of work and wages within the geographical area hereinafter set out for all construction employees performing work under the classifications listed in the Schedules forming part of the Agreement, in the employ of the Employers while employed in the Heavy Engineering Sector or engaged in such other work as has traditionally been performed under this Collective Agreement, as described in Article 3 hereafter, save and except construction employees covered by collective agreements respecting road building, sewer and watermain construction, and save and except non-working foremen and persons above the rank of non-working foreman.

The geographic area covered by this Agreement is defined as Board Areas 8, 9, 10, 11 & 18, set out by the Ontario Labour Relations Board.

ARTICLE 2 - TERM OF AGREEMENT

2.01 This Agreement shall be effective and operative from the first (1st) day of May 2004 and shall remain in full force and effect until the thirtieth (30th) day of April 2007.
2.02 Should the Union or the Association desire to change, add to, amend or terminate this agreement, written notice to that effect will be given not more than one hundred and twenty (120) days and not less than sixty (60) days prior to the termination of this agreement. On receipt of such notice, the parties to the Agreement shall convene a meeting within fifteen (15) days and bargain in good faith to endeavour to reach an agreement. If no such notice is given, this Agreement shall continue in force thereafter for a further three (3) year period unless either parties shall furnish the other with desire to change, add to, amend or terminate this Agreement within any like period of that set out above, in any third year thereafter.

ARTICLE 3 - RECOGNITION AND SCOPE

3.01 (a) The Association recognizes the Universal Workers Union, L.I.U.N.A., Local 183 as the sole and exclusive bargaining agent for all construction employees coming within the jurisdiction of this Agreement while working in the Heavy Engineering Sector, as defined by Article 1 of this Agreement and as further defined by Section (b) of this Article, or while engaged in any other work which has been traditionally performed under the terms and conditions of this Collective Agreement and such other construction employees covered by the collective agreements set out in Article 3.01(c); save and except non-working foremen, persons above the rank of non-working foreman, office and clerical staff, shop and yard employees, engineering staff and security guards. The Union recognizes the Association as an accredited bargaining representative for the Heavy Engineering Sector in Ontario Labour Relations Board Area 8, but recognizes that such representation is without liability against the Association for violations of the Collective Agreement by individual Employers.

(b) It is agreed that this Collective Agreement applies to all work falling within the Heavy Engineering Sector (which, for the purposes of this Agreement includes all work traditionally performed under the terms and provisions of this Collective Agreement) in Ontario Labour Relations Board Geographic Areas 8, 9, 10, 11 & 18 performed by members of the bargaining unit including, but not limited to, the construction, reconstruction, demolition, construction maintenance, rehabilitation, repair and, except as specifically excluded below, all associated work traditionally related thereto, of the following:

1. Bridges, including pedestrian bridges, underpasses and overpasses.

2. Retaining walls (all types), slurry walls and abutments associated with bridges, underpasses and overpasses.

3. All structures in connection with dams, docks, wharves and breakwaters.
4. Gabion work carried out on heavy construction work.

5. Precast rip-rap installations and all slopes retaining work directly associated with bridge construction.

6. Tunnels, save and except cable conduits (utilities), pipelines and sewer and watermain tunnels.

7. Structural work on reservoirs and pumping stations, and sewage and water treatment plants.

8. Installation and/or removal of piles, shoring, anchors, caissons and underpinning, including all welding related thereto.

9. Structures on transit systems (heavy rail or light rail) and on express-ways, including all welding related thereto.

10. Structures involved in river channelization and flood control projects, except structural work traditionally carried out by the roads or sewers industry.

11. Box culverts over 15 feet in overall surface span (the calculation of the span excludes intermediate piers or supports).

12. All T.T.C. projects including structural work on stations and sewer and watermain work on these projects, save and except work carried out according to past practices or stations by architectural and finishing trades and on roadways by road builders.

13. Field precast manufacturing operations as defined in Schedule "C" of this Agreement.

14. Erection, installation and finishing of precast concrete products directly associated with heavy construction work.

15. Cement lining of watermains.

16. All work involved in or related to the erection or dismantling of scaffolding including high load shoring systems or any of the above-noted works, projects or undertakings.
17. All work involved in or related to the installation, removal and operation of glycol-circulated ground heating systems on any of the above-noted works, projects or undertakings.

(c) If an Employer covered by this Agreement engages in work other than that falling within the Heavy Engineering Sector and/or work which has traditionally been performed under the terms of this Collective Agreement and such other work comes within the purview of any of the collective agreements set out in Schedule "E", then all terms and conditions of the applicable collective agreements shall apply.

ARTICLE 4 - UNION SECURITY

4.01 (a) The Employers agree to employ only members in good standing of the Union for work covered by this Agreement.

(b) As a condition of continued employment, all employees shall maintain in good standing their membership in the Union.

(c) The Union agrees that no discrimination shall be shown against any non-working foreman who elects to retain Union membership while functioning in this management capacity.

(d) Except as provided for hereafter, the Employers agree to sublet all work covered by this Agreement to companies which are bound to the terms and provisions of this Collective Agreement, and such work will be performed under the terms and provisions of this Collective Agreement by such subcontractors.

(e) (i) Except as provided in (e) (ii) the Employers agree to sublet all sewer and watermain work and all road construction work and all work falling under the Railroad Agreement (i.e. "Violin"), on the project within the jurisdiction of Universal Workers Union, L.I.U.N.A. Local 183, only to subcontractors who are in contractual relationship with the Local 183.

(ii) The Employers agree to sublet work falling within the scope of this Agreement in the erection, installation and finishing of precast products, sound wall and fencing of all types only to such contractors who are party to or bound by a collective agreement binding upon the Union and who employ only members of Local 183 to perform such work.

(iii) The Employers agree to subcontract utility construction work (as described by the collective agreement binding upon The Utility Contractors' Association of
Ontario, Inc. and the Union) in connection with the construction of any structure or bridge only to contractors who are party to or bound by a collective agreement with or binding upon the Union and who shall perform such work under such collective agreement.

(iv) The Employers agree to sublet all landscaping work only to contractors who are party to or bound by a collective agreement binding upon the Union.

(f) Each employee shall, when working in a position within the bargaining unit described in Article 3 above, be required as a condition of employment to have his regular monthly union dues and any required working dues checked off and the Union agrees to duly inform the Employer of the amounts of such union dues and working dues and any changes in the amounts. The Employer agrees to make such deductions from the first pay issued to the employees each calendar month and remit the same to the Union not later than the fifteenth (15th) day of the following month to the Secretary-Treasurer of the Union. The Employers shall, when remitting such dues, name the employees and their social insurance numbers from whose pay such deductions have been made. It is further agreed and understood that the Employers will receive at least 30 days notice of any changes in the amounts of working dues. It is also agreed and understood that this clause shall apply to all Schedules of this Collective Agreement.

(g) The Employers further agree that off-duty policemen will be used only where necessary or stipulated by contract specifications.

ARTICLE 5 - HIRING OF EMPLOYEES

5.01 (a) For T.T.C. projects and for mixed projects where fifty percent (50%) or more of the work falls within the Heavy Engineering Sector, the Employer agrees to call the Union Hall by 1:00 p.m. for his needed supply of men for the following day. All employees hired through the Union Hall shall present to the Employer a referral slip from the Union prior to commencing employment. It is understood that if the Union, having been requested by 1:00 p.m. to supply men, is unable to confirm by 4:30 p.m. of the same day that the required men will report at the job site ready for work at the starting time the following work day, the Employer is free to hire such local labour as is available without payment of any travel allowance. Any local labour so hired shall apply to the Union for membership within fifteen (15) calendar days of hiring, and as a condition of continued employment shall maintain membership in good standing in the Union.

(b) For mixed projects where less than fifty percent (50%) of the work falls within the Heavy Engineering Sector:
The Employers shall have the right to hire up to fifty percent (50%) of the required work force on the project from any available source, provided however, that any employee so hired will be required to apply for a clearance slip from the Union before starting work. It is further agreed that when a new employee is hired, he will be required to apply for a clearance slip from the Union before starting work, except in emergency circumstances where the Employer requires the employee to start work immediately, in which event the employee must apply for clearance at the Union Hall not later than the Saturday following commencement of employment. The Employer shall supply a letter to the employee confirming he has been hired.

The balance of the required work force shall be hired through the Union Hall in accordance with Section (a) above.

The sequence and order of hiring employees under the provisions of subsections (i) and (ii) above shall be as mutually agreed from time to time between the Employer and the Union.

It is further agreed that any employee hired under the provisions of Section (a) or (b) above can be transferred to any project of the Employer and assigned to work on any aspect of the said project, except that only employees who have been hired with a referral slip from the Union (Section (a) above) may be transferred to a T.T.C. project. It is further agreed that on a project where fifty percent (50%) or more of the work falls within the Heavy Engineering Sector, no more than twenty-five percent (25%) of the total number of employees engaged on that project and covered by this agreement shall be key employees of the Employer who have been transferred from other projects of the Employer where such employees were originally hired by clearance slip from the Union.

It is agreed that should an Employer violate any of the terms and provisions set out above with respect to the hiring of employees, then, without prejudice to any other claim for damages which the Union may have, the Employer will pay to the Union general damages in an amount equal to all amounts which would have been paid to employees (whether members of the Union or not) and/or the Union and/or others on behalf of the Union and such employees had the Employer not violated the hiring provisions of this Agreement.

ARTICLE 6 - MANAGEMENT RIGHTS

6.01 The Union agrees that it is the exclusive function of the Employer:
(a) To conduct its business in all respects in accordance with its commitments and responsibilities, including the right to manage the jobs, locate, extend, curtail or cease operations, to determine the number of men required at any and all operations, to determine the kinds and locations of equipment to be used and the schedules of production, to judge the qualifications of the employees and to maintain order, discipline and efficiency.

(b) To hire, discharge, classify, transfer, promote, demote, layoff, suspend or otherwise discipline employees, provided that a claim by an employee that he has been discharged, suspended disciplined or disciplinarily demoted without reasonable cause, shall be subject to the provisions of the Grievance Procedure.

(c) To make, alter from time to time, and enforce reasonable rules of conduct and procedure to be observed by the employees.

(d) It is agreed that these functions shall not be exercised in a manner which is inconsistent with the express provisions of this Agreement or which is arbitrary, discriminatory or in bad faith.

ARTICLE 7 - CO-OPERATION

7.01 (a) The Employers agree to advise the Union when any major change is being made to working systems or working rules on the project and will discuss the intended changes with the Union.

(b) In the event new classifications are introduced under the scope of this agreement, the parties shall meet and negotiate the applicable wage rates which shall bear a proper ranking relationship to the wage rates set up in the Schedules of this agreement.

(c) A pre-job conference may be called at the option of either party on all T.T.C. projects and mixed projects.

ARTICLE 8 - WORK JURISDICTION, HOURS OF WORK, OVERTIME AND WAGE RATES

8.01 Attached hereto are Schedules “A”, “B” “C” and “D” outlining hours of work, overtime, wage rates and classifications, which are hereby made part of this Agreement.

ARTICLE 9 - JURISDICTIONAL DISPUTES

9.01 When a work claim dispute arises between the Union which is a party to this Agreement and any other union, person or organization, which cannot be settled to the satisfaction
of all parties concerned, such dispute shall immediately be processed as a complaint to the Ontario Labour Relations Board requesting an order from that Board as outlined in Section 99 of the Labour Relations Act, R.S.O. 1990, Chapter 228, as amended, and in the meantime, work will continue as assigned by the Employer until otherwise directed by the Ontario Labour Relations Board.

ARTICLE 10 - HOLIDAYS

10.01 All work performed on Sundays and the following holidays:

- New Year's Day
- Good Friday
- Victoria Day
- Civic Holiday
- Canada Day
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

or any other statutory holidays legally declared by the Provincial or Federal Government, shall be deemed overtime work and paid for at the rate of double the regular day shift rate.

ARTICLE 11 - VACATION PAY AND STATUTORY HOLIDAY PAY

11.01 (a) Vacation and statutory holiday credits shall be paid to employees covered by this collective agreement at the rate of ten percent (10%) of the gross wages earned. It is understood and agreed that five percent (5%) is to be considered in lieu of statutory holiday pay.

(b) During the term of any one year, by mutual arrangement between an Employer and employee only two (2) weeks' vacation without pay will be taken by an employee, exclusive of statutory holidays. Vacation may be taken at any time during the calendar year at such time as may be most convenient to the Employer, but every effort shall be made to schedule vacation at times suitable to the employee.

(c) Vacation and statutory holiday pay as aforesaid shall be paid into the Local 183 Civil Engineering Vacation Pay Trust Fund, jointly administered by an equal number of Employer and Union trustees, which Employer trustees shall be appointed by the Greater Toronto Sewer and Watermain Contractors' Association, the Utility Contractors' Association of Ontario and The Heavy Construction Association of Toronto. One of the said Employer trustees shall be appointed by the Association. Payments into the Fund shall be made monthly and the interest earned by the investment of the monies in such fund shall be firstly applied against the administration costs of the Fund and secondly, against any deficit caused by the delinquency of a contributing Employer and
the balance shall be paid to the Association pro-rated on the basis of contributions into the Fund made by all Employers covered by this agreement, on account of the Association's costs of negotiating and administering this agreement. Payments into the Fund shall be made by the fifteenth (15th) day of the month following the month for which payment is due. The Chairmanship of the Trust Fund shall alternate annually between the Union and the Employer trustees.

Vacation with Pay Trust Fund surplus to be distributed as follows:

(i) Administration costs;

(ii) Deficits;

(iii) A reserve fund shall be established and maintained based on the past history of deficiencies as agreed by the trustees.

(iv) The surplus, if any, to be distributed equally to the Association and the Union on an annual basis.

ARTICLE 12 - MERGER OF VACATION PAY FUNDS

12.01 The Universal Workers Union, L.I.U.N.A. Local 183 and the Association agree to merge the Local 183 Members' Vacation Pay Trust Fund and the Local 183 Civil Engineering Vacation with Pay Trust Fund, subject to acceptance and adoption by the Trustees thereof, in accordance with Section 6.03 of the Trust Agreements establishing both Funds.

ARTICLE 13 - PAYMENT OF WAGES

13.01 (a) All time books are to be closed weekly.

(b) Employees shall be paid weekly. In the event that payment is by cheque, pay day shall not be later than Thursday. Payment shall be accompanied by a slip outlining all hours of work, overtime hours, hourly rate, deduction for income tax, unemployment insurance, pension, etc. where applicable.

(c) In the case of layoff or dismissal, all employees will receive one hour's notice in advance. When an employee quits a job, he shall give the Employer one hour's notice.

(d) Whenever an Employment Insurance Separation Certificate and pay cheque is not given to employees at the time of termination, they shall be sent by the Employer to the employee
by registered mail to his last known address within seventy-two (72) hours from the time of termination.

ARTICLE 14 - SAFETY, SANITATION AND SHELTER

14.01 (a) Every Employer shall provide a proper and adequate place of shelter sufficiently heated and securely locked in which the employees may eat their lunch and store their clothing. It is further agreed that the lunch room facilities shall be separated by a partition from the area in which the clothing is stored. Water, towels and soap shall be available at all times. It is clearly understood that the place of shelter shall not be used for any other purpose, such as storage of tools, etc. Sanitary toilets shall be provided in accordance with the regulations of the Occupational Health and Safety Act, as amended, and if located near the lunch room, shall be separated by a partition. The Employers agree to provide the above facilities before production work commences on the project. It is agreed that these facilities shall be on or in the vicinity of the working area.

Without in any way limiting the generality of the above, in the case of welders, employed by the Employer, the special clothing and protective equipment which the Employer is required to supply shall include the following:

- Suitable gloves for welding
- Leather sleeved or welding jackets
- Safety helmets and welding masks
- Cutting goggles
- All equipment required for normal welding duties

(b) In co-operation with the Employer’s overall program of Accident Control and Prevention, the Job Steward and Health and Safety Representative may report to the Foreman for immediate corrective action of any unsafe conditions, unsafe acts or violation of safety regulations. Safe working conditions are primarily the responsibility of Management; therefore all supervisory personnel shall be made aware of all safety regulations and see that they are carried out.

(c) Every employee shall, as a condition of employment, be required to wear a Safety Helmet of an approved type. The Employers agree said helmets will be supplied by them at no cost to the employee. If an employee at termination of employment does not return said helmet, he shall be charged at cost.

(d) Every employee shall, as a condition of employment, own and wear suitable protective footwear. The Employer shall supply protective equipment required in the normal course of the
employee's duties including special clothing such as suitable gloves, at no cost to the employee. The Employer shall provide leather safety boots to the employees covered by this agreement at cost, which will be deducted from the employee's pay. It is further agreed that the Employer shall provide free of cost, rubber safety boots when necessary. The Union recognizes the right of Employers to economically supervise the distribution of the clothing provided and will co-operate with the Employers to prevent wasteful practices.

(e) A Safety Committee is to be established. This Committee will be composed of two (2) members of Universal Workers Union, L.I.U.N.A. Local 183, and two (2) representatives from the Association. Safety meetings, not to exceed one (1) per month, will be held and may be called by either party. A Safety Committee may be established by the Union on projects with twenty (20) employees or more coming within the jurisdiction of this agreement, provided that there is no more than one committee per project.

(f) The Employer shall, at his own expense, furnish to any workman injured in his employment who is in need of it, immediate conveyance and transportation to a hospital or to a physician. It is further agreed that an ambulance shall be used where necessary and possible.

(g) An employee who is injured during working hours and who is required to leave for treatment, or is sent home for such injury, shall receive payment for the remainder of the shift at his regular rate of pay.

(h) Locktenders' shift reports will be kept in ink.

(i) The trucks to be used to transport employees will be enclosed and tools will be secured in tool boxes. No materials will be carried in the trucks in a manner endangering the safety of the employees being transported.

(j) No employee will be discharged by his Employer because he fails to work in unsafe conditions as set out in government safety regulations. Any refusal by an employee to abide by such regulations after being duly warned, will be sufficient cause for dismissal.

(k) On projects where the Company is required under Article 13.01(a) to provide locked up facilities for employees to store their tools and clothing the Company will reimburse an employee up to three hundred and fifty dollars ($350.00) for loss due to fire, or theft resulting from a break-in to such locked up facilities. In all cases the employee must provide a written and signed statement substantiating the amount of the loss.
ARTICLE 15 - ERGONOMICS TRAINING

15.01 (a) As a condition of employment, newly-hired employees shall be required to attend and complete the ergonomics training course offered by the Labourers' Local 183 Members Training Fund.

(b) On-site supervisory personnel of any Employer shall be required to attend and complete the ergonomics training course offered by the Labourers' Local 183 Members Training Fund.

(c) Union Stewards shall be required to attend and complete the ergonomics training course offered by the Labourers' Local 183 Members' Training Fund.

(d) The Union shall ensure that in issuing a referral slip under Article 3, the employee has taken the ergonomics training course or that arrangements have been made to comply with (a) hereof.

(e) All of the above training shall not be performed on company time.

ARTICLE 16 - THE OCCUPATIONAL AND REHABILITATION HEALTH CLINIC FUND

16.01 The Employer agrees to co-operate with the programs established by the Soft Tissue Rehabilitation Clinic and the Occupational Health Clinic, and, in particular, to require his employees to attend at the Occupational Health Clinic for the requisite testing at least once every three (3) years and further, to notify the Soft Tissue Clinic of any Soft Tissue Injury sustained by any of his employees, including the address and telephone number of such employee, within three (3) days of the Employer being advised that said employee sought medical attention.

ARTICLE 17 - BUSINESS AGENT AND SHOP STEWARD

17.01 The Business Agent of the Union shall have access to all jobs during working hours, but in no case shall his visits interfere with the progress of the work. When visiting a job, he will first advise the superintendent or other supervisory personnel of the Employer.

17.02 No discrimination shall be shown against any Shop Steward for carrying out his duties but in no case shall his duties interfere with the progress of the work. It is agreed that a Shop Steward may be appointed on all jobs of an Employer by a business agent of the Union on the basis of one (1) Shop Steward to twenty (20) employees or major fraction thereof [on tunnel projects one (1) Shop Steward for up to two (2) mining crews per shift will be recognized] and shall
notify the job Superintendent at once (or the Foreman on the job if there is no job Superintendent) before he can be recognized. Such appointment shall be confirmed by the Union in writing to the Employer within seven (7) working days thereafter. By mutual agreement of the parties, where conditions require it, additional Stewards may be appointed. The Shop Steward, all other things being equal, shall be one of the last two men retained by the Employer on the shift if competent to perform the available work remaining. The Shop Steward on each job will be responsible for reporting any disputes to the Employer and Union Representative, so that these can be taken up in the proper manner without delay.

17.03 It is agreed that the Shop Steward will not be excluded from a gang for overtime work, provided he is able to do the work required. It is further agreed that there will be at least one (1) Shop Steward (or Acting Shop Steward) on the project at all times while work is in progress provided that the Steward (or Acting Steward) is able to do the work required. The Union will be notified when a Shop Steward is to be laid off or discharged.

ARTICLE 18 - NO STRIKES, NO LOCKOUTS

18.01 In view of the Grievance and Arbitration Procedures provided in this agreement, there shall be no strikes or lockouts so long as this Agreement continues to operate.

ARTICLE 19 - GRIEVANCE PROCEDURE

19.01 The parties to this Agreement agreed that it is of the utmost importance to adjust complaints and grievances as quickly as possible.

19.02 Grievances properly arising under this Agreement shall be adjusted and settled as follows:

Step No. 1

Within twenty (20) working days after the circumstances giving rise to the grievance occurred or originated, [save and except grievances arising out of discharge cases in which case the grievance shall be brought forward within ten (10) working days of the employee being notified of his discharge, and save and except monetary and benefit grievances as defined in Section 19.03 (a) and administered under Section 19.03 (b) and 19.03 (c) below], the aggrieved employee, with his business representative, may present his grievance, which shall be reduced to writing, to the Employer. Should no settlement satisfactory to the employee be reached within ten (10) full working days, the next step in the grievance procedure may be taken at any time within ten (10) working days thereafter.
Step No. 2

The Union Grievance Committee, if it considers it a valid grievance, may submit the grievance to a committee of the Association and the respective committees shall meet within five (5) working days thereafter in an endeavour to settle the grievance. If a satisfactory settlement is not reached within five (5) working days from this meeting, the grievance may be submitted to arbitration as provided in Article 20 below at any time within twenty (20) working days thereafter or referred to the Ontario Labour Relations Board for arbitration pursuant to Section 133 of the Labour Relations Act within reasonable time which shall not be more than twenty (20) working days thereafter.

19.03 (a) Monetary grievances are defined as those arising under this Agreement involving payment for hours of work, rates of pay, overtime, shift premiums, travelling expenses, room and board allowances and reporting allowances, but do not include grievances arising out of classification assignment. Benefit grievances are defined as those arising under this Agreement involving payment of pension and welfare contributions, union dues, working dues, industry and training fund, and vacation and statutory holiday pay.

(b) Monetary grievances shall be brought forward at Step 1 within three (3) months after the circumstances giving rise to the grievance became known or ought reasonably to have become known to the Council. It is further understood that the adjustment of any such grievance shall be retroactive to the first day of the alleged violation within the three (3) month period.

(c) Benefit grievances shall be brought forward at Step 1 within twelve (12) months after the circumstances giving rise to the grievance became known or ought reasonably to have become known to the Council. It is further understood that the adjustment of any such grievance shall be retroactive to the first day of the alleged violation within the twelve (12) month period.

ARTICLE 20 - ARBITRATION

20.01 The parties to this Agreement agree that any grievance concerning the interpretation or alleged violation of this Agreement, which has been properly carried through all the steps of the grievance procedure outlined in Article 19 above which has not been settled, will be referred to a Board of Arbitration at the request of either of the parties hereto.

20.02 The Board of Arbitration will be composed of one person appointed by the Association, one person appointed by the Union and a third person to act as Chairman chosen by the other two members of the Board.
20.03 The party requesting arbitration shall name its appointee at the time of requesting arbitration, and the other party shall name its appointee within two (2) working days thereafter.

20.04 Should the person chosen by the Association to act on the Board and the person chosen by the Union fail to agree on a third member as Chair within five (5) days of the notification mentioned above, the Minister of Labour of the Province of Ontario will be asked to nominate an impartial person to act as Chairman.

The decisions of the Board of Arbitration or a majority of such Board constituted in the above manner shall be binding on the employee, the Union, the Association and the Employers.

The Board of Arbitration shall not have any power to alter or change any of the provisions of this agreement or to substitute any new provisions for any existing provisions, nor to give any decision inconsistent with the terms and provisions of this agreement.

Each of the parties to this Agreement will bear the expense of the arbitrator appointed by it, and the parties will jointly bear the expense, if any, of the Chairman.

(a) The nature of the grievance, the remedy sought and the section or sections of the agreement which are alleged to have been violated, shall be set out in the written record of the grievance and not be subject to change in later steps;

(b) In determining the time which is allowed in the various steps, Sunday and Statutory Holidays shall be excluded, and any time limits may be extended by agreement in writing;

(c) If advantage of the provisions of Articles 19 and 20 hereof is not taken within the time limits specified therein or as extended in writing as set out above, the grievance shall be deemed to have been abandoned and may not be reopened.

ARTICLE 21 - MANAGEMENT GRIEVANCES AND UNION GRIEVANCES

21.01 (a) It is understood that an Employer and/or the Association may file a grievance with the Union, and that if such complaint is not settled to the satisfaction of the parties concerned, it may be treated as a grievance and referred to arbitration in the same way as a grievance of any employee. Such grievance shall be processed at Step No. 2 of the Grievance Procedure set out in Article 19 hereto.

(b) A Union grievance which is defined as an alleged violation of this agreement involving all or a number of employees in the bargaining unit in regard to which a number of employees have
signified an intention to grieve, or a grievance involving the Union itself, including the application or interpretation of this agreement, may be brought forward in writing in the same manner and within the same time limits as in the case of an employee grievance. Such grievance shall be processed at Step No. 1 of the Grievance Procedure as set out in Article 19 hereof. If it is not settled, it may go to a Board of Arbitration in the same manner as a grievance of an employee.

ARTICLE 22 - GOVERNMENT LEGISLATION

22.01 In the event that any of the provisions of this Agreement are found to be in conflict with any valid and applicable Federal or Provincial law now existing or hereinafter enacted, it is agreed that such law shall supersede the conflicting provision without in any way affecting the remainder of the Agreement.

ARTICLE 23 - PRODUCTIVITY

23.01 The Union and the Association recognize the mutual value of improving by all proper and reasonable means the productivity of the individual workman, and both will undertake individually and jointly to promote such increased productivity.

ARTICLE 24 - REPORTING ALLOWANCE

24.01 (a) An employee who reports for work at an Employer's job site or shop, unless directed not to report the previous day by his Employer, and for whom no work is available due to reasons other than inclement weather, shall receive a minimum of four (4) hours reporting time and shall remain at other work if requested to do so by the Foreman.

(b) Two (2) hour's pay shall be paid by the Employer when an employee covered by this Agreement reports for work at the Employer's shop or job site but work is not available due to inclement weather, provided the employee remains on the job for two (2) hours after 7:00 a.m. or remains on the job for two (2) hours after his designated starting time. However, no reporting pay shall be allowed where an employee has been informed not to report for work and such information has been given to him before quitting time on the previous day. When work starts late but within two (2) hours of the normal starting time, employees shall be paid from the normal starting time. If work starts later than two (2) hours after the normal starting time, employees shall be paid from the actual time work started, plus two (2) hour's reporting time.

In the event the employee commences work and work cannot proceed for any reason then the employee shall receive four (4) hours' pay.
(c) An employee directed to work after the noon lunch period and who commences to work shall receive four (4) hours' pay at the applicable hourly rate and shall also remain at other work if requested by the foreman. This provision does not apply when lack of work results from inclement weather.

*Note: See Letter of Understanding No. 11*

(d) An employee directed to wait on the job site by his Employer will be paid for such waiting time.

**ARTICLE 25 - COFFEE AND LUNCH BREAKS**

25.01 (a) An employee will be allowed to have one coffee break of ten (10) minutes during each half of his working shift. An employee will be allowed a ten (10) minutes' rest period if required to work more than two hours beyond the end of his shift.

(b) Regular day shift employees shall be allowed one half-hour lunch break between 12:00 noon and 1:00 p.m., except where different hours are being worked on a two or three shift operation. It is understood that no employee shall be required to work more than five (5) consecutive hours without a meal break.

25.02 An employee required to work more than two (2) hours beyond the end of his shift shall be allowed to have one additional break of ten (10) minutes.

**ARTICLE 26 - WELFARE, LONG TERM CARE, CAMPING GROUND AND PENSION**

26.01 (a) The Employers agree to pay into the Local 183 Members' Benefit Fund, jointly administered by an equal number of Employer and Union trustees, for the purpose of purchasing weekly indemnity, life insurance, dental, medical and similar benefits, for the employees covered by this Agreement, represented by the Union as follows:

(i) **Board Area A**
   Effective May 3, 2004 - two dollars ($2.00) per hour
   Effective May 2, 2005 - two dollars and five cents ($2.05) per hour
   Effective May 1, 2006 - two dollars and ten cents ($2.10) per hour

(ii) **Simcoe County**
    Effective May 3, 2004 - two dollars ($2.00) per hour
    Effective May 2, 2005 - two dollars and five cents ($2.05) per hour
    Effective May 1, 2006 - two dollars and ten cents ($2.10) per hour
(b) It is understood that the amounts mentioned in Article 26.01(a) include five cents (.05¢) per hour into the Tri-Fund.

(c) It is understood that the amounts mentioned in Article 26.01(a) also include ten cents (.10¢) per hour into the Seniors Fund.

(d) **Long Term Care**

The Employer agrees to contribute the following amounts for each hour worked by employees covered by this Agreement to the Local 183 Members’ Benefit Fund for the purpose of purchasing benefits for Long Term Care:

(i) **Board Area 8**
- Effective May 3, 2004 - forty cents ($0.40)
- Effective May 2, 2005 - fifty cents ($0.50)
- Effective May 1, 2006 - sixty cents ($0.60)

(ii) **Simcoe County**
- Effective May 3, 2004 - forty cents ($0.40)
- Effective May 2, 2005 - fifty cents ($0.50)
- Effective May 1, 2006 - sixty cents ($0.60)

(e) **Camping Ground**

The Employer agrees to contribute the following amounts for each hour worked by employees covered by this Agreement to the Local 183 Members’ Benefit Fund for the purpose of purchasing a Camping Ground:

(i) **Board Area 8**
- Effective May 3, 2004 - ten cents ($0.10)
- Effective May 2, 2005 - fifteen cents ($0.15)
- Effective May 1, 2006 - twenty cents ($0.20)

(ii) **Simcoe County**
- Effective May 3, 2004 - ten cents ($0.10)
- Effective May 2, 2005 - fifteen cents ($0.15)
- Effective May 1, 2006 - twenty cents ($0.20)
The Employer shall remit contributions to the Labourers' Local 183 Members' Benefit Fund monthly, together with a duly-completed report form, by the fifteenth (15th) day of the month following the month for which payment is due.

26.02 Pension

The Employer agrees to contribute the following amounts for each hour worked by employees covered by this Agreement into the Labourers' Pension Fund of Central and Eastern Canada:

(i) Board Area 8
   Effective May 3, 2004 - five dollars and thirty cents ($5.30)
   Effective May 2, 2005 - five dollars and eighty cents ($5.80)
   Effective May 1, 2006 - six dollars and thirty cents ($6.30)

(ii) Simcoe County
   Effective May 3, 2004 - five dollars and ten cents ($5.10)
   Effective May 2, 2005 - five dollars and forty cents ($5.40)
   Effective May 1, 2006 - five dollars and seventy cents ($5.70)

The Employer shall remit contributions to the Labourers' Pension Fund of Central and Eastern Canada monthly, together with a duly-completed report form, by the fifteenth (15th) day of the month following the month for which payment is due.

26.03 The Employers shall inform the Trustees of the Members' Benefit Fund and the Pension Fund of any worker who is absent from work because of injury and who is entitled to receive benefits under the Workplace Safety and Insurance Act 1997 as a result of an accident by including the following information on the next monthly contribution reports filed with the administrators of the said Fund following the accident, namely:

(i) the name, social insurance number and last known address of such worker;

(ii) the date when and the location where the accident occurred;

(iii) the Workplace Safety and Insurance Board claim number for such worker and proof from the said Board that the worker is entitled to receive benefits under the Workers' Compensation Amendment Act, 1989.
26.04 It is agreed that by joint agreement the Trustees of the Benefit Fund shall be empowered to charge interest at the rate of two percent (2%) per month on failure of an Employer to make payments due to the Benefit Fund in accordance with Article 26.01. It is further agreed that by joint agreement of the Union and the Association, interest at the rate of two percent (2%) per month may be charged on failure of an Employer to make payments due to the Pension Fund in accordance with Article 26.02. Interest charged shall not exceed twenty-four percent (24%) per annum.

ARTICLE 27 - PREPAID LEGAL PLAN

27.01 (a) The Employer agrees to pay the sum of ten cents (10¢) for each hour worked by each employee covered by this Agreement to the Local 183 Prepaid Legal Benefits Fund; jointly administered by an equal number of Employer and Union Trustees, for the purpose of providing legal benefits to such employees and their beneficiaries.

(b) The Employer shall remit contributions to the Local 183 Prepaid Legal Benefit Fund monthly, together with a duly completed employer's report form, by the fifteenth (15th) day of the month following the month for which the payment is due.

ARTICLE 28 - PROVINCIAL SALES TAX

28.01 The Employer agrees to pay provincial retail sales tax on contributions to the Local 183 Members' Benefit Fund and remit such taxes to the said Fund together with the contributions on which such tax is paid.

ARTICLE 29 - TRANSFER OF FUNDS

29.01 During the lifetime of this Agreement, the Union shall have the right, subject to the approval of the Trustees, at any time to require the Employer to change the amounts of the contributions to any Trust Funds other than the Vacation with Pay Trust Fund by transferring any portion of the contribution required to be made to any particular Trust Fund to any other Trust Fund provided that there shall be no increase in the total monetary contributions required to be made under this Agreement and also provided that the Trust Fund to which contribution is redirected to, is part of this Collective Agreement.

ARTICLE 30 - AMENDMENT PROVISIONS OF TRUST AGREEMENTS

30.01 The Universal Workers Union, LIUNA Local 183 and the Association agree to amend the following sections of the following Trust Funds:
(a) Section 8.01 of the Agreement of Declaration and Trust made as of October 1, 1980, as amended, establishing the Local 183 Members' Benefit Fund.

(b) Section 8.01 of the Agreement and Declaration of Trust made as of the 1st day of May, 1977 establishing the Local 183 Members' Training and Rehabilitation Fund, as amended.

(c) Local Union 183 Civil Engineering Vacation with Pay Trust Fund (the "Fund"), that Section 4.03 (h) of the Agreement and Declaration of Trust made as of the 1st day of July 1976, as amended, establishing the said Fund.

30.02 To provide that, with respect to the amendment of the Trust Agreement by the Union and the Party Associations, the Trust Agreement may be amended by the mutual agreement of the Union and at least sixty percent (60%) of the Party Associations provided that if the Trust Agreement is so amended by agreement involving at least sixty percent (60%) but less than one hundred percent (100%) of the Party Associations, any Association which claims it will suffer hardship as a result of such amendment may refer within fifteen (15) days the issue to an arbitrator appointed by mutual agreement, in which case the arbitrator shall have the authority to rescind the amendment if the grieving Association can substantiate its claim. If the parties cannot agree upon an arbitrator, the Office of Arbitration will be asked to appoint an arbitrator for them within fifteen (15) days hereafter.

ARTICLE 31 - REINSTATMENT OF EMPLOYEES UPON RETURN FROM INDUSTRIAL ACCIDENT

31.01 An employee injured in the performance of his duties will resume his regular work when medically fit to do so if work is available and he applies. The job of an injured worker shall be deemed to be available if upon his return any work within his classification on any project under this agreement, is being performed by an employee who, subsequent to the time of injury was hired by the Employer or transferred or otherwise assigned to perform any work within the said classification on any project covered by this Agreement. An employee who claims he has been denied employment contrary to this provision may have recourse to the Grievance and Arbitration procedures as set out in Articles 19 and 20 of this Agreement.

The above shall not apply if the injury is attributable solely to the wilful misconduct of the employee.

31.02 The parties agree to the establishment within three (3) months of the signing of this Agreement, of a joint committee of equal representatives of the Toronto and Area Road Builders' Association, The Greater Toronto Sewer and Watermain Contractors' Association, The Heavy
Construction Association of Toronto and The Utility Contractors’ Association of Ontario and the
Union, for the purpose of exploring the possibilities of finding light work within the industry for
injured workers. Any decisions reached by the said joint committee and approved by the
Association and the Union shall be binding upon all Employers bound by this or a similar or like
collective agreement.

ARTICLE 32 - INDUSTRY AND TRAINING

32.01 Each Employer bound by this Agreement or a like agreement adopting in substance
but not necessarily in form, the terms and conditions herein, shall contribute the sum of thirty-five
cents (35¢) per hour for each hour worked by each employee covered by this Agreement or such
like agreement, and remit monthly to the Local 183 Members Training and Rehabilitation Fund such
contributions together with a duly completed Employer’s report form, by the fifteenth (15th) day of
the month following the month for which the payments are due, as follows:

(a) Each Employer bound by this Agreement or a like agreement shall pay the sum of
twenty cents (20¢) per hour for each hour worked by each employee covered by this Agreement
or such like agreement to the Local 183 Members Training and Rehabilitation Fund. Such amounts
shall be immediately paid to the Association by the Trustees of the Local 183 Members Training
and Rehabilitation Fund as such Employer’s contribution to the cost of negotiating and
administering this Agreement.

(b) The sum of twenty-five cents (25¢) for each hour worked by each employee covered
by this Agreement or such like agreement, into the Local 183 Members Training and Rehabilitation
Fund, jointly administered by an equal number of management and union trustees one of which
management trustee shall be appointed by the Association.

(c) The parties agreed that a joint committee shall be struck to initiate an apprenticeship
programme in conjunction with the Ministry of Education and Training which shall include an
appropriate training procedure with hours and rates of pay within ninety (90) days of the signing
of this Collective Agreement.

ARTICLE 33 - INDUSTRY GRADING

33.01 The parties agree to continue with the joint committee of equal representatives of the
Association and the Union for the purpose of issuing recognized identification cards noting the
employee’s classification. The issuance of such cards will be based upon the certifications given
by Employers in the Heavy Engineering Sector and/or such criteria or such standards as the
Committee may adopt from time to time. The Committee shall continue to determine which
classifications contained in the groups in Schedule "A" and "B" hereto shall be subject to this procedure. See letter attached to this Agreement.

ARTICLE 34 - TRAVEL ALLOWANCE

34.01 The geographic area of this agreement will be divided into the following zones:

(a) Zone 1 - The area bounded on the east by the west boundary of Markham Road, on the west by the west boundary of the Highway 427, and on the north by the south boundary of Steeles Avenue. No travel expenses will be paid for work done within Zone 1.

(b) Zone 2 - In regard to travelling expense for work outside Zone 1, but within a 50-kilometre radius including the Town of Newmarket, employees will be granted $10.00 per day travelling allowance when company transportation is not supplied. No travelling expenses will be paid to employees whose normal place of residence is in the same township as that in which the job is located.

(c) Zone 3 - In regard to travelling expense in the fringe area, outside the 50-kilometre radius including the Town of Newmarket and up to 100 kilometres, the employee will be paid at the rate of thirty-five cents (35¢) per road kilometre one way, from the Toronto City Hall to the job site. Such payment is in lieu of room and board and is not paid when company transportation to the job is supplied and straight time is paid to the employee.

(d) Room and Board - It is understood that if the Employer requires an employee to be out of town overnight, the Employer will provide suitable room and board for the employee up to maximum of seventy ($70.00) per day with no limit.

(e) It is understood and agreed that when an employee works in a Board Area (including Board Areas not otherwise referred to herein), in which he does not regularly work, all terms and conditions set out in this Collective Agreement will be maintained and the employee will continue to receive his wage rate, hours of work and fringe benefits, as provided for in this Collective Agreement and that are applicable in the Board Area in which he regularly works, unless the employee is working in a Board Area where such terms and conditions are specifically governed by a Schedule forming part of this Collective Agreement and which provides for more beneficial terms and conditions for the employee, in which case the more beneficial terms and conditions shall apply.

(f) Where the Employer supplies transportation and where an employee is required by his Employer to report to a yard or assembly point within Toronto before going to a job outside of
Toronto, the employee will be paid at straight time while travelling to and from the job in excess of fifteen (15) minutes each way.

34.02 Downtown Parking - Employees required to work on projects within the downtown area of Toronto, (defined as that area bounded by Dufferin Street on the West, Bloor Street on the North and Don Valley Parkway on the East,) and for whom no transportation is provided, the Employer shall provide parking or refund to the employee upon presentation of a valid receipt for parking expenses paid by the employee the amount of the receipt to a maximum of seven dollars and fifty cents ($7.50) per day.

ARTICLE 35 - DEEMED ASSIGNMENT OF COMPENSATION UNDER THE EMPLOYMENT STANDARDS AMENDMENT ACT, 1991

35.01 The Trustees of the employee benefit plans referred to in this Collective Agreement shall promptly notify the Association of the failure by any Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the Program Administrator of the Employee Wage Protection Program may deem that there has been an assignment of compensation under the said Program in compliance with the Regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

ARTICLE 36 - DELINQUENCY

(a) In the event an Employer fails to remit any contributions or deductions for the Benefit Plan, Pension Plan, Prepaid Legal, dues, fees, Training Fund, Working Dues Check-Off, or Industry Fund, the Employer shall pay to the appropriate fund as liquidated damages and not as a penalty an amount equal to two percent (2%) [twenty-four percent (24%) per annum] per month compounded monthly for any delinquent contributions, deductions or remittances fifteen (15) days in arrears calculated from the date due, provided the Employer has received five (5) days prior written notice to correct such delinquency and has not done so.

(b) With reasonable cause, the Trustees may request an Employer to submit to them within a stipulated period a certified audited statement of payroll contributions to these funds for a period not to exceed the period from the effective date of this Agreement until the date the audit takes place. Such statements shall reply to the questions submitted to the Employer by the Trustees.

(c) If the Employer does not submit the certified audited statement as per Article 36(b), the Trustees may appoint an independent chartered accountant or other qualified person to enter upon the Employer's premises during regular business hours to perform an audit of the Employer's
records only with respect to the Employer's contributions or deductions to the required Employee Benefit Plan, Pension Plan, dues, fees, Working Dues Check-Off, and Industry Fund.

(d) Where the Trustees appoint an auditor, the cost shall be borne by the appropriate plan. In the event that the audit reveals discrepancies between the Employer's records and the contributions or deductions submitted, the cost shall be borne by the Employer.

(e) In the event such audit reveals that the Employer has failed to remit contributions in accordance with the provisions of this Agreement, the Employer shall, within five (5) days of receipt of written notice from the Trustees, remit all outstanding contributions together with any liquidated damages required under the terms of Article 36(e) above and completed supporting contribution report forms as required by the Plan.

(f) When an Employer fails to remit all delinquent contributions, the provisions of Article 36(e) shall apply to the Union, on instructions from the Trustees, shall immediately institute proceedings against the delinquent Employers under Section 126 of the Labour Relations Act of Ontario. All cost of such actions shall be borne by the appropriate plan or fund unless otherwise recoverable.

(g) Where the Union has taken prior proceedings and obtained a decision against an Employer for delinquent contributions, deductions or remittances, the Union may require the said Employer to post a cash bond or certified cheque not to exceed twenty thousand dollars ($20,000.00) to be held in trust by the Trustees for a period to be determined by the Trustees. In the event that the said Employer again becomes delinquent for contributions, deductions or remittances, the Union and/or the Trustees may apply the cash bond or certified cheque, or any portion thereof, to satisfy the delinquency and require the Employer to replenish the cash bond or certified cheque in a higher amount. In the event that the cash bond or certified cheque does not satisfy the full amount of the delinquency, the Union may take other proceedings to recover the balance.

(h) If an Employer does not have any employees in his employ, he shall submit a Nil report in accordance with the provisions of Article 36(e).

ARTICLE 37 - CONSTRUCTION CRAFT WORKER APPRENTICESHIP

37.01 The purpose of this Article is to provide a program to train skilled tradesmen by making provisions for Apprentices in the Heavy Construction sector as per Articles 4(a), 4(b) & 4(f) of this Agreement.
37.02 Apprentice(s) means an employee(s) within the Local 183 classifications considered to be in the training stage of his (their) career(s) by Local 183. Except as allowed for in Articles 37.07 and 37.08 below, all Apprentices shall be registered as such with Local 183 prior to being employed as Apprentices by any Employer.

37.03 When the Employer wishes to employ an Apprentice, the Employer shall make a request to the Local 183 Life Long Learning Centre. The Life Long Learning Centre shall make immediate efforts to dispatch an Apprentice within five (5) days of receipt of the request. Any person not dispatched in accordance with this Article shall not be considered to be an Apprentice for the purposes of this Agreement except as provided for in Articles 37.06 and 37.07 below.

37.04 The said Apprentices shall be obliged to attend all relevant Health and Safety Training Programs offered at the Local 183 Life Long Learning Centre on their own time at no cost to the Employer.

37.05 Training Requirements

<table>
<thead>
<tr>
<th>Phase 1</th>
<th>60% of full rate</th>
<th>0 - 800 hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Phase 2</td>
<td>75% of full rate</td>
<td>800 - 1600 hours</td>
</tr>
<tr>
<td>Phase 3</td>
<td>85% of full rate</td>
<td>1600 - 2400 hours</td>
</tr>
</tbody>
</table>

Above 2400 hours and successful completion of the exam, the full rate will apply.

37.06 If the Union cannot supply such Apprentices to the Employer under Article 37.03, the Employer has the right to employ Apprentices from other sources. Such persons shall, as a condition of employment, and continued employment, be required to apply for membership in Local 183 and become registered as Apprentices within ten (10) working days of hiring.

37.07 If the Union cannot supply such Apprentices resident in Simcoe County for work in Simcoe County to the Employer under Article 37.03, the Employer has the right to employ Apprentices from other sources. Such persons shall, as a condition of employment, and continued employment, be required to apply for membership in Local 183 and become registered as Apprentices within ten (10) working days of hiring.
37.08 The Employer has the right to hire one (1) Apprentice per five (5) employees in the Local 183 portion of the bargaining unit.

37.09 Any person who is not registered as an Apprentice in accordance with the provisions of Articles 37.02, 37.07 or 37.08 (whichever is applicable) shall receive the full rate for the relevant period of employment.

37.10 If the ratio set out in Article 37.08 is not complied with, then all Apprentices shall receive the full rate for the relevant period of employment.

37.11 It is agreed that prior to laying off any full-rate employees, all Apprentices will be laid off. It is further agreed that a full-rated employee who has been laid off by the Company within two (2) months of the date of recalling or employing any Apprentice will be offered recall prior to recalling or employing any Apprentice. It is further agreed that prior to requesting or employing any new Apprentices, the Company will offer recall to any Apprentices which it has laid off within two (2) months, providing that such Apprentices are capable of performing the available work.

IN WITNESS WHEREOF the parties hereto have caused their duly authorized representatives to affix their signatures this 17th day of March, 2005.

Rocco DiGiovanni
SCHEDULE "A"

Applying to Heavy Construction work as defined in Article 3 of the Agreement but excluding all tunnel work covered under Schedule "B" and Field Precast manufacturing work covered by Schedule "C" of this Agreement attached hereto.

ARTICLE 1 - WORK WEEK, WORK DAY

The regular working day shall be eight and one half (8½) hours per day and subject to variation by mutual consent of the parties, shall be between 7:00 a.m. and 5:00 p.m., from Monday to Friday, inclusive. Any work done outside these hours shall be overtime or shift work. The maximum number of working hours per week shall be forty-two and one half (42½) hours and work outside these hours shall be overtime work, save and except the provisions of this agreement relating to shift work.

With regard to heaters and pumps being operated on a three shift basis, it is agreed that the first six (6) shifts in each week (Monday to Saturday inclusive) will be paid at straight time. Sundays will be paid for at double time.

ARTICLE 2 - OVERTIME

All work performed in excess of the regular working day of eight and one-half (8½) hours from Monday to Friday inclusive, shall be deemed overtime work. The rate of wages shall be time and one half (1½) the regular day shift rate.

All work on Saturdays shall be paid for at double the regular day shift rate.

Where three (3) shifts are working involving payment of Saturday or Sunday overtime under the provisions of this Agreement, it is agreed that shift premium where applicable, will be paid in addition to overtime. It is further agreed and understood that on a two (2) or three (3) shift operation or shifts starting after 6:00 p.m., the tenth (10th) or fifteenth (15th) shift as the case may be, may be worked at straight time on Saturday until 7:00 a.m. provided, however, that the applicable shift premium shall be paid.
ARTICLE 3 - SHIFT WORK

All second (2nd) shift work to be paid at time and one-eighth (1\(\frac{1}{8}\)) the regular day shift rate, and all third (3rd) shift work and shifts starting after 6:00 p.m. to be paid at time and one seventh (1-1/7) the regular day shift rate.

ARTICLE 4 - WAGES

The rates of wages for Board Area 8 during a regular day shift working period shall be:

<td>$781.00</td>
</tr>
</tbody>
</table>
Board Area 8

All Working Foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.

If an employee works more than fifty percent (50%) of his shift on a higher rated job than his regular classification, he will be paid the higher rate for the whole shift.

A qualified employee shall be paid the rate for the work to which he is assigned.
WAGES AND CLASSIFICATIONS - SIMCOE COUNTY

Hourly wage increases for Group 1 for Simcoe County during a regular day shift working period shall be: thirty-three cents ($0.33) effective May 3, 2004; thirty-eight cents ($0.38) effective May 2, 2005; and thirty-nine cents ($0.39) effective May 1, 2006.

Hourly wage increases Groups 2, 3, 4, 5 & 6 for Simcoe County during a regular day shift working period shall be: sixty-three cents ($0.63) effective May 3, 2004; sixty-eight cents ($0.68) effective May 2, 2005; and sixty-nine cents ($0.69) effective May 1, 2006.

Simcoe County

All Working Foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.

If an employee works more than fifty percent (50%) of his shift on a higher rated job than his regular classification, he will be paid the higher rate for the whole shift.

A qualified employee shall be paid the rate for the work to which he is assigned.
SCHEDULE "B"

Applying to Heavy Construction Tunnels and T.T.C. Subway Tunnel Work

ARTICLE 1 - WORK WEEK

The regular work week will start not earlier than 7:00 a.m. on Monday, and the regular working day, subject to variation by mutual consent of the parties, shall be between 7:00 a.m. and 5:00 p.m. from Monday to Friday, inclusive. Any work done outside these hours shall be overtime or shift work. The maximum number of working hours per week shall be forty (40), and work outside these hours shall be overtime work, save and except the provisions of this Agreement relating to shift work.

ARTICLE 2 - OVERTIME

All work performed in excess of the regular working day of eight (8) hours from Monday to Friday inclusive, shall be deemed overtime work. The rate of wages shall be time and one-half (1½) the regular day shift rate.

All work on Saturday shall be paid for at double the regular day shift rate, except where shift work is in operation. Time worked after midnight Friday night shall be paid for at the rate of time and one-half (1½) in respect of a shift commencing Friday evening and terminating not later than 7:00 a.m. on Saturday morning. All work on Sundays and Statutory Holidays shall be paid for at double the regular day shift rate.

ARTICLE 3 - SHIFT WORK

Where three (3) shifts are worked, the shift times shall be as follows, subject to variation by agreement of the Union and an Employer:

1st shift: 7:00 a.m. - 3:00 p.m.
2nd shift: 3:00 p.m. - 11:00 p.m.
3rd shift: 11:00 p.m. - 7:00 a.m.

On such three (3) shift tunnelling operations, it is agreed the meal break will be paid.

Where three (3) shifts are working involving payment of Saturday or Sunday overtime under the provisions of this Agreement, it is agreed that shift premium, where applicable, will be paid in addition to the overtime.
All second (2nd) shift work to be paid at time and one-eighth (1 1/8) the regular day shift rate, and all third (3rd) shift work to be paid at time and one-seventh (1-1/7) the regular day shift rate. On tunnel work, all hours worked on a second (2nd) shift after 11:00 p.m. will be paid at third (3rd) shift premium rate (time and one-seventh) [1-1/7], but this does not apply when the regular quitting time for the second (2nd) shift is 12:00 midnight.

**ARTICLE 4 - WAGES - TUNNEL WORK**

The rates of wages during regular day shift working periods on tunnel work shall be:

<table>
<thead>
<tr>
<th>Wage Classification</th>
<th>May 3, 2004</th>
<th>May 2, 2005</th>
<th>May 1, 2006</th>

<td>$781.00</td>
</tr>
</tbody>
</table>

All Working Foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.

If an employee works more than fifty percent (50%) of his shift on a higher rated job than his regular classification, he will be paid the higher rate for the whole shift.

A qualified employee shall be paid the rate for the work to which he is assigned.

When new types of equipment for which rates of pay are not established by this Agreement are put into operation and such similar equipment is being operated by members of the Union, the rates covering such operations shall be subject to negotiations between the parties and if such negotiations do not result in agreement, the dispute will be settled as if it were a grievance arising under the provisions of the Agreement.

**ARTICLE 5 - PREMIUM RATES AND CONDITIONS IN COMPRESSED AIR**

(a) The following sliding scale of premium rates shall apply to workers in compressed air. These rates are non-cumulative.

<table>
<thead>
<tr>
<th>Air Pressure</th>
<th>Premium per Shift</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 14 lbs.</td>
<td>$16.00</td>
</tr>
<tr>
<td>15 - 20 lbs.</td>
<td>$19.50</td>
</tr>
<tr>
<td>21 lbs.</td>
<td>$23.50</td>
</tr>
</tbody>
</table>

For air pressure over twenty-one (21) pounds, the Employer agrees to pay two dollars ($2.00) per pound compressed air premium for each pound over twenty-one (21) pounds, in addition to the twenty-one (21) pound rate.
(b) Where employees are required to work in compressed air they shall receive a minimum nine (9) hours per day or shift; it being understood and agreed that the ninth (9th) hour shall be paid at straight time.

(c) Rest periods when working under air pressure are to be paid as specified by law, and no deduction will be made for a meal break falling in the rest period between the two (2) working periods.

(d) Where employees are required to have their lunch break underground in compressed air, the Employer agrees that a proper sanitary lunchroom facility shall be provided, heated when necessary, and separate from the work area. Potable water shall be provided at all times. Sanitary toilets shall be provided and shall not be located in or near the lunchroom area.

(e) Hot beverages:

(i) The Employers shall, at their own expense, supply sugar and hot beverages for employees working in compressed air during rest periods;

(ii) Containers and cups for the beverages required as outlined above shall be maintained in a clean and sanitary condition and kept stored in a closed container.

ARTICLE 6 - PRODUCTIVITY PREMIUM

(a) The Employer agrees to negotiate with the Union any incentive bonus system before implementing it, provided that the Union's Negotiating committee will consist of, but not limited to, lead miners.

(b) It is further understood that any incentive bonus premium schedule is part of the collective agreement and therefore subject to the same provisions, such as grievance procedure, etc.

(c) Incentive bonus premium shall be paid over and above the employees' hourly rate, overtime premium, shift premium, compressed air premium, vacation with pay, travelling expense, welfare and pension contributions.

ARTICLE 7 - DECKMAN

It is agreed by the parties hereto, that on all tunnel projects there shall be a member of the Union at the top of the shaft employed as a deckman when work is in progress.
SCHEDULE "C"

A Schedule applying to Field Precast Manufacturing Operations, which shall include work pertaining to: site preparation, site restoration, erection and dismantling of temporary facilities, and all operations pertaining to field manufacturing, yard storage and handling of precast concrete products and components for heavy construction. This Schedule does not apply when precast units are supplied or purchased, provided such precast units are manufactured off-site.

ARTICLE 1 - HIRING OF EMPLOYEES

As provided for in Article 5, Section (b) of the Agreement.

ARTICLE 2 - WORK WEEK, WORK DAY

The regular working day shall be nine (9) hours per day and subject to variation by mutual consent of the parties, shall be between 7:00 a.m. and 7:00 p.m., from Monday to Friday, inclusive. Any work done outside these hours shall be overtime or shift work. The maximum number of working hours per week shall be forty-five (45) hours and work outside these hours shall be overtime work, save and except the provisions of this agreement relating to shift work. It is agreed and understood that the tenth (10th) shift of a two (2) shift operation and the fifteenth (15th) shift of a three (3) shift operation may be worked at straight time on Saturday until 7:00 a.m. provided, however, that the applicable shift premium shall be paid.

ARTICLE 3 - OVERTIME

All work performed in excess of the regular working day of nine (9) hours from Monday to Friday, inclusive, and all work performed on Saturday, shall be deemed overtime work. The rate of wages for overtime work shall be time and one-half (1½) the regular day shift rate.

Watchmen

Watchmen shall receive overtime payment at the rate of time and one-half (1½) the employee's current hourly rate for all work performed on such employee's seventh (7th) consecutive shift.
ARTICLE 4 - SHIFT WORK

Any shift or shifts falling between the hours of 7:00 a.m. and 7:00 p.m. shall be considered to be day shifts and shall attract no shift premium. Any shift or shifts commencing after twelve noon shall be considered to be an afternoon shift and a shift premium of fifty cents (50¢) per hour shall be paid for all hours worked during such afternoon shifts. Any shift or shifts commencing after 10:00 p.m. shall be considered to be a night shift and a shift premium of fifty cents (50¢) per hour shall be paid for all hours worked during such night shifts.

<table>
<thead>
<tr>
<th>Wage Classification</th>
<th>May 3, 2004</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group 1 - General labourer; yardman and mini skid steer loaders and mini backhoes of 50 h.p. and under and similar small equipment; fork lift operator</td>
<td>$24.35</td>
</tr>
<tr>
<td>Group 2 - Concrete worker; rigger and burner signalman.</td>
<td>$24.60</td>
</tr>
<tr>
<td>Group 3 - Carpenter, reinforced concrete worker, concrete cement finisher, welder (certified) rod or semi-automatic.</td>
<td>$24.85</td>
</tr>
<tr>
<td>Group 4 - Watch Person (for 6 nights duty, 10 hours per day, 50 hours per week).</td>
<td>$580.50</td>
</tr>
</tbody>
</table>

All Working Foremen will receive a minimum of one dollar ($1.00) per hour above the trade rate of the majority of the employees in the group supervised.
SCHEDULE "D"

This Schedule applies to employees in the classifications shown below assigned to the clean-up and removal of hazardous contaminated soil on sites as designated by the appropriate governmental authority.

The classifications and rates are as follows:

<table>
<thead>
<tr>
<th>Wage Classification</th>
<th>May 3, 2004</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group 1 - Labourers, operating all machine-driven tools by gas, air or electricity, including plate-tampers, operators of self-propelled hand compactors, burners, fence erectors - all types, sod layers, traffic control person.</td>
<td>$19.61</td>
</tr>
<tr>
<td>Group 2 - Labourers, operating high pressure water equipment, welders, fork lifts, farm-tractors, small trenchers, mini-skid steer loaders, and all other similar small equipment using attachments such as &quot;sweepers&quot;, &quot;fork rakes&quot;, &quot;earth augers&quot;, &quot;pallet or utility forks&quot;, &quot;angle brooms&quot;, blade-backhoe or hydraulic breakers, sod or vibrator rollers, etc.</td>
<td>$20.36</td>
</tr>
</tbody>
</table>

Benefits for employees so assigned shall be as set out in Schedule "A" save that overtime work shall be paid only after fifty (50) hours worked with makeup time permitted on Saturdays. Employees working for his Employer under classifications and rates under Schedule "A" shall not have his rate of pay reduced, when assigned to work under this Schedule "D".

The Union agrees to train employees for this work in its recognized training school to standards established by the appropriate ministerial authority for the safety and health of employees.
SCHEDULE “E”

(a) “The Sewer and Watermain Agreement”, being a collective agreement between the Greater Toronto Sewer and Watermain Contractors’ Association and a Council of Trade Unions acting as the representative and agent of Teamsters’ Local 230 and the Union;

(b) “The Roads Agreement”, being a collective agreement between the Toronto and Area Road Builders’ Association and the Union;

(c) “The Forming Agreement”, being a collective agreement between the Ontario Formwork Association and the Formwork Council of Ontario;

(d) “The House Basements Agreement”, being a collective agreement between the Residential Low Rise Forming Contractors’ Association of Metropolitan Toronto and Vicinity and the Union;

(e) The Apartment Builders Agreement”, being a collective agreement between the Metropolitan Toronto Apartment Builders Association and the Union;

(f) “The House Builders Agreement”, being a collective agreement between the Toronto Residential Construction Labour Bureau and the Union;

(g) “The Concrete and Drain Agreement”, being a collective agreement between the Ontario Concrete and Drain Contractors’ Association and the Union;

(h) “The Utilities Agreement”, being a collective agreement between the Utility Contractors’ Association of Ontario and Labourers’ International Union of North America, Ontario Provincial District Council and its affiliated Local Unions;

(i) “The Carpentry Agreement”, being a collective agreement between The Residential Framing Contractors’ Association of Metropolitan Toronto and Vicinity and the Union;

(j) “The Landscaping Agreement”, being a collective agreement between the Landscaping Contractors in Ontario Labour Relations Board Area No. 8 and 18 and the Union;

(k) “The Agreement Covering Building Restorations and Associated Work”, being a collective agreement between the Building Restorations and Associated Work Contractors in Ontario Labour Relations Board Area No. 8 and the Union;
(l) "The Bricklaying and Masonry Residential Sector Agreement", being a collective agreement between various independent bricklaying and masonry contractors and the Union;

(m) "The Marble, Tile, Terrazzo & Cement Masons Agreement", being a collective agreement between various independent marble, tile, terrazzo and cement masons contractors and the Union;

(n) "The Residential Plumbing Agreement", being a collective agreement between various independent plumbing contractors and the Union;

(o) "The Fencing Agreement", being a collective agreement between various independent fencing contractors and the Union;

(p) "The Trim Carpentry Agreement", being a collective agreement between independent trim carpentry contractors and Laborers' International Union of North America;

(q) "The Residential Roofing Agreement", being a collective agreement between independent residential roofing contractors and Laborers' International Union of North America.
SCHEDULE "F"

This Schedule applied to employees covered by this Agreement who are not working in, or who do not regularly work in Ontario Labour Relations Board Area 8 and Simcoe County.

For employees covered by this Schedule rates of pay, hours of work, remittances and other monetary terms and conditions of employment shall be as per the Collective Agreement binding upon Local 183 and the Oshawa Signatory contractors.
LETTER OF UNDERSTANDING NO. 1

LETTER TO:  The Heavy Construction Association of Toronto

FROM: Universal Workers Union, L.I.U.N.A. Local 183

RE: Collective Agreement - May 1st, 2004

Further to the signing of the Collective Agreement between us, this letter will serve to confirm certain understandings which were reached in connection with the classifications of Reinforced Concrete Worker, Carpenter Improver and Pipelayer. It is understood that the classification of "Reinforced Concrete Worker" applies to those employees engaged within the jurisdiction of the Agreement in laying reinforcing rod or mesh; similarly, the classification Carpenter Improver applies to those employees engaged within the jurisdiction of this Agreement in the setting of travelling steel forms and wood forms. Further, the "Pipe Layer" classification is intended to apply to not more than one man per crew.

DATED at Toronto, Ontario this 17th day of March, 2005.

LETTER OF UNDERSTANDING NO. 2

RE: Collective Agreement - May 1st, 2004

Further to the signing of the Collective Agreement between us, this letter will serve to confirm certain understandings which were reached regarding the items falling within the Heavy Engineering Sector.

The parties agree that a Joint Committee shall be established between the Association and the Union to review any dispute arising out of the interpretation and meaning of any of the agreed-upon definitions and to decide upon the application of the same to any given project or part thereof. The Joint Committee shall consist of two members each from the Association and the Union. A majority decision of the Committee shall be binding upon the parties. Failing settlement of any dispute concerning interpretation of definitions, then the matter shall be referred to arbitration.

DATED at Toronto, Ontario this 17th day of March, 2005.

LETTER OF UNDERSTANDING NO. 4

RE: Collective Agreement - May 1st, 2004

Further to the signing of the Collective Agreement between us, letter will serve to confirm certain understandings between the parties:

1. The parties agree to establish a Joint Committee to meet with representatives of the T.T.C. to explain to them the amendments made to the former collective agreement which have been incorporated into the new collective agreement effective from May 1st, 2004 to April 30th, 2007 (the "Collective Agreement").

LETTER OF UNDERSTANDING NO. 5

RE: Classification Recognition Committee

(A) A Recognition Committee for classification purposes of each party be established to accept Company certification cards of proficiency for the following classifications:

1. Miner
2. Lead Miner
3. Mucker
4. Tunnel Machine Operator

(B) Card must be clearly identifiable and contain member's name, Social Insurance Number, date of birth, etc.

(C) Card to be used for Union Registration purpose only. Card will not be used in any grievance procedures, nor will it be used to increase any hourly rate of pay, (i.e. a certified pipelayer is hired as a Labourer, he shall receive Labourer's rate of pay).

(D) Should there be any question of the Card holder's capabilities or proficiency, any employee or Employer can make a request to the Committee for a review. The employee in question shall be sent to the Training Centre for a proficiency test.

DATED at Toronto, Ontario this 17th day of MARCH, 2005.

FORKLIFT LETTER

Local 183 claims jurisdiction over the operation of forklifts and will take all necessary action to defend its jurisdictional claims.

Local 183 understands that other Unions may also claim jurisdiction over the operation of forklifts.

Therefore, Local 183 undertakes that should it be necessary to file a grievance with respect to this issue, it will not seek damages against an Employer unless there has been a previous decision award or agreement in relation to the specific Employer for the operation of forklift by members of Local 183.

HIRING

In order to ensure that the Employers bound to the terms and conditions of the Collective Agreement binding upon the Union and the Association continue to have access to an efficient and skilled work force in an expeditious manner, which the parties agree will benefit the unionized portion of this industry, and will thereby benefit all members of the Union, the parties hereby agree as follows:

(a) Notwithstanding the provisions of Article 5 of the Collective Agreement requiring the Employer to obtain all, or some, of its workforce from the Union's Hiring Hall, the Employer may make a request of the Union to hire specific Union members, who have previously been employed by the Employer, under the provisions of this Collective Agreement, within a six (6) month period prior to the date of any such request. Should it receive such a request, the Union may, at its sole and exclusive discretion, allow some or all of the requested individuals to be hired by the employer notwithstanding the Hiring Hall provisions set out in the Collective Agreement depending upon all of the circumstances which the Union considers relevant, including, but not necessary limited to, the general state of the Heavy Engineering sector of the construction industry in the various areas covered by the Collective Agreement; the levels of employment amongst members of the Union; the particular skill levels of the requested employees; the Employer's general compliance with the hiring and other provisions of the Collective Agreement whether or not any instances of non-compliance have resulted in grievances; and any other circumstances which the Union considers relevant;

(b) Should the Union agree that the employer may hire some or all of the requested individuals, all other provisions set out in this Collective Agreement concerning hiring or otherwise, will apply and therefore, without limiting the generality of the
foregoing, such individuals must be Union members in good standing and must have obtained referral slips from the Union prior to commencing work;

(c) The parties agree that this Letter of Understanding forms part of the Collective Agreement binding upon them and is enforceable as such.

Remittances and Contributions

THE PARTIES agree that during the lifetime of the Agreement, the Union shall have the right, at any time, to require the Employer to change the amount of contributions to any of the employee benefit funds including, but not limited to, the Pension Fund, Welfare Fund and Pre-Paid Legal fund, set out in this Collective Agreement, or which may be established hereafter by the Union, by transferring any portion of the contributions required to be made to any particular employee benefit fund (now existing or existing in the future), other than the Vacation Pay Fund and the Industry Fund, to any other employee benefit fund (now existing or existing in the future) provided that there should be no increase in the total monetary contributions required to be made under this Agreement.

THE PARTIES agree that this Letter of Understanding forms part of the Collective Agreement binding upon them and may be enforced as such.

Union Dues

With respect to the deduction and remittance of Union dues for Local 183 provided for in Article 4.01(f), the parties agree as follows:

1. Of the working dues deducted and remitted under this Agreement, fifteen cents (15¢) may be remitted to the Ontario Provincial District Council of LIUNA after, and provided that,

   (a) the Organizing Trust Fund, and the OPDC Motions thereto, are found to be proper and valid at the conclusion of the Court and other legal proceedings;

   (b) such remittances and deductions are approved by the members that regularly work under this Agreement in a separate secret ballot vote concerning this specific issue.

2. Other than with the regular dues which are set by the International Convention of LIUNA, there shall be no increase in the amount of dues and assessments deducted and remitted pursuant to the terms of this Collective Agreement unless such increases are approved by a secret ballot vote of the members normally working under this Collective Agreement.

3. The Parties agree that this Letter of Understanding forms part of the Collective Agreement which is binding upon them and is enforceable as such.

The Heavy Construction Association of Toronto
(the "Association")

Industry Development Fund

The Association and the Union agree to form a Sub-Committee in order to establish an Industry Development Fund which shall be managed and/or trusted by participating Employer Associations. The Sub-Committee will be made up of representatives of the Union, the Association and other Interested Employer Associations to review and determine the governance of the Fund, its terms of reference and the amount to be contributed per hour, subject to final approval by the Association. It is agreed that if the Union and the Association reach an agreement upon the establishment of the Fund, the five cents (.05¢) per hour allocated to the Tri-Fund under Article 26.01(b) will henceforth be remitted to the Industry Development Fund instead.

It is agreed that one of the issues which will be discussed by the Sub-Committee will be the ability of the Labourers' Canadian Tri-Fund to make proposals for funding from the Industry Development Fund if and when it becomes established.

The Parties agree that this Letter of Understanding forms part of the Collective Agreement which is binding upon them and is enforceable as such.

LABORERS' INTERNATIONAL UNION
OF NORTH AMERICA APPENDIX

to the

Collective Agreement

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

POWER COUNCIL OF UNIONS
(hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to employees in classifications listed in Article 1 of this Appendix, subject to the following:

The "Classifications", "Wages", "Shift Differential Rate" and "Overtime Rates" articles of this Appendix and the "Hours of Work" article of the Master Portion of this Agreement do not apply for work such as driveway and parking lot construction, railroad construction, landscaping, precast concrete erection, fencing or demolition. When such work is undertaken, the classifications, wages, weekly hours of work, shift differential rate and overtime rates appropriate for the class and character of work shall be as established by the nearest influencing representative agreements between locals of the Union and builders' exchanges, contractors' associations or contractors for the class and character of work.

For tunneling work the wages, classifications, shift differential rates, compressed air premiums, hours of work and other individual employee working conditions shall be as set forth in the Tunnel Schedule of the Collective Agreement between the Heavy Construction Association of Toronto and the Laborers Union.
Article 1

CLASSIFICATIONS

1.1 The following classifications are covered by this Appendix:

Group I
- Watchman

Group II
- Laborer
- Heateman
- Power Sweeper Operator
- Siamese Blowgun Operator
- Carpenter Helper
- Flagman
- Signalman
- Spotter
- Janitorial Cleaner (Construction Site)
- Area Captain (BHWP)

Group III
- Formworker (Lakeview and Pickering Projects only)

Group IV
- Conveyer Belt Attendant
- Scaler
- Wrecker - Demolition of Complete Buildings
- Yardman - Used Building Materials
- Formstripper
- Powderman Helper
- Air Trac Driller Helper
- Bricklayer Helper/Mason Tender
- Stressing Operator Helper - Post-Tensioning and Prestressing
- Caulker including Tile and Concrete Pipe
- Grouter Operator (not machine)
- Portable Compressor Operator
- Small Pump Operator
- Pipe Layer
- Small Mixer Operator

Group V
- Concrete Worker
- Floatman
- Puddler
- Screedman
- Mortarman
Group VI
Air Tool Operator
Concrete Core Drill Machine Operator
Jackhammer Operator
Tamper Operator
Chainsaw Operator
Vibrator Operator
Electrical Tool Operator
Pressurized Grouterman
Bomag Operator
Scootcrete Operator
Chipping Hammer Operator
Concrete Breaker
Jackleg Operator
Rocksplits Operator
Farm Tractor Operator
Tool Crib Attendant
Building Laborer (Lines and Stations only)
Stump Cutter Operator
Stress Operator - Post-Tensioning and Prestressing
Welder - Post-Tensioning and Prestressing

Group VII
Powderman

Group VIII
Air Trac/Hydraulic Drills and Self-Propelled Hydraulic Drills

Group IX
Diamond Driller

1.2 If additional classifications are required, they will be negotiated, as appropriate, for work in the electrical power systems sector.

1.3 Classifications and wages for tunnelling shall be as set forth in the tunnel schedule of the Collective Agreement between the Heavy Construction Association of Toronto and the Laborers Union.

Article 1.4 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 1, Addendum 1 – Modified Provisions of this Construction Appendix

1.4 On stand alone jobs when the crew is five (5) or less, the foreman may only work with the tools, at the foreman rate, on mutual agreement of the EPSCA Representative and the Local Business Manager.
Article 2

WAGES

2.1 Effective May 1, 2000 and until April 30, 2004 the rates of pay for employees in the classifications listed in Article 1 of this Appendix shall be as set forth in the wage schedules attached hereto.

The table of relationships dated September 1973 and amended August 1984 will be maintained.

2.2 EPSCA shall provide the Council with current wage schedules.

2.3 The rate of the subforeman classification listed in Section 1.1 of Article 1 shall be the appropriate hourly rate for his classification plus $1.75 per hour and shall be set forth in the wage schedules attached hereto.

Article 3

WEEKLY HOURS OF WORK

3.1 The weekly hours of work for Watchmen shall be forty-eight (48) hours per week. Watchmen may be required to work up to twelve (12) hours per day.

3.2 The weekly hours of work for tunnelling shall be forty (40) per week.

The regular workweek will start not earlier than 7:00 am on Monday, and the regular working day, subject to variation by mutual consent of the parties, shall be between 7:00 am and 5:00 pm, from Monday to Friday, inclusive. Any work done outside these hours shall be overtime or shift work. The maximum number of working hours per week shall be forty, and work outside these hours shall be overtime work, save and except the provisions relating to shift work.

Article 3.3. does NOT apply to work falling within the scope of Addendum 1

3.3 The weekly hours of work for mason tenders shall be forty (40) comprised of eight and one-half hours Monday through Thursday and six hours on Friday. All work in excess of the daily hours shall be overtime.
Article 4

SHIFT DIFFERENTIAL RATE

4.1 Employees required to work shift work, other than the regular day shift, shall receive a shift differential of one-seventh (1/7) for normal scheduled shift hours worked.

Employees required to work shift work on the third shift of a three shift operation shall receive a shift differential of one-fifth (1/5) for normal scheduled shift hours worked.

4.2 For employees required to work shift work on tunnelling, the following conditions will apply:

Where three shifts are worked, the shift times shall be as follows, subject to variation by agreement of the Union and an employer:

<table>
<thead>
<tr>
<th>Shift</th>
<th>7:00 am</th>
<th>3:00 pm</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st Shift</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2nd Shift</td>
<td>3:00 pm</td>
<td>11:00 pm</td>
</tr>
<tr>
<td>3rd Shift</td>
<td>11:00 pm</td>
<td>7:00 am</td>
</tr>
</tbody>
</table>

On such three shift tunnelling operations, it is agreed the meal break will be paid.

Where three shifts are working involving payment of Saturday or Sunday overtime under the provisions of this agreement, it is agreed that shift premium, where applicable, will be paid in addition to the overtime.

All second shift work to be paid at time and one-eighth the regular day shift rate, and all third shift work to be paid at time and one-seventh the regular day shift rate. On tunnel work, all hours worked on a second shift after 11:00 pm will be paid at third shift premium rate (time and one-seventh), but this does not apply when the regular quitting time for the second shift is 12:00 midnight.

Article 5

OVERTIME RATES

5.1 Overtime rates are paid for work performed outside of normal hours as defined in the "Hours of Work" article of the Master Portion of this Agreement and for work performed on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix shall be as set forth in the wage schedules subject to 5.2 below.
5.2 Effective May 1, 2000 and until April 30, 2004, EPSCA shall amend wage
schedules with respect to overtime to conform to the overtime rates of pay for the
classifications listed in Article 1 of this Appendix paid in the locality by Employers
under agreement with the Union for construction work of a related nature.

5.3 When overtime work is required, a minimum of one-half (1/2) hour's work will be
provided.

5.4 WATCHMEN

Overtime rates for Watchmen (excluding tunnelling) shall be one and one-half times the
basic rate for all hours worked outside of twelve (12) hours per day or in excess of
forty-eight (48) hours per week.

Two times the basic rate shall be paid for all hours worked on the Statutory Holidays
listed in Article 16 of this Appendix.

5.5 TUNNELLING

All work performed in excess of the regular working day of eight (8) hours from
Monday to Friday inclusive, shall be deemed overtime work. The rate of wages shall be
time and one-half the regular day shift rate.

All work on Saturday, Sunday and recognized holidays shall be paid for at double the
regular day shift rate, except where shift work is in operation. Time worked after
midnight Friday night shall be paid for at the rate of time and one-half in respect of a
shift commencing Friday evening and terminating not later than 7:00 am on Saturday
morning.

5.6 PROJECTS AND STATIONS ONLY

The Chief Steward will be informed of all overtime and shall be given the opportunity
to work providing he is capable to perform the available work. In the event he declines
the work, he shall be responsible to designate a steward to work the overtime who is
qualified to perform the available work.
Article 6

BENEFITS

6.1 The Employer agrees to pay into operative welfare, pension, prepaid legal and supplementary unemployment benefit plans, whether in addition to the wage rates or deducted from the wage rates, for employees covered by this Appendix. The amounts shall be as set out in the wage schedules attached hereto.

6.2 The Union agrees to supply the Employer with all information regarding the welfare, pension and supplementary unemployment benefit plans and also all administrative material that is required for the implementation of them.

Should the welfare, pension or SUB plan contributions recognized under this Agreement change during the term of this Agreement then an adjustment may be made to the base rate. The total wage package will not be changed.

Within three (3) weeks of receipt of an acceptable written notice from the Union, any changes to such contributions will be implemented. The effective date will be the date of implementations.

6.3 In the event an Employer is more than fifteen (15) days in arrears of the requirement to forward contributions and/or deductions to the Trustees by the fifteenth of the month following, the Employer shall pay as liquidated damages and not as a penalty an amount equal to two (2%) percent (equivalent to 24% per annum) for each month or part thereof that the contributions and/or deductions are in default for greater than fifteen (15) days provided the Employer has received five (5) days' written notice to correct such default. The trustees may require a delinquent Employer to pay for the costs, legal or otherwise, of collecting the amount owing, as outlined in the operative benefit plan trust documents.

6.4 The Trustees of the Employee Benefit Plans referred to in this Collective Agreement shall promptly notify the Union of the failure by any Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under that said program in compliance with the regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.
Article 7

INCLEMENT WEATHER PAY

7.1 An employee, who reports for work at the beginning of a shift and is unable to commence work due to inclement weather, will receive two (2) hours' pay at the applicable rate. To qualify, the employee must remain on the job site for two (2) hours, unless excused earlier by an authorized representative of the Employer.

7.2 An employee who reports for and commences work, but is unable to continue work due to inclement weather, shall receive two (2) hours' pay at the applicable rate or pay for the actual time worked for that shift, whichever is greater.

7.3 An employee who qualifies for inclement weather pay shall also receive travel or board allowance, if applicable.

Article 8

KEY TRADESMEN

8.1 Employers reserve the right to transfer tradesmen from one location to another to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear and hydraulic generation and transmission and transformation construction.

8.2 The number of key tradesmen to be transferred shall be determined at a pre-job conference identified in the "Advance Notice" article of the Master Portion.

8.3 All key tradesmen, requested by the Company and agreed to by the Union, must obtain clearance from the Local Union and the local EPSCA office before commencing work.

Article 9

TRAVEL AND TRANSPORTATION

9.1 INITIAL EMPLOYMENT

On recruitment of tradesmen who live between 80 and 161 radius kilometers from the project, the Employer shall pay $25.00 for the initial trip to the project.
9.2 ONTARIO RESIDENTS

On recruitment of tradesmen who live in Ontario but beyond 161 radius kilometers from the project, the Employer shall pay as an allowance 25¢ per radius kilometer, plus travel time based on one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the project from where the tradesman lives or place of recruitment, whichever is closer to the project.

9.3 NON-ONTARIO RESIDENTS

On recruitment of tradesmen who live outside Ontario and beyond 161 radius kilometers from the project, the Employer shall pay as an allowance the equivalent of the cost of public transportation plus travel time based on one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the project from where the tradesman lives or place of recruitment, whichever is closer to the project.

9.4 To qualify for payment in 9.1, 9.2 or 9.3, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of the job, whichever is lesser.

9.5 On termination of employment due to a reduction of staff, an employee entitled to payment under 9.1, 9.2 or 9.3 shall be entitled to return expenses calculated in the same manner as in 9.1, 9.2 or 9.3 above for the return trip from the project to where the tradesman lives or place of recruitment, whichever is closer to the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.

9.6 TRANSFER

When transferring employees, the Employer shall pay the equivalent of the cost of public transportation for the initial trip to the project from the employee's most recent work location. In addition, the Employer shall pay travelling time at straight-time rates up to a maximum of eight (8) hours.

Article 10

TOOLS

10.1 Employers may supply tools and equipment to employees. Employees receiving such tools or equipment shall be responsible for them in accordance with the "Tools and Clothing" article of the Master Portion of this Agreement.

10.2 Gang tools, referred to in the "Tools and Clothing" article of the Master Portion of this Agreement, are tools which are issued to a foreman and are used by one or more members of the crew.
Article 11

PROTECTIVE CLOTHING AND EQUIPMENT

11.1 Employees must, at their own expense, provide suitable clothing for the performance of their regular duties. Employees are required to wear protective clothing and use protective equipment, as determined by the Employer, for the work being done, subject to sections 11.2 and 11.3 below.

11.2 The Employer shall provide suitable rainwear, when required.

11.3 The protective clothing and equipment covered in sections 11.1 and 11.2 of this Article that is provided by the Employer shall be charged out to an employee and the employee shall be responsible for the return of such clothing and equipment to his Employer.

No charge will be made against an employee for protective clothing which can be substantiated as having been lost or stolen due to circumstances beyond the employee's control. Any lost or stolen articles are to be reported to the supervisor immediately.

11.4 On abnormally dirty and/or corrosive work in which employees' clothes may be permanently damaged, the Employer shall supply and maintain the appropriate protective clothing at no cost to the employee. Such protective clothing will remain the property of the Employer and will be returned by employee upon completion of the work involved.

Article 12

APPRENTICESHIP AND TRAINING PROGRAMS

12.1 The Employer agrees to pay into operative apprenticeship or training funds the amounts specified for apprenticeship or training as set forth in the wage schedules attached hereto, for employees covered by this Appendix during the time they are employed.

The Union agrees to supply EPSCA with all pertinent information regarding these funds.
Article 13

PROJECT LAYOFF PROCEDURE

13.1 During staff reduction the Employer shall lay off the last employee hired, providing the remaining employees are able to perform the work currently under way.

13.2 Subject to Article 10.1 of the Foreman's Appendix to the EPSCA/Power Council of Unions Master Portion collective agreement, the employer shall have the right to move foremen from construction site to construction site.

When a requirement for foremen no longer exists, the treatment of foremen shall be as follows:

(i) Foremen who are transferred into, or hired as a Foreman at, an Ontario Power Generation Inc or Hydro One construction site as a foreman shall be laid off as a foreman or transferred out to another Ontario Power Generation Inc or Hydro One construction site as a foreman.

(ii) An employee who has been promoted to the foreman level by the Employer during the course of his employment on an Ontario Power Generation Inc or Hydro One construction site, shall not be subject to (i) above and will be reduced to a working position at such site. For layoff purposes, the employee will then be subject to Article 13.1.

Article 14

PREMIUMS

14.1 When an employee covered by this Appendix is required to work from a bosun chair or swing stage, he/she will receive an additional forty-five cents (45¢) per hour for each hour worked.

Article 15

VACATION PAY

15.1 The Vacation Pay rate shall be four (4) percent of vacationable gross earnings*. Payment shall be made weekly on the employee's regular pay cheque.

* "Vacationable gross earnings" means pay for regular hours, overtime, premium pay, shift differential, lines and stations daily travel time, retroactive pay adjustments, reporting pay, inclement weather pay, call-in pay, Saturday and Sunday premiums and trade training, but does not include payment for initial and return travel.
A three (3) week leave of absence for the purpose of taking an annual vacation will be granted in the calendar year in which the employee completes one year of service*. In special circumstances, where the work schedule permits, additional time off may be granted an employee. The additional time off will not be unreasonably denied.

Article 16

STATUTORY HOLIDAYS

16.1 The Statutory Holiday pay rate shall be six (6) percent of vacationable gross earnings. Payment shall be made weekly on the employee's regular pay cheque.

The Statutory Holidays recognized under this Agreement are:

- New Year's Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day

- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed on either the preceding Friday or the following Monday.

EPSCA reserves the right to change the day of observance of a Statutory Holiday when such a holiday falls on a Tuesday or Thursday.

Article 17

GREENMAN RECALL

NEW

In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers in sequence from the out of work list to the location from where they were laid off. This recall provision can only be used when all Green qualified Atomic Radiation Workers currently employed are being utilized for greenmanning duties. Recalled Greenmen will perform only Greenman work and will not work with the tools as a Labourer.

* Service will be calculated based on an employee's length of continuous service with his Employer.
The incorporated specific Statement of Settlement amendments to the Laborers' International Union of North America Appendix of the Collective Agreement between The Electrical Power Systems Construction Association and The Power Council of Unions have been agreed to by the bargaining committees of the Laborers' and The Electrical Power Systems Construction Association. These proposed amendments are herewith recommended to the EPSCA Board of Directors and the Officers of the Council in accordance with Article 33.1 of the Master Portion of the Collective Agreement for approval and incorporation into the Laborers' Appendix of the Collective Agreement.

Dated this 18th day of May, 2000.

For: The Laborer Bargaining Committee

Rick Weiss

For: The EPSCA Bargaining Committee

Barry Roberts

Approved for incorporation into the Laborers' Appendix effective this 10th day of April, 2001.

ADDENDUM 1

MODIFIED PROVISIONS OF THIS CONSTRUCTION APPENDIX

These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:

• a new facility which provides a new function
• a new (i.e. additional) generating unit

Definitions:

Facility Something that is built composed of multi-systems which serves a specific function

Function Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the ‘Modified Provisions of this Construction Agreement’ apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.

All terms of this appendix shall apply to work covered by Addendum 1, with the exception of Article 1.4 and Article 3.3.

Section 1

WORKING FOREMEN

REV When the *crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade. The foreman, if not already eligible to act as a working foreman during the normal scheduled hours of work, will not act as a working foreman on overtime.

Section 2

LINES AND STATIONS FOREMEN RATE

NEW The rate of pay for Foremen working in Lines and Stations under the Modified Provisions of this construction agreement shall be $3.00 per hour above the journeyman rate.
(Article 5 – Wages – Foreman Appendix, Master Portion does not apply)

Section 3

HIRING, TRANSFERS AND RECALL

NEW

The parties agree that this Article fulfills the previous commitment as set out in the hiring and mobility re-opener language of April 28, 2000.

TRANSFER PROVISIONS – ALL LOCALS

The parties agree an employer is allowed to transfer employees within the geographic area of the Local Union for projects covered by this collective agreement.

HIRING AND RECALL – LOCAL UNION PROVISIONS

Hiring and recall shall be as set out in the ICI collective agreement and as amended from time to time (excluding foremen – see Foremen’s Appendix, Master Portion of this collective agreement). As amendments take place, they will be incorporated into this Article.

* A crew is defined as the foreman and the total number of tradespersons directly supervised.
Modified Provisions

Local 625 – Windsor

The employer shall have the prerogative, when adding to his workforce, to first re-hire any employees who are unemployed and have been in his employ during the preceding twelve (12) months, provided that they are in good standing.

Local 625 - Chatham

The employer shall have the prerogative, when adding to his workforce, to first re-hire any employees who are unemployed and have been in his employ during the preceding twelve (12) months, provided that they are in good standing.

Local 1089 - Sarnia

The employer shall be permitted to recall former employees who are unemployed and registered at the local union office, provided he does so within a twelve (12) month period from date of layoff and said employees are in good standing with the union.

Local 1059 – London

No appendix provisions.

Local 1081 – Brantford (Cambridge)

The employer, when adding to his workforce, shall have the prerogative of first recalling any unemployed member in good standing with Local 1081, as long as the member has worked for ten (10) consecutive days previous to being recalled.

The member has to have been in his/her employ during the twelve (12) months of the date of rehire, and such employees shall retain a referral slip from the union within two (2) working days of the date of rehire.

Members of other local unions who have transferred into Local 1081 will not be eligible for recall unless the member has transferred into Local 1081 at least twelve (12) months prior to the date of recall.

Members that transfer out of Local 1081 with a company and back, will have the right to be recalled within twelve (12) months of his return to membership in Local 1081.
Local 1081 – Kitchener (Cambridge)

The employer, when adding to his workforce, shall have the prerogative of first recalling any unemployed member in good standing with Local 1081, as long as the member has worked for ten (10) consecutive days previous to being recalled.

The member has to have been in his/her employ during the twelve (12) months of the date of rehire, and such employees shall retain a referral slip from the union within two (2) working days of the date of rehire.

Members of other local unions who have transferred into Local 1081 will not be eligible for recall unless the member has transferred into Local 1081 at least twelve (12) months prior to the date of recall.

Members that transfer out of Local 1081 with a company and back, will have the right to be recalled within twelve (12) months of his return to membership in Local 1081.

Local 837 – Hamilton

The employer agrees to employ only members of the union in good standing during the term of this agreement and will call the union for its needed supply of men. The union, upon request, will supply the employer with two (2) former employees and for additional men thereafter, on the basis of twenty-five per cent (25%) ratio of former employees who were employed by the contractor in the past six (6) months prior to the job award.

Local 837 – St. Catharines (Niagara)

No appendix provisions.

Local 506 – Toronto

The employer may name hire up to fifty per cent (50%) of the total crew within each project, provided that:

a) the person is a member in good standing of Local 506.

b) the member is registered on a Local 506 work referral list and is currently unemployed as a result of layoff or if for any other reason has been registered for two (2) weeks or more.

c) the employer notified the union hall directly with the request to name hire any individual member and at the same time provide the request for hall referrals to comply with above requirements. The employer may hire the odd-numbered member only with consent of the union. Such consent will not be unreasonably denied.
Modified Provisions

Local 506 – Barrie (Simcoe County Schedule)

The employer may name hire up to fifty per cent (50%) of the total crew within each project, provided that:

a) the person is a member in good standing of Local 506.

b) the member is registered on a Local 506 work referral list and is currently unemployed as a result of layoff or if for any other reason has been registered for two (2) weeks or more.

c) the employer notified the union hall directly with the request to name hire any individual member and at the same time provide the request for hall referrals to comply with above requirements. The employer may hire the odd-numbered member only with consent of the union. Such consent will not be unreasonably denied.

Local 597 - Oshawa

The employer shall have prerogative, when adding to his workforce, to first rehire any employees who are unemployed and have been in his employ during the preceding six (6) months, provided that they are in good standing with Local 597. Such employees shall obtain a referral slip prior to commencing employment.

Local 597 – Peterborough/Huntsville

The union agrees the employer may recall former employees for a period of up to six (6) months from date of layoff.

The employer shall have the prerogative, when adding to his workforce, to first rehire any employees who are unemployed and have been in his employ during the preceding six (6) months, provided that they are in good standing with Local 597. Such employees shall obtain a referral slip prior to commencing employment.

Local 247 - Kingston

The employer may name hire one (1) employee for each one (1) employee referred by the union.

Upon request, the union will supply the employer with the first employee name by the employer, the second employee will be referred by the union, and so on, alternately, until all labour requirements are filled.

To be eligible for name hire, an employee must be a member in good standing of Local 247 and must have been registered on the union unemployment list for a period of not less than forty-five (45) days. The forty-five (45) day provision will not apply to Local 247 members who are re-name hired to the same employer.
Modified Provisions

Local 527 – Ottawa

When hiring, a request by the employer for a named individual who is a member in good standing of the union, registered on the out of work list, shall not being reasonably denied by the union.

When hiring, the employer shall have the prerogative of first rehiring any employee who has been in his employ during the preceding twelve (12) months of the date of rehire and such employee shall first obtain a referral slip from the union.

Local 527 – Cornwall, Smith Falls, Arnprior

When hiring, a request by the employer for a named individual who is a member in good standing of the union, registered on the out of work list, shall not being reasonably denied by the union.

When hiring, the employer shall have the prerogative of first rehiring any employee who has been in his employ during the preceding twelve (12) months of the date of rehire and such employee shall first obtain a referral slip from the union.

Local 527 – Hawkesbury/Pembroke

When hiring, a request by the employer for a named individual who is a member in good standing of the union, registered on the out of work list, shall not being reasonably denied by the union.

When hiring, the employer shall have the prerogative of first rehiring any employee who has been in his employ during the preceding twelve (12) months of the date of rehire and such employee shall first obtain a referral slip from the union.

Local 493 – Sudbury

The employer shall have the prerogative, when adding to his workforce, to first rehire any employees who are unemployed and who have been in his employ during the preceding twelve (12) months, provided they are in good standing with the union.

Local 493 – N.E. Miscellaneous

The employer shall have the prerogative, when adding to his workforce, to first rehire any employees who are unemployed and who have been in his employ during the preceding twelve (12) months, provided they are in good standing with the union.
Modified Provisions

Local 491 – Timmins

The employer may rehire former employees who have been in his employ during the preceding twelve (12) months who have remained in good standing with the union and are registered as out of work, to be eligible for rehire.

The employee must not have worked in the E.P.S. sector for any other contractor during that period. Subject to availability to perform the work, employees will be recalled in inverse order of layoff.

Hiring will be on the following basis:

1st employee selected by the employer
2nd employee selected by the union
3rd employee selected by the employer
4th employee selected by the union, and this sequence to continue in this method for each employee.

Local 1036 – Sault Ste. Marie

The employer shall have the prerogative, when adding to his workforce, to first rehire any employees who are unemployed and who have been in his employ during the preceding twelve (12) months, provided they are in good standing with the union.

The parties agree that after the fifth employee recalled as above, the union shall have the right to include one (1) employee of its choice who may be designated as Steward for the project.

Local 607 – Thunder Bay

The employer may rehire former employees who have been in his employ during the preceding twelve (12) months, who have remained in good standing with the union and are registered as out of work provided that the employee(s) have not worked for another employer during that period.

Hiring will be on the following basis:

1st employee selected by the employer
2nd employee selected by the union
3rd employee selected by the employer,
   and this sequence to continue in this method for each employee

Should an employer elect to recall employees as above, then before the employer can utilize the hiring clause above, an equal number of employees as were recalled will be provided by the union.

September 27, 1973
The wage schedule for this Appendix will be prepared in a similar manner to the schedule presently contained on Ontario Hydro's Agreement with the Allied Construction Council, with the following changes:

1. The table of relationships will be converted from a percentage differential to a cents-per-hour differential.

2. The cents-per-hour differential will be frozen at the present level.

3. The wage schedule which is produced will not apply to those types of work excluded in the preamble to this Appendix.
EPSCA LABORERS’ APPENDIX

GENERATION STATION PROJECTS
OVERTIME RATE SCHEDULE

In accordance with Article 5.2, Generation Station Projects, of this Appendix, the overtime rates of pay are as follows:

Lakeview and Pickering Projects

One and one-half times the appropriate hourly rate for his classification for the first three hours worked outside of normal hours in any one day, Monday to Friday.

Two times the appropriate hourly rate for his classification after the first three hours worked outside of normal hours in any one day, Monday to Friday, and for all hours worked on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix.

Bruce Project

Two times the appropriate hourly rate for his classification for all hours worked outside of normal hours in any one day, Monday to Friday, and for all hours worked on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix.

Nanticoke, Wesleyville and Darlington Projects

One and one-half times the appropriate hourly rate for his classification for the first two hours worked outside of normal hours in any one day, Monday to Friday.

Two times the appropriate hourly rate for his classification after the first two hours worked outside of normal hours in any one day, Monday to Friday, and for all hours worked on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix.
EPSCA LABORERS’ APPENDIX (continued)

Thunder Bay and Atikokan Projects

One and one-half times the appropriate hourly rate for his classification for the first three hours worked outside of normal hours in any one day, Monday to Friday.

Two times the appropriate hourly rate for his classification after the first three hours worked outside of normal hours in any one day, Monday to Friday, and for all hours worked on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix.

Effective June 2, 1980:

One and one-half times the appropriate hourly rate for his classification for the first two hours worked outside of normal hours in any one day, Monday to Friday.

Two times the appropriate hourly rate for his classification after the first two hours worked outside of normal hours in any one day, Monday to Friday, and for all hours worked on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix.

April 27, 2004
MEMORANDUM OF SETTLEMENT

BETWEEN

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

AND

LABOURERS’ INTERNATIONAL UNION OF NORTH AMERICA

Dated this 6th day of December 2004
It is agreed that the existing agreement between the parties which expired April 30, 2004 will be renewed with the following amendments:

GENERAL

There is agreement to create a "free standing" collective agreement. Master Portion, Foreman's Appendix, Labourers' Appendix and December 6, 2004 Memorandum of Settlement to be incorporated into one collective agreement.

Language to be modified where necessary –

e.g. delete references to the "Power Council of Unions" and "Power Council of Unions and affiliates" and replace with "the Union"

APPENDIX D

MODIFIED PROVISIONS

Modified Provisions to apply as follows:

- Modified Articles – Hours of Work, Reporting Pay and Meals on Overtime from Master Portion to replace corresponding articles in main body of agreement
- Working Foremen, Lines and Stations Foremen Rate and Hiring, Transfer and Recall in Labourers' Appendix to be placed into main body of the agreement

ARTICLE 8

UNION STEWARDS

"Where practicable and where requested by an employee, a Union Steward and/or Union Representative will be present at a meeting where there will be discipline or discharge meted out to an employee. There may be instances where this is not practicable (e.g. security breaches, fighting, safety breaches) or where a Union Steward and/or Union Representative is not available. This Article applies to generation sites only."
ARTICLE 10  WORK ASSIGNMENT

Revised language to read as follows:

10.1

(a) A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of this markup process is to indicate to the Union the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes.

(b) When work is to be performed on a project site and it meets the following criteria: same employer, same work, same project site, the markup process will not be required. This procedure shall not preclude a Union’s right to contest previously disputed work.

(c) When an Employer has work that is less than a 3 week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Union will be notified of the scope of work and the Employer’s proposed work assignments. The Unions will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Union of the final work assignments prior to the commencement of the work.

(d) All work that does not meet the criteria set out in clauses 10.1 (b) or 10.1 (c) will be reviewed and assigned at a markup meeting.

(e) EPSCA will provide written notice to the Union as far in advance as possible of markup meetings. The Union may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

(f) The Employer who has the responsibility for the work shall make a proposed assignment of the work involved. The Employer shall be responsible for providing copies of proposed assignments to the Unions in attendance at the markup meeting. The Employer will specify a reasonable time limit for the Unions involved to submit evidence of their claims. The Employer will evaluate all evidence submitted and make a final assignment of the work involved. The Employer will advise the Unions of the final assignments prior to the work commencing.

(g) The EPSCA representative will record the proposed assignments and jurisdictional claims and forward a copy of them within fifteen (15) working days to the Union.
(h) The parties recognize that circumstances may arise, particularly with
discovery and emergency work, where the process set out above may not
be practical or possible, however reasonable effort will be made by the
Employer to adhere to the appropriate trade jurisdiction.

* For the purposes of this Article, Nanticoke, Lambton, Lakeview/Hearn,
BNPD, Pickering, Darlington, Lines and Stations and the Five Electricity
Production Zones are each considered individual project sites.

ARTICLE 11  JURISDICTIONAL
DISPUTES

Revise language to read as follows:

11.1
In the event there is a jurisdictional dispute which cannot be settled on a local basis by
the Unions involved, it shall be submitted to the Ontario Labour Relations Board
without permitting it to interfere in any way with the progress of the work at any time.

11.2
In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the
Ontario Labour Relations Board as governed by 11.1 above, the arbitration board panel
appointed by the Ontario Labour Relations Board pursuant to the Act is not authorized
to award damages in respect of a mis-assignment of work only in circumstances where
the other union(s) involved in the proceedings is (are) equally restricted in their ability
to claim for damages. However this clause 11.2 shall not apply where the Jurisdictional
Dispute and the mis-assignment of work involves the same employer and the same
work, and on the same job previously the subject of a Jurisdictional Dispute before the
Ontario Labour Relations Board.

11.3
The board panel appointed by the Ontario Labour Relations Board will govern its
decision pursuant to its normal criteria.

11.4
In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the
Ontario Labour Relations Board as governed by 11.1 above, the decision of the panel of
the Ontario Labour Relations Board will be final and binding upon the parties to this
agreement with no further recourse to the Plan on the issue decided by the Ontario
Labour Relations Board.
ARTICLE 12  UNION SECURITY

Replace Article 12.2 with the following:

12.2 Union Dues and Checkoff

a) The Employer agrees to deduct from each employee covered by the terms of this agreement. Working dues at the rate provided for in the applicable Local Union Schedule which shall be remitted to the Secretary-Treasurer of the applicable Local Union by the fifteenth (15th) day of the month following the month in which such deduction were made.

b) Ontario Provincial District Council working dues consisting of fifteen cents ($0.15) per hour shall be deducted and remitted by the Employer directly to the Labourers' Pension Fund of Central and Eastern Canada, along with the pension contributions.

c) The amounts of the Ontario Provincial District Council working dues deductions, as well as the recipient of said deductions, may only be altered by the Secretary-Treasurer of the Ontario Provincial District Council in accordance with Article 12.2 (f) below.

d) The Employer shall, when remitting such dues, submit a list of names and social insurance numbers (where permissible under applicable legislation) for and on whose behalf such deductions were made, on one (1) Standard Benefits Form showing all applicable deductions and/or contributions.

e) The aforesaid remittances shall be made directly by the Employer as aforesaid notwithstanding anything contained in any other article, Appendix or Schedule to this Agreement.

f) Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. The effective date of such changed wage schedules, dues and remittances shall be within 30 days of receipt of such notice.

The above noted time frames shall not apply proceeding contract ratification for a period of forty-five (45) days.
ARTICLE 14

WAGES AND PAY PROCEDURE

Add: "The parties agree to direct deposit for direct hire employees of OPG, Hydro One and Bruce Power LP. An employer will provide assistance to employees who require assistance obtaining a bank account. Employers other than OPG, Hydro One and Bruce Power LP may implement direct deposit with employee consent."

ARTICLE 17/ SECTION 1

GENERATION PROJECTS DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

- Upon signing – 4%
- May 1, 2005 – 2%
- May 1, 2006 – 2%
- May 1, 2007 – 4%
- May 1, 2008 – 2%
- May 1, 2009 – 2%

ARTICLE 18

LINES AND STATIONS CONSTRUCTION TRAVEL ALLOWANCE AND ROOM AND BOARD

Travel rings and Board to be increased as follows:

Travel:
Effective upon signing and May 1st in each subsequent year – 50 cents

Board:
Effective upon signing and May 1st in each subsequent year - $1.00
ARTICLE 20

STANDOFF

Amend 20.1 (b) as follows:

"... No travel allowance will be paid to an employee for the Standoff period. Subsistence allowance will only be paid when proof that temporary residence is being maintained is provided. Proof of residency will be in a form acceptable to Management such as a Landlord receipt, hotel/motel receipt etc..."

Amend 20.2 to state, “An employee who qualifies for subsistence allowance (subject to 20.1)...”

ARTICLE 24

TOOLS AND CLOTHING

Amend 24.4 as follows: $12.00 per day upon ratification
$15.00 per day effective May 1, 2006

SECTION 2/

ARTICLE 26

HOURS OF WORK

Amend 2nd and 3rd paragraph of Section 2.1 to read:

(i) The weekly hours of work Monday to Friday inclusive shall consist of forty (40) hours for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.

The weekly hours of work may be arrived at by having the employees work either:

- four (4) consecutive ten-hour shifts, Monday to Thursday or;
- four (4) consecutive ten-hour shifts, Tuesday to Friday or;
- five (5) consecutive eight-hour shifts

but not concurrently on the same work program.*

Employees will not be moved from work program to work program to circumvent overtime. Disputes arising from this Article are subject to the grievance procedure.

Each Employer will notify the Local Union of the weekly hours of work for each work program* at the site.

Weekly hours of work will be established for a minimum period of two (2) weeks.
If an Employer, with the approval of the owner, intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.

*For the purposes of this section, a work program may be defined as work taking place on a site that could include the following:

- Outages,
- Specific contracted scopes of work,
- Various and different modifications in an operating plant where the owner dictates the hours of work, or
- Subcontracts for a prime contractor where the prime contractor dictates the hours of work.

(ii) Amend start time in 3rd paragraph of Section 2.1 to read 7:00 am.

(iii) The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way of the end of the day shift.

(iv) Add:

"Shift differential will not be paid on overtime hours."

**ARTICLE 33 TERM OF AGREEMENT**

Duration – Amend to read as follows:

"This Agreement shall continue in full force and effect from May 1, 2004 until April 30, 2010 inclusive…"

**SECTION 2 LABOURERS WAGES APPENDIX**

Effective July 31, 2004 – ICI increases
May 1, 2005 – ICI increases
May 1, 2006 – ICI increases

ICI increase/date for the following three years of agreement.

**MISCELLANEOUS:**

- RESP, DeNovo and Tri-Fund to be deducted from the Total Wage Package amount
LETTER OF UNDERSTANDING

Between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

LABOURERS’ INTERNATIONAL UNION
OF NORTH AMERICA

RE: APPENDIX A - MOOSE RIVER BASIN

Moose River Basin shall be defined as that part of the District of Cochrane, North of the fiftieth (50th) parallel of latitude which drains into the Moose River. EPSCA will meet with the Union to discuss and update this portion of the agreement when work is scheduled for that geographic location.

EPSCA

LIUNA
LETTER OF UNDERSTANDING

Between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

AND

LABOURERS' INTERNATIONAL UNION OF NORTH AMERICA

RE: OLRB Certifications

- Letter of Understanding to be drafted regarding carry over of LIUNA agreement pending OLRB certification hearings.
- Target date for draft letter – mid-January 2005
- Target date for final letter – end of January 2005

EPSCA

LIUNA
The parties agree to recommend this settlement for ratification.

Unless otherwise indicated, all terms in this settlement shall be conditional upon ratification by December 9, 2004 and shall form the new agreement between the Parties.

Dated this 6th day of December, 2004 at Toronto, Ontario.

For EPSCA

</table>
WHEREAS the Union and the Employer are desirous of establishing a form of standard collective agreement with respect to all employees engaged in heavy construction work within the geographical area defined herein so as to provide uniform interpretation, application and administration of the relationship established.

IT IS EXPRESSLY AGREED AND DECLARED
BY AND BETWEEN THE PARTIES HERETO AS FOLLOWS

ARTICLE 1 - DURATION OF AGREEMENT

1.1 This agreement shall become effective on the 1st day of May 2000 and shall continue to remain in effect until the 30th, of April 2004 and shall continue in force from year to year thereafter unless either party shall furnish the other with notice of termination, or proposed revision of this agreement within ninety (90) days before the 30th, day of April 2004, or in a like period of any year thereafter.
ARTICLE 2 - RECOGNITION

2.1 The employer recognizes the Union as the exclusive bargaining agent for all employees of the Employer covered by the classifications set out in this agreement, and any additional classifications as may be agreed to by the parties save and except, non-working foremen and persons above the rank; office, clerical staff and security guards.

2.2 The employer agrees to employ only members of the Union in good standing and the Union agrees to give the Employer preference in supplying men for such work.

2.3 The Union will not sign any Agreement with an Employer who is engaged in the same work as the Employers to whom this Agreement applies for less than the terms of this Agreement.

2.4 (a) With respect to all work performed or undertaken or contractors let or sublet that does not come within the purview of this agreement, the Employer and the Union hereby acknowledge and agree to recognize, observe and be bound by all terms, conditions, provisions (both monetary and non-monetary) and all of the relevant schedules of the Provincial Collective Agreement between the Operating Engineers Employer Bargaining Agency, including the amendments, additions or renewals thereof, as if the same were made between the Union and the Employer. The Employer hereby acknowledges that it is in possession of a copy and is familiar with all the terms, conditions, and provisions of the Provincial Agreement.

2.4 (b) For the purpose of clarity, it is agreed that the Windsor Heavy Agreement shall apply to within of the five (5) feet of the exterior wall of any building or structure. The stripping of topsoil shall be covered by the H.C.A. Agreement.

ARTICLE 3 - UNION SECURITY

3.1 The Employer agrees that whenever he requires personnel to perform work covered by this agreement he shall first call the Union Office for his requirements in the area where the work is to be performed.

3.2 The Union will advise the Employer of their progress in obtaining personnel within twenty four (24) hours. If the Union cannot supply qualified and competent personnel within two working days (excluding Saturday, Sundays and Holidays) the Employer may hire from any source available to him. Any request made after 12:00 p.m. noon shall not be considered a part of the two working days for supply.
3.3 All personnel hired shall be required to have a clearance card issued by the Union before they start to work unless other arrangements are made by the Union dispatcher. Such clearance card will not be unreasonably withheld.

3.4 All employees working under this Agreement shall apply to become members of the Union within fourteen (14) working days and maintain their membership in good standing or be replaced. Probationary employees so hired will be paid 80% of the rate for the appropriate class for three months and become a member of the Union or be replaced at that time.

3.5 The Employer shall have the prerogative when adding to its working force, to first re-hire former regular employees through the Union hall who have been employed by the Employer for at least three (3) calendar months of the last twelve (12) calendar months or as otherwise provided for in the attached schedules.

3.6 The Employer only agrees to engage only those sub-contractors including owner-operators, who are in contractual relations with the Union to perform work set out in the classifications of this Agreement. The Union may, if contacted prior to bid closing, give permission to use specialty type sub-contractors. If relief is given, it will be given to any member contractors who request it through the Heavy Construction Association of Windsor, prior to bid closing.

3.7 The Employer agrees to remove any sub-contractor in violation of section 3.6 upon written notification from the Union Representative, subject to Letter of Understanding as applicable.

3.8 (a) As a condition of employment the Employer shall request each employee to sign a form which authorizes the Employee to deduct regular monthly union dues, working dues, initiation fees and annual assessments from the employee's pay. The regular monthly union dues shall be deducted from each employee on the first pay period of each month. The Union shall notify the Employer of the amounts and changes thereto of the above mentioned deductions.

3.8 (b) All dues, fees and assessments so deducted shall be remitted together with Pension and/or Benefit Contributions set out in this Agreement on or before the 15th. day of the following month in which such deductions were made. The Employer shall, when making all remittances to the Union, identify employees by name and Social Insurance Number and indicate the amount deducted from each employee.
ARTICLE 4 - MANAGEMENT RIGHTS

4.1 The Union agrees and acknowledges that the Employers have exclusive right to manage the business, and to exercise such right without restriction, save and accept such prerogatives of management that may be specifically modified by the terms and the conditions of this agreement.

Without restricting the generality of the foregoing paragraph, it is the exclusive function of the Employer:

(a) To determine qualifications, classify, transfer, hire direct promote, layoff, discipline and discharge employees for just cause and to increase or decrease working forces in accordance with the terms of this agreement.

(b) To determine the materials to be used, design of the products to be handled, facilities and equipment required, scheduling of work and location of equipment.

(c) To determine the rules and regulations to be observed by Employees, violations of which may be the cause for discipline and may include discharge.

4.2 The Employer recognizes that the employee and the Union have recourse through the grievance procedure if they feel that the Employer has exercised any of the foregoing rights contrary to the terms of this Agreement and further that discipline and discharges shall only be exercised for just cause.

4.3 Notices of discipline and discharge shall be provided in written form with reasons therefore, if requested in writing by the effected employees.

4.4 The Employer shall not discriminate against any employee and the Union. Employer and employees shall all comply with the Ontario Labour Relations Act, Human Rights Code, Workers Compensation Act and all other applicable legislation.

ARTICLE 5 - Geographical Area

As per appendices

ARTICLE 6 - GRIEVANCE PROCEDURES

6.1 There shall be an earnest effort on the part of both parties to this agreement to settle promptly through the procedure set out herein, any complaints, grievances or disputes arising from the interpretation, application or administration of this agreement.
6.2 It is understood and agreed that an employee does not have a grievance until he has discussed the matter with his supervisory personnel acting in his capacity and given him an opportunity of dealing with the complaint. His decision shall be made known to said employee within forty-eight (48) hours. Grievances properly arising under this agreement shall be adjusted and settled as follows:

STEP 1: Within ten (10) days after the circumstances giving rise to the grievance the aggrieved employee, with or without Union Representation, shall present his grievance in writing to the official of the Employer named by the Employer to handle grievances at this step. If a settlement satisfactory to Union and the Employee concerned is not reached within five (5) full working days a grievance may be presented as indicated in Step 2 at any time within five (5) full working day thereafter.

STEP 2: At this step the grievance may be processed as an individual, joint, employer or union grievance and shall be presented in writing by a Union Steward or Representative to the company official assigned to handle written grievances.

6.3 All grievances to be dealt with under Step 2 above shall be in writing on a form supplied by the Union and signed by the employee having such grievance.

6.4 The Employer shall designate and name the official to who a written grievance is submitted at Step 2.

6.5 Written grievances to be valid shall set out the nature of the grievance: the Article or Articles of the Agreement alleged to be violated and the nature of the remedy sought and shall not be subjected to change at later steps except by mutual agreement in writing with the Employer, or in the case of remedy, by an Arbitration Board.

6.6 In determining the time which is allowed in the various steps, Saturday, Sunday and Statutory Holidays shall be excluded and any time limits may be extended by mutual agreement in writing.

6.7 If advantage of the provisions of Articles 6 and 7 hereof is not taken within the time limits specified therein or as extended in writing as set out above, the grievance shall be deemed to have been abandoned and may not be re-opened.

6.8 Notwithstanding the above, a grievance concerning wages may be presented within ten (10) days after the circumstances giving rise to the grievance occurring or originating and further provide that a grievance concerning welfare or pension contributions may be presented within ten (10) days after the particulars of such grievance should have reasonably become first known to a Union Representative.
ARTICLE 7 - ARBITRATION

7.1 The parties to this agreement agree that any grievance concerning the interpretation or alleged violation of this agreement which has been properly carried through all the steps of the grievance procedure outlined in Article 6 which has not been settled will then be referred to a Board of Arbitration at the request of either of the parties hereto.

7.2 The Board of Arbitration will be composed of one person appointed by the Employer, one person by the Union and a third person to act as chairman chosen by the other two members of the Board.

7.3 Within five (5) working days of the request by either party for a Board, each party shall notify the other in writing of the name of its appointee.

7.4 Should the person chosen by the Employer to act on the Board and the person chosen by the Union fail to agree on a third member as chairman within five (5) days of the notification mentioned above, the Minister of Labour of the Province of Ontario will be asked to appoint a chairman.

7.5 The decision of the Board of Arbitration or a majority of such Board constituted in the above manner shall be binding on the parties of this agreement.

7.6 The Board of Arbitration shall not have any power to alter or change any of the provisions of this agreement or to substitute any provisions for any existing provisions, nor to give any decision inconsistent with the terms and provisions of this Agreement.

7.7 Each of the parties of this Agreement will bear the expenses of the Arbitrator appointed by it and the parties will jointly bear the expenses of the Chairman.

ARTICLE 8.1 - NO STRIKES, NO LOCKOUT

8.1 In view of the grievance and arbitration procedures provided in this agreement, it is agreed by the Union that there shall be no strike, picketing, slowdown or stoppage of work, either complete or partial and the Employer agrees that during the terms of this agreement, there shall be no lockout.
ARTICLE 9 - UNION REPRESENTATION

9.1 The Union Representative shall, in the course of his duty, have access to work, where possible, on which members of the Union are employed and the Employer shall assist the Union Representative to obtain passes to the premises where necessary. The Union Representative shall make his presence known to the Employers senior representative or his delegate. In no instances, however, shall he interfere with the progress of work.

9.2 It is agreed that the Union may appoint one employee per shift, per company project as Steward.

9.3 Whenever possible, considering the nature of the work to be performed, Steward shall be one of the last two employees covered under terms of this agreement to remain, providing he is qualified, competent and capable of performing the remaining work.

9.4 The Steward or Stewards, where possible, will be responsible for reporting any complaints or grievances to the Employers and to the Union so that these may be dealt within the proper manner and without undue delay.

9.5 The Employer agrees that one employee shall be selected by the Union to serve as the Employees safety representative on each of the Employers projects when there are five (5) or more employees on the project.

9.6 SPECIAL INFORMATION FOR THE EMPLOYERS: In order to comply with the Construction Safety Act, the Employers shall notify those Unions who have members on the site that the numbers of employees is five (5) or more and that a Safety Representative should be selected.

ARTICLE 10 - JURISDICTIONAL DISPUTES

10.1 The Employer and the Union agree that there shall be no work stoppage resulting from jurisdictional disputes. In the case of a jurisdictional dispute the Employer agrees to assign work in accordance with the decision of the Labour Relations Board of Ontario.

ARTICLE 11 - SAFETY SANITATION AND SHELTERS

11.1 In co-operation within the Employer's overall program of accident control or prevention, the Steward or any employees shall report to the foreman for immediate investigation of an alleged unsafe condition, unsafe acts or violations of safety regulations for correction if required.
11.2 Employees shall be provided with adequate protection from falling material and other hazards on the job, in accordance with the appropriate Safety Acts. Adequately heated enclosures or cabs for men operating equipment shall be provided where as reasonably required.

11.3 Every employee shall, as a condition of employment, be required to wear an approved safety helmet a safety vest. The Employer agrees that such helmets may be purchased from him at cost. When the Employer makes mandatory the wearing of a specific helmet it will be released on a charge-out basis.

11.4 Every employee shall wear suitable protective footwear. Other personal protective equipment required under abnormal conditions or during inclement weather will be supplied by the Employer.

11.5 The Employer agrees to supply the necessary drinking water and proper sanitary facilities including flush toilets which shall be maintained in a clean and sanitary condition by the employees and the Employer as required under the occupational health and safety regulations.

11.6 Suitable adequately heated shelters for men to eat their lunch shall be provided by the Employer, with table and seating space, which shall be maintained in a clean and sanitary condition by the employees and Employer separate from any work area.

11.7 The Employer agrees to replace or insure any or all tools brought on the job at his request for the purpose of maintenance and repair of equipment. If an inventory of the tools is given to the Employer, on employment, by the employee; all deletions and additions will be recorded as they occur.

11.8 Operators of hoisting equipment shall disregard signals from anyone except Competent signalmen who shall be supplied by the Employer when required.

11.9 If an employee is injured and receives medical attention by a qualified physician, he will receive his regular wages and other benefits for the full day if in the opinion of the physician he is unable to return to work or if instructed by his foreman or superintendent, if another employee is required to leave the job site with the injured employee to assist him in getting medical attention, he too shall be paid his regular wages and other benefits. The Union office and the Employer shall be notified immediately of an accident to an employee.

11.10 Due to the safety factor involved, no employee shall work alone on any project where there is any possibility of accident and injury.

11.11 A safety Committee is to be established in accordance with the Occupational Health and Safety Act and Regulations for Construction Projects.
ARTICLE 12 - PAYMENT OF WAGES AND LAY OFF

12.1 (a) Wages shall be paid in cash or (direct deposit) or cheque at the option of the Employer and no later than Thursday of each week during the working hours. Employees will be paid every week as mutually agreed to, by the Employer and the Union.

(b) Accompanying each payment of wages shall be a statement identifying both the Employer and the Employee showing total hours marked "regular" & "overtime", the total earnings, the rate of pay, the amount of each deduction, the purpose thereof, the net earnings, and the amount of vacation pay as required by the Employment Standards Act.

12.2 If any one or more of the above requirements or parts thereof of this Article are violated, it shall be the privilege of the Union to immediately withdraw the right of the offending Employer's privilege to pay by cheque.

12.3 In the case of lay off, all employees shall be paid up to the date on the job site where practical; otherwise cheques and EI record of employment certificate shall be forwarded by registered mail to his last known address within the next pay period of the lay off. Notification to, or attempted notification of lay-off, to an employee on a Saturday, Sunday or Holiday shall not be considered proper notice unless the employee is working on such days. When laid off, employees shall be allowed sufficient time to clear up their personal and company properly on the job site. When employees who are laid off are not paid up to date on the job site and should the Employer fail to send such wages and or employment records as stated above, the Employer shall pay eight (8) hours pay at the regular hourly rate for each additional regular working day the employee is required to wait for his pay and records after giving such notice to the employee, and giving him eight (8) hours to correct such default.

12.4 In the event of a reduction of the working force, the member employer shall first lay off all probationary employees who have not become members of the Union; secondly to apply the principle of "last-one on...first-one-off" insofar as it is consistent to an efficient work force.

12.5 One (1) hour notice with pay shall be given by the Employer when an employee is temporarily laid off or discharged and the employee shall work such hour, in lieu of such notification the employee shall receive one (1) additional hours pay.

- PAGE 9 -
ARTICLE 13 - HOURS OF WORK AND OVERTIME

May 1, 2000 – April 30, 2001

13.1 (a) Sewers - Fifty (50) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday, and 7:00 am to 1:00 pm on Saturday with a maximum five (5) hours on Saturday.

Roads - Fifty-five (55) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday. Saturday 7:00 am to 1:00 pm with a maximum five (5) hours on Saturday.

General Excavating - Fifty (50) hours per week between the hours of 7:00 am and 1:00 pm Monday through Friday. Saturday 7:00 am to 1:00 pm with a maximum five (5) hours on Saturday.

Landscaping/Tug Boat Operations - Fifty-five (55) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday. Saturday 7:00 am to 1:00 pm with a maximum five (5) hours on Saturday.

Landfilling Operations - Fifty-five (55) hours week between the hours of 7:00 am to 7:00 pm Monday through Friday. Saturday 7:00 am to 1:00 pm with a maximum five (5) hours at straight time (Rates to be negotiated at a later date).

Residential Operations - Fifty-five (55) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday and 7:00 am to 1:00 pm on Saturday with a maximum of five hours (5) hours on Saturday. Residential work at 85% of the rate, 100% of the Benefits. This section does not cover any work normally performed by other Agreements with Local 793 and the Employer. If the operator works less than ten (10) hours at this rate, he will be paid the full rate. All current operators will be red circled and shall continue to be paid as per the H.C.A. including all increases.

13.1 (b) All work performed in excess of the daily (Monday through Friday 7:00 am and 7:00 pm or Saturday 7:00 am and 1:00 pm) hours shall be paid at the rate of time and one half (1.5).

May 1, 2001 – April 30, 2003

13.1 (c) Sewers - Fifty (50) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday.

Roads - Fifty-five (55) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday.
General Excavating - Fifty (50) hours per week between the hours of 7:00 a.m. and 7:00 p.m. Monday through Friday.

Landscaping/Tug Boat Operations - Fifty-five (55) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday.

Landfilling Operations - Fifty-five hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday. (Rates to be negotiated at a later date.)

Residential Operations - Fifty-five (55) hours per week between the hours of 7:00 am and 7:00 pm Monday through Friday. Residential work at 85% of the rate, 100% of the benefits. This section does not cover any work normally performed by other Agreements with Local 793 and the Employer. If the operator works less than ten (10) hours at this rate, he will be paid the full rate. All current operators will be red circled and shall continue to be paid as per the H.C.A. including all increases.

13.1 (d) All hours performed in excess of the daily (Monday through Friday 7:00 am and 7:00 pm) hours shall be paid at the rate of time and one half (1.5).

13.1 (e) If during the week, eight (8) or more hours are lost due to inclement weather, one (1) eight-hour shift may be made up on Saturday at straight rate of pay.

13.1 (f) Where the above hours are exceeded by reason of an emergency out of control of the Employer these excess hours shall be paid at straight time.

13.2 Overtime at the rate of double time shall be paid to all employees, except watchmen, for all work performed on Sundays and the following holidays. Should any of these Holidays occur on a Saturday or Sunday, such Holiday shall be observed on the Monday and / or Tuesday following unless changed by mutual agreement between the Employer and the Union.

New Year's Day        Good Friday        Victoria Day
Dominion Day          Civic Holiday       Labour Day
Thanksgiving Day      Christmas Day      Boxing Day

- PAGE 11 -
ARTICLE 14 - SHIFT WORK AND REPORTING TIME

14.1 The member employer reserves the right to institute shift work subject to Article 14.1.

DAY SHIFT - Five (5) consecutive shifts at regular day shift rate
2nd SHIFT - Five (5) consecutive shifts at forty (.40) cents per hour premium
3rd SHIFT - Five (5) consecutive shifts at fifty (.50) cents per hour premium above regular day shift rate

The Employer will meet with the Union prior to shift work being implemented on any job site.

14.2 (a) Any employee who reports as usual on any day Monday through Friday for work under this provision, unless directed not to report the previous day by his Employer shall receive a minimum of one (1) hours pay and shall remain at other work of his craft if requested by the foreman. Two Hours shall be paid to employees who must travel in excess of Sixty (60) road kilometres to the job site.

(b) If climatic conditions indicate the possibility that work could not commence the employee shall contact the Employer or the Employer Representative for such direction prior to reporting for work.

(c) Work break is to be ten (10) minutes duration midway in each half shift or as designated by management. Wherever possible this work break must be taken at the work station. Abuse of such privilege will result in such disciplinary action against offenders.

(d) In the event that any employee is called back for work of an emergency after completion of his regular shift, he shall be guaranteed a minimum of two (2) hours pay at the applicable rate.

ARTICLE 15 - TRAVEL TIME AND LIVING ALLOWANCE

15.1 There shall be a free zone extending to a twenty five (25) kilometre radius from Walker Road and Highway 401. To any employees supplying their own transportation any distance travelled in excess of the twenty five (25) kilometre zone, the Employer shall pay them at the rate of Thirty-Three (33) cents per kilometre both ways. The travel time for the County of Kent is to be the same as for Essex County but computed from Chatham City Hall with a free zone of twenty five (25) kilometres in radius.
15.2 Where an employee is required to work beyond one hundred and sixty (160) road kilometres from point of hire or dispatch, the Employer shall pay full expenses suitable and reasonable room and board based on a per day worked. Where the job is in excess of four hundred (400) road kilometres from point of hire or dispatch the Employer shall pay full expenses for suitable and reasonable room and board per calendar day.

15.3 Where transportation is supplied by the Employer the Employee shall receive travel time one way at straight time rate when he is requested to travel outside the County of Essex.

15.4 Where an employee is required to wait in excess of one half (1/2) hour for employer supplied transportation to leave the job at the completion of his work day, for any reason within the control of the Employer, he shall be paid any time in excess of the half (1/2) hour at straight time rates.

ARTICLE 16 - STUDENTS

16.1 Students may be hired at the ratio of one (1) to seven (7) regular members of the Union; pay union dues and no benefits and, receive wages at the rate of fifty (50%) percent of their classification with the consent of the Union. A students term shall not exceed four (4) months in any twelve (12) consecutive months.

ARTICLE 17 - SHOP CLAUSE

17.1 If any Employer has no productive contract work as an alternative to laying off employees he may retain one or more of them to perform work of a non productive nature. However, anything less than one (1) day shall be paid at regular rates of pay, anything in excess of one (1) day shall be at seventy five (75%) percent of the regular rate of pay and one hundred (100%) percent fringe benefits.

ARTICLE 18 - PRE-JOB CONFERENCE

18.1 On projects valued in excess of $250,000.00 the Employer where requested by the Union will hold a pre-job conference and inform the Union signatory to this agreement of the proposed list of subcontractors if he proposes to subcontract any portion of the job.
ARTICLE 19 - DELINQUENCY CONTROL

19.1 In the event an Employer fails to remit any contributions, deductions or remittances for the Benefit Plan, the Pension Plan, dues, fees, assessments for Training Fund and Industry by the fifteenth (15th) of the month due, pursuant to the "Union Security Clause," the Employer shall pay to the appropriate fund as liquidated damages and not as a penalty, an amount equal to two (2%) percent per month, deductions or remittances fifteen (15) days in arrears calculated from the date due provided the Employer has received five (5) days prior, written notice to correct such delinquency and has not done so.

19.2 With reasonable cause, the Trustees may request an Employer to submit to them within a stipulated period a certified audited statement of payroll contributions to these funds for a period not to exceed the period from the effective date of this Agreement until the audit takes place. Such statements shall reply to the questions submitted to the Employer by the Trustees.

19.3 If the Employer does not submit the certified audited statement as per the above paragraph, the Trustees may appoint an Independent Chartered Accountant to enter upon the Employer's premises during regular business hours to perform an audit of the Employers contributions or deductions to the required Benefit Plan. Where the Trustees appoint an auditor, the cost shall be borne by the appropriate Plan.

19.4 In the event such audit reveals that the Employer has failed to remit contributions in accordance with the provisions of this Agreement, the Employer shall within five (5) days of receipt of written notice from the Trustees, remit all outstanding contributions together with any liquidated damages required under the terms of this provisions and completed supporting contribution report forms as required by the Plan.

19.5 Where the Union has taken prior proceedings and obtained a decision against an Employer for delinquent contributions, deductions or remittances, the Union may require the said Employer to post a cash bond or certified cheque not to exceed Ten Thousand Dollars ($10,000.00) to be held in trust by the Trustees. In the event that the said Employer again becomes delinquent for contributions, deductions or remittances, the Union and/or the Trustees may apply the cash bond or certified cheque, or any portion thereof to satisfy the delinquency and require the Employer to replenish the cash bond or certified cheque in a higher amount. In the event the cash bond or certified cheque does not satisfy the full amount of the delinquency, the Union may take other proceedings to recover the balance.
19.6 If the Employer does not have any employees in it's employ, the Employer shall remit one initial nil report outlining all pertinent information.

19.7 If the Ontario Labour Relations Board or Board of Arbitration to which grievance alleging failure to make appropriate payments to a Trust Fund or an administrator as required by this Agreement is litigated and the Board determines that an Employer has violated the Agreement, then the Ontario Labour Relations Board of Arbitration shall also require the Employer to pay all reasonable costs incurred by the Union in prosecuting the grievance including but not limited to, all legal costs on a solicitor-and client basis, travel, meal and accommodation cost of all witness(es) and business representative (such as) conduct money, cost incurred in serving a summons, any expenses incurred by the Union pursuant to Section 126 (4) of the Labour Relations Act or otherwise, for the Board of Arbitration.
CLASSIFICATION AND WAGE RATES FOR MEMBERS OF LOCAL 793

The rate of hourly wages shall be set forth for all employees of the member employers engaged in the operating, repairing, maintaining, oiling or greasing on all power driven, power generating construction equipment coming within jurisdiction of the International Union of Operating Engineers as recognition by the Ontario Labour Relations Board.

WAGE SCHEDULE FOR ESSEX COUNTY

This Agreement shall in no way be construed to effect a reduction of wages or existing privileges of the employees covered by this Agreement where the Union has received voluntary recognition or certification of a new contractor.

A-1-A - Licensed operators operating all friction and brake hoisting plants with all attachments, all barge mounts.

1. CONTRIBUTION INFORMATION

Each Employer shall remit Employer Contributions in respect of benefit, pension, training and labour relations trust funds in accordance with the Collective Agreement by the Fifteenth day of the month following the month in which the hours have been worked, together with all supporting information, inclusive of social insurance numbers, hours worked, initiation fees and hourly working dues on a reporting form as designated.

2. VACATION PAY

Shall be at the rate of nine percent (9%) to include four percent (4%) for vacation pay, five percent (5%) in lieu of statutory holidays and to be paid to each employee, weekly.
3. WELFARE BENEFITS AND PENSION

The amount of monies to be paid into the Benefit Plan by each employer shall be effective May 1st, 2000, One dollar and ninety-nine cents ($1.99) plus P.S.T. for each hour worked by each employee in its employ.

Effective May 1st, 2001 this amount shall be increased to Two Dollars and Thirteen cents ($2.13) plus P.S.T. per hour worked by each employee in its employ.

Effective May 1st, 2002 this amount shall be increased to Two Dollars and Thirty-One cents ($2.31) plus P.S.T. per hour worked by each employee in its employ.

Effective May 1st, 2003 this amount shall be increased to Two Dollars and Forty-Six cents ($2.46) plus P.S.T. per hour worked by each employee in its employ.

The amount of monies to be paid into the Pension Plan by each employer shall be, effective May 1st, 2000 Three Dollars and Sixty Two cent ($3.62) for each hour worked by each employee in its employ.

Effective May 1st, 2001, this amount shall be increased to Three Dollars and Eighty-Two cents ($3.82) for each hour worked by each employee in its employ.

Effective May 1st, 2002 this amount shall be increased to Four Dollars and Two cents ($4.02) for each hour worked by each employee in its employ.

Effective May 1st, 2003 this amount shall be increased to Four Dollars and Twenty Two cents ($4.22) for each hour worked by each employee in its employ.

In all cases these contributions shall be remitted for all hours worked by each Employee covered by this Agreement, and shall not be paid directly to the employee in any event.

4. TRAINING FUND

The Union and the Employer agree to maintain and recognize the I.U.O.E. Local 793 Training Fund (Training Fund). The Training Fund shall be jointly trusted by an equal number of Trustees appointed by employer organizations and the Union.

Apprentices shall be indentured to the Training Fund or an Employer and the Training Fund shall have full authority over the training, education and movement of all Apprentices and the Union shall accept as members of the Union all apprentices who are approved by the Training Fund and indentured to the Training Fund or an Employer.

The Training Fund shall be responsible for the training education and upgrading of all apprentice and Operating Engineers.
Each Employer shall contribute Nineteen Cents (.19) per hour worked effective May 1st, 2000 to the Training Fund for each hour worked by each employee in his employ, to be submitted with the Pension and Welfare Fund Training Fund for the purpose of developing and implementing programs established by the Training Fund.

**Training Apprentices**

(a) Indentured apprentices shall be paid in accordance with the following schedule:
- 1st...2,000 hours - 50% of Licensed Journeyman Base Rate
- 2nd...2,000 hours - 65% of Licensed Journeyman Base Rate
- 3rd...2,000 hours - 80% of Licensed Journeyman Base Rate

The length of term and qualifications required to progress the next term shall be determined by the Training Fund.

(b) All Apprentices must register at the appropriate Union District office in their area and also on the master list at the Training Centre.

(c) Employers shall request apprentices through the Union District Offices who, in turn, will notify the Training School at 30 Commercial Road, Toronto. All dispatching of Apprentices shall be done from the appropriate Union District Office under the direction of the Training Fund.

(d) Present Oiler-Drivers will remain and as additional personnel are required required indentured apprentices will be dispatched to Employers in accordance with item (c) above.

(e) Employers will make every effort to keep Apprentices on a steady basis in order to complete their Apprenticeship hours and all related training as specified in the Training standards of the Training Fund.

(f) Each Apprentice will, as a condition of employment be required to complete apprenticeship hours and all related training as specified in the Training Standards of the Training Fund.

(g) An Apprentice who:
- (1) completes his hours of on-the-job training
- (2) completes all related training
- (3) successfully obtains his certificate of Qualification from the Ministry of Colleges and Universities will no longer be classified as an Apprentice and will then become a Junior Hoisting Engineer with the Employer under all the terms and conditions of the applicable schedule.

(h) All Apprentices must abide by the Rules and Regulations as spelled out in the Training Standards of the Training Fund.
Journeyman Trainee - Upgrade

Where a Journeyman wishes to upgrade himself to another machine or machines, and schooling is either not available or the employee does not wish to go to school, 1500 recorded log book hours of training are required and the employee shall be paid at the rate of 10% less than the rate for which the machine is classified.

Where a Journeyman wishes to upgrade himself to another machine or machines, and he does complete the training school for that machine or machines, 1200 recorded log book hours of training are required and the employee shall be paid at a rate of 5% less than the rate for which the machine is classified, subject to the Agreement between the Company and the Union.

In both cases the recorded hours are cumulated and will carry forward to other Employers if the employee moves.

Earthmoving Apprentices

(a) A new Apprentice entering the industry who has taken pre-employment training at the Training Institute will work for his first 1,000 hours at Fifty (50%) of the current base rate for the machine which he is operating.

(b) When an Apprentice has completed his first 1,000 hours plus all the related training provided for in the Training Standards of the Training Fund and after written assessment by the Employer and the Training Fund, each Trainee will be employed for the next 1,000 hours a Sixty (60%) of the current base rate for his classification.

(c) When an Apprentice has completed 2,000 hours plus all of the related training provided for in the Training Standards of the Training Fund, and after written assessments by the Employer and the Training Fund, each Apprentice will be employed for the next 1,000 hours at Seventy Five (75%) of the current rate for his classification.

(d) After completion of the 3,000 hours of on-the-job training and all related training as from time to time specified by the Training Fund the Apprentice will then fit into the work force at the rate provided in the Collective Agreement.

(e) Employers shall request Apprentices through the Union District Officers who, in turn will notify the Training Fund at P.O. Box 636, Morrisburg, Ontario KOC lXO. All dispatching of Apprentices shall be done from the appropriate Union District Office under the direction of the Training Fund.
RATIO OF APPRENTICES

The ratio of Apprentices employed by an Employer shall not be more than one (1) Apprentice up to five (5) Journeymen Operating Engineers or as authorized by the Union.

RECALL OF APPRENTICES

Apprentices laid off due to lack of work may be recalled by their respective Employer, through the Union District Office, at any time during a one year period provided the Apprentice was employed by the Employer for more than 90 working days and is available for work.

LOG BOOKS

Each Apprentice will be required to keep a daily work record with each Employer and a copy will be supplied to the Training Institute every 30 days. Failure to do so may result in disciplinary action by the Training Fund.

WORKING DUES

The Employer agrees to deduct from each employee in the bargaining unit, working dues at the rate of 2% on the straight time hourly rate for each hour worked by each employee.

EMPLOYER LABOUR RELATIONS FUND

Every Employer signatory to this Agreement shall pay to an Employer Labour Relations Fund, Five (5) cents per man worked plus all applicable taxes for all employees covered by this Agreement.

All the above contributions and deductions shall be submitted along with the information required on the proper forms to I.U.O.E. Local 793, Benefit Trust, Canadian Imperial Bank of Commerce, 180 Laird Drive, Toronto, Ontario M4G 3V7 by the fifteenth (15th) day of the month following the month for which the deductions were made.

The regular dues, fees and assessments so deducted shall be remitted on or before the fifteenth (15th) day of the month following the month in which such deductions were made.
AIR PRESSURE PREMIUMS FOR BOTH ESSEX AND KENT COUNTIES

Air Pressure premiums shall be as follows:
Above atmospheric:

<table>
<thead>
<tr>
<th>Weight</th>
<th>Premium</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>But not more than 14 lbs. over 14 not exceeding</td>

</tr>
</tbody>
</table>

If a tunnel bonus is to be instituted, the crane and compressor operator shall be guaranteed eight (8) hours pay with lunch period and in any event the Engineers Local 793 shall be consulted.

Equipment operators and/or crews shall not be replaced by working foremen, mechanics or those above the rank of working Foremen with purpose of overtime or reductions in crews unless voluntarily declined such work, In which case other regular operators or crews shall be given the first opportunity for such work, for production. In the event of a reduction in crews the company will apply the system as set out in the lay-off clause of this schedule.

CRAFT JURISDICTION

Mobile truck cranes, milling machine operators and pavers, Licensed tug boat operators, tug boat operators, bargemen, skip hoist, skyway and climbing type cranes, locomotive cranes, derricks, A-Frame and boom trucks, pitman and the like, bullmoose and Austin Western type cranes, air tuggers, power hoists, all clamps, shovels, backhoes, draglines, piledrivers, emcos, gradalls, mine hoists, chimney hoists, kubota/bobcat type excavators less than 65 horse power, kubota/bobcat type skid steer loader (all the attachments) less than 65 horse power, power operated sheeps foot compactors, overhead hoists and cranes, sidebooms, booms of all type mounted on tractors, trenching machines, self propelled drills, graders, scrapers, bulldozers, front-end loaders and similar types of equipment, rail engineers, dinky and the like, welding machines driven by internal combustion engines, mechanics, welders, serviceman on this type of equipment. Batching plants of all types, air compressors, temporary heating plants, well point systems, gas steam or diesel drive generators, and pumps of all kinds. Concrete pumps, mixers, mobiles, overhead loaders, asphalt spreaders, pneumatic propelled drills, compaction equipment, forklifts and ross carrier. Mucking machines, farm and industrial tractors with attachments. Oilier, truck crane drivers, mobile street sweepers, caisson boring machines,
asphalt rollers, firemen, tunnel boring machines. Dredges (suction and dipper) conveyors, regardless of motor power. Heating units such as Herman Nelson and Dravo, Rotary drills, tunnel motors, elevators of all types used in construction, temporary or permanent. Power driven Jumbo from setters. Self-propelled tar pipelining machines, towblades, highline cableways.

Deck engine, loaders, crushing plants, elevating pneumatic concrete placing machines, elevating grader. Highline cableway signal men, lift slab machine, motor patrols, pipebending machines, power screed, helicopter winch operators, survey crews (including Party Chief and those listed below the rank of Chief), truck drivers on/off road, haul maintenance, Serviceman helpers. All types of earth boring equipment including directional drills, landscapers, traffic control, parts running warehouseman, scalemen, timekeepers and all other classifications of equipment as listed in the Union’s Constitution.

No equipment shall be operated on a site by demonstrators without the Union being notified as a qualified Union Operator being present and paid for hours of said demonstration when the demonstration is for production work of more than two (2) days duration.

Where repairs are performed in the field by the Employer this Agreement shall apply and the Operator and the Apprentices of the equipment under repair will assist with the services and such repair on the job site. In the event it is not possible to employ the operator and the apprentices productively on such repairs they may be utilized on other work within the jurisdiction of this Agreement but they shall not replace another operator or apprentice.

HOISTING ENGINEERS - TOOLS REQUIRED

Hoisting Engineers will require to have in their possession the following list of tools:

1 tool box with lock and key
2 chisels, cold
1 hammer, ball peen medium or heavy
1 hack saw frame, 10" or adjustable
1 pliers, combination
2 punchers, pin or taper
2 screwdrivers, flat blade, medium or large
1 wrench, adjustable, crescent type, 10" or 12"
1 wrench, open end, set up to 1"
HEAVY DUTY MECHANICS

1 tool box (size to conform to departments' requirements
1 chisel, cold flat, set of 3 or more - up to 3/4"
1 drill, twist, set up to 1/4" - by 64ths.
1 gauge, thickness set
1 gauge spark plug set
1 hack saw frame .10" or adjustable
1 hammer, soft face
3 hammers, ball peen - light, medium and heavy
1 jackknife
1 pliers, diagonal cutting, 6"
1 pliers, battery
2 pliers, needle nose
1 pliers, brake spring
1 punch, centre
1 punch, taper, set
1 rule, steel 6"
1 scraper, carbon
1 screwdriver, flat blade, offset
1 screwdriver, flat blade, set of 6 – up to 12"
1 screwdriver, Phillips, set of 4 or 1 detachable head
1 tube cutter and flanging tool
1 wrench adjustable, crescent type 6"
1 wrench adjustable, crescent type, 12"
1 wrench, box end, starter and manifold
1 wrench, vise grip, 10"
1 wrench, pipe, 14"
1 wrench, socket, set, master, up to and including ½" sq.drive approximately 70 pieces.
1 wrench, socket, set, spark plug, approximately 6 pieces
1 wrench, open end, set 5/16" to 1-1/2"
1 wrench, box end, set 3/8" to 1-1/4"
1 wrench, tappet set approximately 6 pieces
1 wrench Allen Head, set, approximately 8 pieces
1 wrench, ignition, set, approximately 8 pieces
1 pliers, waterpump
1 punch, pin set
SURVEYORS

For all direct hiring encompassed by the following classifications this schedule shall apply, including all the appropriate articles outlined in the master portion of this Agreement.

ARTICLE 1 – CLASSIFICATIONS

1.1 Instrument Man – three (3) years experience minimum, including lay-out.

1.2 Sr. Rodman – two (2) years experience minimum, including construction lay-out.

1.3 Jr. Rodman – one (1) year experience minimum of survey practice.

1.4 Party Chief shall supervise a maximum of nine (9) men and this Party Chief will receive a maximum of $1.25 per hour above the rate of Instrument Man.

Article 2 - SURVEYOR’S SCOPE OF WORK

2.1 To collect by measurement all facts required for determining the same boundaries of, position of, shape of, contouring of, the job site.

2.2 The establishing and recording of all site limits, base lines, reference lines and datum lines required for all the establishment of all foundations, vessel, equipment, machinery, pipeline, pipe racks, monuments, bench marks and tie locations.

2.3 To lay-out (set out) on horizontal and vertical planes, all excavations, underground and above ground services, cast-in-place concrete, walls line, grid lines, batter boards, shims, centre and offset lines plumbing operations by use of transit, transfer of grade and/or lines requiring the use of transfer of grade and/or lines requiring the use of transit, transfer of grade and/or lines requiring the use of transit, transfer of grade and/or lines requiring the use of Dumpy level, automatic levels, laser equipment, electronic measuring devises, Theodolite and sonic measuring tapes.

2.4 Pre-engineering required to substantiate any existing locations or elevations.

2.5 Cross sectioning required for the establishments of quantities.

2.6 To check lines and grades prior to concrete pours including anchor bolts, imbedded items and inverts, subject to the provision set under the Classification.

2.7 To supply information for as-built drawings when required by survey methods.
ARTICLE 3 - DUTIES AND RESPONSIBILITIES

The following duties and responsibilities related thereto shall apply to all phases of survey work which the Employer undertakes to perform.

Party Chief – Shall take directions from the Employers assigned representative (s), shall be responsible for all survey work performed by his party including but not limited to, the field lay-outs on a horizontal and vertical lane, the proper location of formwork and imbedded items prior to replacement of concrete, the supervision and direction of all members of his survey party.

Instrument Man – Shall be able to perform lay-out under direction from the Employer’s representative (s) and/or Party Chief. He shall be able to set up, operate and make minor adjustments to surveying instruments, read plans and sketches and keep surveying records.
He shall be able to perform the duties of Rodman or Chainman.

Sr. Rodman – One who assists Instrument Man, is able to operate survey rod, chain and instruments accurately and efficiently, have some blueprint reading ability and knowledge of survey practice and methods of setting grades and lines.

Jr. Rodman – One who assists Sr. Rodman and Instrument Man and has knowledge of standard survey practice and methods.

ARTICLE 7 - WAGES, OVERTIME, REPORTING ALLOWANCE, TRAVEL AND BOARD ALLOWANCE AND EMPLOYER LABOUR RELATIONS FUND CONTRIBUTIONS.

7.1 Overtime, reporting allowance, travel and board allowance and Employer Labour Relations Fund contributions shall be paid as set out in local area Schedule.

7.2 It is understood and agreed that the terms and conditions of the Schedule apply only to employees performing Survey Work for whom the Union holds or acquires bargaining rights.
ACCEPTANCE OF AGREEMENT

BETWEEN: THE HEAVY CONSTRUCTION ASSOCIATION OF WINDSOR
(hereinafter referred to as the "COMPANY")

AND -

INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL 793
(herewith referred to as the "Union")

1. The undersigned Company has read and hereby approves and accepts
the Agreement entered into between the Heavy Construction Association
of Windsor, and the International Union of Operating Engineers, Local 793,
a copy of which is attached.

2. The undersigned Company further agrees to be bound by any amendments
or results of negotiations leading to said amendments between the
Heavy Construction Association of Windsor, and the International Union
of Operating Engineers, local 793.

IN WITNESS WHEREOF, we the undersigned Parties, hereby attach our hands and seals:

this 9 day of May 2001

SIGNED ON BEHALF OF SIGNED ON BEHALF OF

FOR THE COMPANY FOR THE UNION

Jim Lyons Richard K. Law

INTERNATIONAL UNION OF OPERATING ENGINEERS' APPENDIX

to the Collective Agreement

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

POWER COUNCIL OF UNIONS
(hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to employees in classifications covered by this Appendix, subject to the following:

The "Wages", "Shift Differential Rate", "Benefits" and "Overtime Rates" articles of this Appendix and the "Hours of Work" article of the Master Portion of this Agreement do not apply for driveway and parking lot construction and landscaping. When such work is undertaken, the wages, weekly hours of work, shift differential, benefits and overtime rates appropriate for the class and character of work shall be as established by the nearest influencing representative agreements between Local 793 of the Union and builders' exchanges, contractors' associations or contractors.

Article 1

CLASSIFICATIONS

1.1 Classifications for the electrical power systems sector shall be as set forth in the wage schedules, attached hereto.

1.2 If classifications are required that are not shown in the wage schedules they will be negotiated, as required.

1.3 Where the crew size is five (5) or less, the foreman may work with the tools on mutual agreement of the Employer and the Union.

Article 1.4 is applicable only to work covered by Addendum I - Modified Provisions

1.4 Working Foreman
When the crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade.
Article 2

WAGES

2.1 The base hourly rate(s) of pay for employees in the classifications covered by this Appendix shall be as set forth in the wage schedules, attached hereto.

2.2 Employers whose primary function is structural steel erection and/or mechanical installations shall employ an equipment foreman for every ten (10) members on site. Such equipment foreman shall receive the base hourly rate(s) of pay contained in the appropriate wage schedule of the Foreman’s Appendix.

2.3 The classification of subforeman shall be published in the wage schedules of this Appendix and the base hourly rates(s) shall $1.00 per hour above the base hourly rate(s) of the highest classification supervised.

2.4 Effective May 1, 2000 and until April 30, 2004 EPSCA will amend the wage schedules for the classifications referred to in Article 1 of this Appendix as set forth in the wage schedules, attached hereto.

2.5 Effective May 1, 1985 the base hourly rate(s) of pay for employees in the firefighter classifications set forth in the wage schedules, attached hereto, shall be established as follows:

### Pickering Project

<table>
<thead>
<tr>
<th>Classification</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firefighter - 0 to 6 mos.</td>
<td>Group 2(A) base hourly rate(s) of pay less $5.37 per hour</td>
</tr>
<tr>
<td>Firefighter - After 6 mos.</td>
<td>Group 2(A) base hourly rate(s) of pay less $4.49 per hour</td>
</tr>
</tbody>
</table>

### Darlington, Bruce and Atikokan Projects

<table>
<thead>
<tr>
<th>Classification</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firefighter - 0 to 6 mos.</td>
<td>Group 2(A) base hourly rate(s) of pay less $5.37 per hour</td>
</tr>
<tr>
<td>Firefighter - 6 to 12 mos.</td>
<td>Group 2(A) base hourly rate(s) of pay less $4.65 per hour</td>
</tr>
<tr>
<td>Firefighter - After 12 mos.</td>
<td>Group 2(A) base hourly rate(s) of pay less $3.91 per hour</td>
</tr>
</tbody>
</table>
Lakeview, Lambton, Nanticoke, Wesleyville and Thunder Bay Projects

Firefighter - 0 to 6 mos.  -  Group 2(A) base hourly rate(s) of pay less $5.37 per hour
Firefighter - After 6 mos.  -  Group 2(A) base hourly rate(s) of pay less $4.65 per hour

The wage rate differentials for firefighters, as set out above, have been established by the parties with due recognition of the existence of a wage rate relationship between firefighters and other classifications represented by the Union. During subsequent bargaining sessions, EPSCA and the Union will endeavour to ensure that this wage rate relativity, as it existed on May 1, 1984, will continue to be reflected in Operating Engineers' wage schedules.

Article 3

HOURS OF WORK
MISCELLANEOUS PROVISIONS

3.1 All employees of Employers whose primary function is structural steel erection who report for work at the beginning of a shift shall be provided with eight (8) hours' work per day. All employees of Employers whose primary function is mechanical installation who report for work at the beginning of a shift shall be provided with eight (8) hours of work per day, Monday to Thursday, and six (6) hours of work on Friday.

3.2 When overtime work is required as an extension of normal daily hours, a minimum of one-half (1/2) hour's work will be provided.

3.3 The weekly hours of work for operating engineers on tunnelling shall be forty (40) made up of five (5) days of eight (8) hours each, Monday to Friday.

3.4 Firefighters at Darlington GS will work a regular shift of twelve (12) hours in length, all paid at the straight-time rate; they will work an average of thirty-eight (38) hours per week over the schedule period. Firefighters at Darlington will have two (2) shifts per day, seven (7) days per week:

Day Shift Hours:  6:00 a.m. to 6:00 p.m.

Night Shift Hours:  6:00 p.m. to 6:00 a.m.
Article 4

SHIFT DIFFERENTIAL RATE

4.1 Employees required to work shift work, other than the regular day shift, shall receive a shift differential rate of one-seventh (1/7) times the base hourly rate(s) for normal scheduled shift hours worked, except as noted in 4.2 and 4.4 below.

4.2 Employees required to work shift work on the third shift of a three-shift operation shall receive a shift differential of one-fifth (1/5) for normal scheduled shift hours worked.

4.3 Shift scheduling for shift workers on boilers and pumps, tunnelling work and firefighters for normal scheduled shift hours worked on the second and third shifts will commence on Monday.

4.4 The shift differentials for all regular shift hours on the night shift (6:00 p.m. to 6:00 a.m.) for firefighters and stationary engineers (2nd and 3rd class) at Darlington Generating Station shall be fixed dollar amounts, as set forth in the wage schedules, attached hereto.

Article 5

OVERTIME RATES

5.1 Overtime rates are paid for work performed outside of normal hours as defined in the "Hours of Work" article of the Master Portion of this Agreement and for work performed on Saturday, Sunday and the Statutory Holidays listed in Article 15 of this Appendix.

When an employee is required to return to work without an eight-hour (8-hour) break, all work performed shall be paid for at the applicable overtime rate until such time as the employee receives an eight-hour (8-hour) break. This provision does not apply to a shift change.

5.2 Overtime rates of pay for employees in the classifications covered by this Appendix shall be as set forth in the wage schedules, attached hereto.

5.3 The overtime allotment system will provide for reasonable opportunity for union representatives as follows:

(a) overtime will first be offered to the operator of the machine required for overtime (for the purpose of interpreting Article 8.3 in the Master Portion for the Operating Engineers, the operator who normally works the specific piece of equipment through the week on the applicable shift is considered the crew);
(b) if the operator does not wish to work, where practical, overtime on a weekend shift will next be offered to a steward (Chief, if applicable), provided he is capable of performing the task;

(c) if the steward (Chief, if applicable), is not capable of performing the task or does not wish to work, another qualified job steward will be asked by management to work the overtime;

(d) if all the qualified job stewards decline the opportunity to work overtime, management has fulfilled the obligation to offer overtime work to Union Stewards and shall offer the overtime to any other capable operator.

Article 6

BENEFITS

6.1 The Employer agrees to pay into operative welfare, pension and supplementary unemployment benefit plans the amount specified for welfare, pension and supplementary unemployment benefits as set forth in the wage schedules, attached hereto, for employees covered by this Appendix during the time they are employed.

The Union agrees to supply the Employer with all information regarding the welfare, pension and supplementary unemployment benefit plans and also all administrative material that is required for the implementation of same.

6.2 Should the welfare, pension or supplementary unemployment benefit plan contributions recognized under this Agreement change during the term of this Agreement, which require an adjustment to the base rate, an adjustment will be made to the base rate. The total wage package will not be changed. Within three (3) weeks of receipt of an acceptable written notice of a change in the above-noted benefit plan contributions, the change will be implemented. The effective date will be the date of implementation.

6.3 In the event an Employer is more than fifteen (15) days in arrears of the requirement to forward contributions and/or deductions to the Trustees by the fifteenth of the month following, the Employer shall pay as liquidated damages and not as a penalty an amount equal to two (2%) percent (equivalent to 24% per annum) for each month or part thereof that the contributions and/or deductions are in default for greater than fifteen (15) days provided the Employer has received five (5) days' written notice to correct such default. The trustees may require a delinquent Employer to pay for the costs, legal or otherwise, of collecting the amount owing, as outlined in the operative benefit plan trust documents.
6.4 The Trustees of the Employee Benefit Plans referred to in this Collective Agreement shall promptly notify the Union of the failure by any Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the *Employment Standards Amendment Act, 1991* in relation to the Employee Wage Protection Program.

Article 7

**INCLEMENT WEATHER PAY**

7.1 When an employee engaged in work on power systems construction, site preparation and earth dams, reports at the beginning of a shift, but is unable to commence work because weather conditions are unsuitable, he shall receive two (2) hours' pay at the base hourly rate(s), or at the shift rate if on shift, or at the premium rate if on overtime, plus travel or room and board allowance where applicable, if the employee remains for two (2) hours at his place of work.

Article 8

**KEY TRADESMEN**

8.1 Employers may transfer key tradesmen from one location to another to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.

8.2 The number of key tradesmen to be transferred will be jointly determined at a pre-job conference provided for in the "Advance Notice" article of the Master Portion of this Agreement.

Article 9

**TRAVEL AND TRANSPORTATION**

9.1 **INITIAL EMPLOYMENT**

On recruitment of tradesmen whose regular residence* or place of recruitment, whichever is closer to the project, is between 80 to 161 radius kilometers from the project, the Employer shall pay $25.00 for the initial trip to the Project.

* As defined in *Article 17 or Article 18 of the Master Portion of this Agreement, whichever is applicable.*
9.2 ONTARIO RESIDENTS

On recruitment of tradesmen whose regular residence is beyond 161 radius kilometers from the project, the Employer shall pay mileage based on 25¢ per radius kilometer, plus an allowance for travel time equivalent to one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay for the initial trip to the project from the tradesman's regular residence or place of recruitment, whichever is closer to the project.

9.3 NON-ONTARIO RESIDENTS

On recruitment of tradesmen whose regular residence is beyond 161 radius kilometers from the project, the Employer shall pay the equivalent of the cost of public transportation, plus an allowance for travel time equivalent to one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay for the initial trip to the project from the tradesman's regular residence or place of recruitment, whichever is closer to the project.

9.4 To qualify for payment in 9.1, 9.2 or 9.3, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of the job, whichever is lesser.

9.5 On termination of employment due to a reduction of staff, an employee entitled to payment under 9.1, 9.2 or 9.3 shall be entitled to return expenses calculated in the same manner as in 9.1, 9.2 or 9.3 above for the return trip from the project to the tradesman's regular residence or place of recruitment, whichever is closer to the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.

9.6 TRANSFER

When transferring employees, the Employer shall pay the equivalent of the cost of public transportation for the initial trip to the project from the employee's most recent work location. In addition, the Employer shall pay an allowance for travelling time equivalent to the straight-time rate up to a maximum of eight (8) hours.

9.7 When an employee works continuously on a project which is beyond 483 kilometers from the employee's regular residence, the employee shall receive the equivalent of one return air fare from the nearest airport to the project to the nearest airport to the employee's regular residence, every sixty (60) calendar days. This allowance will only be paid to qualifying employees of Employers whose primary function is structural steel erection and/or mechanical installations.
Article 10

TOOLS

10.1 In accordance with the "Tools and Clothing" article of the Master Portion of this Agreement, employees shall be required to provide themselves with the ordinary hand tools of their trade as specified in the tool list, attached hereto. Employees may provide themselves with further hand tools of their trade provided a listing of their tools showing the valuation is filed with the Employer. All personal hand tools shall be appropriately marked as to ownership. The Employer's liability shall be limited to the replacement value of the tools on the attached tool list and the tool list provided by the employee.

10.2 Employers may supply additional tools and equipment to employees. Employees receiving such tools or equipment shall be responsible for them in accordance with the "Tools and Clothing" article of the Master Portion of this Agreement. Employees will immediately report the loss of any Employer supplied tools or equipment.

10.3 Power tools, torque wrenches and other gang tools, referred to in the "Tools and Clothing" article of the Master Portion of this Agreement, are tools which are issued to a foreman and are used by one or more members of the crew. Such tools are not identified on trades tool lists, nor are they the tools and equipment identified in 10.1 and 10.2 of this article.

Article 11

PROTECTIVE CLOTHING AND EQUIPMENT

11.1 Employees are required to wear protective clothing and use protective equipment for the work being done. When in the opinion of the Employer it is required, wet weather clothing including rubber boots shall be supplied by the Employer, subject to the provisions of 11.2.

11.2 The protective clothing and equipment covered in 11.1 of this article that is provided by the Employer shall be charged out to the employee and the employee shall be responsible for the return of such clothing and equipment to his Employer.

11.3 Adequate shelter will be provided to protect employees exposed to excessive heat, cold or inclement weather where there is a need for such protection.
Article 12

APPRENTICESHIP AND TRAINING PROGRAMS

12.1 The Employer agrees to pay into operative apprenticeship or training funds the amounts specified for apprenticeship or training as set forth in the wage schedules, attached hereto, for employees covered by this Appendix during the time they are employed.

The Union agrees to supply EPSCA with all pertinent information regarding these funds including all administrative material that is required for their implementation.

12.2 It is recognized and agreed that the IUOE Local 793 Training Fund is the operative apprenticeship and training body recognized under this Collective Agreement.

12.3 The Union recognizes the Employer's right to establish training programs to provide employees with special skills which are required in the electrical power systems sector and which are not provided by the Training Fund. Such programs shall be funded in such amounts as determined by the Employer and the Trustees of the Training Fund.

Where apprentice mechanics are employed, there shall not be more than one (1) apprentice for every five (5) journeymen.

12.4 Employers whose primary function is structural steel erection and/or mechanical installations shall assign an apprentice, oiler or oiler-driver to each unit on all conventional truck mounted cranes with a manufacturers' rating of 25 tons capacity and over, all crawler cranes with a manufacturers' rating of 50 tons capacity and over, all truck mounted hydraulic cranes with a manufacturers' rating of 35 tons capacity and over, and all rough terrain type cranes with a manufacturers' rating of 65 tons capacity and over.

12.5 Craning apprentices working under the terms of this Collective Agreement shall be indentured to the Employer or to the Union and the Union shall accept into its membership all such indentured apprentices.

12.6 Craning Apprentices

(a) The craning apprenticeship program shall consist of three (3) work terms each being 2000 hours in length, or of such terms and duration as approved by the Director of Apprenticeship.

Base hourly rates of pay for craning apprentices shall be in accordance with the following schedule and set out in the wage schedule, attached hereto:

1st term - 50% of the licensed journeyman base hourly rate
2nd term - 65% of the licensed journeyman base hourly rate
3rd term - 80% of the licensed journeyman base hourly rate
(b) In order to expedite the apprentices' entrance into journeyman status, the following policy shall apply:

(i) The apprentice must apply to the Apprenticeship Branch to write his examination as soon as possible after he has reached his total hours less 300, but no later than reaching his total hours plus 300.

(ii) The Employer will commence paying the journeymen's rate of pay the day after the Apprentice completes the required hours of on-the-job training, all required training and has shown the Employer proof that he has successfully obtained his Certificate of Qualification from the Ministry of Colleges and Universities.

12.7 Recall of Apprentices

Apprentices laid off due to lack of work may be recalled by a former Employer provided the apprentice was employed by the Employer for more than 90 working days in the previous twelve (12) months and is available for work. Recalls shall be processed through the local Union District Office.

12.8 For the purposes of continued and/or varied training, and upon mutual agreement of the Employer and the Union, apprentices may be transferred to any work location suitable for that purpose.

Article 13

R.P.A. QUALIFICATION

13.1 Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person who has achieved the full radiation qualification via the approved Ontario Power Generation Inc Training Program. This requires successful completion of the construction R.P.A. training and checkouts and the performance of R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the appropriate equivalent foremen's rates when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

13.2 In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers (R.P.A.) in sequence from the out-of-work list to the location from where they were laid off. Recalled Greenmen (R.P.A.) will perform sufficient Greenman work to maintain their skill level, or be laid off.
Article 14

VACATION PAY

14.1 The Vacation Pay rate shall be four (4) percent of vacationable gross earnings*. Payment shall be made weekly on the employee’s regular pay cheque.

A three (3) week leave of absence for the purpose of taking an annual vacation will be granted in the calendar year in which the employee completes one year of continuous service with the Employer. In special circumstances, where the work schedule permits, additional time off may be granted an employee. The additional time off will not be unreasonably denied.

Article 15

STATUTORY HOLIDAYS

15.1 Statutory Holiday pay rate shall be six (6) percent of vacationable gross earnings. Payment shall be made weekly on the employee’s regular pay cheque.

The Statutory Holidays recognized under this Agreement are:

- New Year’s Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year’s Day falls on a Saturday or Sunday, it shall be observed on either the preceding Friday or the following Monday.

For shiftworkers on boilers and pumps and firefighters, recognized holidays will be observed on the actual day on which the holiday occurs.

EPSCA reserves the right to change the day of observance of a Statutory Holiday when such a holiday falls on a Tuesday or Thursday.

* “Vacationable gross earnings” means pay for regular hours, overtime, premium pay, shift differential, lines and stations daily travel time, retroactive pay adjustments, reporting pay, inclement weather pay, call-in pay, Saturday and Sunday premiums and trade training, but does not include payment for initial and return travel.
Article 16

RECALL

NEW

16.1 The employer may recall former regular employees through the Union Office who have been absent from the employer up to twelve (12) months.

Regular employees shall be defined as employees who have been on the employer’s payroll for six (6) consecutive months or more.

The incorporated specific Statement of Settlement amendments to the International Union of Operating Engineers' Appendix of the Collective Agreement between The Electrical Power Systems Construction Association and The Power Council of Unions have been agreed to by the bargaining committees of the Operating Engineers and The Electrical Power Systems Construction Association. These proposed amendments are herewith recommended to the EPSCA Board of Directors and the Officers of the Council in accordance with Article 33.1 of the Master Portion of the Collective Agreement for approval and incorporation into the Operating Engineers' Appendix of the Collective Agreement.

Dated this 19th day of May, 2000.

For: The Operating Engineer Bargaining Committee

Phil Bertrand

For: The EPSCA Bargaining Committee

Barry Roberts

Approved for incorporation into the Operating Engineers' Appendix effective this 10th day of April, 2001.

For: The Electrical Power Systems Construction Association

ADDENDUM 1

MODIFIED PROVISIONS
OF THIS CONSTRUCTION APPENDIX

These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

Definitions:

Facility     Something that is built composed of multi-systems which serves a specific function

Function     Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the ‘Modified Provisions of this Construction Agreement’ apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.

All terms of this appendix shall apply to work covered by Addendum 1, with the exception of Article 1.3.
TOOL LIST

OPERATING ENGINEERS

1  Tool Box with lock and key
2  Chisels, cold
1  Hammer, ball peen, medium or heavy
1  Hack Saw Frame, 250 mm or adjustable
1  Pliers, combination
2  Punches, pin or taper
2  Screwdrivers, flat blade, medium or large
1  Wrench, adjustable, Crescent type, 250 mm or 300 mm
* 1  Wrenches, open end, set - up to 1"

HEAVY DUTY MECHANICS

1  Tool Box (size to conform to Department's requirements
1  Chisels, cold, flat, set of 3 or more - 6mm, 12 mm and 18 mm
1  Drills, twist, from 1.5 mm to 6.5 mm in 0.5 mm steps
1  Gauges, thickness, set
1  Gauges, spark plug set
1  Hack Saw Frame, 250 mm or adjustable
1  Hammer, soft face
3  Hammers, ball peen - light, medium and heavy
1  Jackknife
1  Pliers, combination, 150 mm
1  Pliers, diagonal cutting, 150 mm
1  Pliers, waterpump
1  Pliers, battery
2  Pliers, needle nose
1  Pliers, brake spring
1  Punch, centre
1  Punches, taper, set
1  Punches, pin, set
* 1  Rule, steel, 2 m
1  Scraper, carbon
1  Screwdriver, flat blade, offset
1  Screwdrivers, flat blade, set of 6; 150 mm up to 300 mm

* Measurement Sensitive
HEAVY DUTY MECHANICS (continued)

1 Screwdrivers, Phillips, set of 4 or 1 detachable head
1* Tape, rule, steel, 3 m
1 Tube Cutter and Flaring Tool
1 Wrench, adjustable, Crescent type, 150 mm
1 Wrench, adjustable, Crescent type, 300 mm
1 Wrench, box end, starter and manifold
1 Wrench, vise grip, 250 mm
1 Wrench, pipe, approximate length 350 mm
* 1 Wrenches, socket, set, master, up to and including 1/2" sq drive - approximately 70 pieces
1 Wrenches, socket, set, spark plug - approximately 6 pieces
1 Wrenches, open end, set - 5/16" to 1-1/2"
1 Wrenches, box end, set - 3/8" to 1-1/4"
1 Wrenches, tappet, set - approximately 6 pieces
1 Wrenches, Allen Head, set - approximately 8 pieces
1 Wrenches, ignition, set - approximately 8 pieces

* Measurement Sensitive
MEMORANDUM OF SETTLEMENT

BETWEEN

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

INTERNATIONAL UNION OF
OPERATING ENGINEERS'

Dated this 25th day of June 2004
It is agreed that the existing agreement between the parties which expires April 30, 2004 will be renewed with the following amendments:

GENERAL

There is agreement to create a “free standing” collective agreement. Master Portion, Foreman’s Appendix, O.E. Appendix and June 25, 2004 Memorandum of Settlement to be incorporated into one collective agreement.

Language to be modified where necessary - e.g. delete references to the “Power Council of Unions”

APPENDIX D  MODIFIED PROVISIONS

Modified Provisions to apply as follows:

Amend the agreement as necessary, e.g.

- Modified – Hours of Work to replace corresponding articles in main body of agreement (see changes below)
- Modified – Reporting Pay on 8 Hour and 10 Hour Shifts to replace corresponding articles in main body of agreement
- Modified – Meals on Overtime to replace corresponding articles in main body of agreement

ARTICLE 8  UNION STEWARDS

Amend 8.1 as follows:

Add to the end of the first sentence: “(except as noted below)”.

Add new paragraph:

“In cases where the Chief Steward is an employee of OPG, Bruce Power L.P. or Hydro One, he shall not be considered the Steward for the purposes of owner-only contracts. The Union shall have the right to appoint a Steward on such contracts who shall be considered the Steward with respect to employees of employers on such contracts. All Operating Engineers shall report to the Chief Steward prior to commencing work for the purpose of verifying membership and clearance to the appropriate project and/or contractor”
ARTICLE 12

UNION SECURITY

Add, where appropriate:

"Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. The effective date of such changed wage schedules, dues and remittances shall be the date of issuance."

Dues deduction amounts to be converted to a cents/hr amount and reflected on the wage schedule.

Union Dues for this Local are:

2% of the total wage package plus $20.25 per month effective July 1, 2003.
2% of the total wage package plus $20.75 per month effective July 1, 2005.

ARTICLE 14

PAY PROCEDURE

Add:

"Direct deposit to be implemented at the Employer's option."

ARTICLE 17/
SECTION 1

GENERATION PROJECTS DAILY
TRAVEL ALLOWANCE AND ROOM
AND BOARD

Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

- Upon signing – 4%
- May 1, 2005 – 2%
- May 1, 2006 – 2%
- May 1, 2007 – 4%
- May 1, 2008 – 2%
- May 1, 2009 – 2%
ARTICLE 18  
LINES AND STATIONS DAILY  
TRAVEL ALLOWANCE AND ROOM  
AND BOARD  

Travel rings and Board to be increased as follows:  

Travel:  
Upon signing and in each subsequent year – 50 cents  

Board:  
Upon signing and in each subsequent year - $1.00  

ARTICLE 20  
STANDOFF  

Amend language to indicate that proof of board (proper receipts) must be shown in order for subsistence allowance to be paid to an employee for the Standoff period.  

ARTICLE 26/  
SECTION 2  

HOURS OF WORK  

Amend 2\textsuperscript{nd} paragraph of Article 26/Section 2.1 as follows:  

(i)  
The weekly hours of work Monday to Friday inclusive shall consist of forty (40) hours for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.  

The weekly hours of work may be arrived at by having the employees work either:  

• four (4) consecutive ten-hour shifts,  
  Monday to Thursday or;  
• four (4) consecutive ten-hour shifts,  
  Tuesday to Friday or;  
• five (5) consecutive eight-hour shifts  

but not concurrently on the same work program.*  

Employees will not be moved from work program to work program to circumvent overtime. Disputes arising from this Article are subject to the grievance procedure.
Each Employer will notify the Local Union of the weekly hours of work for each work program* at the site.

Weekly hours of work will be established for a minimum period of two (2) weeks.

If an Employer intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.

* For the purposes of this section, a work program may be defined as work taking place on a site that could include the following:

- Outages,
- Specific contracted scopes of work,
- Various and different modifications in an operating plant where the owner dictates the hours of work, or
- Subcontracts for a prime contractor where the prime contractor dictates the hours of work.

(ii) Amend start time in 3rd paragraph of Section 2.1 to read 7:00 am.

(iii) The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way of the end of the day shift.

ADD "When members of the Operating Engineers are assigned to fire watch duties, they may commence work after the start of the rest of the crew. In these cases, normal scheduled hours of work beyond the quit time of the rest of the crew will not be subject to overtime premiums."

ARTICLE 2  WAGES

Upon signing $1.20
May 1, 2005 $1.10
May 1, 2006 $1.10

ICI increase/date for next three years.

Additional ICI parity payment of 1/3rd in years 4, 5 and 6 of the agreement.
Amend Article 2.6 as follows:

Wage rates to reflect one classification for all firefighters. Rate in all locations to be Group 4 minus $1.00 base wage rate

**WAGE SCHEDULES**

Add the following classifications to the wage schedule:

- Hydro Vac
- Self-erecting Cranes

- Group 4
- Over 10 ton Group 2A
- Under 10 ton Group 2B

**ARTICLE 33**

**TERM OF AGREEMENT**

Duration – Amend to read as follows:

This Agreement shall become effective May 1, 2004 and will expire on April 30, 2010.

**ADDITIONAL ITEMS**

RST issue – signing of letter on hold pending confirmation from EPSCA advisors.

**FOREMAN’S APPENDIX**

Amend Article 5 as follows:

Foreman’s differential: 10 cent increase per year
LETTER OF UNDERSTANDING

Between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

INTERNATIONAL UNION OF OPERATING ENGINEERS’

RE: Employment Practices

The Parties agree that existing practices available to Employers in the Power Sector will be maintained.

Dated this 25th day of June, 2004.

 EPSCA

 O.E.
LETTER OF UNDERSTANDING

Between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

AND

INTERNATIONAL UNION OF OPERATING ENGINEERS'

RE: Lines and Stations Mobility allowance

In recognition of the mobility requirements of those individuals working in the following classifications on Lines and Stations Projects; Commander II, Radial Boom Derrick Driver and Puller Tensioner, these employees will receive an additional 50 cents in each year of the agreement that will be added to the Board allowance payment.

Dated this 25th day of June, 2004.

EPSCA

O.E.
June 25, 2004

This agreement is conditional upon ratification by EPSCA. All terms and conditions will become effective upon date of signing and shall form the new agreement between the Parties.

Dated this 25th day of June, 2004 at Toronto, Ontario.

1 = per hour worked; (2) = per hour paid
Union Funds
Union Funds contain the following items:

| Welfare  | $2.66  | per hour paid |
| Pension  | $6.04  | per hour paid |
| $6.04    | per hour paid - effective May 1, 2005 |
| $6.04    | per hour paid - effective May 1, 2006 |
| Training | $0.50  | per hour paid |
| $0.50    | per hour paid - effective May 1, 2005 |
| $0.50    | per hour paid - effective May 1, 2006 |

* Welfare amount includes $0.05 for Bill 162 benefits.

Benefits Administration
All deductions, contributions and union dues, excluding the EPSCA Association fund, are to be sent to the following location:

International Union of Operating Engineers - Local 793
30 Commercial Road
TORONTO, ON
M4G 126

Union Dues
Union Dues are not included in Union Funds. Union Dues are to be deducted from the Base Hourly Rate.

Union Dues for this Local are:
- 2% of the Total Wage Package plus $20.25 per month
- 2% of the Total Wage Package plus $20.75 per month - effective July 1, 2005

Union Dues are to be remitted to the same location as that for Benefits Administration.

OVERTIME RATE

Power Systems Construction, Site Preparation and Earth Dams:
Mon - Fri = 2x (except for oiling and greasing)
Sat = 2x
Sun & Hol = 2x

Shift Workers on Boilers and Pumps:
2x the base hourly rate for all hours worked outside of normal hours in any one scheduled day of work and for all hours worked on the Statutory Holidays listed in the Master Portion of the Agreement, for all hours worked on Easter Sunday and for the 6th and 7th consecutive shifts worked.
Relief work for shift workers on boilers and pumps is paid at 1x if following shift worker fails to report for work. No more than one relief shift to be worked per day; no more than two relief shifts to be worked per week.
Firefighters at Nanticoke T.G.S.:
2x for all hours worked outside normal hours, for the 6th and 7th consecutive shifts worked, for all hours worked on Easter Sunday and for the Statutory Holidays listed in the Master Portion of the Agreement.

GEOGRAPHIC AREA: Hamilton-Wentworth(RM); that portion of Halton(RM) lying west of Hwy 25 and Bronte Road Niagara(RM); Haldimand-Norfolk(RM); Waterloo(RM); Counties of Brant, Dufferin, Grey and Wellington.

(1) = per hour worked; (2) = per hour paid

**Union Funds**

Union Funds contain the following items:

- **Welfare**
  - $2.66 per hour paid
  - $2.86 per hour paid - effective May 1, 2005
  - $3.06 per hour paid - effective May 1, 2006

- **Pension**
  - $6.04 per hour paid
  - $6.04 per hour paid - effective May 1, 2005
  - $6.04 per hour paid - effective May 1, 2006

- **Training**
  - $0.50 per hour paid
  - $0.50 per hour paid - effective May 1, 2005
  - $0.50 per hour paid - effective May 1, 2006

* Welfare amount includes $0.05 for Bill 162 benefits.
Benefits Administration

All deductions, contributions and union dues, excluding the EPSCA Association fund, are to be sent to the following location:

International Union of Operating Engineers - Local 793
30 Commercial Road
TORONTO, ON
M4G 1Z6

Union Dues

Union Dues are not included in Union Funds. Union Dues are to be deducted from the Base Hourly Rate.

Union Dues for this Local are:
- 2% of the Total Wage Package plus $20.25 per month
- 2% of the Total Wage Package plus $20.75 per month - effective July 1, 2005

Union Dues are to be remitted to the same location as that for Benefits Administration.

INTERNATIONAL BROTHERHOOD OF
TEAMSTERS' APPENDIX

to the

Collective Agreement

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

ONTARIO ALLIED CONSTRUCTION TRADES COUNCIL
(hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to employees in classifications listed in Article 1 of this Appendix, subject to the following:

The "Wages", "Benefits", "Shift Differential Rate" and "Overtime Rates" articles of this Appendix and the "Hours of Work" article of the Master Portion of this Agreement do not apply for driveway and parking lot construction. When such work is undertaken, the wages, benefits, weekly hours of work, shift differential rate and overtime rates appropriate for this work shall be as established by the nearest influencing representative agreements between locals of the Union and contractors' associations or contractors for construction work of a related nature.

Article 1

CLASSIFICATIONS

1.1 The Teamster classifications covered by this Appendix are divided into three groups as set out below:

GROUP 1

Driver - all vehicles except as listed in Groups 2 and 3 below
- bus
- farm tractor
- forklift up to and including 8 tons
Outboard Motor Boatman
Inboard Motor Boatman under 24 feet
Material Checker - Blanket Stores and Weigh Scales
Serviceman
Warehouseman to Start
Helper
Dispatcher

GROUP 2

Driver
- fully equipped line truck
- self-loading/off-loading boom or A-frame equipped truck
- truck with tag-along float
- truck with pole trailer
- cross-country vehicle (tracked and rubber tired articulated frame, such as Nodwell, Go-Tract, Foremost, Bombardier, Treefarmer)
- single unit, Euclid-Type excavation truck
- forklift over 8 tons
- truck with T3 pole trailer
- redi-mix

Warehouseman after 12 months

GROUP 3

Driver
- float
- tractor, semi-trailer
- belly-dump type, such as Euclid, DW20, DW21
- truck with T5 pole trailer
- Self-loading/off-loading Boom Truck (8 tons and over boom capacity)

Inboard Motor Boatman - 24 feet and over
Articulated Dump Truck

Note: Drivers operating a vehicle or a boat carrying explosives shall be paid the appropriate rate for vehicle/boat being operated, but in no case less than the Group 1 rate.

1.2 The Warehouseman classifications covered by this Appendix are as set out below:

Warehouseman after 12 months
Warehouseman to start
Helper

1.3 The Subforeman classification covered by this Appendix is as set out below:

Teamster Subforeman

Article 1.4 is applicable only to work covered by Addendum I - Modified Provisions

2
1.4 Working Foreman
When the crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade.

Article 2

WAGES

2.1 Wage rates for employees in the classifications listed in Article 1 of this Appendix shall be as set forth in the wage schedules, attached hereto, and will remain in effect until April 30, 2000.

2.2 Differentials for Teamster Groups are as follows:

<table>
<thead>
<tr>
<th>Group</th>
<th>Differential</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group 1</td>
<td>Base rate</td>
</tr>
<tr>
<td>Group 2</td>
<td>Group 1 base rate plus 35¢ per hour</td>
</tr>
<tr>
<td>Group 3</td>
<td>Group 1 base rate plus 60¢ per hour</td>
</tr>
<tr>
<td>Subforeman</td>
<td>Group 2 rate plus 50% of Foreman's differential</td>
</tr>
</tbody>
</table>

Article 3

SHIFT DIFFERENTIAL RATE

3.1 Employees required to work shifts other than the regular day shift shall receive a shift differential of one-seventh (1/7) or normal scheduled shift hours worked.

Employees required to work on the third shift of a three-shift operation shall receive a shift differential of one-fifth (1/5) for normal scheduled shift hours worked.

Article 4

OVERTIME RATES

4.1 Overtime rates are paid for work performed outside of normal hours as defined in the "Hours of Work" article of the Master Portion of this Agreement and for work performed on Saturday, Sunday and the Statutory Holidays listed in Article 13 of this Appendix.

4.2 Overtime rates of pay for employees in the classifications listed in Article 1 of this Appendix shall be as set forth in the wage schedules, attached hereto.

4.3 EPSCA will provide the Council with current wage schedules.
4.4 Stewards must be given the first opportunity to work overtime in accordance with Article 8.3 of the Master Portion.

Article 5

BENEFITS

5.1 All Employers agree to pay welfare and pension contributions on behalf of their employees to the operative benefit plans as designated by the Union. The amount(s) of welfare and pension contributions to be paid will be set out in the wage schedules, attached hereto.

5.2 The Union agrees to supply the Employer with all information regarding these welfare and pension plans and also all administrative material that is required for implementation of these payments.

5.3 Any changes in the welfare or pension plan contributions recognized under this Agreement will be confirmed, in writing, by the Union to EPSCA before such changes are to be put into effect. Within three (3) weeks of receipt of an acceptable written notice, such changes will be implemented. The effective date will be the date of implementation. Should welfare or pension plan contributions change during the term of this Agreement, then an adjustment may be made to the base rate. The total wage package will not be changed.

5.4 In the event an Employer is more than fifteen (15) days in arrears of the requirement to forward contributions and/or deductions to the Trustees by the fifteenth of the month following, the Employer shall pay as liquidated damages and not as a penalty an amount equal to two (2 %) percent (equivalent to 24 % per annum) for each month or part thereof that the contributions and/or deductions are in default for greater than fifteen (15) days provided the Employer has received five (5) days' written notice to correct such default. The trustees may require a delinquent Employer to pay for the costs, legal or otherwise, of collecting the amount owing, as outlined in the operative benefit plan trust documents.

5.5 The Trustees of the Employee Benefit Plans referred to in this Collective Agreement shall promptly notify the Union of the failure by any Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

Article 6

INCLEMENT WEATHER PAY
6.1 An employee who reports for work at the beginning of a shift and is unable to commence work due to inclement weather, will receive two (2) hours' pay at the applicable rate. To qualify, the employee must remain on the job site for two (2) hours unless excused earlier by an authorized representative of the Employer.

6.2 An employee who reports for and commences work but is unable to continue work due to inclement weather, shall receive two (2) hours' pay at the applicable rate or pay for the actual time worked for that shift, whichever is greater.

6.3 An employee who qualifies for inclement weather pay shall also receive travel or board allowance, if applicable.

Article 7

KEY EMPLOYEES

7.1 Employers reserve the right to transfer employees from one location to another to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.

7.2 The number of key employees to be transferred will be jointly determined at a pre-job conference provided for in the Master Portion.

Article 8

TRAVEL AND TRANSPORTATION

8.1 INITIAL EMPLOYMENT

On recruitment of tradesmen whose regular residence or place of recruitment, whichever is closer to the project, is between 81 to 161 radius kilometers from the project, the Employer shall pay $25.00 for the initial trip to the project.
8.2 ONTARIO RESIDENTS

On recruitment of tradesmen whose regular residence is beyond 161 radius kilometers from the project, the Employer shall pay mileage based on 25¢ per radius kilometer plus an allowance for travel time based on one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay for the initial trip to the project from the tradesman's regular residence or place of recruitment, whichever is closer to the project.

8.3 NON-ONTARIO RESIDENTS

On recruitment of tradesmen whose regular residence is beyond 161 radius kilometers from the project, the Employer shall pay the equivalent of the cost of public transportation plus an allowance for travel time based on one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay for the initial trip to the project from the tradesman's regular residence or place of recruitment, whichever is closer to the project.

8.4 To qualify for payment in 8.1, 8.2 or 8.3, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of the job, whichever is lesser.

8.5 On termination of employment due to a reduction of staff, an employee entitled to payment under 8.1, 8.2, or 8.3 shall be entitled to return expenses calculated in the same manner as in 8.1, 8.2, or 8.3 above for the return trip from the project to the tradesman's regular residence or place of recruitment, whichever is closer to the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.

8.6 TRANSFER

When transferring employees the Employer shall pay the equivalent of the cost of public transportation for the initial trip to the project from the employee's most recent work location. In addition, the Employer shall pay an allowance for travelling time at straight-time rates up to a maximum of eight (8) hours.

Article 9

TOOLS

9.1 Employers may supply tools and equipment to employees. Employees receiving such tools or equipment shall be responsible for them in accordance with the "Tools and Clothing" article of the Master Portion of this Agreement. Employees will be charged for tools which are lost and not reported immediately.

Article 10
PROTECTIVE CLOTHING AND EQUIPMENT

10.1 Employees are required to wear protective clothing and use protective equipment, as determined by the Employer, for the work being done.

When in the opinion of the Employer it is required, wet weather clothing including rubber boots will be supplied by the Employer subject to the provisions of 10.2. This shall not be unreasonably withheld.

10.2 The protective clothing and equipment, covered in 10.1 of this article, that is provided by the Employer will be charged out to the employee and the employee shall be responsible for the return of such clothing and equipment to his Employer.

Article 11

LAYOFF PROCEDURE

11.1 The layoff of employees covered by this Agreement shall, in general, be governed by the following:

(a) For the purpose of this article, there shall be three (3) groups of employees:
   
   (i) Drivers
   
   (ii) Warehousemen
   
   (iii) Helpers

(b) Seniority will be based on the length of continuous service with the Employer.

(c) In a layoff situation, seniority will only apply at the project or within the zone.

(d) In the event of a reduction of staff, the most junior employee in their respective group (Drivers, Warehousemen, Helpers) having the surplus will be laid off, assuming those remaining are capable and have the necessary skills and ability to satisfactorily perform the work to be done.

(e) Subforeman shall be laid off in their respective classifications (drivers, warehousemen or helpers).
Article 12
VACATION PAY

NEW
12.1 The Vacation Pay rate shall be four (4) percent of vacationable gross earnings*. Payment shall be made weekly on the employee's regular pay cheque.

A three (3) week leave of absence for the purpose of taking an annual vacation will be granted in the calendar year in which the employee completes one year of continuous service with the Employer. In special circumstances, where the work schedule permits, additional time off may be granted an employee. The additional time off will not be unreasonably denied.

Article 13
STATUTORY HOLIDAYS

NEW
13.1 The Statutory Holiday pay rate shall be six (6) percent of vacationable gross earnings. Payment shall be made weekly on the employee's regular pay cheque.

The Statutory Holidays recognized under this Agreement are:

- New Year's Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed on either the preceding Friday or the following Monday.

EPSCA reserves the right to change the day of observance of a Statutory Holiday when such a holiday falls on a Tuesday or Thursday.

* "Vacationable gross earnings" means pay for regular hours, overtime, premium pay, shift differential, lines and stations daily travel time, retroactive pay adjustments, reporting pay, inclement weather pay, call-in pay, Saturday and Sunday premiums and trade training, but does not include payment for initial and return travel.
The incorporated specific Statement of Settlement amendments to the International Brotherhood of Teamsters' Appendix of the Collective Agreement between The Electrical Power Systems Construction Association and The Ontario Allied Construction Trades Council have been agreed to by the bargaining committees of the Teamsters and The Electrical Power Systems Construction Association. These proposed amendments are herewith recommended to the EPSCA Board of Directors and the Officers of the Council in accordance with Articles 34.4 and 34.5 of the Master Portion of the Collective Agreement for approval and incorporation into the Teamsters' Appendix of the Collective Agreement.

Dated this 28th day of January, 1999.

Ron Burns
Matt Elliot
for the Teamsters

Neil Donnelly

ADDENDUM 1

MODIFIED PROVISIONS
OF THIS CONSTRUCTION APPENDIX

These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

Definitions:

*Facility* Something that is built composed of multi-systems which serves a specific function

*Function* Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the 'Modified Provisions of this Construction Agreement' apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.

All terms of this appendix shall apply to work covered by Addendum 1.
MEMORANDUM OF SETTLEMENT

Between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

And

INTERNATIONAL BROTHERHOOD OF TEAMSTERS

Dated this 10th day of July, 2000

The following are amendments agreed to by the Bargaining Committees of the International Brotherhood of Teamsters and the Electrical Power Systems Construction Association for the renewal of the Collective Agreement between the parties, which expires on April 30, 2000. The renewed collective agreement is effective the date of ratification.
HOUSEKEEPING

Amend various references to Ontario Hydro and Ontario Allied Construction Trades Council.

ARTICLE 10  WORK ASSIGNMENT

Add the following new paragraph to 10.2 (b):

“In the Electricity Production Zones when work falls within this criteria the EPSCA Office will send out a “Notification of Work” along with a copy of the original minutes of mark-up meeting(s) to the Local Unions prior to work commencing. This procedure shall not preclude the Union’s right to contest previously assigned work, if the work is in a Local Union jurisdiction other than the one it was marked up in.”

Amend the asterisked footnote to read as follows:

- For the purposes of this Article, Nanticoke, Lambton, Lakeview/Hearn, BNPD, Pickering, Darlington, Lines and Stations and the 5 Electricity Production Zones are each considered individual project sites.

ARTICLE 14  PAY PROCEDURE

Add:

“the employer may implement direct deposit pay by mutual agreement.”

ARTICLE 16  REPORTING PAY

Insert the following information:

Article 16 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 3 – Modified Provisions of this Construction Agreement.
ARTICLE 17  GENERATION PROJECTS DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

Amend Article 17.1 as follows:

June 1, 2000 - increase each travel ring by $1.00
May 1, 2001 - increase each travel ring by $0.50
May 1, 2002 - increase each travel ring by $0.50
May 1, 2003 - increase each travel ring by $0.50

Amend Article 17.2 (b) as follows:

June 1, 2000 - increase allowances by $2.00
May 1, 2001 - increase allowances by $2.00
May 1, 2002 - increase allowances by $2.00
May 1, 2003 - increase allowances by $2.00

Amend Article 17.2 (c) as follows:

June 1, 2000 - increase allowance by $2.00
May 1, 2001 - increase allowance by $2.00
May 1, 2002 - increase allowance by $2.00
May 1, 2003 - increase allowance by $2.00

Amend Article 17.2 (d) as follows:

June 1, 2000 - increase allowance by $3.45
May 1, 2001 - increase allowance by $3.00
May 1, 2002 - increase allowance by $3.00
May 1, 2003 - increase allowance by $3.00

ARTICLE 18  LINES AND STATIONS CONSTRUCTION DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

Amend Article 18.1 as follows:

June 1, 2000 - increase each travel ring by $1.00
May 1, 2001 - increase each travel ring by $0.50
May 1, 2002 - increase each travel ring by $0.50
May 1, 2003 - increase each travel ring by $0.50
Amend Article 18.3 (b) and 18.3 (c) as follows:

June 1, 2000 - increase allowance by $2.00
May 1, 2001 - increase allowance by $2.00
May 1, 2002 - increase allowance by $2.00
May 1, 2003 - increase allowance by $2.00

Add new Article 18.3 (d):

“When an employee's regular residence is more than five hundred (500) radius kilometers from the project, and the job or project is worked on a four ten (4x10) hour work week, the employee shall receive room and board allowance on a five day basis for a regular work week. If the employee is required to work an additional ten (10) hour shift beyond the normal four ten (4x10) hour shift, the employee will be entitled to room and board allowance for an additional ten (10) hour shift worked to a maximum of seven (7) days room and board in a week.”

**ARTICLE 23 MEALS ON OVERTIME**

Insert the following information:

Article 23 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

**For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 4 – Modified Provisions of this Construction Agreement.**

**ARTICLE 33 MODIFIED PROVISIONS OF THIS CONSTRUCTION AGREEMENT**

Make the following changes to this Article then delete this Article and move language to the new “Appendix D for Modified Provisions of this Construction Agreement”.

Amend Article 33.4 to read:

“All terms of this collective agreement shall apply to work covered by this Appendix, with the exception of Article 16 – Reporting Pay, Article 17 – Generation Projects Daily Travel Allowance and Room and Board, Article 23 – Meals on Overtime and Article 26 – Hours of Work.”
Make the following changes to Article 33.5 and then move to the new “Appendix D for Modified Provisions of this Construction Agreement” and re-title as Section 1 – Generation Projects Daily Travel Allowance and Room and Board.

Amend Article 33.5.1 as follows:

**Daily Travel Allowance**

- June 1, 2000 - increase each travel ring by $1.00
- May 1, 2001 - increase each travel ring by $0.50
- May 1, 2002 - increase each travel ring by $0.50
- May 1, 2003 - increase each travel ring by $0.50

Amend Article 33.5.2 as follows:

**Room and Board**

**Article 33.5.2 (b) and (c):**

- June 1, 2000 – increase allowances by $2.00
- May 1, 2001 – increase allowances by $2.00
- May 1, 2002 – increase allowances by $2.00
- May 1, 2003 – increase allowances by $2.00

**Article 33.5.2 (d):**

- June 1, 2000 – increase allowance by $3.45
- May 1, 2001 – increase allowance by $3.00
- May 1, 2002 – increase allowance by $3.00
- May 1, 2003 – increase allowance by $3.00

Make the following changes to Article 33.6 and then move to the new “Appendix D for Modified Provisions of this Construction Agreement” and re-title as Section 2 – Hours of Work.

Delete first paragraph of 33.6

Amend second paragraph of 33.6.1 to read:

“*The weekly hours of work for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts, either Monday –Thursday or Tuesday – Friday but not concurrently on the same project, or by having the employees work five (5) consecutive eight-hour shifts. Weekly hours of work will be established for a minimum period of thirty (30) days. If an employer, with the approval of the owner, intends to change the weekly hours of work, a minimum of fifteen (15) days written notice shall be sent to the Local Union.*"
Amend third paragraph of 33.6.1 to read:

"The start time for the day shift shall be 8:00 a.m. with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one (1) hour either way to coincide with the end of the day shift."

Add New:

APPENDIX D

MODIFIED PROVISIONS OF THIS CONSTRUCTION AGREEMENT

Move existing Article 33.1, 33.2, 33.3, 33.4 language to this Appendix.

Re-number and re-title existing Article 33.5 to read Section 1 – Generation Projects Daily Travel Allowance and Room and Board.

Re-number and re-title existing Article 33.6 to read Section 2 – Hours of Work.

Add new:

SECTION 3 – Reporting Pay on 8 Hour and 10 Hour Shifts.

"An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of a half shifts pay (4 hours or 5 hours) at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for any part of the first half of a shift and an additional half shifts pay (4 hours or 5 hours) will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Section that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

Notwithstanding that work is available and an employee is able to commence or continue work, the Employer may shut down a job to avoid the possible loss of human life because of an emergency situation such as H2S leaks, bomb threats, fire, etc., that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked."
SECTION 4 – MEALS ON OVERTIME

Scheduled Eight (8) Hour Shifts

When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of the first or second shifts or for more than three and one half (3 ½) hours beyond the normal quitting time of the third shift, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the base hourly rate of pay. This meal break will be taken following the first two (2) hours of overtime worked. After each additional four (4) is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided after the first two (2) hours of overtime worked, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first or second shifts.

The above-noted is not applicable to the first six and one half (6 ½) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the third shift.
Scheduled Ten (10) Hour Shifts

When an employee has not been notified the previous day that he will be required to work beyond his normal quitting time, prior to commencing the overtime work, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided prior to commencement of overtime work, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal.

The above-noted is not applicable to the first ten (10) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first and second shifts.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

ARTICLE 34  TERM OF AGREEMENT

Amend Article 34.1 to read:

“This Agreement shall continue in full force and effect from May 1, 2000 until April 30, 2004 inclusive, and thereafter it shall be considered automatically renewed for successive periods of two (2) years unless at least sixty (60) days prior to the end of any two (2) year period, either party serves written notice upon the other that it desires termination, revision or modification of any provision or provisions of this Agreement.”

Delete the balance of Article 34.

Re-number Article 34 to be Article 33.

APPENDIX B - 7 DAY COVERAGE - NUCLEAR SITES

Amend second paragraph to read:

These provisions would only apply to work performed on a Nuclear Facility and the work must be covered by the “Modified Provisions of this Construction Agreement”.

8
FOREMAN APPENDIX

Amend Article 5.1 (a) (i) to read: "$3.00 per hour above the journeyman rate."

WAGES

The following wage increases will be reflected as follows:

June 1, 2000    - $0.50
May 1, 2001    - $0.90
May 1, 2002    - $0.90
May 1, 2003    - $0.95

NEW ARTICLE: RADIATION PROTECTION

Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person who has achieved the full radiation qualification (Green) via the approved Ontario Hydro Training Program, plus has successfully completed the construction R.P.A. training and checkouts, also has performed R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the appropriate equivalent foreman’s rate when performing an R.P.A. function and will report to the Site Safety Unit. R.P.A. is a “qualification” and not a “trade function” irrespective of union or trade affiliation.

NEW ARTICLE: GREENMAN RECALL

In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers in sequence from the out of work list to the location from which they were laid off. Recalled Greenmen will perform only Greenman work and will not work with the tools as a Teamster.

ADD NEW SENTENCE TO ARTICLE 1.4:

“The foreman, if not already eligible to act as a working foreman during the normal scheduled hours of work, will not act as a working foreman on overtime.”

* A crew is defined as a foreman and the total number of tradespersons directly supervised
NEW ARTICLE: RECALL

The Employer may recall former employees who had previously been on the payroll of the Employer.

A member, at date of recall, must be in good standing in the Union and be registered as unemployed with the local union having jurisdiction where the work is to be performed. Before commencing work, the member must be given a referral slip. To qualify for recall a former employee must be requested within six (6) calendar months of termination. The former employee must have been on the payroll of the Employer for at least thirty (30) calendar days in order to be eligible for recall. In order to use this Recall article, an Employer must have previously worked under this Collective Agreement.
A new collective agreement will be comprised of the 1998 - 2000 OACTC Master Portion Collective Agreement, Teamsters’ Appendix and Foreman Appendix as amended by this Memorandum of Settlement.

This settlement represents all outstanding issues and amendments between the parties and this Memorandum of Settlement will be presented by the parties to their respective principals with a unanimous recommendation for ratification.

All monetary items are effective June, 1, 2000.

Dated at Toronto this 10th day of July, 2000

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

And

INTERNATIONAL BROTHERHOOD OF TEAMSTERS

EMPLOYMENT REFERRALS

It is agreed by the Parties to this understanding, that prior to any member being referred for employment under this agreement, the member must submit to a security check. Only members who successfully obtain security clearance will be referred for employment. Once a member has been hired on, they will receive an allowance of $50.00 on their first weeks pay cheque, in consideration of their time spent filling out the security clearance forms.

The union will be notified, as soon as possible, whether or not an individual has successfully obtained security clearance. This pre-clearance does not prohibit the Union from filing a grievance against the Employer on behalf of any member who is refused employment due to his/her failure to obtain security clearance.

Dated at Toronto, this 10th day of July, 2000.

HIRING AND MOBILITY REOPENER

The Union agrees that, in the event of legislation being introduced in the ICI sector that would put EPSCA at a disadvantage regarding hiring and mobility, they would reopen negotiations to deal with these issues. If the parties are unable to come to an agreement on hiring and mobility, EPSCA will be afforded the same hiring and mobility provisions that are provided in the ICI agreements.

OPERATIVE PLASTERERS' AND CEMENT MASON'S
INTERNATIONAL ASSOCIATION OF THE
UNITED STATES AND CANADA APPENDIX

The amendments contained in the Statement of Settlement, dated January 28, 1999 have been incorporated into the Cement Masons' Appendix in accordance with the "Term of Agreement" article contained in the Master Portion of this Agreement.
EPSCA / CEMENT MASONs

GENERAL NOTE

This Appendix distinguishes between two broad categories of work; namely, work that is covered by the “modified provisions” of this Appendix and work that is not. “Modified provisions” apply to all work on Lines & Stations and most work on existing generating sites. Following is a more detailed explanation:

The “Modified Provisions” of this Appendix will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:
   • a new facility which provides a new function
   • a new (i.e. additional) generating unit

Addendum 1 contains the “Modified Provisions of this Construction Appendix”. All terms of this appendix shall apply to work covered by Addendum 1, with the exception of Article 1 - Classifications, Article 4 - Overtime Rates, Article 8 - Key Tradesmen, Article 13 - Layoff Procedure and Article 14 - Union Stewards. The above Articles 1, 4, 8, 13 and 14 do not apply when working under the terms and conditions of the “modified provisions”, as these Articles are replaced by Sections 1 through 5 of Addendum 1.

When work does not fall within the scope of Addendum 1, all terms of this appendix, with the exception of Addendum 1, apply.

A chart to illustrate the above applications follows:

<table>

OPERATIVE PLASTERERS' AND CEMENT MASON'S
INTERNATIONAL ASSOCIATION OF THE
UNITED STATES AND CANADA APPENDIX

to the

Collective Agreement

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

ONTARIO ALLIED CONSTRUCTION TRADES COUNCIL
(hereinafter called the "Council")

As provided in the "Appendices" article of the Master Portion of the Collective Agreement, EPSCA and the Council have agreed to the following conditions to apply to employees in classifications listed in Article 1 of this Appendix.

Article 1

CLASSIFICATIONS

1.1 (a) The following is a list of Cement Mason classifications covered by this Appendix:

Cement Mason Subforeman
Cement Mason
Apprentice

(b) The following is a list of Plasterer classifications covered by this Appendix:

Plasterer Subforeman
Plasterer
Apprentice
(c) The following is a list of Masonry Restoration classifications covered by this Appendix:

Masonry Restoration Subforeman
Masonry Restoration Journeyman
Masonry Restoration Apprentice
Masonry Restoration Improver

1.2 The classifications referred to in Section 1.1 do not establish craft jurisdiction. Such jurisdiction is established in accordance with Articles 10 and 11 of the Master Portion of the Collective Agreement.

1.3 If additional classifications are required, they will be negotiated as appropriate for work in the electrical power systems sector.

1.4 **Working Foreman**
Where the crew size is five (5) or less, the foreman may work with the tools on mutual agreement of EPSCA and the local Business Manager.

**Article 2**

**WAGES**

2.1 Effective January 28, 1999 and until April 30, 2000 the rates of pay for employees in the classifications listed in Article 1 of this Appendix shall be as set forth in the wage schedules, attached hereto.

EPSCA shall provide the Council with the current wage schedules.

2.2 The rate for subforemen covered by this Appendix shall be the appropriate journeyman rate plus $1.20 per hour.

**Article 3**

**SHIFT DIFFERENTIAL RATE**

3.1 Employees required to work shift work, other than the regular day shift, shall receive a shift differential of one-seventh (1/7) for normal scheduled shift hours worked.

Employees required to work shift work on the third shift of a three shift operation shall receive a shift differential of one-fifth (1/5) for normal scheduled shift hours worked.

**Article 4**

2
OVERTIME RATES

4.1 Overtime rates are paid for work performed outside of normal hours as defined in the "Hours of Work" article of the Master Portion of this Agreement and for work performed on Saturday, Sunday and Statutory Holidays listed in Article 16 of this Appendix.

4.2 Overtime shall be paid at (1 1/2) times the basic hourly rate for the first two (2) hours of work performed outside of normal hours Monday to Friday as defined in the "Hours of Work". Overtime work performed in excess of the first two (2) hours Monday to Friday shall be paid at (2) times the basic hourly rate. Work performed on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix shall be paid at (2) times the basic hourly rate.

4.3 When overtime work is required, a minimum of one-half (1/2) hour's work will be provided.

Article 5

BENEFITS

5.1 The Employer agrees to pay into operative welfare, pension and supplementary unemployment benefit plans, whether in addition to the wage rates or deducted from the wage rates, for employees covered by this Appendix. The amounts shall be as set out in the wage schedules, attached hereto.

5.2 The Union agrees to supply the Employer with all information regarding the welfare, pension and supplementary unemployment benefit plans and also all administrative material that is required for the implementation of them.

5.3 Any changes in welfare, pension plan or S.U.B. contributions recognized under this Agreement will be confirmed in writing by the Union to EPSCA before such changes are put into effect. Within three (3) weeks of receipt of an acceptable written notice, such changes will be implemented. The effective date will be the date of implementation. Should the welfare or pension plan contributions change during the term of this Agreement, then an adjustment may be made to the base rate. The total wage package will not be changed.
5.4 In the event an Employer is more than fifteen (15) days in arrears of the requirement to forward contributions and/or deductions to the Trustees by the fifteenth of the month following, the Employer shall pay as liquidated damages and not as a penalty an amount equal to two (2%) percent (equivalent to 24% per annum) for each month or part thereof that the contributions and/or deductions are in default for greater than fifteen (15) days provided the Employer has received five (5) days' written notice to correct such fault. The Trustees may require a delinquent Employer to pay for the costs, legal or otherwise, of collecting the amount owing, as outlined in the operative benefit plan trust documents.

5.5 The Trustees of the Employee Benefit Plans referred to in this Collective Agreement shall promptly notify the Union of the failure by any Employer to pay any employee contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

Article 6

INCLEMENT WEATHER PAY

6.1 When an employee reports for work at the beginning of a shift and inclement weather is declared, an employee shall be entitled to the following payment unless notified not to report by his Employer:

(a) If not put to work, a minimum of two (2) hours' pay at the appropriate rate, providing he remains at his place of work for two (2) hours unless given his Employer's permission to leave;

OR

(b) If put to work, a minimum of four (4) hours' pay at the appropriate rate.

6.2 If inclement weather is declared during the shift, an employee shall receive a minimum of two (2) hours' pay at the appropriate rate,

OR

pay for the actual time worked for that shift, whichever is the greater.
Article 7

PREMIUMS

7.1 When an employee is required to work from a bosun chair or swing stage, more than ten (10) feet above a fixed, safe surface, the employee will receive an additional one dollar ($1.00) per hour for each hour worked.

7.2 Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person who has achieved the full radiation qualification (Green) via the approved Ontario Hydro Training Program, plus has successfully completed the construction R.P.A. training and checkouts, also has performed R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

Article 8

KEY TRADESMEN

8.1 Employers reserve the right to transfer tradesmen from one location to another to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear and hydraulic generation and transmission and transformation construction.

8.2 The number of key tradesmen to be transferred shall be determined at a pre-job conference identified in the "Advance Notice" article of the Master Portion.

8.3 Key tradesmen shall have the option to accept or reject a transfer.

8.4 In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers in sequence from the out of work list to the location from where they were laid off. Recalled Greenmen will perform sufficient Greenman work to maintain their skill level, or be laid off.
Article 9

TRAVEL AND TRANSPORTATION

9.1 ONTARIO RESIDENTS

On recruitment of tradesmen who live in Ontario but beyond 162 radius kilometers from the project, the Employer shall pay 20¢ per radius kilometer plus an allowance for travel time equivalent to one hour’s pay for each 81 radius kilometers of travel to a maximum of 8 hours’ pay for the initial trip to the project from where the tradesman lives or place of recruitment, whichever is closer to the project.

9.2 NON-ONTARIO RESIDENTS

On recruitment of tradesmen who live outside Ontario and beyond 162 radius kilometers from the project, the Employer shall pay the equivalent of the cost of public transportation plus an allowance for travel time equivalent to one hour’s pay for each 81 radius kilometers of travel to a maximum of 8 hours’ pay for the initial trip to the project from where the tradesmen live or place of recruitment whichever is closer to the project.

9.3 To qualify for payment in 9.1, and 9.2, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of his job, whichever is lesser.

9.4 On termination of employment due to a reduction of staff, an employee entitled to payment under 9.1, and 9.2, will be entitled to return expenses calculated in the same manner as in 9.1, and 9.2, above, for the return trip from the project. An employee whose employment terminates for any reason other than reduction of staff will not be eligible for return payment.

9.5 TRANSFER

When transferring employees, the Employer will pay the equivalent of the cost of public transportation for the initial trip to the project from the employee’s most recent work location. In addition the Employer will pay an allowance for travelling time at straight-time rates up to a maximum of 8 hours.

Article 10

TOOLS

10.1 In accordance with the "Tools and Clothing" article of the Master Portion of this Agreement, employees shall be required to provide themselves with the ordinary hand tools of their trade as specified in the Tool List, attached hereto.
10.2 Employers may supply additional tools and equipment to employees. Employees receiving such tools or equipment shall be responsible for loss or damages to such tools. Employees will immediately report any losses or damages to the Employer and the Employer shall assess the merits of each case prior to charging employees for such losses and damages.

10.3 Gang tools, referred to in the "Tools and Clothing" article of the Master Portion of this Agreement, are tools which are issued to a foreman and are used by one or more members of the crew. Such tools are not identified on trades tool lists, nor are they the tools and equipment identified in Sections 10.1 and 10.2 of this Article.

Article 11

PROTECTIVE CLOTHING AND EQUIPMENT

11.1 Employees are required to wear protective clothing and use protective equipment appropriate for the work being done. Where deemed necessary by the Employer on abnormally dirty work or for the safe performance of work, coveralls and gloves will be supplied.

11.2 Protective clothing and equipment and rainwear that is provided by the Employer will be charged out to an employee and the employee shall be responsible for the return of such clothing and equipment to his Employer.

Article 12

APPRENTICESHIP AND TRAINING PROGRAMS

12.1 The Employer agrees to pay into operative apprenticeship or training funds the amounts specified for apprenticeship or training as set forth in the wage schedules, attached hereto, for employees covered by this Appendix during the time they are employed.

12.2 The Union agrees to supply EPSCA with all pertinent information regarding these funds.

12.3 Training programs established by the Employer to provide skills required in the electrical power systems section shall be funded by reducing the Employer's contribution to the training fund in the specific locality where the training is taking place by an amount of money equivalent to the cost of such programs.

12.4 When employing apprentices, the provisions of the Ontario Apprenticeship and Tradesman Qualification Act pertaining to Cement Masons shall apply.

12.5 The Union agrees that for purposes of continuity of employment, the Employer may transfer apprentices to any work location or Project.
Article 13

LAYOFF PROCEDURE

13.1 New employees will be subject to a 60-day probationary period during which time their work performance and capability will be assessed. The Employer may terminate the employment of any probationary employee whose work performance and capability is deemed unsatisfactory. The provisions of 13.2 below will not apply during this 60-day probationary period.

13.2 The retention of employees covered by this Agreement shall be governed by the following, if capability and performance (including attendance and punctuality) are approximately equal:

(a) Availability of employment in their respective trade at the Project or work location.

(b) Length of continuous service with the Employer.

Article 14

UNION STEWARDS

14.1 Accredited Union Representatives shall inform the appropriate EPSCA Representative and the Employer of the steward in writing of the names of all stewards, one of whom shall be designated Chief Steward, as they are appointed and when they cease to act as stewards. A steward, other than a Chief Steward, shall exercise his duties only in respect to employees of his Employer. A Chief Steward, in order to carry out his duties in respect to employees of other than his Employer, shall first involve the EPSCA Representative.

A steward shall obtain permission from his immediate supervisor before leaving his work area for union business. Such permission shall not be unreasonably denied.

14.2 The appropriate Union shall receive written notice before the employment of a steward is terminated by his Employer, and provided the steward is able to perform the work required, he will be the last employee to be retained by his Employer in a layoff situation.

14.3 Where practical and when an additional person is required for a crew, the Chief Steward shall be given the first opportunity to work overtime providing he is qualified to perform the work. When the Chief Steward declines the opportunity to work overtime, he will appoint an acting union steward from the workers assigned to work the overtime.

14.4 No foreman or subforeman shall be permitted to act as a steward.
Article 15

VACATION PAY

NEW
15.1  The Vacation Pay rate shall be four (4) percent of vacationable gross earnings*. Payment shall be made weekly on the employee's regular pay cheque.

A three (3) week leave of absence for the purpose of taking an annual vacation will be granted in the calendar year in which the employee completes one year of continuous service with the Employer. In special circumstances, where the work schedule permits, additional time off may be granted an employee. The additional time off will not be unreasonably denied.

Article 16

STATUTORY HOLIDAYS

NEW
16.1  The Statutory Holiday pay rate shall be six (6) percent of vacationable gross earnings. Payment shall be made weekly on the employee's regular pay cheque.

The Statutory Holidays recognized under this Agreement are:

New Year’s Day  Civic Holiday
Good Friday  Labour Day
Easter Monday  Thanksgiving Day
Victoria Day  Christmas Day
Canada Day  Boxing Day

EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year’s Day falls on a Saturday or Sunday, it shall be observed on either the preceding Friday or the following Monday.

EPSCA reserves the right to change the day of observance of a Statutory Holiday when such a holiday falls on a Tuesday or Thursday.

* "Vacationable gross earnings" means pay for regular hours, overtime, premium pay, shift differential, lines and stations daily travel time, retroactive pay adjustments, reporting pay, inclement weather pay, call-in pay, Saturday and Sunday premiums and trade training, but does not include payment for initial and return travel.
The incorporated specific Statement of Settlement amendments to the Operative Plasterers' and Cement Masons' International Association of the United States and Canada Appendix of the Collective Agreement between The Electrical Power Systems Construction Association and The Ontario Allied Construction Trades Council have been agreed to by the bargaining committees of the Cement Masons' and The Electrical Power Systems Construction Association. These proposed amendments are herewith recommended to the EPSCA Board of Directors and the Officers of the Council in accordance with Articles 34.4 and 34.5 of the Master Portion of the Collective Agreement for approval and incorporation into the Cement Masons' Appendix of the Collective Agreement.

Dated this 28th day of January, 1999.

Carlos Catarino

for the Cement Masons

Neil Donnelly

for the EPSCA

Approved for incorporation into the Cement Masons' Appendix effective this 16th day of August, 1999.

ADDENDUM 1

MODIFIED PROVISIONS
OF THIS CONSTRUCTION APPENDIX

These provisions will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:
   • a new facility which provides a new function
   • a new (i.e. additional) generating unit

Definitions:

Facility Something that is built composed of multi-systems which serves a specific function

Function Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the ‘Modified Provisions of this Construction Agreement’ apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.

All terms of this appendix shall apply to work covered by Addendum 1, with the exception of Article 1 - Classifications, Article 4 - Overtime Rates, Article 8 - Key Tradesmen, Article 13 - Layoff Procedure and Article 14 - Union Stewards.
EPSCA/CEMENT MASON'S APPENDIX

CLASSIFICATIONS

1.1 (a) The following is a list of Cement Mason classifications covered by this Addendum:
   
   Cement Mason Subforeman
   Cement Mason
   Apprentice

(b) The following is a list of Plasterer classifications covered by this Addendum:
   
   Plasterer Subforeman
   Plasterer
   Apprentice

(c) The following is a list of Masonry Restoration classifications covered by this Appendix:
   
   Masonry Restoration Subforeman
   Masonry Restoration Journeyman
   Masonry Restoration Apprentice
   Masonry Restoration Improver

1.2 The classifications referred to in Section 1.1 do not establish craft jurisdiction. Such jurisdiction is established in accordance with Articles 10 and 11 of the Master Portion of the Collective Agreement.

1.3 If additional classifications are required, they will be negotiated as appropriate for work in the electrical power systems sector.

1.4 Working Foreman
Where the crew size is six (6) or less, including the foreman, the foreman may be required to work with the tools of the trade.
Section 2

OVERTIME RATES

2.1 On Monday to Friday inclusive, overtime work shall be paid at one and one-half (1-1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to maximum of 12 hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the base hourly rate.

2.2 Overtime work performed on Saturday, Sunday and the Statutory Holidays listed in Article 16 of this Appendix shall be paid at two (2) times the basic hourly rate.

2.3 When overtime work is required, a minimum of one-half (1/2) hour's work will be provided.

2.4 Where practical and when an additional person is required for a crew, the Chief Steward shall be given the first opportunity to work overtime providing he is qualified to perform the work. When the Chief Steward declines the opportunity to work overtime, he will appoint an acting union steward from the workers assigned to work the overtime.

Section 3

KEY TRADESMEN

3.1 Employers reserve the right to transfer tradesmen from one location to another to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear and hydraulic generation and transmission and transformation construction.

3.2 Key tradesmen shall have the option to accept or reject a transfer.

3.3 In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers in sequence from the out of work list to the location from where they were laid off. Recalled Greenmen will perform sufficient Greenman work to maintain their skill level, or be laid off.
Section 4

EMPLOYMENT REQUESTS

4.1 The Employer shall have the right to request Union members from that Local having jurisdiction for the geographic area by name, in writing, who shall be issued a referral slip by the Local Union. The number of employees so requested shall not exceed fifty percent (50%) of the employees supplied to the job by the Local Union, subject to the availability of the requested individuals.

Section 5

PROBATIONARY EMPLOYEES

5.1 New employees will be subject to a 60-day probationary period during which time their work performance and capability will be assessed. The Employer may terminate the employment of any probationary employee whose work performance and capability is deemed unsatisfactory.
OPERATIVE PLASTERERS' AND CEMENT MASONS' INTERNATIONAL ASSOCIATION OF THE UNITED STATES AND CANADA APPENDIX

TOOL LIST

Tools listed below must be supplied by the tradesman as required to perform assigned tasks.

CEMENT MASONS

1 Chalk line
1 Tool box
1 Set Kneeling pads
1 Set socket wrenches
1 Cutting pliers (bull nose)
1 1/8" radius fine edger
1 Sidewalk jointer
1 Sidewalk edger
* 1 Rubbing stone (carborundum)
* 2 Brushes (1 fine, 1 coarse)
* 1 Chipping hammer
  1 Bush hammer
* 1 Pointing trowel
  1 8" screwdriver
  2 Cold chisels
  1 Round nose chisel
* 1 Wooden float
* 1 Sponge or cork float
* 1 Metal float
* 1 Set of steel trowels (10-1/2", 12", and 14")

* Employer to replace when worn out on job.
PLASTERERS

1 Browning trowel
1 Finishing trowel
1 Gauging trowel
* 1 Pointing trowel
1 Hawk
1 Float
1 Paddle
1 Proper finishing brush
1 Set mitre tools
1 Set small tools containing a set of joint rods, a pointing tool, and a tool brush
1 Hammer
1 Chalk line
1 Level
1 Snips
1 Saw
1 Square
1 Rule
1 Axe
1 Set of broad knives
1 Gyproc knife
1 Tool bag or box

MASONRY RESTORERS

1 Club hammer
1 Brick trowel
1 Steel Float
1 2" Square Trowel
1 Pointing trowel
1 Tape measure
1 Wood Float
1 of each slick 1/4", 3/8", 1/2", 5/8", 3/4"

* Employer to replace when worn out on job.
MEMORANDUM OF SETTLEMENT

BETWEEN

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION (EPSCA)

AND

OPERATIVE PLASTERERS’ AND CEMENT MASON'S, INTERNATIONAL ASSOCIATION OF THE UNITED STATES AND CANADA PLASTERERS LOCAL 124

Dated this 21st day of July 2004
It is agreed that the existing agreement between the parties which expired April 30, 2004 will be renewed with the following amendments:

GENERAL

There is agreement to create a “free standing” collective agreement between EPSCA and the Operative Plasterers’ and Cement Masons’ International Association of the United States and Canada, Plasterers Local 124. The Master Portion, Foreman’s Appendix, Cement Mason/Plasterer Appendix, June 12, 2000 Memorandum of Settlement and July 21, 2004 Memorandum of Settlement will be incorporated into this one collective agreement.

Language to be modified where necessary e.g. delete references to the “Ontario Allied Construction Trades Council” and other unions (e.g. International Union of Operating Engineers).

Appendix D

MODIFIED PROVISIONS

Modified Provisions to apply to all work.

Amend the agreement as necessary. Replace corresponding articles in main body with Modified Provisions as follows:

- Delete General Note
- Generation Projects Daily Travel Allowance and Room and Board
- Hours of Work
- Reporting Pay on 8 Hour and 10 Hour Shifts
- Meals on Overtime

ARTICLE 12

UNION SECURITY

Add, where appropriate:

"Dues deductions to be based on cents per hour worked"
Add, where appropriate:

"Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. The effective date of such changed wage schedules, dues and remittances shall be the date of issuance."

Note: see Attached Statement of Understanding for clarification.

ARTICLE 14

PAY PROCEDURE

Add:

""Direct Hire" employees of the three owners (Bruce Power, Ontario Power Generation and Hydro One) to be paid weekly or bi-weekly at the Employer's option. Employees of contractors will continue to be paid weekly.

"For Direct Hire" employees of the three owners (Bruce Power, Ontario Power Generation and Hydro One) direct deposit to be implemented at the Employer's option.

ARTICLE 20

STANDOFF

(i) Amend 2nd paragraph of Article 20 as follows:

"The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel will be paid to an employee for the Standoff period. Subsistence allowance will only be paid if the employee is specifically directed by the employer to maintain existing accommodation near the work location."

(ii) Modify 20.2 per the above paragraph

(iii) Modify last sentence of Article 20.3 per the above paragraph
ARTICLE 17/Appendix D

GENERATION PROJECTS DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

<table>
<thead>
<tr>
<th>Date</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>May 1, 2004 – 4%</td>
<td></td>
</tr>
<tr>
<td>May 1, 2005 – 2%</td>
<td></td>
</tr>
<tr>
<td>May 1, 2006 – 2%</td>
<td></td>
</tr>
<tr>
<td>May 1, 2007 – 4%</td>
<td></td>
</tr>
<tr>
<td>May 1, 2008 – 2%</td>
<td></td>
</tr>
<tr>
<td>May 1, 2009 – 2%</td>
<td></td>
</tr>
</tbody>
</table>

ARTICLE 26/ App D Sect 2

HOURS OF WORK

Amend 2nd and 3rd paragraph of Section 2.1 as follows:

(i) Amend 2nd and 3rd paragraph of Section 2.1 as follows:

“The weekly hours of work for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts, either Monday – Thursday or Tuesday – Friday, or by having the employees work five (5) consecutive eight-hour shifts. Weekly hours of work will be established for a minimum period of two (2) weeks. The Employer will notify the Local Union of the weekly hours of work for each work program at the site. If an employer, with the approval of the owner, intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.”

The start time for the day shift shall be between the hours of 7:00 am to 9:00 am. The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way of the end of the day shift. The Employer will notify the Local Union of its start times in advance of the work commencing.”

ADD “Trades assigned to fire watch duties may commence work after the start of the rest of the crew. In these cases, normal scheduled hours of work beyond the quit time of the rest of the crew will not be subject to overtime premiums.”

ADD “Shift differential will not be paid on overtime hours.”
ARTICLE 31

RADIATION WORK

(i) Add the following:

Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person (Greenman) who has achieved the full radiation qualification via (i) the approved Ontario Power Generation Inc. and/or Bruce Power Training Program, (ii) has successfully completed the construction R.P.A. training and checkouts, and (iii) has performed R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

The Employer will select for Greenman training only those employees who are members of the Local Union for the Project.

R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

In the case of a recall to work, Employers reserve the right to recall qualified Greenmen in sequence from the out-of-work list to the location from where they were laid off. Recalled Greenmen will perform sufficient Greenman work to maintain their skill level.

ARTICLE 34

TERM OF AGREEMENT

Duration – Amend to read as follows:

This Agreement shall become effective May 1, 2004 and will expire on April 30, 2010.

WAGES

- Upon Ratification $1.20
- May 1, 2005 $1.10
- May 1, 2006 $1.10

IC1 increase/date for years 4, 5 and 6.
Classifications

The following classifications will be added to the Wage Schedules:

- Fireproofer
- Drywall Taper/Finisher

Article 13

HIRING AND MOBILITY

The Employer shall have the right to request up to fifty (50) per cent name hire from the Local Union Hall.

Employers shall have the right to move existing staff from site to site across the province.

The parties agree that the “fan out” provisions in Article 13.6 (b) require the local union to prioritize the referral of qualified members on the basis of proximity to the work site. Those who live closest are referred first. Members referred from outside the geographic area of the local union are not eligible for Board allowance, unless they have been name hired or transferred at the request of an employer.
Statement of Understanding

This letter will clarify the intent and understanding behind the application of Article 12, where in the Memorandum of Settlement dated July 21, 2004 the parties have agreed to "remittance windows" for notifying EPSCA of remittance changes (see Article 12, Section  ).

The timing of the windows was with a view to attempting to implement changes as close as possible to January 1st (November window) and May 1 (April window). EPSCA will make every attempt to implement requested changes on these dates. The parties recognize that the earlier in the window that changes are requested, the greater the likelihood of meeting these timelines.

Dated this ________________, 2004.

For: ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

FOR: OPERATIVE PLASTERS' and CEMENT MASON'S INTERNATIONAL ASSOCIATION of the UNITED STATES and CANADA, PLASTERERS LOCAL 124
The parties agree to recommend this settlement for ratification.

Dated this 21st Day of July, 2004 at Ottawa, Ontario.

For: ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

FOR: OPERATIVE PLASTERS’ and CEMENT MASONS’ INTERNATIONAL ASSOCIATION of the UNITED STATES and CANADA, PLASTERERS LOCAL 124

COLLECTIVE AGREEMENT

between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

and the

INTERNATIONAL ASSOCIATION OF BRIDGE,
STRUCTURAL, ORNAMENTAL AND REINFORCING
IRON WORKERS

May 1, 2004 - April 30, 2010
This Collective Agreement distinguishes between two broad categories of work; namely, work that is covered by the “modified provisions” of this construction agreement and work that is not. “Modified provisions” apply to all work on Lines & Stations and most work on existing generating sites. Following is a more detailed explanation:

The “Modified Provisions” of this Construction Agreement will apply to:

(a) all work on Lines and Stations, and

(b) all work on existing generating sites except the construction of:
   • a new facility which provides a new function
   • a new (ie. additional) generating unit

Article 41 - contains the “Modified Provisions of this Construction Agreement”. All terms of this collective agreement shall apply to work covered by Article 41, with the exception of Article 23 - Overtime Rates. Article 23 does not apply when working under the terms and conditions of the “modified provisions”, as it is replaced by Article 41.4.

When work does not fall within the jurisdiction of Article 41, all terms of this agreement, with the exception of Article 41, apply.

A chart to illustrate the above applications follows:

<table>

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

(hereinafter called EPSCA)

and the

INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL, ORNAMENTAL AND REINFORCING IRON WORKERS

(hereinafter called the Union)

* * * * *

WITNESSETH

WHEREAS EPSCA is an Association formed to represent all Employers engaged in construction industry work in the electrical power systems sector in collective bargaining and on their behalf enter into collective agreements covering those of their employees in the bargaining unit as hereinafter defined; and

WHEREAS the Union is affiliated with the American Federation of Labour - Congress of Industrial Organizations and has in its membership competent, skilled and qualified journeymen and apprentices to perform work coming within the trade and craft jurisdiction; and

WHEREAS the Association and the Union desire to mutually establish and stabilize wages, hours and working conditions for journeymen and apprentices employed by Employers within the electrical power systems sector of the construction industry, and further, to encourage closer cooperation and understanding between the Association and the Union to the end that a satisfactory, continuous and harmonious relationship will exist between the parties to this Agreement;

NOW THEREFORE, the Association and the Union mutually agree that the working conditions as set out below shall be applicable throughout the Province of Ontario.
Article 1

RECOGNITION

1.1 EPSCA recognizes the Union as the exclusive bargaining agency for a bargaining unit as defined in Section 1.4 engaged in

(i) all construction industry work under the responsibility of Design and Construction Branch (including Generation Projects Division and Transmission Systems Division),

(ii) all Major* construction industry work which is tendered/contracted for other than the Design and Construction Branch and,

(iii) work performed by the Design and Construction Branch for any Operations branch of Ontario Power Generation Inc (OPGI), Bruce Power LP and Ontario Hydro Services Company (OHSC) [formerly Ontario Hydro] where it has been determined by that Operations branch that there does not exist internally the expertise or the current staff to perform the work.

This work shall be performed in the Province of Ontario on Ontario Power Generation Inc (OPGI), Bruce Power LP and Ontario Hydro Services Company (OHSC) property [formerly Ontario Hydro] for the bulk power system, save and except the building of commercial-type office facilities at urban locations remote from operating facilities. The work encompasses:

- construction of new facilities
- additions to existing facilities
  - modifications
  - rehabilitation
  - reconstruction of existing facilities

For the purpose of clarity, the bulk power system comprises generating stations, hydraulic works, heavy water facilities, transmission lines (voltages over 50 kV) and transmission stations, microwave and repeater stations.

1.2 The Union recognizes EPSCA as the sole and exclusive collective bargaining agency for all of the Employers covered by this Agreement, and in all matters pertaining to the administration of this Collective Agreement.

* The definition of Major described in (ii) above and any issues arising out of the interpretation of Major shall be dealt with in an attached Letter of Understanding.
1.3 The term "employee" shall include all employees of the Employers in the classifications as set out in Section 1.4 below.

1.4 The bargaining unit under this Agreement shall comprise the following classifications:

** IRON WORKERS **
Foreman
Subforeman

** Journeyman Iron Worker **
Rigger
Industrial Door Mechanic

1.5 The term "Employers" shall include individual members of EPSCA and any company, partnership, sole proprietorship, joint venture, contractor, subcontractor or any person who is bound by the terms and conditions of this Agreement.

1.6 The classifications referred to in Section 1.4 do not establish craft jurisdiction. Such jurisdiction is established in accordance with Article 6 of this Collective Agreement.

** This classification includes, but not limited to, the following job titles:

Machinery Mover
Window Mechanic
Precast Erector
Pile Driver
Ornamental Miscellaneous
Steel Erector
Tower Crane Erector
Finisher (Window and Curtain Wall) Installer
Sheeter

Layout Man
Field Fabricator
Structural Erector
Instrument Surveyor
Welder
Apprentice
Fence Erector
Fence Erector Helper A
Fence Erector Helper B

excepting those described hereunder:

(i) Employees as set out in Section 1.4 above, employed by an Employer signatory to the National Agreement for Canada, Stacks - Chimneys - Silos, when performing work covered by the scope of that Agreement.
Article 2

EXECUTIVE COMMITTEE

2.1 To advance harmonious relations between EPSCA, the Employers, the Union, and the employees, the parties shall each appoint an Executive Committee. The Committees shall meet together at least annually to review matters associated with the administration of this Collective Agreement with the intent of achieving uniformity of application of this Agreement wherever employees are working in the Province. This Committee shall consist of not more than six (6) members from each party.

Article 3

ACCREDITED UNION REPRESENTATIVES

3.1 The Senior Representative of the Union will designate Local Union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two (2) representatives from the Union for each Project and suitable number for each Lines and Stations Construction Zone. The Union will notify the General Manager of EPSCA in writing of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Upon entering the job site, such representatives after identifying themselves to the EPSCA representative and the authorized representative of the Employer, will be free to observe the progress and conduct of the work and to conduct normal Union business. The Union undertakes that these representatives will not hinder or interfere in any way with the said work.

Article 4

UNION STEWARDS

4.1 The Accredited Union Representative shall inform the appropriate EPSCA Representative in writing of the names of all stewards as they are appointed and when they cease to act as stewards. There shall not be more than one (1) steward per Employer unless the Employer and Union mutually agree that more stewards are required. A steward shall exercise his duties only in respect to employees of his Employer. A steward shall obtain permission from his immediate supervisor before leaving his work area for Union business. Such permission shall not be unreasonably denied. No Foreman or Subforeman shall be permitted to act as a Steward.
The Accredited Union Representative shall inform the appropriate EPSCA Representative in writing of the name of one (1) steward who will represent the Union at stewards' meetings.

4.2 The steward shall be supplied by his Employer with a list of employees hired, discharged and to be laid off.

4.3 In the event of a work stoppage or threat of a work stoppage, or any other employee activity prohibited by this Agreement, affected stewards, in keeping with their responsibilities, as it is incumbent upon all Union representatives, shall immediately do all in their power to ensure that the prohibited action of the employees is prevented or stopped.

4.4 The Union shall be given written notice before a steward is released by the Employer, and under normal conditions, the steward will be the last employee retained by the Employer in a layoff situation, provided the steward is able to perform the work required.

4.5 A Union steward will not be transferred to another project unless mutually agreed to by the Employer and the Accredited Union Representative.

4.6 A steward shall be given the first opportunity to work overtime. When a crew not containing a steward is required to work overtime, one (1) member of the crew will be replaced by a steward in order that a steward may be present for overtime hours worked.

Article 5

ADVANCE NOTICES

5.1 EPSCA will advise the Union of all new construction work coming under the scope of this Agreement for the construction field forces of the Employers.

Upon the request of the Union, EPSCA will convene a pre-job conference before work commences to discuss the preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the Project.
Article 6

WORK ASSIGNMENT

6.1 The Jurisdiction of the Unions shall be that jurisdiction established by agreements between International Unions claiming the work or Decisions of Record recognized by the AFL-CIO for the various classifications and the character of work performed, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.

6.2 A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of this markup process is to indicate to the Union the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes. In the Electricity Production zones when work falls within this criteria the EPSCA Office will send out a “Notification of Work” along with a copy of the original minutes of mark-up meeting(s) to the Local Unions prior to work commencing. This procedure shall not preclude the Unions’ right to contest previously assigned work, if the work is in a Local Union jurisdiction other than the one it was marked up in.

When work is to be performed on a project site and it meets the following criteria; same employer, same work, same project site, the markup process will not be required.

When an Employer has work that is less than a three (3) week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Union will be notified of the scope of work and the Employer’s proposed work assignments. The Union will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Union of the final work assignments prior to the commencement of the work.

All work that does not meet the criteria set out in paragraph 2, will be reviewed and assigned at a markup meeting.

EPSCA will provide written notice to the Union (International Office and Local Union Office) as far in advance as possible of markup meetings. The Union may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

* For the purposes of this Article, Nanticoke, Lambton, Bruce Nuclear Power Development (BNPD), Darlington, Pickering, Lines and Stations and the six (6) Electricity Production Zones are each considered one project site.
The Employer who has the responsibility for the new work shall make a proposed assignment of the work involved. The Employer shall be responsible for providing copies of proposed assignments to the Union (International Office and Local Union Office). The Employer will specify a time limit for the Union to submit evidence supporting its claims. The Employer will evaluate all evidence submitted and make a final assignment of the work involved. This final assignment will be in accordance with the procedural rules established by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. The Employer will advise the Union of the final assignments prior to the work commencing.

The EPSCA representative will record the proposed assignments and jurisdictional claims and forward a copy of them within fifteen (15) working days to the Union (International Office and Local Union Office).

The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the process set out above may not be practical or possible.

Article 7

JURISDICTIONAL DISPUTES

7.1 (a) The Union shall have the exclusive right to elect to pursue or respond to any Jurisdictional disputes that arise under this Agreement at either the Ontario Labour Relations Board (OLRB) or the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry (Plan).

In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Plan, paragraphs 7.1(b), 7.2, 7.3 and 7.4 will apply.

In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the OLRB, paragraphs 7.1(b), 7.2, 7.3, and 7.4 will NOT apply. Further, the sentence within paragraph 7.1(b) which reads "If the jurisdictional dispute cannot be settled on a local basis by the Unions involved, it shall be submitted to the International Unions involved for settlement without permitting it to interfere in any way with the progress of the work at anytime." will apply.

(b) In the event of a jurisdictional dispute, the Employer will make an assignment for the work in dispute in accordance with the Procedural Rules and Regulations of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. If the jurisdictional dispute cannot be settled on a local basis by the Unions
involved, it shall be submitted to the International Unions involved for settlement without permitting it to interfere in any way with the progress of the work at any time. The parties will settle such jurisdictional dispute in accordance with procedure as outlined by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry of the Building Trades Department, AFL-CIO or any successor agency of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry authorized by the Building Trades Department.

(c) Where a local of the Union is in disagreement with an Employer's work assignment, the Employer shall supply the Accredited Union Representative with a copy of the evidence submitted by the other union(s) involved along with drawings and/or prints plus a description of the work or process in dispute from a qualified representative of the Employer when requested.

(d) When a jurisdictional dispute exists between unions and upon requests by the Ironworkers, the Employer shall furnish the International Representative a signed letter from a duly authorized official of the company on Employer stationery, stating whether or not the Union was employed on specific types of work on a given project.

7.2 In the event the dispute is not settled by the International Unions involved, it shall then be submitted to the Administrator of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry for resolution. The Union and Employer involved shall advise EPSCA respectively, in writing, of an intent to submit a jurisdictional dispute to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry and will identify the work in question. The arbitration decision will be final and binding on the parties to this Agreement.

7.3 EPSCA shall have direct recourse to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry when the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry has under its consideration a dispute involving the assignment of work being done by employees who are covered by this Agreement.

7.4 In the event that the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry fails to render a decision within sixty (60) days of the disputed assignment being referred to the Plan, EPSCA, or the Union, shall have recourse to the Ontario Labour Relations Board.
7.5 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the OLRB, the arbitration board panel appointed by the Ontario Labour Relations Board pursuant to the Act is not authorized to award damages in respect of a mis-assignment of work only in circumstances where the other union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However this paragraph 7.5 shall not apply where the Jurisdictional Dispute and the mis-assignment of work involves the same employer and the same work previously the subject of a Jurisdictional Dispute before the OLRB or the Plan.

7.6 The board panel appointed by the OLRB will govern its decision pursuant to its normal criteria.

7.7 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the OLRB, the decision of the panel of the OLRB will be final and binding upon the parties to this agreement with no further recourse to the Plan on the issue decided by the OLRB.

Article 8

UNION SECURITY

8.1 UNION MEMBERSHIP

As a condition of employment, all employees covered by this Agreement shall either be members of, or will apply for membership in, the Union and, with respect to initiation fees and dues, will maintain such membership in good standing.

8.2 CHECKOFF

The Employer will deduct amounts specified in the current EPSCA wage schedule for each hour paid for each employee covered by this Agreement.

The Employer will forward same to the Financial Secretary of the Local Union where the work is being performed, postmarked not later than the fifteenth (15th) day of the month following the month for which the deductions are made. This amount is for working dues assessment and will be deducted from gross wages and identified on the employee's pay statement. The Union shall indemnify EPSCA and the Employers for any liability arising from the deduction of initiation fees or dues.
8.3 Where an employee works in more than one (1) Local Union territory for a week or less, the Employer will forward deductions to the Local Union in whose territory the employee worked the greater percentage of hours.

8.4 The Union through its International Office will notify EPSCA, in writing, of any changes to initiation fees and dues. Within three (3) weeks of receipt of an acceptable written notice any changes to such fees and dues will be implemented. The effective date will be the date of implementation.

Article 9

EMPLOYMENT

9.1 (a) For purposes of this Article, a geographic area will be established for each Project and geographic areas for each Lines and Stations Zone. The size of these geographic areas will be dependent upon the location of the work.

(b) The boundaries of the geographic areas will be jointly established at pre-job conferences.

9.2 An office will be established by EPSCA, or the Employer with the approval of EPSCA, for each Project and each Lines and Stations Zone. A purpose of this office will be to coordinate employment as specified in this Article.

9.3 EPSCA, or the Employer with the approval of EPSCA, and the Union will exchange the names of their representatives in each of the areas described in Section 9.1(a), who will be responsible for cooperating in the referral and employment of reliable and competent Union members.

9.4 EPSCA, or the Employer with the approval of EPSCA, will notify the Union of all manpower required for all work to be undertaken by Employers coming under the scope of this Agreement. All employees employed under the terms of this Article will be required to obtain a referral slip from the Local Union having jurisdiction for the geographic area except as noted in Section 9.5(b) below. All employees will report to the EPSCA/Employer referral office prior to starting work.

9.5 (a) The Employer shall have the right to request Union members from that Local Union having jurisdiction for the geographic area by name, in writing, who shall be issued a referral slip by the Local Union. The number of employees so
requested shall not exceed fifty percent (50%) of the employees supplied to the job by the Local Union, subject to the Local Union being able to supply.

(b) Employee members who are transferred within the territory of their Local Union including sector to sector by an employer will not require an additional referral slip. The parties agree that there is no restriction on the number of employees so transferred. However such transfers will not result in layoff of employee members presently on these projects.

(c) When Union members are transferred from one (1) Local Union territory to another, including sector to sector, the number of Union members will not exceed forty percent (40%) of the total crew on the job unless approval is obtained from the Local Union office. Such transferred Union members must secure a referral slip from the Local Union in whose territory the work is being performed. However, before members are transferred from one (1) Local Union territory to another, the Employer shall contact the Local Union Business Agent of the territory where the work is to be performed.

(d) The transfer of employees by an Employer will not result in a lay-off of the Employer's existing employees at the project before 14 days or the completion of the project whichever is earlier.

(e) The Employer shall have the right to recall former employees provided that:

(i) The employee being recalled is a Local Union member in good standing.
(ii) The employee has not worked for another employer since being laid off.

Recalled employees, if not named, shall not be considered as name hires and the number of employees recalled will not affect the name hire percentage in Section 9.5 (a).

9.6 The employment of additional tradesmen and apprentices shall be carried out on the following basis and sequence:

(a) The EPSCA office, or the Employer with the approval of EPSCA, will request the appropriate Local Union office for tradesmen and apprentices required. The request will include a description of the work, the number of tradesmen and apprentices required, and the name of the Employer for whom the tradesmen and apprentices will be working.

(b) The Union members who are resident in the designated geographic area will be referred by the Union for employment through the EPSCA/Employer’s office. As
much as their out-of-work list will permit, the Union will supply members on a fanout basis from the project or work location.

The Employer will either hire such persons or substantiate their reasons in writing for not doing so.

(c) If, after a request has been made, the Union is unable to supply sufficient tradesmen and apprentices to meet the manpower requirements of the Employers, the Employers may employ tradesmen and apprentices who are resident within the geographic area. Such tradesmen and apprentices shall comply with the requirements of the Union Security Article of this Agreement.

Probationary members will be replaced by qualified Local Union members when they become available subject to the following.

(i) No replacement shall take place within five (5) working days of the end of the job.

(ii) The Local Union shall provide the Employer with, a minimum of two (2) working days notice when an employee is to be replaced.

(iii) Notwithstanding Article 28, the local members who replace probationary employees shall not be entitled to initial travel monies and the probationary employees being replaced shall not be entitled to return travel monies.

(iv) The Employer shall decide which probationary employee or employees shall be replaced.

(v) This provision will not be cause for grievance by any probationary member.

(vi) Employees will be laid off in the following sequence:

1. Probationary Members
2. Out-of-Province Members
3. Ontario Travel Cards/Local Members where the work is being performed maintaining the ratios of Local Union members to Travellers as specified in Article 9.5 (c).
(d) Once the supply of suitable tradesmen and apprentices within the geographic area has been exhausted and additional tradesmen and apprentices are required, EPSCA, or the Employer with the approval of EPSCA, will contact the International Representative or his designee, in order to determine whether suitable Union tradesmen and apprentices are available outside of the geographic area. EPSCA, or the Employer with the approval of EPSCA, will cooperate in providing employment to such Union tradesmen and apprentices on the basis that they be supplied from the nearest location where they are available.

The Union shall obtain prior written approval of the General Manager of EPSCA before referring a person who resides outside the Province of Ontario except for members residing in border cities adjacent to the local union having jurisdiction over the job site.

(e) In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers in sequence from the out of work list to the location from where they were laid off. Recalled Greenmen will perform sufficient Greenman work to maintain their skill level, or be laid off.

9.7 Re-employment as required by the Workers’ Compensation Board shall not be a violation of this collective agreement nor be subject to the provisions of Article 9.

Article 10

FOREMEN AND SUBFOREMEN

10.1 It is understood that foremen and subforemen hold key positions in the relationship between the Employers and the Union. Both parties agree that every effort should be made to recruit and retain foremen and subforemen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of the Union, the Employers and the Union will make every effort to minimize problems that may arise which concern the relationship between the foremen and subforemen, the Employers and the Union.

10.2 The parties recognize the responsibilities of foremen and subforemen to discharge their managerial duties. If the Union feels that the foreman or subforeman is not discharging his managerial duties in a manner that is fair and equitable, or if an Employer feels that the Union is interfering with the foreman or subforeman in the performance of his managerial duties, the Employer or the Union may refer the problem to the Executive
Committee for resolution. If the matter cannot be resolved by the Executive Committee, the grievance procedure may be invoked by either party.

10.3 The selection and retention of foremen and subforemen will be the responsibility of the Employers. When making appointments to the foreman and subforeman level, the Employers will give first consideration to those local journeyman ironworkers they presently employ on site. When making appointments to the subforeman level, the provisions of Article 9.5(c) employment will be maintained.

10.4 The foremen’s differential shall be $3.00 above the journeyperson’s rate as set out in the wage schedules. The subforeman’s differential shall be $2.50 above the journeyperson’s rate as set out in the existing wage schedules. The rates of pay for all foremen and subforemen covered by this Agreement will be set forth in the current wage schedules. EPSCA will provide the Union with current wage schedules.

10.5 Adequate Ironworker supervision shall be employed on all overtime work where a crew is required.

10.6 Where the crew size is six (6) or less, including the forman, the foreman may work with the tools of the trade. The foreman may not be used to replace a journeyman on overtime.

Article 11

MEMBERS ON RIGS

11.1 Not less than four (4) employees and a foreman or subforeman shall be employed on or around mobile or power operated rigs of any description used on structural steel erection. When mobile or power operated rigs are used for other than structural steel erection, the number of employees required on said rig shall be determined by the foreman or subforeman who, after conferring with the steward, shall keep in mind the safe and efficient operation of the job.
Article 12

APPRENTICES

12.1 The Employer and the Union agree to participate in the Apprenticeship Program through the auspices of the Employment Training Branch, Ministry of Education and Training. To that end, the Employer agrees to employ a full complement of apprentices who are duly registered with the Employment Training Branch, Ministry of Education and Training.

12.2 One (1) apprentice shall be permitted for the first journeyman employed by the Employer, plus one (1) additional apprentice for each additional five (5) journeymen on all work.

12.3 After a six thousand (6,000) hour term of apprenticeship, the apprentice must satisfy the requirements as set out in the Apprenticeship and Tradesmen's Qualification Act and applicable regulations pertaining to Ironworkers, and when he has successfully completed same, he shall be paid at the prevailing journeyman rate.

12.4 The rates of pay for apprentices covered by this agreement will be set out in the wage schedules attached hereto.

12.5 When an apprentice leaves employment to attend trade school, the Employer agrees to hire another apprentice to take his/her place for the period of time the apprentice is in attendance at school.

Article 13

PAY PROCEDURE

13.1 NORMAL

(a) Employees will be paid weekly and payment for any given week will be made not later than the sixth (6th) working day after the close of the payroll period, but in any event not later than Thursday of the following week.
(b) Wages shall be paid by the Employers on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. Direct Deposit to be implemented at the Employer’s option. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee setting forth:

(i) the period of time or the work for which the wages are being paid;
(ii) the rate of wages to which the employee is entitled;
(iii) the amount of wages to which the employee is entitled;
(iv) the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;
(v) any allowance or other payment to which the employee is entitled;
(vi) the amount of vacation pay for which the employee is being paid;
(vii) the amount of recognized holiday pay for which the employee is being paid; and
(viii) the net amount of money being paid to the employee.

(c) In cases of inclement weather being declared on pay day, employees will receive their pay before leaving the site provided it is available on the site.

13.2 ON TERMINATION

(a) An employee who voluntarily terminates his employment will be provided his final pay on the next regular pay day.

(b) An employee who is laid off will have his final pay mailed to his regular residence*, or as otherwise requested by the employee, by priority post within 5 days of termination.

(c) An employee who is discharged shall be provided with his final pay immediately if the Employer's pay facilities are on site or as per Section 13.2(b) if the Employer's pay facilities are not on site.
(d) Included in an employee's final pay will be vacation and recognized holiday pay owing him, his UIC, Record of Employment Form.

(e) No employee shall be laid off during the first four (4) hours of his shift.

(f) When an employee is laid off from a job where he is accommodated in a camp, he will be paid one (1) hour at the applicable straight-time rate to check out of camp.

(g) Should an Employer fail to provide an employee such wages and/or forms as required above within the prescribed five (5) working day time period, then said employee shall be paid any waiting time in excess of the five (5) working day time period at straight-time rates of pay applicable to the regular working hours.

Article 14

WAGES

14.1 Effective July 13, 2004, and until April 30, 2010, the rates of pay for employees in the classifications listed in Article 1 of this Agreement and working in Generation Projects, Miscellaneous Projects and Lines and Stations Construction shall be as set forth in the wage schedules attached hereto.

Article 15

RECOGNIZED HOLIDAYS

15.1 The holidays recognized under this Agreement are:

New Year's Day            Civic Holiday
Good Friday               Labour Day
Easter Monday             Thanksgiving Day
Victoria Monday           Christmas Day
Canada Day                 Boxing Day

15.2 EPSCA agrees to recognize Heritage Day when proclaimed by legislation.
15.3 Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday, it shall be observed either on the preceding Friday or following Monday.

15.4 EPSCA reserves the right to change the day of observance of Canada Day to the preceding Monday if it falls on Tuesday and to the following Friday if it falls on Thursday.

Article 16

VACATION AND RECOGNIZED HOLIDAY PAY

16.1 The vacation and recognized holiday pay rate shall be ten percent (10%) (six percent [6%] vacation and four percent [4%] in lieu of recognized holidays) of total earnings*.

16.2 Payment of vacation and recognized holiday pay shall be made on the regular weekly pay cheque.

16.3 Employees with one year's employment will be entitled to 3 weeks annual vacation. Employees with more than one year's employment, under special circumstances, will be entitled to additional time off subject to the approval of the Employer. Additional time off will not be unreasonably denied.

All vacation entitlement will be subject to approval providing the work schedule will permit.

* "Total earnings" means pay for regular hours, overtime, premium pay, shift differential, retroactive pay adjustments, call-in, Saturday and Sunday premiums and trade training.
Article 17

WELFARE AND PENSION PLANS

17.1 For each of his employees working within the territorial jurisdiction of Locals 700, 721, 736, 765, 786, and 759 the Employer agrees to pay welfare contributions on his behalf to the Ironworkers' Central Welfare Fund.

17.2 For each of his employees working within the territorial jurisdiction of Locals 700, 721, 736, 765, 786 and 759, the Employer agrees to pay pension contributions on his behalf to the Ironworkers' Ontario Pension Fund.

17.3 The Union agrees to supply the Employer with all necessary information regarding these welfare and pension plans, including all administrative material that is required.

17.4 The amount(s) of welfare and pension contributions to be paid will be set out in the wage schedules attached hereto.

17.5 Contributions shall be postmarked by the fifteenth (15th) day of the month following the month in which the hours were paid and at no time will the contributions be paid directly to the employee. A penalty of three percent (3%) of any unpaid amount of contributions shall become due and payable to the applicable plan by a contributing Employer on the sixteenth (16th) day following the day designated for postmark by the Collective Agreement. A further charge of three percent (3%) of any monies owing shall become due and payable on the expiry of each succeeding thirty (30) day period until all monies due and owing including both contribution and charges) have been paid.

17.6 Any changes in welfare or pension plan contributions recognized under this Agreement will be confirmed in writing by the Union to EPSCA before such changes are put into effect. Within three (3) weeks of receipt of an acceptable written notice, such changes will be implemented. The effective date will be the date of implementation. Should the welfare or pension plan contributions change during the term of this Agreement then an adjustment shall be made to the base rate. The total wage package will not be changed.
17.7 The trustees of the employee benefit plans referred to in this collective agreement shall promptly notify the Union (or Council) of the failure by any Employer to pay any employee benefit contributions required to be made under this collective agreement and which are owed under the said plans in order that the Program Administrator of the Employee Wage Protection Program may deem that there has been an assignment of compensation under the said Program in compliance with the Regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

17.8 To reduce administrative costs the parties agree that the number of monthly separate remittance and deduction cheques will be kept to a minimum. (status quo)

Article 18

IRONWORKERS' TRADE IMPROVEMENT PLAN

18.1 Employers employing employees covered by this Agreement will contribute to the Ironworkers' Trade Improvement Plan Trust for Locals 700, 721, 736, 765 and 786, or Local 759 as applicable. The Fund is to be used for the education of apprentices, the testing of welders and any purpose deemed necessary and advantageous for the improvement of the trade.

18.2 The amount(s) of contributions to the Ironworkers' Trade Improvement Plan for Locals 700, 721, 736, 759, 765 and 786 will be set out in the wage schedules attached hereto.

18.3 Employer contributions, including nil reports, shall be postmarked by the fifteenth (15th) day of the month following the month in which the hours were paid, and at no time will the Ironworkers' Trade Improvement Plan Trust contributions be paid directly to the employees. A charge of three percent (3%) of any unpaid amount of contributions shall become due and payable to the Trust by a contributing Employer on the sixteenth (16th) day following the day designated for postmark by the Collective Agreement in effect between EPSCA and the Union. A further charge of three percent (3%) of any monies owing shall become due and payable on the expiry of each succeeding thirty (30) day period until all monies due and owing (including both contributions and charges) have been paid.

18.4 Employers agree to be bound by the decisions of the Trustees of the Ironworkers' Trade Improvement Plan Trust on matters pertaining to the Trust.

18.5 The Union agrees to supply all pertinent information regarding the Trust to the Employer.
18.6 To reduce administrative costs the parties agree that the number of monthly separate remittance and deduction cheques will be kept to a minimum. (status quo)

NEW

18.7 Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. The effective date of such changed wage schedules, dues and remittances shall be the date of issuance.

Article 19

ASSOCIATION FUND

19.1 All Employers shall contribute the amount specified on the wage schedules attached hereto for each hour worked by each employee covered by this Agreement to the Electrical Power Systems Construction Association Fund. The Employer shall remit such contribution in accordance with the standard form of remittance supplied by EPSCA.

Article 20

REPORTING PAY

20.1 An employee who reports for work at the usual starting time for his shift shall receive a minimum of two (2) hours' pay plus his appropriate daily travel or board allowance at the applicable rate when he reports for work but is unable to commence work because of circumstances beyond his control. To qualify for this allowance, the employee must remain on the job during the two (2) hour period and perform any work requested which, in the opinion or judgment of his foreman or subforeman, after conferring with the steward, can be accomplished safely.
Article 21

CALL-IN PAY

21.1 When an employee is called in outside of his normal hours of work, he shall receive a minimum of four (4) hours' work at two (2) times the basic rate plus his appropriate daily travel allowance. If the employee's normal hours of work commence within this four (4) hour period, the employee will be paid premium time until the start of his normal hours and will revert to his normal hourly rate at the commencement of his normal hours of work, except in the circumstances provided for in Section 23.2.

Article 22

HOURS OF WORK

22.1 One (1) or Two (2) Shift Operation

The weekly hours of work shall consist of forty (40) hours, worked between Monday and Friday, for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.

REV The weekly hours of work may be arrived at by having the employees work either:

- four (4) consecutive ten-hour shifts, Monday to Thursday or;
- four (4) consecutive ten-hour shifts, Tuesday to Friday or;
- five (5) consecutive eight-hour shifts

but not concurrently on the same work program.

Weekly hours of work will be established for a minimum of two (2) weeks. The Employer will notify the Local Union of the weekly hours of work for each work program at the site. If an Employer intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.

REV The start time for the day shift shall be 7:00 AM with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way of the end of the day shift.
The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

**NEW** Trades assigned to fire watch duties may commence work after the start of the rest of the crew. In these cases, normal scheduled hours of work beyond the quit time of the rest of the crew will not be subject to overtime premiums.

**NEW** Shift Differential will not be paid on overtime hours.

**22.2 Three (3) Shift Operation**

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours per shift at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift. A shift differential of one-seventh (1/7) shall be paid for all normal scheduled shift hours worked.

Those employees working on the night shift shall work seven (7) hours per shift. A shift differential of one-fifth (1/5) shall be paid for all normal scheduled shift hours worked.

A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked excluding Saturdays, Sundays and recognized holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the remainder of the hours that would have been worked had the employee not been reassigned.

It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Union.

**NEW** Shift Differential will not be paid on overtime hours.
Article 23

OVERTIME RATES

Article 23 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Article 41 - Modified Provisions of this Construction Agreement. (Article 41.4)

23.1 On Monday to Friday inclusive, overtime work shall be paid at two (2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours.

Overtime work performed on Saturday, Sunday and Recognized Holidays shall be paid at two (2) times the basic hourly rate.

23.2 When an employee is required to return to work without an eight (8) hour break, all work performed shall be paid for at the appropriate overtime rate, until such time as the employee receives an eight (8) hour break.

23.3 Overtime shall be assigned as impartially as possible amongst all members of the crew, subject to their ability to perform the work required.

Article 24

REST PERIOD

24.1 For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, for each half shift worked.
24.2 For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

24.3 For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the employer, after each two (2) hours of overtime worked.

Article 25

MEALS ON OVERTIME

25.1 If an employee is notified during the time he is working that he will be required to work for more than two (2) hours past his normal quitting time of the first or second shifts or for more than three and one-half (3-1/2) hours beyond the normal quitting time of the third shift, the Employer will provide a free meal to the employee after approximately two (2) hours of overtime worked and for each four (4) hours of overtime worked thereafter. The Employee will be allowed thirty (30) minutes with pay at straight time rates to eat each meal at the time directed by the Employer. When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

To qualify for the above-noted on a Friday for work on the first and second shifts, an employee working a thirty-eight (38) hour week will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first or second shifts.

The above-noted is not applicable to the first six and one-half (6-1/2) hours worked on Sundays or Recognized Holidays for employees who normally work the third shift.

25.2 Where an employee has been notified the previous day, no lunch will be provided but the employee will be allowed time to eat without loss of pay.
Article 26

GENERATION PROJECTS

DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

26.1 DAILY TRAVEL ALLOWANCE

(a) A daily travel allowance will be paid by the Employers to their employees on the following basis:

(i) If an employee lives within forty (40) radius kilometers* of the Project, no travel allowance will be paid.

(ii) If an employee lives within forty (40) to fifty-six (56) radius kilometers of the Project, he shall receive $20.60 per day effective July 13, 2004 ($21.00 effective May 1, 2005, $21.40 effective May 1, 2006, $22.25 effective May 1, 2007, $22.70 effective May 1, 2008 and $23.15 effective May 1, 2009) travel allowance for each day worked or reported for.

(iii) If an employee lives within fifty-six (56) to eighty (80) radius kilometers of the Project, he shall receive $23.95 per day effective July 13, 2004 ($24.45 effective May 1, 2005, $24.95 effective May 1, 2006, $25.95 effective May 1, 2007, $26.45 effective May 1, 2008 and $27.00 effective May 1, 2009) travel allowance for each day worked or reported for.

(iv) If an employee lives within eighty (80) to ninety-seven (97) radius kilometers of the Project, he shall receive $27.60 per day effective July 13, 2004 ($28.15 effective May 1, 2005, $28.70 effective May 1, 2006, $29.85 effective May 1, 2007, $30.45 effective May 1, 2008 and $31.05 effective May 1, 2009) travel allowance for each day worked or reported for.

(v) If an employee lives greater than ninety-seven (97) radius kilometers from the project and does not qualify for subsistence allowance under Subsection 26.2 below, he shall receive $31.00 per day effective July 13, 2004 ($31.60 effective May 1, 2005, $32.25 effective May 1, 2006, $33.55 effective May 1, 2007, $34.20 effective May 1, 2008 and $34.90 effective May 1, 2009) travel allowance for each day worked or reported for.

Note: Bruce GS "A", Bruce GS "B" and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce Complex will be calculated from the midpoint of a straight line joining the centres of the Bruce GS "A" and Bruce GS "B" turbine halls.

*For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each Project.
When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement. A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

26.2 ROOM AND BOARD
(Excluding Darlington and Pickering Projects)

The following conditions will apply for employees whose regular residence* is more than ninety-seven (97) radius kilometers from the project:

(a) An Employer may supply either:

(i) room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or
(ii) a subsistence allowance; or
(iii) a travel allowance

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $79.05 per day effective July 13, 2004 ($80.65 effective May 1, 2005, $82.25 effective May 1, 2006, $85.55 effective May 1, 2007, $87.25 effective May 1, 2008 and $89.00 effective May 1, 2009) worked or reported for when employed at a location north of the French River and $65.50 per day effective July 13, 2004 ($66.80 effective May 1, 2005, $68.15 effective May 1, 2006, $70.90 effective May 1, 2007, $72.30 effective May 1, 2008 and $73.75 effective May 1, 2009) for each day worked or reported for when employed at a location south of the French River subject to Sections 26.2(c), 26.2(d), 26.3 and 26.4.

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near the Project. Employees who travel daily to locations beyond ninety-seven (97) radius kilometers from the Project will be entitled to $27.80 per day for each day worked or reported for.

* An employee's "regular residence" is the place where he maintains a self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally sleeps and eats) in which he resides, and for which he can show proof of financial commitment.
(d) Pickering and Darlington Projects

(i) An employee who qualifies for subsistence allowance shall receive a subsistence allowance of $39.55 per day effective July 13, 2004 ($40.35 effective May 1, 2005, $41.15 effective May 1, 2006, $42.80 effective May 1, 2007, $43.65 effective May 1, 2008 and $44.50 effective May 1, 2009) worked or reported for, subject to Sections 26.2(c), 26.3 and 26.4.

(ii) Employees who don't qualify for board allowance and commute beyond ninety-seven (97) radius kilometers shall receive $27.80 per day for each day worked or reported for.

26.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 26.1 and 26.2 above when such employee reports for work but does not remain at work for his scheduled daily hours of work unless excused by an authorized representative of the Employer. Such permission shall not be unreasonably denied.

26.4 An employee who maintained a regular residence within the geographic area of the Local Union for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

26.5 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at twenty-five dollars ($25.00) per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged twenty-five dollars ($25.00) per day, unless he is excused from work for a legitimate reason by the Project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

Article 27

LINES AND STATIONS CONSTRUCTION
DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

27.1 DAILY TRAVEL ALLOWANCE

The daily travel allowance will be paid by the Employers to their employees who are not living in camp or receiving a subsistence allowance as referred to in Section 27.3, on the following basis:

(a) If an employee lives within forty (40) radius kilometers of the work location, no travel allowance will be paid.

(b) If an employee lives within forty (40) to fifty-six (56) radius kilometers of the work location, he shall receive $20.05 per day effective July 13, 2004 ($20.55 effective May 1, 2005, $21.05 effective May 1, 2006, $21.55 effective May 1, 2007, $22.05 effective May 1, 2008 and $22.55 effective May 1, 2009) travel allowance for each day worked or reported for.

(c) If an employee lives within fifty-six (56) to eighty (80) radius kilometers of the work location he shall receive $23.55 per day effective July 13, 2004 ($24.05 effective May 1, 2005, $24.55 effective May 1, 2006, $25.05 effective May 1, 2007, $25.55 effective May 1, 2008 and $26.05 effective May 1, 2009) travel allowance for each day worked or reported for.

(d) If an employee lives within eighty (80) to ninety-seven (97) radius kilometers of the work location he shall receive $27.05 per day effective July 13, 2004 ($27.55 effective May 1, 2005, $28.05 effective May 1, 2006, $28.55 effective May 1, 2007, $29.05 effective May 1, 2008 and $29.55 effective May 1, 2009) travel allowance for each day worked or reported for.

(e) If an employee lives greater than ninety-seven (97) radius kilometers from the work location and does not qualify for subsistence allowance under Section 27.3 below, he shall receive $29.30 per day effective July 13, 2004 ($29.80 effective May 1, 2005, $30.30 effective May 1, 2006, $30.80 effective May 1, 2007, $31.30
effective May 1, 2008 and $31.80 effective May 1, 2009) travel allowance for each day worked or reported for, provided he continues to travel greater than ninety-seven (97) radius kilometers daily.

(f) When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee’s travel allowance entitlement. A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

27.2 The Employer reserves the right to base daily travel allowance on the distance in radius kilometers from where an employee lives to either the work location or declared assembly point, depending on where the employee is directed to report.

27.3 ROOM AND BOARD

The following conditions will apply for employees whose regular residence* is more than ninety-seven (97) radius kilometers from the work location:

(a) An Employer may supply either:

(i) room and board in camp or a good standard of board and lodging within a reasonable distance of the work location; or
(ii) a subsistence allowance; or
(iii) a travel allowance

* For the purpose of this Article, "regular residence":

(i) for metropolitan areas (Toronto and Hamilton) is the place where an employee maintains a permanent self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally sleeps and eats) in which he resides, and for which he can show proof of financial commitment.

(ii) for all other areas, shall be deemed to be the city or town hall of the municipality where an employee maintains a permanent self-contained domestic establishment described in (i) above. In those municipalities where a city or town hall does not exist, then the post office serving his permanent self-contained domestic establishment will apply.
An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $77.00 per day effective July 13, 2004 ($78.00 effective May 1, 2005, $79.00 effective May 1, 2006, $80.00 effective May 1, 2007, $81.00 effective May 1, 2008 and $82.00 effective May 1, 2009) for each day worked or reported for when employed at a location north of the French River and $64.00 per day effective July 13, 2004 ($65.00 effective May 1, 2005, $66.00 effective May 1, 2006, $67.00 effective May 1, 2007, $68.00 effective May 1, 2008 and $69.00 effective May 1, 2009) for each day worked or reported for when employed at a location south of the French River, subject to Sections 27.3(c), 27.4, and 27.5.

To qualify for subsistence allowance an employee must maintain temporary accommodation at or near the work location. Employees who travel daily to locations beyond ninety-seven (97) radius kilometers from the work location will be entitled to $27.30 per day effective July 13, 2004 ($27.80 effective May 1, 2005, $28.30 effective May 1, 2006, $28.80 effective May 1, 2007, $29.30 effective May 1, 2008 and $29.80 effective May 1, 2009) for each day worked or reported for.

An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 27.1 and 27.3 above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.

An employee who maintained a regular residence within the geographic area of the Local Union for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at twenty-five dollars ($25.00) per day. This will be applied on the following basis:

- An employee who remains in camp on a normally scheduled work day on which he does not work will be charged twenty-five dollars ($25.00) per day, unless he is excused from work by an authorized representative of his Employer.

- An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday
without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

**Article 28**

**INITIAL AND RETURN TRAVEL AND TRANSPORTATION**

28.1 On recruitment of tradesmen who live between ninety-seven (97) and one hundred and sixty-one (161) radius kilometers from the Project, the Employer shall pay twenty-five dollars ($25.00) for the initial trip to the Project.

28.2 **ONTARIO RESIDENTS**

On recruitment of tradesmen who live in Ontario, but beyond one hundred and sixty-one (161) radius kilometers from the Project, the Employer shall pay thirty cents (30¢) per radius kilometer, plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the Project from where the tradesman lives or place of recruitment, whichever is closer to the Project.

28.3 **NON-ONTARIO RESIDENTS**

On recruitment of tradesmen who live outside Ontario and beyond one hundred and sixty-one (161) radius kilometers from the Project, the Employer shall pay the equivalent of the cost of public transportation plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the Project from where the tradesman lives or place of recruitment, whichever is closer to the Project.

28.4 To qualify for payment on Sections 28.1, 28.2 or 28.3, the employee must remain at the Project for a minimum of thirty (30) calendar days or the duration of the job, whichever is lesser. Such payment shall be included in the employee's first pay cheque. Should
the employee subsequently fail to qualify for payment as noted above, the Employer will deduct the payment from the employee's final pay.

28.5 On termination of employment for reasons other than discharge for cause, an employee entitled to payment under Sections 28.1, 28.2 or 28.3 shall be entitled to return expenses calculated in the same manner as in Sections 28.1, 28.2 or 28.3 above, for the return trip from the Project to where the tradesman lives or place of recruitment, whichever is closer to the Project. To be eligible for return payment, an employee must remain at the Project for a minimum of sixty (60) calendar days or the duration of the job, whichever is the lesser.

28.6 (a) On the Thunder Bay Project and Atikokan Project, an employee shall qualify for a return trip from the Project to his regular residence* for each thirty (30) days worked on the Project providing his regular residence is more than four hundred (400) radius kilometers from the Project.

(b) For each entitlement, the Employer shall pay travel expenses on the basis of the equivalent cost of public transportation plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel to a maximum of eight (8) hours' pay.

Article 29

WELDING TESTS

29.1 On hire a welder must possess the satisfactory qualifications and be in possession of either a current Canadian Welding Bureau (All Position) Certificate or an equivalent Ministry of Consumer and Commercial Relations (MCCR) Certificate in accordance with Section 9 of the ASME code, as required by his Employer. It shall be at the discretion of the Employer whether a welder will be hired who does not possess the satisfactory qualifications or either one (1) of the above certificates.

* An employee's "regular residence" is the place where he maintains a self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally sleeps and eats) in which he resides and for which he can show proof of financial commitment.
29.2 Employees scheduled to take Canadian Welding Bureau welding tests during their period of employment shall receive a monetary grant from and as per the regulations of the Ironworkers' Trade Improvement Fund in lieu of wages and allowances lost in taking such tests. Ironworker Welders will be released from duty for necessary Canadian Welding Bureau retesting.

Article 30

TOOLS AND CLOTHING

30.1 Employees shall be required to provide themselves with the ordinary hand tools of their trade. The Employer will provide, insofar as is practical, separate facilities for storing the tools, but shall not be held responsible for losses, except as noted hereunder:

(a) When personal tools valued in excess of fifteen dollars ($15.00) are lost due to fire, the Employer will consider replacement or payment value to a maximum of four hundred dollars ($400.00), based on the merit of each case. This will include only personal tools that a tradesman is required to have to perform his normal duties with the Employer.

(b) The Employer agrees to compensate employees for tools and work clothing lost by theft, as supported by claims submitted in writing with substantiating evidence to establish theft resulting from forcible entry to locked storage provided by the Employer to a maximum of four hundred dollars ($400.00). The Employer agrees to replace personal tools broken on the job or lost over water to a maximum of four hundred dollars ($400.00).

(c) In the event of a loss by fire at a work site, replacement or payment of the full estimated value in excess of fifteen dollars ($15.00) but not exceeding four hundred dollars ($400.00) for the loss of personal clothing will be made.

(d) In the event of a loss by fire at an Employer-operated camp, replacement or payment of the full estimated value in excess of fifteen dollars ($15.00) but not exceeding seven hundred and fifty dollars ($750.00) for the loss of personal clothing will be made.
30.2 Employees who have obtained tools from Employer's tool crib shall be allowed sufficient time, in the opinion of Management, to return such tools to the tool crib during working hours. Employees receiving tools from such tool crib shall be held responsible for the return of such tools in good condition, subject to normal wear and tear. On layoff, employees will be allowed reasonable time to return tools to the tool crib.

30.3 Gang tools are tools which are issued to a foreman and are used by one or more members of the crew. Such tools are not identified on trade tool lists, nor are they the tools and equipment identified in Sections 30.1 and 30.2 of this Article. Such tools shall be the responsibility of the Employer.

30.4 An employee, upon becoming aware of the theft or loss of Employer supplied tools, or clothing, will immediately report such theft or loss to his Employer. Failures to do so will result in employees being charged for the value of the lost or stolen tools or clothing.

Article 31

PROTECTIVE CLOTHING AND EQUIPMENT

31.1 On jobs of an abnormally dirty nature or on jobs where acid or other chemicals damage clothing, the Employer agrees to supply gloves and coveralls.

31.2 On the Thunder Bay and Atikokan Projects the Employer will, without cost to the employee, supply helmet, welding gloves and protective sleeves but the employee will be responsible to return same.

31.3 Welding jackets, welding sleeves, welding hoods or hard hats broken or damaged on the job shall be replaced by the Employer.
Article 32

DRINKING WATER AND CLOTHES ROOM

32.1 Every Employer shall supply adequate drinking water (with ice when necessary and available) at all times, from covered containers having a drain faucet and individual drinking cups.

32.2 Every Employer shall provide or arrange at the commencement of the job, a sanitary and adequately heated, lighted and ventilated when necessary, place of shelter of adequate size, with adequate benches and tables where employees may eat their lunch, change their clothes and safely keep their tools.

32.3 Where the employer does not supply a shack of his own, but arranges for facilities, as in Section 32.2 above, he shall supply a gangbox, for each shift, with lock to safeguard his employees' tools.

32.4 Every Employer shall arrange for or provide at the commencement of the job, sanitary, adequately heated, lighted and ventilated toilet facilities. Flush toilet facilities shall be arranged for or provided when and where available.

Article 33

RADIATION WORK

33.1 Local Union to be provided with a copy of Ontario Hydro Radiation Protection Procedures and any revisions.

Each employee will have access to his personal radiation exposure record.

Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

Short-term employees will be given a guaranteed period of employment at their time of hire.

33.2 Employees working in a radiation area, in plastic suits of the fully enveloping type with an independent air supply, will receive $10.00 per day. A day for the purposes of this item shall be defined as any period up to twelve (12) hours.
Construction Radiation Protection Assistant (R.P.A) is a Construction Trades Person who has achieved the full radiation qualification via the approved Ontario Hydro Training Program. This requires successful completion of the construction R.P.A. training and checkouts and the performance of R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

Article 34

STANDOFF

NEW

34.1 When unable to proceed with work, an Employer may elect to Standoff part or all of a crew.

The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel or subsistence allowance will be paid to an employee for the Standoff period.

34.2 If Standoff continues beyond ten (10) consecutive working days, an employee, at his/her option, may elect to remain on Standoff for an additional twenty (20) consecutive working days or be removed from Standoff. The Employer retains recall rights on employees electing to continue on Standoff.

34.3 If an employee elects layoff beyond the tenth (10th) consecutive working day, it shall be carried out in accordance with the terms of the Layoff provisions of this Agreement. An employee laid off will be issued a Record of Employment form on his/her date of layoff indicating "Layoff – Shortage of Work".

34.4 Standoff shall only continue beyond thirty (30) consecutive working days with the mutual consent of the Employer and the Union, in writing.
For the purpose of this Article, when working on a 4 x 10 hour shift arrangement, the following will apply:

- eight (8) scheduled working days will be considered the equivalent of ten (10) consecutive working days.

- sixteen (16) scheduled working days will be considered the equivalent of twenty (20) consecutive working days.

- twenty-four (24) scheduled working days will be considered the equivalent of thirty (30) consecutive working days.

Article 35

GRIEVANCE PROCEDURE

35.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by EPSCA and the Union. In the interests of expediting the procedures, the parties shall process grievances in the following manner:

35.2 PRELIMINARY DISCUSSION

Disputes arising out of the interpretation or alleged violation of this Agreement shall, if possible, be settled by discussion between the employee and/or his steward and the employee's supervisor.

35.3 FIRST STEP

If a dispute cannot be resolved by this method, the Accredited Union Representative for the Union may file a formal grievance on the prescribed form with the Manager of Construction or the Field Construction Manager. Such grievance shall be filed within fifteen (15) working days of the alleged grievous act.
Within ten (10) working days of the filing of the grievance, the Manager of Construction or Field Construction Manager shall investigate the grievance and convene a meeting which he or the Accredited Union Representative considers necessary to resolve it. The Manager of Construction or Field Construction Manager shall give his reply on the prescribed form to the Accredited Union Representative within five (5) working days from the date of the First Step meeting.

Copies of completed grievance forms signed by the appropriate parties shall be filed by the Manager of Construction or the Field Construction Manager with the General Manager of EPSCA and by the Accredited Union Representative with the International Representative of the Union.

If a First Step grievance meeting is considered appropriate, the Management Committee shall comprise the Manager of Construction or Field Construction Manager, or their designates, plus two (2) Management officials, one (1) of whom shall be a representative of the Employer against whom the grievance has been filed. The Union Committee shall comprise the Accredited Union Representative plus two (2) additional Union officials.

35.4 SECOND STEP

If a dispute has not been resolved at the First Step of the grievance procedure, the Accredited Union Representative may refer the grievance on the prescribed form to EPSCA's Grievance Officer. Such grievances shall be referred within ten (10) working days after the disposition has been issued under the First Step of this procedure. A copy of the grievance form shall be forwarded by the Accredited Union Representative to the International Representative of the Union.

The EPSCA Grievance Officer shall investigate the grievance and convene a meeting which he or the International Representative considers necessary to resolve it and give his reply on the prescribed form to the International Representative of the Union within five (5) working days from the receipt of the grievance form which was completed at First Step.

If a Second Step grievance meeting is considered appropriate, the Management Committee shall comprise the EPSCA Grievance Officer plus two (2) other Management representatives, one (1) of whom shall be a representative of the Employer against whom the grievance has been filed. The Union Committee shall comprise three (3) persons, including the International Representative and the Accredited Representative for the grievor, plus one (1) other representative of the Union.
35.5 EPSCA OR UNION GRIEVANCES

The processing of EPSCA grievances shall begin at the Second Step. EPSCA may submit either policy or specific grievances. The Union may also institute policy grievances at this Step. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.

35.6 TIME LIMITS

The time limits as to both documents and procedure set out in the above Sections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree in writing in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, the employee concerned, the Union or EPSCA shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been settled and ineligible for arbitration.

35.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at First Step.

35.8 GRIEVANCE FACILITIES

EPSCA shall provide the necessary facilities for all grievance meetings.

Article 36

ARBITRATION

36.1 If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Article 34, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either EPSCA or the Union to a Board of Arbitration for adjudication. The party desiring to submit the dispute to arbitration shall notify the other party in writing of this desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two (2) nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, the appointment shall be made by the Minister of Labour for Ontario upon the request of
the other party. If the two (2) nominees fail to agree upon a Chairman, the services of
the Minister of Labour for Ontario shall be utilized and the request to the Minister may
be made by either party. The arbitration board, when selected or appointed, shall
proceed as soon as practicable to hear and determine the dispute and it shall issue a
decision which is final and binding upon the parties and upon their respective members.
The decision of a majority is the decision of the arbitration board, but if there is no
majority, the decision of the Chairman governs.

36.2 The arbitration board shall have no power to add to or subtract from or modify any of
the terms of this Agreement. The arbitration board shall not substitute its discretion for
that of the parties except where the board determines that an employee has been
discharged or otherwise disciplined for cause when this Agreement does not contain a
specific penalty for the infraction that is the subject matter of the arbitration. In such
cases, the arbitration board may substitute such other penalty for the discharge or
discipline as to the arbitration board seems just and reasonable in all circumstances.
The arbitration board shall not exercise any responsibility or function of the parties.
The arbitration board shall not deal with any matter not contained in the original
statement of grievance filed by the party referring the matter to arbitration.

36.3 In arbitration proceedings, each party shall pay the fees and expenses of its nominee,
whether appointed by the party or by the Minister of Labour for Ontario, and the fees
and expenses of the Chairman shall be shared equally by the parties.

36.4 The time limits as to both documents and procedure set out in the above Sections shall
be observed by the parties to this Agreement provided, however, that the parties may
mutually agree in writing in respect to an extension or waiver of any of the time limits
imposed.

Article 37

NO STRIKE - NO LOCKOUT

37.1 There shall be no strikes or lockouts so long as this agreement continues to operate.
Article 38

FENCE ERECTION

38.1 For employers engaged in fence erection, the terms and conditions of employment will be those contained in Appendix I attached hereto.

Article 39

ABORIGINAL CONTENT COMMITMENT

39.1 Where an aboriginal commitment has been established on a project, the Union will cooperate in meeting the content commitments.

39.2 For a project that is less than $100,000 field labour, and has aboriginal content commitments, the terms of this collective agreement will not apply to those aboriginal content commitments.

Article 40

ENABLING AGREEMENT

40.1 Where a particular Article or Articles of this Collective Agreement is or are found to work a hardship in a specific Local Union jurisdiction territory, the terms and conditions in this Agreement for that Local Union area may be modified for a particular project by the mutual consent of the Local Union and the Employers when they deem it prudent. Such amendments made shall be submitted to the International Office and EPSCA for ratification.

It being understood and agreed that where mutual agreement for change cannot be achieved the request shall not be subject to either grievance or arbitration.
Article 41

MODIFIED PROVISIONS OF THIS CONSTRUCTION AGREEMENT

41.1 These provisions will apply to all work on Lines and Stations and on existing generating sites except the construction of:

- a new facility which provides a new function
- the construction of a new (ie. additional) generating unit

41.2 Definitions:

Facility: A facility is something that is built composed of multi-systems which serves a specific function

Function: eg. Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (eg. Shops)

41.3 Dispute Resolution Process

A dispute as to whether the 'Modified Provisions of this Construction Agreement' apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within five (5) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within ten (10) working days for a final and binding resolution. The arbitrator shall give an oral decision within five (5) working days, and a written decision, if requested, within twenty (20) working days.
41.4 **OVERTIME RATES**

41.4.1 When working on an eight (8) hour day and five (5) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of 2 hours per day. All hours in excess of 10 hours per day shall be paid at two (2) times the base hourly rate.

When working on a ten (10) hour day and four (4) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of 2 hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the base hourly rate.

**REV** Overtime work performed on Saturday, Sunday, Recognized Holidays and non-shift days shall be paid at two (2) times the basic hourly rate.

41.4.2 When an employee is required to return to work without an eight (8) hour break, all work performed shall be paid for at the appropriate overtime rate, until such time as the employee receives an eight (8) hour break.

41.4.3 Overtime shall be assigned as impartially as possible amongst all members of the crew, subject to their ability to perform the work required.
Article 42

TERM OF AGREEMENT

42.1 This Agreement shall continue in full force and effect from July 13, 2004 until April 30, 2010, inclusive, and thereafter it shall be considered automatically renewed for successive periods of twelve (12) months unless at least sixty (60) days prior to the end of any twelve (12) month effective period either party serves written notice upon the other that it desires cancellation, revision, or modification of any provision or provisions of this Agreement.

In witness whereof, EPSCA and the Union have caused this agreement to be executed in their names by duly authorized representatives at Toronto this 25th day of November, 2004

FOR:
THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

J. Starasts
General Manager,
Ivars Starasts

FOR:

Fred Marr
APPENDIX I

to the

Collective Agreement

between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

and the

INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL AND ORNAMENTAL IRON WORKERS

May 1, 1990 - April 30, 1992

If members of the Union are to be engaged in fence erection, the master portion articles of this Agreement shall apply in full with the exception of Article 15, Vacation and Recognized Holiday Pay; Article 13, Wages; Article 21, Hours of Work; Article 22, Overtime Rates; Article 16, Welfare and Pension Plans; Article 11, Apprentices; and Article 17, Ironworkers' Trade Improvement Plan, which are amended as follows:

Article 15 - Vacation and Recognized Holiday Pay

The vacation and recognized holiday pay rate shall be ten percent (10%) (six percent [6%] vacation and four percent [4%] in lieu of recognized holidays) of total earnings.

Article 13 - Wages

The wage rates for employees engaged in fence erection shall be as follows:

Subforeman - Fence Erector rate plus fifty-four cents (54¢) per hour.

<table>
<thead>
<tr>
<th></th>
<th>% of J'Man</th>
<th>June 25, 1990</th>
<th>May 1, 1991</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fence Erector</td>

<td>Available</td>
</tr>
<tr>
<td>Fence Erector Helper &quot;B&quot;</td>
<td>60</td>
<td>13.55</td>
<td></td>
</tr>
</tbody>
</table>
Following completion of not more than three (3) months of continuous employment, an employee classified as Fence Erector Helper "B" shall be reclassified to Fence Erector Helper "A", and be paid the appropriate rate.

**Article 21 - Hours of Work**

The normal hours of work for employees engaged in fence erection shall be forty-four (44) hours made up of four (4) days of nine (9) hours each, Monday to Thursday inclusive, and eight (8) hours on Friday.

**Article 22 - Overtime Rates**

One and one-half (1-1/2) times the basic rate for hours worked in excess of normal hours in any one (1) day, Monday to Friday and for all hours worked on Saturdays and the Statutory Holidays listed in the master portion of this Agreement. Two (2) times the basic rate will be paid for all hours worked on Sundays.

**Article 16 - Welfare and Pension Plans**

Not applicable.

**Article 17 - Ironworkers' Trade Improvement Plan**

Not applicable.
APPENDIX A

MOOSE RIVER BASIN: NORTHERN ONTARIO

Where the Employer elects to establish a camp, the following conditions will apply for employees working in the Moose River Basin:

Camp Conditions

(a) An Employer may elect to provide free room and board in camp at no cost to the employee. Where the Employer elects to provide a camp such employees will not be entitled to receive a daily travel or room and board allowance.

(b) When an Employer does not elect to provide free room and board in camp, the employee will be entitled to receive a daily travel or room and board allowance as set out in Article 26.

(c) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(d) An employee who is absent from work without approval and who remains in camp and is still absent from work the following day without approval will be charged $25.00 for the day of absence and each successive day of unapproved absence.

Hours of Work

(1) The hours of work will consist of a 21 day cycle of fourteen (14) consecutive work days followed by seven (7) consecutive days off.

(2) Regularly scheduled hours of work of ten (10) hours per day shall be paid at straight time hourly rates.

(3) Regularly scheduled hours of work on Saturday, Sunday, Recognized Holidays, and the fifth (5th) consecutive weekday shall be paid at two times the straight time hourly rate.
Wrap Around

An employee shall qualify for a return trip from the project every second twenty-one (21) day cycle he is on the project on the following basis:

(a) If an employee lives within 161 radius kilometres from the project, the Employer shall pay forty dollars ($40.00).

(b) If an employee lives greater than 161 radius kilometres from the project, the Employer shall pay as an allowance, forty dollars ($40.00) plus travel time based on the equivalent of one (1) hour's base rate of pay for each eighty (80) radius kilometres, or portion thereof, of travel time to a maximum of 800 kilometres from where the employee lives or place of recruitment, whichever is closer to the project.
APPENDIX B

7 DAY COVERAGE

These provisions would only apply to work covered by the "Modified Provisions" of this Construction Agreement.

When working under the provisions of this appendix all conditions listed below will supersede those contained in the main agreement. Where the appendix is silent, the appropriate article in the collective agreement applies.

The overtime rates will be as per the Modified Provisions.

This shift schedule is intended for work greater than four (4) weeks in duration, however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the employer to provide seven days per week work coverage, on a one, two, or three shift per day basis. When this occurs, a specific shift arrangement will be established by the employer detailing the shift schedule to be worked. The employer will provide the Union with 48 hours notice prior to the implementation of these shift provisions.

First Shift

Regularly scheduled hours of work of up to ten (10) hours per shift Monday to Friday inclusive shall be paid at straight time hourly rates.

Second Shift

Regularly scheduled hours of work of up to ten (10) hours per shift Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-fifth of the straight time hourly rate.
Third Shift

Regularly scheduled hours of work of up to ten (10) hours per shift Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-fifth of the straight time hourly rate.

All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at two times the straight time hourly rate. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
STATEMENT OF UNDERSTANDING #1

EMPLOYMENT EQUITY

It is recognized by the Electrical Power Systems Construction Association and the International Association of Bridge, Structural and Ornamental Ironworkers that Employment Equity legislation will be passed during the life of this collective agreement.

The parties therefore agree to consider and address the legislation as it affects the accommodation of aboriginals and any other group designated by the legislation.

Signed at Toronto this 29th day of June, 1992.

LETTER OF UNDERSTANDING

Compensation for Travel Time at Remote Hydro Electric Generating Sites

Considering the travelling conditions and availability of accommodation, the Employer may establish as assembly point different than the work location. Where the assembly point is different than a work location, the following provisions will apply:

1.0 An employee will be paid an allowance equivalent to his straight-time rate, up to a maximum of one (1) hour, for all time spent travelling from his assembly point to his work location.

2.0 An employee will travel on his own time when returning from his work location to his assembly point.

3.0 The Employer is entitled to 50% name hire for work covered by these provisions.

Dated this 26th day of November, 1998.

LETTER OF UNDERSTANDING
between
THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION
and
THE INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL,
ORNAMENTAL AND REINFORCING IRONWORKERS

EMPLOYMENT REFERRALS TO NUCLEAR FACILITIES
AND ONTARIO HYDRO SERVICES COMPANY

It is agreed by the parties to this understanding, that prior to any member being referred for employment at a nuclear generating facility or Ontario Hydro Services Company property, the member must submit to a security check. Only members who successfully obtain security clearance will be referred to the facility for employment. Once a member has been hired on, they will receive an allowance of $50.00 on their first weeks pay cheque, in consideration of their time spent filling out the security forms.

The Union will be notified in writing of the names of the individuals who were not successful in obtaining security clearances.

The parties to this understanding also acknowledge that this pre-clearance process does not prohibit the Union from filing a grievance on behalf of any member who is refused employment due to their failure to obtain security clearance.

IRON WORKERS and REINFORCING RODMEN

In order to address the issues of training and cost competitiveness, the parties agree
that the following shall constitute the principles that will govern training for the term of
the collective agreement.

1. The EPSCA Owners will continue to mandate the training requirements for
   workers on EPSCA owner sites

2. Ironworkers will attend industry standard training on their own time. The parties
   agree that the following training courses will be recognized as industry standard:
   
   • WHMIS
   • Fall Arrest
   • Fork Lift
   • Elevated Work Platform
   • Basic First Aid
   • High Voltage Awareness
   • Powder activated tools

3. The parties agree that EPSCA owners/contractors can request workers with
   industry standard training (as outlined above).

- 58
MEMORANDUM OF SETTLEMENT

BETWEEN

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

INTERNATIONAL ASSOCIATION OF BRIDGE,
STRUCTURAL, ORNAMENTAL AND REINFORCING
IRON WORKERS and REINFORCING RODMEN

Dated this 27th day of April 2004
It is agreed that the existing agreement between the parties which expires April 30, 2004 will be renewed with the following amendments:

**GENERAL**

Amend references to add Bruce Power LP

**ARTICLE 40 MODIFIED PROVISIONS**

Modified Provisions to apply to all work.

Amend the agreement in the following areas:

- Delete General Note
- Deleted boxed statement in Article 23
- Delete Article 40
- Appendix B
  - Delete first and third paragraph

**ARTICLE 13 WAGES AND PAY PROCEDURE**

Add:

"Direct deposit to be implemented at the Employer's option."

**ARTICLE 14 WAGES**

14.1 May 1, 2004 $1.10  
May 1, 2005 $1.05  
May 1, 2006 $1.00

ICI increase/date for following three years of agreement
ARTICLE 18

IRONWORKERS’ TRADE IMPROVEMENT PLAN

Add, where appropriate:

“Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. The effective date of such changed wage schedules, dues and remittances shall be the date of issuance.”

ARTICLE 22

HOURS OF WORK

Amend 2nd paragraph of Article 22.1 to read:

“The weekly hours of work may be arrived at by having the employees work either:

- four (4) consecutive ten-hour shifts, Monday to Thursday or;
- four (4) consecutive ten-hour shifts, Tuesday to Friday or;
- five (5) consecutive eight-hour shifts

but not concurrently on the same work program.

Weekly hours of work will be established for a minimum of two (2) weeks. The Employer will notify the Local Union of the weekly hours of work for each work program at the site. If an Employer intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.”

Amend start time in 3rd paragraph of 22.1 to read 7:00 am.

Add to the 3rd paragraph of 22.1:

“The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way at the end of the day shift.”

Add to 22.1:

“Trades assigned to fire watch duties may commence work after the start of the rest of the crew. In these cases, normal scheduled hours of work beyond the quit time of the rest of the crew will not be subject to overtime premiums.”
Add to 22.1 and 22.2:

"Shift differential will not be paid on overtime hours."

Agreement to settle existing grievance(s) related to shift differential – From date of filing of grievance to date of expiry as discussed by the Parties

ARTICLE 23

OVERTIME

Amend as follows:

23.1 On Monday to Friday inclusive, overtime work shall be paid at one and one-half (1 ½) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of 12 hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the basic hourly rate.

Overtime work performed on Saturday, Sunday, Recognized Holidays and non-shift days shall be paid at two times (2x) the basic hourly rate

23.2 When an employee is required to return to work without an eight (8) hour break, all work performed shall be paid for at the appropriate overtime rate, until such time as the employee receives an eight (8) hour break.

23.3 Overtime shall be assigned as impartially as possible amongst all members of the crew, subject to their ability to perform the work required.

ARTICLE 26

GENERATION PROJECTS DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

- May 1, 2004 – 4%
- May 1, 2005 – 2%
- May 1, 2006 – 2%
- May 1, 2007 – 4%
- May 1, 2008 – 2%
- May 1, 2009 – 2%
ARTICLE 27
LINE AND STATIONS DAILY
TRAVEL ALLOWANCE AND ROOM
AND BOARD

Travel rings and Board and Travel to be increased as follows:

Travel:
May 1, 2004 and in each subsequent year – 50 cents

Board:
May 1, 2004 and in each subsequent year - $1.00

ARTICLE 28
INITIAL AND RETURN

Amend Article 28.1 to read twenty-five dollars ($25.00).

Amend Article 28.2 to read thirty cents (30¢)

ARTICLE 33
RADIATION WORK

Amend Article 33.2 to read ten dollars ($10.00)
NEW ARTICLE

STANDOFF

"When unable to proceed with work, an Employer may elect to Standoff part or all of a crew.

The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel or subsistence allowance will be paid to an employee for the Standoff period.

If Standoff continues beyond ten (10) consecutive working days, an employee, at his/her option, may elect to remain on Standoff for an additional twenty (20) consecutive working days or be removed from Standoff. The Employer retains recall rights on employees electing to continue on Standoff.

If an employee elects layoff beyond the tenth (10th) consecutive working day, it shall be carried out in accordance with the terms of the Layoff provisions of this Agreement. An employee laid off will be issued a Record of Employment form on his/her date of layoff indicating "Layoff – Shortage of Work".

Standoff shall only continue beyond thirty (30) consecutive working days with the mutual consent of the Employer and the Union, in writing.

For the purpose of this Article, when working on a 4 x 10 hour shift arrangement, the following will apply:

- eight (8) scheduled working days will be considered the equivalent of ten (10) consecutive working days.
- sixteen (16) scheduled working days will be considered the equivalent of twenty (20) consecutive working days.
- twenty-four (24) scheduled working days will be considered the equivalent of thirty (30) consecutive working days.

ARTICLE 41

TERM OF AGREEMENT

41.1 Duration – Amend to read as follows:

This Agreement shall become effective May 1, 2004 and will expire on April 30, 2010.
LETTER OF UNDERSTANDING

Between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

AND

INTERNATIONAL ASSOCIATION OF BRIDGE,
STRUCTURAL, ORNAMENTAL AND REINFORCING
IRON WORKERS and REINFORCING RODMEN

In order to address the issues of training and cost competitiveness, the parties agree that the following shall constitute the principles that will govern training for the term of the collective agreement.

1. The EPSCA Owners will continue to mandate the training requirements for workers on EPSCA owner sites

2. Ironworkers will attend industry standard training on their own time. The parties agree that the following training courses will be recognized as industry standard:

   • WHMIS
   • Fall Arrest
   • Fork Lift
   • Elevated Work Platform
   • Basic First Aid
   • High Voltage Awareness
   • Powder activated tools

3. The parties agree that EPSCA owners/contractors can request workers with industry standard training (as outlined above).

EPSCA

Ironworkers
It is also agreed that the:

EPSCA/Rodmen Collective Agreement expiring April 30, 2004 will be renewed by incorporating the above amendments to the corresponding articles in the EPSCA/Rodmen Collective Agreement.

The parties agree to recommend this settlement for ratification. This agreement is conditional upon ratification by May 14, 2004. Following ratification, all terms and conditions will become effective May 1, 2004 (unless otherwise noted) and shall form the new agreement between the Parties.

Dated this 27th day of April, 2004 at Toronto, Ontario.

STRUCTURAL, ORNAMENTAL AND REINFORCING
IRON WORKERS

Dated this 13th day of July 2004

All matters contained in April 27, 2004 Memorandum of Settlement in addition to
the clarification letter dated May 11, 2004, with the exception of the following
articles, will form a recommended settlement between the Parties

All conditions in the April 27, 2004 memorandum and issues resolved as of today
will become effective July 13, 2004.

Article 10 – Foremen and Subforemen

The Parties agree that should there be an increase negotiated in the 2007 round
of ICI bargaining those increases shall be applied to the Foreman/Subforeman
rates in the EPSCA agreement.

Overtime – Article 23 (Greenfield Construction)

No changes to existing Article 23.
It is also agreed that the:

EPSCA Collective Agreement expiring April 30, 2004 will be renewed by incorporating the above amendments to the corresponding articles in the EPSCA/Ironworker Collective Agreement.

The parties agree to recommend this settlement for ratification. This agreement is conditional upon ratification by July 30, 2004. Following ratification, all terms and conditions will become effective date of signing and shall form the new agreement between the Parties.

Dated this 13th day of July, 2004 at Toronto, Ontario.

(1)= per hour worked; (2)= per hour paid
OVERTIME RATE:

Mon-Fri:
Scheduled Work Days: 1 1/2 times for up to and including 2 hours beyond the normal daily scheduled number of hours. This applies for both 4 day x 10 hours per day schedule and 5 day by 8 hour per day schedule.

Non-Scheduled Work Days: 2 times for all hours worked.
Sat: 2 times for all hours worked.
Sun-Hol: 2 times for all hours worked.

UNION FUNDS:
Union Funds contain the following items:
- Trade Improvement Plan - $0.23 per hour paid
- District Council - $0.20 per hour paid
- $0.25 per hour paid - effective May 1, 2005
- Institute of Ironworker Industry - $0.02 per hour paid

BENEFITS ADMINISTRATOR:
All deductions and contributions, excluding Union Dues, are to be sent to the following location:
Ontario Ironworker/Rodman Benefits Plan Administrator
111 Sheppard Ave., East
North York, ON
M2N 6S2

UNION DUES:
Union Dues for this Local are: $0.75 per hour
$0.78 per hour - effective May 1, 2005

This amount is not included in above noted Union Funds.
Union Dues are to be deducted from the Base Hourly Rate.
Union Dues are to be sent to the following person and location:
Mr. D. Smees
Business Manager
Ironworker/Rodman - Local 736
1955 Upper James St.
Hamilton, ON

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called EPSCA)

and the

INTERNATIONAL ASSOCIATION OF BRIDGE,
STRUCTURAL, ORNAMENTAL AND REINFORCING IRON WORKERS
on behalf of Reinforcing Rodmen
(hereinafter called the Union)

* * * *

WITNESSETH

WHEREAS EPSCA is an Association formed to represent all Employers engaged in construction industry work in the electrical power systems sector in collective bargaining and on their behalf enter into collective agreements covering those of their employees in the bargaining unit as hereinafter defined; and

WHEREAS the Union is affiliated with the American Federation of Labour - Congress of Industrial Organizations and has in its membership competent, skilled and qualified journeymen and apprentices to perform work coming within the trade and craft jurisdiction; and

WHEREAS the Association and the Union desire to mutually establish and stabilize wages, hours and working conditions for journeymen and apprentices employed by Employers within the electrical power systems sector of the construction industry, and further, to encourage closer cooperation and understanding between the Association and the Union to the end that a satisfactory, continuous and harmonious relationship will exist between the parties to this Agreement;

NOW THEREFORE, the Association and the Union mutually agree that the working conditions as set out below shall be applicable throughout the Province of Ontario.
Article 1

RECOGNITION

1.1 EPSCA recognizes the Union as the exclusive bargaining agency for a bargaining unit as defined in Section 1.4 engaged in

(i) all construction industry work under the responsibility of Design and Construction Branch (including Generation Projects Division and Transmission Systems Division),

(ii) all Major* construction industry work which is tendered/contracted for other than the Design and Construction Branch and,

REV (iii) work performed by the Design and Construction Branch for any Operations branch of Ontario Power Generation Inc (OPGI), Bruce Power LP and Ontario Hydro Services Company (OHSC) [formerly Ontario Hydro] where it has been determined by that Operations branch that there does not exist internally the expertise or the current staff to perform the work.

REV This work shall be performed in the Province of Ontario on Ontario Power Generation Inc (OPGI), Bruce Power LP and Ontario Hydro Services Company (OHSC) [formerly Ontario Hydro] property for the bulk power system, save and except the building of commercial-type office facilities at urban locations remote from operating facilities. The work encompasses:

- construction of new facilities
- additions to existing facilities
  - modifications
  - rehabilitation
  - reconstruction of existing facilities

For the purpose of clarity, the bulk power system comprises generating stations, hydraulic works, heavy water facilities, transmission lines (voltage over 50 kV) and transmission stations, microwave and repeater stations.

1.2 The Union recognizes EPSCA as the sole and exclusive collective bargaining agency for all of the Employers covered by this Agreement, and in all matters pertaining to the administration of this Collective Agreement.

1.3 The term "employee" shall include all employees of the Employers in the classifications as set out in Section 1.4 below.

* The definition of Major described in (ii) above and any issues arising out of the interpretation of Major shall be dealt with in an attached Letter of Understanding.
1.4 The bargaining unit under this Agreement shall comprise the following classifications:

RODMEN

Foreman
Subforeman
Journeyman Rodman
Apprentice

1.5 The term "Employers" shall include individual members of EPSCA and any company, partnership, sole proprietorship, joint venture, contractor, subcontractor or any person who is bound by the terms and conditions of this Agreement.

1.6 This Agreement shall cover all of the employees of the Employer for whom the Union has bargaining rights that work on field fabrication, handling, racking, sorting, cutting, bending, hoisting, placing, burning, welding, and tying of all materials used to reinforce concrete construction without limiting the generality of the foregoing, this includes reinforcing bars, welded wire mesh, post-tensioning systems (wire, strand, bar, plastic and substitute materials, including the stressing and all related work).

1.7 The classifications referred to in Section 1.4 do not establish craft jurisdiction. Such jurisdiction is established in accordance with Article 6 of this Collective Agreement.

Article 2

EXECUTIVE COMMITTEE

2.1 To advance harmonious relations between EPSCA, the Employers, the Union, and the employees, the parties shall each appoint an Executive Committee. The Committees shall meet together at least annually to review matters associated with the administration of this Collective Agreement with the intent of achieving uniformity of application of this Agreement wherever employees are working in the Province. This Committee shall consist of not more than six (6) members from each party.
Article 3

ACCREDITED UNION REPRESENTATIVES

3.1 The Senior Representative of the Union will designate Local Union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two (2) representatives from the Union for each Project and suitable number for each Lines and Stations Construction Zone. The Union will notify the General Manager of EPSCA in writing of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Upon entering the job site, such authorized representatives after identifying themselves to the EPSCA Representative and the authorized representative of the Employer, will be free to observe the progress and conduct of the work and to conduct normal union business. The Union undertakes that these representatives will not hinder or interfere in any way with the said work.

Article 4

UNION STEWARDS

4.1 The Accredited Union Representative shall inform the appropriate EPSCA Representative in writing of the names of all stewards as they are appointed and when they cease to act as stewards. If the Employer disapproves of the appointed steward, the Employer shall immediately notify the Union through the EPSCA Representative, in writing, stating the reason for disapproval. If the reason(s) are acceptable to the Union, a new steward will be appointed immediately. If an acceptable Union Steward cannot be chosen, the Union and the Employer shall meet jointly to discuss the reasons for disapproval and if necessary the grievance procedure will be followed. There shall not be more than one (1) steward per Employer unless the Employer and Union mutually agree that more stewards are required. A steward shall exercise his duties only in respect to employees of his Employer. A steward shall obtain permission from his immediate supervisor before leaving his work area for Union business. Such permission shall not be unreasonably denied. No Foreman or Subforeman shall be permitted to act as a Steward.

The Accredited Union Representative shall inform the appropriate EPSCA Representative in writing of the name of one (1) steward who will represent the Union at stewards' meetings.

4.2 The steward shall be supplied by his Employer with a list of employees hired, discharged and to be laid off.
4.3 In the event of a work stoppage or threat of a work stoppage, or any other employee activity prohibited by this Agreement, affected stewards, in keeping with their responsibilities, as it is incumbent upon all Union representatives, shall immediately do all in their power to ensure that the prohibited action of the employees is prevented or stopped.

4.4 The Employer agrees that when employees are laid off, the steward will be one of the last two employees laid off provided the steward is able to perform the remaining work required.

4.5 A Union steward will not be transferred to another project unless mutually agreed to by the Employer and the Accredited Union Representative.

4.6 A steward shall be given the first opportunity to work overtime provided he is able to perform the work required. When a crew not containing a steward is required to work overtime, one (1) member of the crew will be replaced by a steward in order that a steward may be present for overtime hours worked.

Article 5

ADVANCE NOTICES

5.1 EPSCA will advise the Union of all new construction work coming under the scope of this Agreement for the construction field forces of the Employers.

Upon the request of the Union, EPSCA will convene a pre-job conference before work commences to discuss the preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the Project.

Article 6

WORK ASSIGNMENT

6.1 The Jurisdiction of the Unions shall be that jurisdiction established by agreements between International Unions claiming the work or Decisions of Record recognized by the AFL-CIO for the various classifications and the character of work performed, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.
A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of this markup process is to indicate to the Union the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes. In the Electricity Production zones when work falls within this criteria the EPSCA Office will send out a “Notification of Work” along with a copy of the original minutes of mark-up meeting(s) to the Local Unions prior to work commencing. This procedure shall not preclude the Unions’ right to contest previously assigned work, if the work is in a Local Union jurisdiction other than the one it was marked up in.

When work is to be performed on a project site and it meets the following criteria; same employer, same work, same project site, the markup process will not be required.

When an Employer has work that is less than a three (3) week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Union will be notified of the scope of work and the Employer’s proposed work assignments. The Union will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Union of the final work assignments prior to the commencement of the work.

All work that does not meet the criteria set out in paragraph 2, will be reviewed and assigned at a markup meeting.

EPSCA will provide written notice to the Union (International Office and Local Union Office) as far in advance as possible of markup meetings. The Union may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

The Employer who has the responsibility for the new work shall make a proposed assignment of the work involved. The Employer shall be responsible for providing copies of proposed assignments to the Union (International Office and Local Union Office). The Employer will specify a time limit for the Union to submit evidence supporting its claims. The Employer will evaluate all evidence submitted and make a final assignment of the work involved. This final assignment will be in accordance with the procedural rules established by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. The Employer will advise the Union of the final assignments prior to the work commencing.

* For the purposes of this Article, Nanticoke, Lambton, Bruce Nuclear Power Development (BNPD), Darlington, Pickering and the six (6) Electricity Production Zones are each considered one project site.
The EPSCA representative will record the proposed assignments and jurisdictional claims and forward a copy of them within fifteen (15) working days to the Union (International Office and Local Union Office).

The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the process set out above may not be practical or possible.

Article 7

JURISDICTIONAL DISPUTES

7.1 (a) The Union shall have the exclusive right to elect to pursue or respond to any jurisdictional disputes that arise under this Agreement at either the Ontario Labour Relations Board (OLRB) or the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry (Plan).

In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Plan, paragraphs 7.1(b), 7.2, 7.3 and 7.4 will apply.

In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the OLRB, paragraphs 7.1(b), 7.2, 7.3, and 7.4 will NOT apply. Further, the sentence within paragraph 7.1(b) which reads "If the jurisdictional dispute cannot be settled on a local basis by the Unions involved, it shall be submitted to the International Unions involved for settlement without permitting it to interfere in any way with the progress of the work at anytime." will apply.

(b) In the event of a jurisdictional dispute, the Employer will make an assignment for the work in dispute in accordance with the Procedural Rules and Regulations of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. If the jurisdictional dispute cannot be settled on a local basis by the Unions involved, it shall be submitted to the International Unions involved for settlement without permitting it to interfere in any way with the progress of the work at any time. The parties will settle such jurisdictional dispute in accordance with procedure as outlined by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry of the Building Trades Department, AFL-CIO or any successor agency of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry authorized by the Building Trades Department.

(c) Where a local of the Union is in disagreement with an Employer's work assignment, the Employer shall supply the Accredited Union Representative with a copy of the evidence submitted by the other union(s) involved along with drawings and/or prints plus a description of the work or process in dispute from a qualified representative of the Employer when requested.
(d) When a jurisdictional dispute exists between unions and upon requests by the Ironworkers, the Employer shall furnish the International Representative a signed letter from a duly authorized official of the company on Employer stationery, stating whether or not the Union was employed on specific types of work on a given project.

7.2 In the event the dispute is not settled by the International Unions involved, it shall then be submitted to the Administrator of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry for resolution. The Union and Employer involved shall advise EPSCA respectively, in writing, of an intent to submit a jurisdictional dispute to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry and will identify the work in question. The arbitration decision will be final and binding on the parties to this Agreement.

7.3 EPSCA shall have direct recourse to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry when the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry has under its consideration a dispute involving the assignment of work being done by employees who are covered by this Agreement.

7.4 In the event that the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry fails to render a decision within sixty (60) days of the disputed assignment being referred to the Plan, EPSCA, or the Union, shall have recourse to the Ontario Labour Relations Board.

7.5 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the OLRB, the arbitration board panel appointed by the Ontario Labour Relations Board pursuant to the Act is not authorized to award damages in respect of a mis-assignment of work only in circumstances where the other union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However this paragraph 7.5 shall not apply where the Jurisdictional Dispute and the mis-assignment of work involves the same employer and the same work previously the subject of a Jurisdictional Dispute before the OLRB or the Plan.

7.6 The board panel appointed by the OLRB will govern its decision pursuant to its normal criteria.

7.7 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the OLRB, the decision of the panel of the OLRB will be final and binding upon the parties to this agreement with no further recourse to the Plan on the issue decided by the OLRB.
Article 8

UNION SECURITY

8.1 UNION MEMBERSHIP

As a condition of employment, all employees covered by this Agreement shall either be members of, or will apply for membership in, the Union and, with respect to initiation fees and dues, will maintain such membership in good standing.

8.2 CHECKOFF

The employer will deduct amounts specified in the current EPSCA wage schedule for each hour paid for each employee covered by this agreement. The Employer will forward same to the Financial Secretary of the Local Union where the work is being performed, postmarked not later than the twentieth (20th) day of the month following the month for which the deductions are made.

These amounts are for working dues assessment and will be deducted from gross wages and identified on the employee's pay statement. The Union shall indemnify EPSCA and the Employers for any liability arising from the deduction of initiation fees or dues. The Union through its International Office will notify EPSCA, in writing, of any changes to initiation fees and dues. Within three (3) weeks of receipt of an acceptable written notice any changes to such fees and dues will be implemented. The effective date will be the date of implementation.

8.3 Where an employee works in more than one (1) Local Union territory for a week or less, the Employer will forward deductions to the Local Union in whose territory the employee worked the greater percentage of hours.

Article 9

EMPLOYMENT

9.1 (a) For purposes of this Article, a geographic area will be established for each Project and geographic areas for each Lines and Stations Zone. The size of these geographic areas will be dependent upon the location of the work.

(b) The boundaries of the geographic areas will be jointly established at pre-job conferences.

9.2 An office will be established by EPSCA, or the Employer with the approval of EPSCA, for each Project and each Lines and Stations Zone. A purpose of this office will be to coordinate employment as specified in this Article.
9.3 EPSCA, or the Employer with the approval of EPSCA, and the Union will exchange the names of their representatives in each of the areas described in Section 9.1 (a), who will be responsible for cooperating in the referral and employment of reliable and competent Union members.

9.4 EPSCA, or the Employer with the approval of EPSCA, will notify the Union of all manpower required for all work to be undertaken by Employers coming under the scope of this Agreement. All employees employed under the terms of this Article will be required to obtain a referral slip from the Local Union having jurisdiction for the geographic area, except as noted in Section 9.5 (b) below. All employees will report to the EPSCA/Employer’s referral office prior to starting work.

9.5 (a) The Employer shall have the right to request, by name, Local Union members who have solicited jobs. These members must present a written request to the Union who will issue them a referral slip. This right to request shall not be abused.

(b) Employee members who are transferred within the territory of their Local Union including sector to sector by an employer will not require an additional referral slip. The parties agree that there is no restriction on the number of employees so transferred. However such transfers will not result in layoff of employee members presently on these projects.

(c) When Union members are transferred from one (1) Local Union territory to another, including sector to sector, the number of Union members will not exceed forty percent (40%) of the total crew on the job unless approval is obtained from the Local Union office. Such transferred Union members must secure a referral slip from the Local Union in whose territory the work is being performed. However, before members are transferred from one (1) Local Union territory to another, the Employer shall contact the Local Union Business Agent of the territory where the work is to be performed.

(d) The transfer of employees by an Employer will not result in a lay-off of the Employer's existing employees at the project before 14 days or the completion of the project whichever is earlier.

(e) The Employer shall have the right to recall former employees provided that:

(i) The employee being recalled is a Local Union member in good standing.
(ii) The employee has not worked for another employer since being laid off.

Recalled employees, if not named, shall not be considered as name hires.
The employment of additional tradesmen and apprentices shall be carried out on the following basis and sequence:

(a) The EPSCA office, or the Employer with the approval of EPSCA, will request the appropriate Local Union office for tradesmen and apprentices required. The request will include a description of the work, the number of tradesmen and apprentices required, and the name of the Employer for whom the tradesmen and apprentices will be working.

(b) The Union members who are resident in the designated geographic area will be referred by the Union for employment through the EPSCA/Employer’s office. As much as their out-of-work lists will permit, the Union will supply members on a fan out basis from the project or work location.

The Employers will either hire such persons or substantiate their reasons in writing for not doing so.

(c) If, after a request has been made, the Union is unable to supply sufficient tradesmen and apprentices to meet the manpower requirements of the Employers within forty-eight (48) hours after a requisition is made by EPSCA, the Employers may employ tradesmen and apprentices who are resident within the geographic area. Such tradesmen and apprentices shall comply with the requirements of the Union Security Article of this Agreement.

(d) Once the supply of suitable tradesmen and apprentices within the geographic area has been exhausted and additional tradesmen and apprentices are required, EPSCA, or the Employer with the approval of EPSCA, will contact the International Representative or his designee, in order to determine whether suitable Union tradesmen and apprentices are available outside of the geographic area. EPSCA, or the Employer with the approval of EPSCA, will cooperate in providing employment to such Union tradesmen and apprentices on the basis that they be supplied from the nearest location where they are available.

The Union shall obtain prior written approval of the General Manager of EPSCA before referring a person who resides outside the Province of Ontario except for members residing in border cities adjacent to the local union having jurisdiction over the job site.

(e) In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers in sequence from the out of work list to the location from where they were laid off. Recalled Greenmen will perform sufficient Greenman work to maintain their skill level, or be laid off.
9.7 Probationary members will be replaced by qualified Local Union members when they become available subject to the following:

(i) No replacement shall take place within five (5) working days of the end of the job.

(ii) The Local Union shall provide the Employer with a minimum of two (2) working days notice when an employee is to be replaced.

(iii) Notwithstanding Article 29, the local members who replace probationary employees shall not be entitled to initial travel monies and the probationary employees being replaced shall not be entitled to return travel monies.

(iv) The Employer shall decide which probationary employee or employees shall be replaced.

(v) This provision will not be cause for grievance by any probationary member.

9.8 Employees will be laid-off in the following sequence:

(a) probationary members

(b) out-of-province travel card members

(c) in-province members

This layoff sequence is subject to:

(a) That the employees being retained at any time in the sequence, have the skills and ability to satisfactorily perform the work yet to be completed.

(b) That at all times in the total makeup of the employers bargaining unit work force, the employer will have the right to retain union members who have been transferred from one local union territory to another (travel card members) providing, however, that the number of travel card members being retained does not exceed forty (40) percent of the total bargaining unit work force on an individual project or work location.

This layoff provision should apply on an individual project or work location basis.

The local union will indicate on an employee's referral slip the travel card member's home local.

9.9 Re-employment as required by the Workers' Compensation Board shall not be a violation of this collective agreement nor be subject to the provisions of Article 9.
Article 10

FOREMEN AND SUBFOREMEN

10.1 It is understood that foremen and subforemen hold key positions in the relationship between the Employers and the Union. Both parties agree that every effort should be made to recruit and retain foremen and subforemen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of the Union, the Employers and the Union will make every effort to minimize problems that may arise which concern the relationship between the foremen and subforemen, the Employers and the Union.

10.2 The parties recognize the responsibilities of foremen and subforemen to discharge their managerial duties. If the Union feels that the foreman or subforeman is not discharging his managerial duties in a manner that is fair and equitable, or if an Employer feels that the Union is interfering with the foreman or subforeman in the performance of his managerial duties, the Employer or the Union may refer the problem to the Executive Committee for resolution. If the matter cannot be resolved by the Executive Committee, the grievance procedure may be invoked by either party.

10.3 The selection and retention of foremen and subforemen will be the responsibility of the Employers. When making appointments to the foreman and subforeman level, the Employers will give first consideration to those local journeyman rodmen they presently employ on site. When making appointments to the subforeman level, the provisions of Article 9.5 (c) employment will be maintained.

10.4 The foremen’s differential shall be $3.00 above the journeyperson’s rate as set out in the wage schedules. The subforeman’s differential shall be $2.50 above the journeyperson’s rate as set out in the existing wage schedules. The rates of pay for all foremen and subforemen covered by this Agreement will be set forth in the current wage schedules. EPSCA will provide the Union with current wage schedules.

10.5 Adequate Rodmen supervision shall be employed on all overtime work where a crew is required.

10.6 Where the crew size is six (6) or less, including the foreman, the foreman may work with the tools of the trade. The foreman may not be used to replace a journeyman on overtime.
Article 11

MEMBERS ON RIGS

11.1 When mobile or power operated rigs are used for hoisting reinforcing steel, the number of men required on said rig shall be determined by the foreman or subforeman who, after conferring with the steward, shall keep in mind the safe and efficient operation of the job.

Article 12

APPRENTICES

12.1 After 4000 hours term of Apprenticeship, the Apprentice shall have satisfied the requirements as set out by the Joint Apprenticeship Committee, and when he has successfully passed same, he shall be paid at the prevailing Journeyman's rate.

12.2 One (1) Apprentice shall be permitted for the first Journeyman employed by the Employer plus one (1) additional Apprentice for each additional five (5) Journeymen on all work.

12.3 The Employer and the Union agree to participate in the Apprenticeship program through the auspices of the Employment Training Branch, Ministry of Education and Training.

12.4 The rates of pay for Apprentices covered by this Agreement will be set out in the wage schedules attached hereto.

12.5 When an apprentice leaves employment to attend trade school, the Employer agrees to hire another apprentice to take his place for the period of time the apprentice is in attendance at school.

Article 13

PAY PROCEDURE

13.1 NORMAL

(a) Employees shall be paid weekly and payment for any given week will be made not later than the sixth (6th) working day after the close of the payroll period, but in any event not later than Thursday of the following week.
(b) Wages shall be paid by the Employers on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. Direct Deposit to be implemented at the Employer's option. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee setting forth:

(i) the period of time or the work for which the wages are being paid;
(ii) the rate of wages to which the employee is entitled;
(iii) the amount of wages to which the employee is entitled;
(iv) the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;
(v) any allowance or other payment to which the employee is entitled;
(vi) the amount of vacation pay for which the employee is being paid;
(vii) the amount of statutory and recognized holiday pay for which the employee is being paid; and
(viii) the net amount of money being paid to the employee.

(c) In cases of inclement whether being declared on pay day, employees will receive their pay before leaving the site provided it is available on the site.

13.2 ON TERMINATION

(a) An employee who voluntarily terminates his employment will be provided his final pay on the next regular pay day.

(b) An employee who is laid off will have his final pay mailed to his regular residence*, or as otherwise requested by the employee, by Priority Post within five (5) working days of termination.

(c) An employee who is discharged shall be provided with his final pay immediately if the Employer's pay facilities are on site or as per Section 13.2 (b) if the Employer's pay facilities are not on site.

(d) Included in an employee's final pay will be vacation and recognized holiday pay owing him, his UIC, Record of Employment Form.

(e) No employee shall be laid off during the first four (4) hours of his shift.

(f) When an employee is laid off from a job where he is accommodated in a camp, he will be paid one hour at the applicable straight-time rate to check out of camp.

* An employee's "regular residence" is the place where he maintains a permanent self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally sleeps and eats) in which he resides and for which he can show proof of financial commitment.
(g) Should an Employer fail to provide an employee such wages and/or forms as required above within the prescribed five (5) working day time period, then said employee shall be paid any waiting time in excess of the five (5) working day time period at straight-time rates of pay applicable to the regular working hours for the regular working hours in the day.

Article 14

WAGES

14.1 Effective May 1, 2004, and until April 30, 2010, the rates of pay for employees in the classifications listed in Article 1 of this Agreement and working in Generation Projects, Miscellaneous Projects and Lines and Stations Construction shall be set as forth in the wage schedules attached hereto.

Article 15

STATUTORY AND RECOGNIZED HOLIDAYS

15.1 The holidays recognized under this Agreement are:

- New Year’s Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

15.2 EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

15.3 Statutory and recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed either on the preceding Friday or following Monday.

15.4 EPSCA reserves the right to change the day of observance of Canada Day to the preceding Monday if it falls on Tuesday and to the following Friday if it falls on Thursday.
Article 16

VACATION, STATUTORY AND RECOGNIZED HOLIDAY PAY

16.1 The vacation, statutory and recognized holiday pay rate shall be ten percent (10%) (six percent [6%] vacation and four percent [4%] in lieu of statutory and recognized holidays) of total earnings*.

16.2 Payment of vacation, statutory and recognized holiday pay shall be made on the regular weekly pay cheque.

16.3 Employees with one year's employment will be entitled to 3 weeks annual vacation. Employees with more than one year's employment, under special circumstances, will be entitled to additional time off subject to the approval of the Employer. Additional time off will not be unreasonably denied.

All vacation entitlement will be subject to approval providing the work schedule will permit.

Article 17

WELFARE AND PENSION PLANS

17.1 For each of his employees working within the territorial jurisdictions of Locals 700, 736, 765, and 786, the Employer agrees to pay welfare contributions on his behalf to the Ironworkers Central Welfare Fund.

17.2 For each of his employees working within the territorial jurisdictions of Locals 700, 736, and 786, the Employer agrees to pay pension contributions on his behalf to the Ironworkers Ontario Pension Fund.

17.3 Contributions to the plans identified in Sections 17.1 and 17.2 shall be submitted by the twentieth (20th) day of the month following the month in which the hours were paid, and at no time will contributions be paid directly to the employee. A penalty of three percent (3%) of any unpaid amount of contributions shall become due and payable to the applicable plan by a contributing Employer on the thirtieth (30th) day following the day designated for payment by the Collective Agreement. A further penalty of three percent (3%) of any monies owing shall become due and payable on the expiry of each succeeding thirty (30) day period, until all monies due and owing (including both contributions and charges) have been paid.

* "Total earnings" means pay for regular hours, overtime, premium pay, shift differential, retroactive pay adjustments, call-in, Saturday and Sunday premiums and trade training.
17.4 For each of his employees working within the territorial jurisdiction of Local 721, the Employer agrees to pay welfare contributions on his behalf to the welfare plan established for that Local.

17.5 For each of his employees working within the territorial jurisdiction of Local 721, the Employer agrees to pay pension contributions on his behalf to the pension plan established for that Local.

17.6 Contributions to the plans identified in sections 17.4 and 17.5 shall be submitted by the fifteenth (15th) of the following month in which the hours were paid, and at no time shall the contributions be paid directly to the employee. If payment is over thirty (30) days late, the interest, at one percent (1%) per month, shall be paid from the due date.

17.7 For Locals 700, 721, 736, 759, 765 and 786, the Union agrees to supply the Employer with all information regarding the welfare and pension plans and also all the administrative material that is required for the implementation of these payments.

17.8 The amount(s) of welfare and pension contributions to be paid will be set out in the wage schedules attached hereto.

17.9 Any changes in welfare or pension plan contributions recognized under this Agreement will be confirmed in writing by the Union to EPSCA before such changes are put into effect. Within three (3) weeks of receipt of an acceptable written notice, such changes will be implemented. The effective date will be the date of implementation. Should the welfare or pension plan contributions change during the term of this Agreement then an adjustment shall be made to the base rate. The total wage package will not be changed.

17.10 The trustees of the employee benefit plans referred to in this collective agreement shall promptly notify the Union (or Council) of the failure by any Employer to pay any employee benefit contributions required to be made under this collective agreement and which are owed under the said plans in order that the Program Administrator of the Employee Wage Protection Program may deem that there has been an assignment of compensation under the said Program in compliance with the Regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

17.11 To reduce administrative costs the parties agree that the number of monthly separate remittance and deduction cheques will be kept to a minimum. (status quo)
Article 18

TRADE IMPROVEMENT PLAN

18.1 Employers employing employees covered by this Agreement will contribute to the Ironworkers Trade Improvement Plan Trust for Locals 700, 721, 736, 765 and 786.

18.2 The amount(s) of contributions to the Ironworkers Trade Improvement Plan will be as set out in the wage schedules attached hereto.

18.3 Employer contributions, including nil reports, shall be postmarked by the twentieth (20th) day of the month following the month in which the hours were paid, and at no time will the Ironworkers Trade Improvement Plan Trust contributions be paid directly to the employees. A charge of three percent (3%) of any unpaid amount of contributions shall become due and payable to the Trust by a contributing Employer on the thirtieth (30th) day following the day designated for postmark by the Collective Agreement in effect between EPSCA and the Union. A further charge of three percent (3%) of any monies owing shall become due and payable on the expiry of each succeeding thirty (30) day period until all monies due and owing (including both contributions and charges) have been paid.

18.4 Employers agree to be bound by the decisions of the Trustees of the Ironworker Trade Improvement Plan Trust on matters pertaining to the Trust.

18.5 The Union agrees to supply all pertinent information regarding the Trust to the Employer.

18.6 To reduce administrative costs the parties agree that the number of monthly separate remittance and deduction cheques will be kept to a minimum. (status quo)

18.7 Wage schedule, dues and remittance changes are to be provided in writing to EPSCA and changes shall only take place during the months of April and November of each calendar year. The effective date of such changed wage schedules, dues and remittances shall be the date of issuance.
Article 19

ASSOCIATION FUND

19.1 All Employers shall contribute the amount specified on the wage schedules attached hereto for each hour worked by each employee covered by this Agreement to the Electrical Power Systems Construction Association Fund. The Employer shall remit such contribution in accordance with the standard form of remittance supplied by EPSCA.

Article 20

CLOTHING ALLOWANCE

20.1 In view of the special requirements of reinforcing work performed by employees in thermal, nuclear or hydraulic generation and transmission and transformation construction, Employers agree to pay a clothing allowance of three cents (3¢) per hour worked. The amount of clothing allowance will be set out in the wage schedules attached hereto.

Article 21

REPORTING PAY

21.1 An employee who reports for work at the usual starting time for his shift shall receive a minimum of two (2) hours' pay plus his appropriate daily travel or board allowance at the applicable rate when he reports for work but is unable to commence work because of circumstances beyond his control.

To qualify for this allowance, the employee must remain on the job during the two (2) hour period and perform any work requested which, in the opinion or judgment of his foreman or subforeman, after conferring with the steward, can be accomplished safely.

Article 22

CALL-IN PAY

22.1 When an employee is called in outside of his normal hours of work, he shall receive a minimum of four (4) hours' work at two (2) times the basic rate plus his appropriate daily travel allowance. If the employee's normal hours' of work commence within this four (4) hour period, the employee will be paid premium time until the start of his normal hours and will revert to his normal hourly rate at the commencement of his normal hours of work.
Article 23

HOURS OF WORK

23.1 One (1) or Two (2) Shift Operation

The weekly hours of work shall consist of forty (40) hours, worked between Monday and Friday, for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.

The weekly hours of work may be arrived at by having the employees work either:

- four (4) consecutive ten-hour shifts, Monday to Thursday or;
- four (4) consecutive ten-hour shifts, Tuesday to Friday or;
- five (5) consecutive eight-hour shifts

but not concurrently on the same work program.

Weekly hours of work will be established for a minimum of two (2) weeks. The Employer will notify the Local Union of the weekly hours of work for each work program at the site. If an Employer intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.

REV The start time for the day shift shall be 7:00 AM with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way of the end of the day shift.

The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

NEW Trades assigned to fire watch duties may commence work after the start of the rest of the crew. In these cases, normal scheduled hours of work beyond the quit time of the rest of the crew will not be subject to overtime premiums.

NEW Shift differential will not be paid on overtime hours.

23.2 Three (3) Shift Operation

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours per shift at the straight time rate.
Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift. A shift differential of one-seventh (1/7) shall be paid for all normal scheduled shift hours worked.

Those employees working on the night shift shall work seven (7) hours per shift. A shift differential of one-fifth (1/5) shall be paid for all normal scheduled shift hours worked.

A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked excluding Saturdays, Sundays and recognized holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the remainder of the hours that would have been worked had the employee not been reassigned.

It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Union.

**NEW** Shift differential will not be paid on overtime hours.

**Article 24**

**OVERTIME RATES**

24.1 When working on an eight (8) hour day and five (5) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of 2 hours per day. All hours in excess of 10 hours per day shall be paid at two (2) times the base hourly rate.

When working on a ten (10) hour day and four (4) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of 2 hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the base hourly rate.

Overtime work performed on Saturday, Sunday, Recognized Holidays and non-shift days shall be paid at two (2) times the basic hourly rate.

24.2 For Local 721, the first hour of overtime, after regularly scheduled hours, Monday to Friday inclusive, shall be paid at the rate of time and one-half of the regular day shift rate.

24.3 Where one or more crews are repeatedly working overtime, fifty (50) percent of the crew will be replaced with members from other crews for the overtime work.
Article 25

REST PERIOD

25.1 For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, for each half shift worked.

25.2 For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

25.3 For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two (2) hours of overtime worked.

Article 26

MEALS ON OVERTIME

26.1 If an employee is notified during the time he is working that he will be required to continue working for more than two (2) hours past his normal quitting time that day, the Employer will provide a free meal to the employee at the end of his regular hours of work. The next overtime meal will be provided after six (6) hours of overtime worked and for each four (4) hours of overtime worked thereafter.

The employee will be allowed thirty (30) minutes with pay at straight time rates to eat each meal at the time directed by the Employer. When a paid meal period overlaps a rest period the paid meal period will supplant the rest period.

To qualify for the above-noted on a Friday for work on the first and second shifts, an employee working a thirty-eight (38) hour week will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or recognized holidays for employees who normally work the first or second shifts.

The above-noted is not applicable to the first six and one-half (6-1/2) hours worked on Saturdays, Sundays or recognized holidays for employees who normally work the third shift.

26.2 Where an employee has been notified the previous day, no lunch will be provided but the employee will be allowed time to eat without loss of pay at a time directed by the Employer.
27.1 DAILY TRAVEL ALLOWANCE

(a) A daily travel allowance will be paid by the Employers to their employees on the following basis:

(i) If an employee lives within forty (40) radius kilometers* of the Project, no travel allowance will be paid.

(ii) If an employee lives within forty (40) to fifty-six (56) radius kilometers of the Project, he shall receive $20.60 per day effective May 1, 2004 ($21.00 effective May 1, 2005, $21.40 effective May 1, 2006, $22.25 effective May 1, 2007, $22.70 effective May 1, 2008 and $23.15 effective May 1, 2009) travel allowance for each day worked or reported for.

(iii) If an employee lives within fifty-six (56) to eighty (80) radius kilometers of the Project, he shall receive $23.95 per day effective May 1, 2004 ($24.45 effective May 1, 2005, $24.95 effective May 1, 2006, $25.95 effective May 1, 2007, $26.45 effective May 1, 2008 and $27.00 effective May 1, 2009) travel allowance for each day worked or reported for.

(iv) If an employee lives within eighty (80) to ninety-seven (97) radius kilometers of the Project, he shall receive $27.60 per day effective May 1, 2004 ($28.15 effective May 1, 2005, $28.70 effective May 1, 2006, $29.85 effective May 1, 2007, $30.45 effective May 1, 2008 and $31.05 effective May 1, 2009) per day travel for each day worked or reported for.

(v) If an employee lives greater than ninety-seven (97) radius kilometers from the project and does not qualify for subsistence allowance under Subsection 27.2 below, he shall receive $31.00 per day effective May 1, 2004 ($31.60 effective May 1, 2005, $32.25 effective May 1, 2006, $33.55 effective May 1, 2007, $34.20 effective May 1, 2008 and $34.90 effective May 1, 2009) per day travel allowance for each day worked or reported for.

*Note: Bruce GS "A", Bruce GS "B" and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce Complex will be calculated from the midpoint of a straight line joining the centres of the Bruce GS "A" and Bruce GS "B" turbine halls.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each Project.
When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement. A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

27.2 ROOM AND BOARD
(Excluding Darlington and Pickering Projects)

The following conditions will apply for employees whose regular residence* is more than ninety-seven (97) radius kilometers from the project:

(a) An Employer may supply either:

(i) room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance; or

(iii) travel allowance

REV (b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $79.05 per day effective May 1, 2004 ($80.65 effective May 1, 2005, $82.25 effective May 1, 2006, $85.55 effective May 1, 2007, $87.25 effective May 1, 2008 and $89.00 effective May 1, 2009) for each day worked or reported for when employed at a location north of the French River and $65.50 per day effective May 1, 2004 ($66.80 effective May 1, 2005, $68.15 effective May 1, 2006, $70.90 effective May 1, 2007, $72.30 effective May 1, 2008 and $73.75 effective May 1, 2009) for each day worked or reported for when employed at a location south of the French River subject to sections 27.2(c), 27.2(d), 27.3 and 27.4.

* An employee's "regular residence" is the place where he maintains a self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally sleeps and eats) in which he resides, and for which he can show proof of financial commitment.
REV(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near the Project. Employees who travel daily to locations beyond ninety-seven (97) radius kilometers from the Project will be entitled to receive $28.90 per day effective May 1, 2004 ($29.50 effective May 1, 2005, $30.10 effective May 1, 2006, $31.30 effective May 1, 2007, $31.95 effective May 1, 2008 and $32.60 effective May 1, 2009) for each day worked or reported for.

(d) Pickering and Darlington Projects

REV (i) An employee who qualifies for subsistence allowance shall receive a subsistence allowance of receive $39.55 per day effective May 1, 2004 ($40.35 effective May 1, 2005, $41.15 effective May 1, 2006, $42.80 effective May 1, 2007, $43.65 effective May 1, 2008 and $44.50 effective May 1, 2009) for each day worked or reported for, subject to Articles 27.2(c), 27.3 and 27.4.

(ii) Employees who don’t qualify for board allowance and commute beyond 97 radius kilometers shall receive $28.90 per day effective May 1, 2004 ($29.50 effective May 1, 2005, $30.10 effective May 1, 2006, $31.30 effective May 1, 2007, $31.95 effective May 1, 2008 and $32.60 effective May 1, 2009) for each day worked or reported for.

27.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 27.1 and 27.2 above when such employee reports for work but does not remain at work for his scheduled daily hours of work unless excused by an authorized representative of the Employer. Such permission shall not be unreasonably denied.

27.4 An employee who maintained a regular residence within the geographic area of the Local Union for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

27.5 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at twenty-five dollars ($25.00) per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged twenty-five dollars ($25.00) per day, unless he is excused from work for a legitimate reason by the Project medical attendant or by an authorized representative of his Employer.
(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

Article 28

LINES AND STATIONS CONSTRUCTION
DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

28.1 DAILY TRAVEL ALLOWANCE

The daily travel allowance will be paid by the Employers to their employees who are not living in camp or receiving a subsistence allowance as referred to in Section 28.3, on the following basis:

(a) If an employee lives within forty (40) radius kilometers of the work location, no travel allowance will be paid.

REV (b) If an employee lives within forty (40) to fifty-six (56) radius kilometers of the work location, he shall receive $20.05 per day effective May 1, 2004 ($20.55 effective May 1, 2005, $21.05 effective May 1, 2006, $21.55 effective May 1, 2007, $22.05 effective May 1, 2008 and $22.55 effective May 1, 2009) travel allowance for each day worked or reported for.

REV (c) If an employee lives within fifty-six (56) to eighty (80) radius kilometers of the work location he shall receive $23.55 per day effective May 1, 2004 ($24.05 effective May 1, 2005, $24.55 effective May 1, 2006, $25.05 effective May 1, 2007, $25.55 effective May 1, 2008 and $26.05 effective May 1, 2009) per day travel allowance for each day worked or reported for.

REV (d) If an employee lives within eighty (80) to ninety-seven (97) radius kilometers of the work location he shall receive $27.05 per day effective May 1, 2004 ($27.55 effective May 1, 2005, $28.05 effective May 1, 2006, $28.55 effective May 1, 2007, $29.05 effective May 1, 2008 and $29.55 effective May 1, 2009) per day travel allowance for each day worked or reported for.
If an employee lives greater than ninety-seven (97) radius kilometers from the work location and does not qualify for subsistence allowance under Section 28.3 below, he shall receive $29.30 per day effective May 1, 2004 ($29.80 effective May 1, 2005, $30.30 effective May 1, 2006, $30.80 effective May 1, 2007, $31.30 effective May 1, 2008 and $31.80 effective May 1, 2009) per day travel allowance for each day worked or reported for, provided he continues to travel greater than ninety-seven (97) radius kilometers daily.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement. A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

The Employer reserves the right to base daily travel allowance on the distance in radius kilometers from where an employee lives to either the work location or declared assembly point, depending on where the employee is directed to report.

28.3 ROOM AND BOARD

The following conditions will apply for employees whose regular residence* is more than ninety-seven (97) radius kilometers from the work location:

(a) An Employer may supply either:
   (i) room and board in camp or a good standard of board and lodging within a reasonable distance of the work location; or
   (ii) a subsistence allowance; or
   (iii) a travel allowance

* For the purpose of this Article, "regular residence":

(i) for metropolitan areas (Toronto and Hamilton) is the place where an employee maintains a self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally sleeps and eats) in which he resides, and for which he can show proof of financial commitment.

(ii) for all other areas, shall be deemed to be the city or town hall of the municipality where an employee maintains a self-contained domestic establishment described in (i) above. In those municipalities where a city or town hall does not exist, then the post office serving his permanent self-contained domestic establishment will apply.
REV (b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $77.00 per day effective May 1, 2004 ($78.00 effective May 1, 2005, $79.00 effective May 1, 2006, $80.00 effective May 1, 2007, $81.00 effective May 1, 2008 and $82.00 effective May 1, 2009) worked or reported for when employed at a location north of the French River and receive $64.00 per day effective May 1, 2004 ($65.00 effective May 1, 2005, $66.00 effective May 1, 2006, $67.00 effective May 1, 2007, $68.00 effective May 1, 2008 and $69.00 effective May 1, 2009) worked or reported for when employed at a location south of the French River, subject to Sections 28.3(c), 28.4, and 28.5.

c To qualify for subsistence allowance an employee must maintain temporary accommodation at or near the work location. Employees who travel daily to locations beyond ninety-seven (97) radius kilometers from the work location will be entitled to $26.80 per day worked or reported for.

28.4 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 28.1 and 28.3 above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.

28.5 An employee who maintained a regular residence within the geographic area of the Local Union for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

28.6 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at twenty-five dollars ($25.00) per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged twenty-five dollars ($25.00) per day, unless he is excused from work by an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

Article 29

INITIAL AND RETURN TRAVEL AND TRANSPORTATION

29.1 On recruitment of tradesmen who live between ninety-seven (97) and one hundred and sixty-one (161) radius kilometers from the Project, the Employer shall pay twenty-five dollars ($25.00) for the initial trip to the Project.

29.2 ONTARIO RESIDENTS

On recruitment of tradesmen who live in Ontario, but beyond one hundred and sixty-one (161) radius kilometers from the Project, the Employer shall pay thirty cents (30¢) per radius kilometer, plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the Project from where the tradesman lives or place of recruitment, whichever is closer to the Project.

29.3 NON-ONTARIO RESIDENTS

On recruitment of tradesmen who live outside Ontario and beyond one hundred and sixty-one (161) radius kilometers from the Project, the Employer shall pay the equivalent of the cost of public transportation plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the Project from where the tradesman lives or place of recruitment, whichever is closer to the Project.

29.4 To qualify for payment on Sections 29.1, 29.2 or 29.3, the employee must remain at the Project for a minimum of thirty (30) calendar days or the duration of the job, whichever is lesser. Such payment shall be included in the employee's first pay cheque. Should the employee subsequently fail to qualify for payment as noted above, the Employer will deduct the payment from the employee's final pay.

29.5 On termination of employment for reasons other than discharge for cause, an employee entitled to payment under Sections 29.1, 29.2 or 29.3 shall be entitled to return expenses calculated in the same manner as in Sections 29.1, 29.2 or 29.3 above, for the return trip from the Project to where the tradesman lives or place of recruitment, whichever is closer to the Project. To be eligible for return payment, an employee must remain at the Project for a minimum of sixty (60) calendar days or the duration of the job, whichever is the lesser.
29.6 (a) On the Thunder Bay Project and Atikokan Project, an employee shall qualify for a return trip from the Project to his regular residence* for each thirty (30) days worked on the Project providing his regular residence is more than four hundred (400) radius kilometers from the Project.

(b) For each entitlement, the Employer shall pay travel expenses on the basis of the equivalent cost of public transportation plus travel time based on one (1) hour's pay for each eighty (80) radius kilometers of travel to a maximum of eight (8) hours' pay.

Article 30

TOOLS AND CLOTHING

30.1 Employees shall be required to provide themselves with the ordinary hand tools of their trade as listed in the attached tool list. The Employer will provide, insofar as is practical, separate facilities for storing the tools, but shall not be held responsible for losses, except as noted hereunder:

(a) When personal tools valued in excess of $15.00 are lost due to fire, the Employer will consider replacement or payment value to a maximum of $400.00, based on the merit of each case. This will include only personal tools that a tradesman is required to have to perform his normal duties with the Employer.

(b) The Employer agrees to compensate employees for tools and work clothing lost by theft, as supported by claims submitted in writing with substantiating evidence to establish theft resulting from forcible entry to locked storage provided by the Employer to a maximum of $400.00. The Employer will consider the replacement of pliers broken on the job. Replacement will be based on the merits of each case.

(c) In the event of a loss by fire at a work site, replacement or payment of the full estimated value in excess of fifteen dollars ($15.00) but not exceeding four hundred dollars ($400.00) for the loss of personal clothing will be made.

(d) In the event of a loss by fire at an Employer-operated camp, replacement or payment of the full estimated value in excess of fifteen dollars ($15.00) but not exceeding seven hundred and fifty dollars ($750.00) for the loss of personal clothing will be made.

* An employee's "regular residence" is the place where he maintains a self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally sleeps and eats) in which he resides and for which he can show proof of financial commitment
30.2 Employees who have obtained tools from the Employer's tool crib shall be allowed sufficient time, in the opinion of Management, to return such tools to the tool crib during working hours. Employees receiving tools from such tool crib shall be held responsible for the return of such tools in good conditions, subject to normal wear and tear. On layoff, employees will be allowed reasonable time to return tools to the tool crib.

30.3 Gang tools are tools which are issued to a foreman and are used by one or more members of the crew. Such tools are not identified on trade tool lists, nor are they the tools and equipment identified in Sections 30.1 and 30.2 of this Article. Such tools shall be the responsibility of the Employer.

30.4 An employee, upon becoming aware of the theft or loss of Employer supplied tools, or clothing, will immediately report such theft or loss to his Employer. Failures to do so will result in employees being charged for the value of the lost or stolen tools or clothing.

Article 31

PROTECTIVE CLOTHING AND EQUIPMENT

31.1 Where special wearing apparel is required, it shall be supplied for use of the employee without cost. Such equipment supplied by the Employer shall be charged against the employee, and credited to him upon its return.

Article 32

DRINKING WATER AND CLOTHES ROOM

32.1 Every Employer shall supply adequate drinking water (with ice when necessary and available) at all times, from covered containers having a drain faucet and individual drinking cups.

32.2 Every Employer shall provide or arrange at the commencement of the job, a sanitary and adequately heated, lighted and ventilated when necessary, place of shelter of adequate size, with adequate benches and tables where employees may eat their lunch, change their clothes and safely keep their tools.

32.3 Where the employer does not supply a shack of his own, but arranges for facilities, as in Section 32.2 above, he shall supply a gangbox, for each shift, with lock to safeguard his employees' tools.

32.4 Every Employer shall arrange for or provide at the commencement of the job, sanitary, adequately heated, lighted and ventilated toilet facilities. Flush toilet facilities shall be arranged for or provided when and where available.
Article 33

RADIATION WORK

33.1 Local Union to be provided with a copy of Ontario Hydro Radiation Projection Procedures and any revisions.

Each employee will have access to his personal radiation exposure record.

Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

Short-term employees will be given a guaranteed period of employment at their time of hire.

33.2 Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person who has achieved the full radiation qualification via the approved Ontario Hydro Training Program. This requires successful completion of the construction R.P.A. training and checkouts and the performance of R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

Article 34

STANDOFF

NEW

34.1 When unable to proceed with work, an Employer may elect to Standoff part or all of a crew.

The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel or subsistence allowance will be paid to an employee for the Standoff period.

34.2 If Standoff continues beyond ten (10) consecutive working days, an employee, at his/her option, may elect to remain on Standoff for an additional twenty (20) consecutive working days or be removed from Standoff. The Employer retains recall rights on employees electing to continue on Standoff.
34.3 If an employee elects layoff beyond the tenth (10th) consecutive working day, it shall be carried out in accordance with the terms of the Layoff provisions of this Agreement. An employee laid off will be issued a Record of Employment form on his/her date of layoff indicating “Layoff – Shortage of Work”.

34.4 Standoff shall only continue beyond thirty (30) consecutive working days with the mutual consent of the Employer and the Union, in writing.

34.5 For the purpose of this Article, when working on a 4 x 10 hour shift arrangement, the following will apply:

- eight (8) scheduled working days will be considered the equivalent of ten (10) consecutive working days.

- sixteen (16) scheduled working days will be considered the equivalent of twenty (20) consecutive working days.

- twenty-four (24) scheduled working days will be considered the equivalent of thirty (30) consecutive working days.

Article 35

GRIEVANCE PROCEDURE

35.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by EPSCA and the Union. In the interests of expediting the procedures, the parties shall process grievances in the following manner:

35.2 PRELIMINARY DISCUSSION

Disputes arising out of the interpretation or alleged violation of this Agreement shall, if possible, be settled by discussion between the employee and/or his steward and the employee's supervisor.
35.3 FIRST STEP

If a dispute cannot be resolved by this method, the Accredited Union Representative for the Union may file a formal grievance on the prescribed form with the Manager of Construction or the Field Construction Manager. Such grievance shall be filed within fifteen (15) working days of the alleged grievous act.

Within ten (10) working days of the filing of the grievance, the Manager of Construction or Field Construction Manager shall investigate the grievance and convene a meeting which he or the Accredited Union Representative considers necessary to resolve it. The Manager of Construction or Field Construction Manager shall give his reply on the prescribed form to the Accredited Union Representative within five (5) working days from the date of the First Step meeting.

Copies of completed grievance forms signed by the appropriate parties shall be filed by the Manager of Construction or the Field Construction Manager with the General Manager of EPSCA and by the Accredited Union Representative with the International Representative of the Union.

If a First Step grievance meeting is considered appropriate, the Management Committee shall comprise the Manager of Construction or Field Construction Manager, or their designates, plus two (2) Management officials, one (1) of whom shall be a representative of the Employer against whom the grievance has been filed. The Union Committee shall comprise the Accredited Union Representative plus two (2) additional Union officials.

35.4 SECOND STEP

If a dispute has not been resolved at the First Step of the grievance procedure, the Accredited Union Representative may refer the grievance on the prescribed form to EPSCA's Grievance Officer. Such grievances shall be referred within ten (10) working days after the disposition has been issued under the First Step of this procedure. A copy of the grievance form shall be forwarded by the Accredited Union Representative to the International Representative of the Union.

The EPSCA Grievance Officer shall investigate the grievance and convene a meeting which he or the International Representative considers necessary to resolve it and give his reply on the prescribed form to the International Representative of the Union within five (5) working days from the receipt of the grievance form which was completed at First Step.

If a Second Step grievance meeting is considered appropriate, the Management Committee shall comprise the EPSCA Grievance Officer plus two (2) other Management representatives, one (1) of whom shall be a representative of the Employer against whom the grievance has been filed. The Union Committee shall comprise three
(3) persons, including the International Representative and the Accredited 
Representative for the grievor, plus one (1) other representative of the Union.

35.5 EPSCA OR UNION GRIEVANCES

The processing of EPSCA grievances shall begin at the Second Step. EPSCA may 
submit either policy or specific grievances. The Union may also institute policy 
grievances at this Step. Such policy or specific grievances shall be submitted within 
thirty (30) days of the alleged grievous act.

35.6 TIME LIMITS

The time limits as to both documents and procedure set out in the above Sections shall 
be complied with by the parties to this Agreement provided, however, that the parties 
may mutually agree in writing in respect to an extension or waiver of any of the time 
limits imposed. Where no answer is given within the time limits specified in the 
grievance procedure, the employee concerned, the Union or EPSCA shall be entitled to 
submit the grievance to the next step of the grievance procedure. Any grievance not 
processed within the time limits specified in the grievance procedure shall be deemed to 
have been settled and ineligible for arbitration.

35.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be 
grieved beginning at First Step.

35.8 GRIEVANCE FACILITIES

EPSCA shall provide the necessary facilities for all grievance meetings.
Article 36

ARBITRATION

36.1 If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Article 34, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either EPSCA or the Union to a Board of Arbitration for adjudication. The party desiring to submit the dispute to arbitration shall notify the other party in writing of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two (2) nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, the appointment shall be made by the Minister of Labour for Ontario upon the request of the other party. If the two nominees fail to agree upon a Chairman, the services of the Minister of Labour for Ontario shall be utilized and the request to the Minister may be made by either party. The arbitration board, when selected or appointed, shall proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. In the case of an arbitration board, the decision of a majority is the decision of the board, but if there is no majority, the decision of the Chairman governs.

36.2 The arbitration board or arbitrator shall have no power to add to or subtract from or modify any of the terms of this Agreement. The arbitration board or arbitrator shall not substitute its discretion for that of the parties except where the board or arbitrator determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the arbitration board or arbitrator may substitute such other penalty for the discharge or discipline as to the arbitration board or arbitrator seems just and reasonable in all circumstances. The arbitration board or arbitrator shall not exercise any responsibility or function of the parties. The arbitration board or arbitrator shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.

36.3 In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario, and the fees and expenses of the Chairman shall be shared equally by the parties.

36.4 The time limits as to both documents and procedure set out in the above section shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree in writing in respect to an extension or waiver of any of the time limits imposed.
Article 37

NO STRIKE - NO LOCKOUT

37.1 There shall be no strikes or lockouts so long as this agreement continues to operate.

Article 38

ABORIGINAL CONTENT COMMITMENT

38.1 Where an aboriginal commitment has been established on a project, the Union will co-operate in meeting the content commitments.

38.2 For a project that is less than $100,000 field labour, and has aboriginal content commitments, the terms of this collective agreement will not apply to those aboriginal content commitments.

Article 39

ENABLING AGREEMENT

39.1 Where a particular Article or Articles of this Collective Agreement is or are found to work a hardship in a specific Local Union jurisdiction territory, the terms and conditions in this Agreement for that Local Union area may be modified for a particular project by the mutual consent of the Local Union and the Employers when they deem it prudent. Such amendments made shall be submitted to the International Office and EPSCA for ratification.

It being understood and agreed that where mutual agreement for change cannot be achieved the request shall not be subject to either grievance or arbitration.
Article 40

TERM OF AGREEMENT

40.1 This Agreement shall continue in full force and effect from May 1, 2004 until April 30, 2010 inclusive, and thereafter it shall be considered automatically renewed for successive periods of twelve (12) months unless at least sixty (60) days prior to the end of any twelve (12) month effective period either party serves written notice upon the other that it desires cancellation, revision, or modification of any provision or provisions of this Agreement.

In witness whereof, EPSCA and the Union have caused this Agreement to be executed in their names by duly authorized representatives at Toronto this 25th day of November, 2004.

APPENDIX A

MOOSE RIVER BASIN: NORTHERN ONTARIO

Where the Employer elects to establish a camp, the following conditions will apply for employees working in the Moose River Basin:

Camp Conditions

(a) An Employer may elect to provide free room and board in camp at no cost to the employee. Where the Employer elects to provide a camp such employees will not be entitled to receive a daily travel or room and board allowance.

(b) When an Employer does not elect to provide free room and board in camp, the employee will be entitled to receive a daily travel or room and board allowance as set out in Article 27.

(c) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(d) An employee who is absent from work without approval and who remains in camp and who is still absent from work on the following day without approval will be charged $25.00 for the day of absence and each successive day of unapproved absence.

Hours of Work

(a) The hours of work will consist of a 21 day cycle of fourteen (14) consecutive work days followed by seven (7) consecutive days off.

(b) Regularly scheduled hours of work of ten (10) hours per day shall be paid at straight time hourly rates.

(c) Regularly scheduled hours of work on Saturday, Sunday, Recognized Holidays, and the fifth (5th) consecutive weekday shall be paid at two times the straight time hourly rate.
Wrap Around

An employee shall qualify for a return trip from the project every second twenty-one (21) day cycle he is on the project on the following basis:

(a) If an employee lives within 161 radius kilometers from the project, the Employer shall pay forty dollars ($40.00)

(b) If an employee lives greater than 161 radius kilometres from the project, the Employer shall pay as an allowance, forty dollars ($40.00) plus travel time based on the equivalent of one (1) hours base rate of pay for each eighty (80) radius kilometers, or portion thereof, of travel time to a maximum of 800 kilometers from where the employee lives or place of recruitment, whichever is closer to the project.
APPENDIX B

7 DAY COVERAGE

When working under the provisions of this appendix all conditions listed below will supersede those contained in the main agreement. Where this appendix is silent, the appropriate article in the collective agreement applies.

This shift schedule is intended for work greater than four (4) weeks in duration, however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the employer to provide seven days per week work coverage, on a one, two, or three shift per day basis. When this occurs, a specific shift arrangement will be established by the employer detailing the shift schedule to be worked. The employer will provide the Union with 48 hours notice prior to the implementation of these shift provisions.

First Shift

Regularly scheduled hours of work of up to ten (10) hours per shift Monday to Friday inclusive shall be paid at straight time hourly rates.

Second Shift

Regularly scheduled hours of work of up to ten (10) hours per shift Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-fifth of the straight time hourly rate.

Third Shift

Regularly scheduled hours of work of up to ten (10) hours per shift Monday to Friday inclusive shall be paid at straight time hourly rates plus a shift differential of one-fifth of the straight time hourly rate.
All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at two times the straight time hourly rate. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
STATEMENT OF UNDERSTANDING #1

EMPLOYMENT EQUITY

It is recognized by the Electrical Power Systems Construction Association and the International Association of Bridge, Structural and Ornamental Ironworkers on behalf of Reinforcing Rodmen, that Employment Equity legislation will be passed during the life of this collective agreement.

The parties therefore agree to consider and address the legislation as it affects the accommodation of aboriginals and any other group designated by the legislation.

Signed at Toronto this 29th day of June, 1992.

Construction Association

and

The International Association
of Bridge, Structural and Ornamental Ironworkers
on behalf of Reinforcing Rodmen

It is agreed by the parties to this understanding that any issues arising from the definition of “Major” referred to in Article 1.1 (ii) shall be referred to a joint committee co-chaired by the General Manager of EPSCA and the Eastern Canadian General Organizer of the Union. It is not subject to the grievance/arbitration process as outlined in Articles 34 and 35.

LETTER OF UNDERSTANDING

Compensation for Travel Time at Remote Hydro Electric Generating Sites

Considering the travelling conditions and availability of accommodation, the Employer may establish as assembly point different than the work location. Where the assembly point is different than a work location, the following provisions will apply:

1.0 An employee will be paid an allowance equivalent to his straight-time rate, up to a maximum of one (1) hour, for all time spent travelling from his assembly point to his work location.

2.0 An employee will travel on his own time when returning from his work location to his assembly point.

3.0 The Employer is entitled to 50% name hire for work covered by these provisions.

Dated this 26th day of November, 1998.

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

and

THE INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL,
ORNAMENTAL AND REINFORCING IRONWORKERS

EMPLOYMENT REFERRALS TO NUCLEAR FACILITIES
AND ONTARIO HYDRO SERVICES COMPANY

It is agreed by the parties to this understanding, that prior to any member being referred for employment at a nuclear generating facility or Ontario Hydro Services Company property, the member must submit to a security check. Only members who successfully obtain security clearance will be referred to the facility for employment. Once a member has been hired on, they will receive an allowance of $50.00 on their first weeks pay cheque, in consideration of their time spent filling out the security forms.

The Union will be notified in writing of the names of the individuals who were not successful in obtaining security clearances.

The parties to this understanding also acknowledge that this pre-clearance process does not prohibit the Union from filing a grievance on behalf of any member who is refused employment due to their failure to obtain security clearance.

LETTER OF UNDERSTANDING

Between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION

AND

INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL, ORNAMENTAL AND REINFORCING IRON WORKERS and REINFORCING RODMEN

In order to address the issues of training and cost competitiveness, the parties agree that the following shall constitute the principles that will govern training for the term of the collective agreement.

1. The EPSCA Owners will continue to mandate the training requirements for workers on EPSCA owner sites

2. Rodmen will attend industry standard training on their own time. The parties agree that the following training courses will be recognized as industry standard:

   - WHMIS
   - Fall Arrest
   - Fork Lift
   - Elevated Work Platform
   - Basic First Aid
   - High Voltage Awareness
   - Powder activated tools

3. The parties agree that EPSCA owners/contractors can request workers with industry standard training (as outlined above).

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

ONTARIO SHEET METAL WORKERS' CONFERENCE
FOR LOCALS 30, 47, 235, 269, 392,
397, 473, 504, 537, 539 and 562
(hereinafter called the "Union")

Article 1

PREAMBLE

1.1 WHEREAS EPSCA is an Association formed to represent Employers engaged in
construction industry work in the electrical power systems sector in collective
bargaining and on their behalf enter into collective agreements covering those of their
employees in the bargaining unit as hereinafter defined; and

WHEREAS the Union is affiliated with the American Federation of Labour - Congress
of Industrial Organizations and has in its membership competent, skilled and qualified
journeymen and apprentices to perform work coming within the trade and craft
jurisdiction; and

WHEREAS EPSCA and the Union desire to mutually establish and stabilize wages,
hours and working conditions for journeymen and apprentices employed by Employers
within the electrical power systems sector of the construction industry, and further, to
encourage closer co-operation and understanding between EPSCA and the Union to the
end that a satisfactory, continuous and harmonious relationship will exist between the
parties to this Agreement;

NOW THEREFORE, EPSCA and the Union mutually agree that the working conditions
as set out below shall be applicable throughout the Province of Ontario.
2.1 EPSCA recognizes the Union as the exclusive bargaining agency for a bargaining unit as defined in Section 2.3 engaged in all construction industry work* under the responsibility of the Design and Construction Branch/Engineering and Construction Services Branch of Ontario Power Generation Inc. (OPGI) and Hydro One [which includes Major Projects, and Construction and Services Division (Lines and Stations, Miscellaneous Projects, Hydraulic Projects and In-Service Thermal, Nuclear and Hydraulic Stations)] performed in the Province of Ontario on Ontario Power Generation Inc. (OPGI) and Hydro One Property for the bulk power system, save and except the building of commercial-type office facilities at urban locations remote from operating facilities. The work encompasses:

- construction of new facilities
- additions to existing facilities
  - modifications
  - rehabilitation
  - reconstruction of existing facilities

For the purpose of clarity, the bulk power system comprises generating stations, hydraulic works, heavy water facilities, transmission lines (voltages over 50 kV) and transmission stations, microwave and repeater stations.

2.2 The Union recognizes EPSCA as the sole and exclusive collective bargaining agency for all of the Employers covered by this Agreement, and in all matters pertaining to the administration of this Collective Agreement.

2.3 The bargaining unit under this Agreement shall comprise the following classifications:

   Acting General Foreman                      Sheeter/Decker
   Subforeman                                  Welder
   Foreman                                     Sheeter's Assistant
   Journeyman Sheet Metal Worker               Material Handler
   Apprentice Sheet Metal Worker               Probationary Employee

* For the purpose of the Electrical Power Systems Construction Association, the work performed is deemed to be under the responsibility of the Generation Projects and Transmission Systems Divisions, Design and Construction Branch/Engineering and Construction Services Branch of Ontario Power Generation Inc. (OPGI) and Hydro One.
2.4 The term "employee" shall include all employees of the Employers engaged in
construction industry work at a project or work location in the classifications, as set out
in Section 2.3 above.

2.5 The term "Employers" shall include individual members of EPSCA and any company,
partnership, sole proprietorship, joint venture, contractor, subcontractor or any person
that agrees to be bound by the terms and conditions of this Agreement.

2.6 The term "personnel" means a certified journeyman sheet metal worker or registered
apprentice; sheeter/decker, welder, sheeter's assistant, material handler and probationary
employee in the sheeting and decking segment of the sheet metal industry eligible to be
employed by the Employers on a project or at a work location. EPSCA recognizes that
the sheet metal trade is a compulsory certified trade.

2.7 The term "applicant" means an employee who has qualified for membership in the Local
Union, but who has not completed payment of prescribed initiation fees.

2.8 The term "Acting General Foreman", "foreman" or "subforeman" means an employee
who is elevated by an Employer in view of his skills and ability to fulfill the duties
required of him.

2.9 Sheeting and decking material handlers shall be restricted to the handling of material on
the ground or on a roof, but excluding the handling and distribution of material from an
Ontario Power Generation Inc. (OPGI) or an Hydro One central material yard.

2.10 The classifications referred to in Sections 2.3 do not establish craft jurisdiction. Such
jurisdiction is established in accordance with Article 8 of this Collective Agreement.

2.11 EPSCA and the Union agree the use of nomenclature is meant to refer to both genders.

Article 3

SCOPE OF AGREEMENT

3.1 This Agreement will consist of a master portion of general application to the
construction field forces represented by the Union together with the following wage
schedules of particular application to employees represented by the Union at projects or
in the areas noted in Section 3.2 below and shall be deemed to include any additional
wage schedule added, as the said wage schedules may be revised by EPSCA and the
Union from time to time.

Article 4

EXECUTIVE COMMITTEE

4.1 To advance harmonious relations between EPSCA, the Employers, the Union and the employees, EPSCA and the Union shall each appoint an Executive Committee. The Executive Committee shall consist of the Board of Directors and officers of EPSCA. The Executive Committee of the Union shall consist of the senior representatives of the Union and the accredited Union representatives.

The committees shall meet together at least annually to review matters associated with the administration of this Collective Agreement with the intent of achieving uniformity of application of this Agreement wherever employees are working in the Province.

Article 5

ACCREDITED UNION REPRESENTATIVES

5.1 The Business Manager of the Ontario Sheet Metal Workers' Conference will designate Local Union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two representatives from the Union for each Project and a suitable number for Lines and Stations Construction. The Union will notify the General Manager of EPSCA, in writing, of the names of such Union representatives, or alternatives in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Upon entering the job site, such representatives after identifying themselves to the EPSCA representative and the authorized representative of the Employer, will be free to observe the progress and conduct of the work and to conduct normal Union business. The Union undertakes that these representatives will not hinder or interfere in any way with the said work.

Article 6

UNION STEWARDS

6.1 Accredited Union Representatives shall inform the appropriate EPSCA representative, in writing, of the names of all stewards, one of whom shall be designated Chief Steward, as they are appointed and when they cease to act as stewards. A steward, other than a Chief Steward, shall exercise his duties only in respect to employees of his Employer. A Chief Steward, in order to carry out his duties with respect to employees of other than his Employer, shall first involve the EPSCA representative. A steward shall obtain permission from his immediate supervisor before leaving his work area for Union business. Such permission shall not be unreasonably denied.
6.2 In the event of a work stoppage or threat of a work stoppage or any other employee activity prohibited by this Agreement, affected stewards, in keeping with their responsibilities, as it is incumbent upon all Union representatives, shall immediately do all in their power to ensure that the prohibited action of the employees is prevented or stopped.

6.3 Providing he is capable of doing the work available on a job, a steward will be the last employee laid off (excluding foremen). A steward shall not be laid off or transferred to another job without prior consultation with the Accredited Union Representative.

6.4 The job steward will be informed of all scheduled overtime. Where practical, a steward shall be given the first opportunity to work the overtime providing he is qualified to perform the work.

6.5 No foreman or subforeman shall be appointed or permitted to act as a steward.

Article 7

ADVANCE NOTICE

7.1 EPSCA will advise the Union of all new construction work coming under the scope of this Agreement for the construction field forces of the Employers.

Upon the request of the Union, EPSCA will convene a prejob conference before work commences to discuss the preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the project.

Article 8

WORK ASSIGNMENT

8.1 The jurisdiction of the Union shall be that jurisdiction established by agreements between International Unions claiming the work or decisions of record recognized by the AFL-CIO for the various classifications and the character of work performed, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.

An Agreement or Decision of Record is one that is published by the Building and Construction Trades Department AFL-CIO (Agreement and Decisions Rendered Affecting the Building Industry).
Where no Decision or Agreement applies, the Employer agrees to consider evidence of established practices of other Employers within the construction industry when making jurisdictional assignments.

8.2 A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of this markup process is to indicate to the Union the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes.

When work is to be performed on a project site and it meets the following criteria; same Employer, same work, same project site, the markup process will not be required.

NEW In the Electricity Production Zones when work falls within this criteria the EPSCA Office will send out a “Notification of Work” along with a copy of the original minutes/final assignments of mark-up meeting(s) to the Local Unions prior to work commencing. This procedure shall not preclude the Union’s right to contest previously assigned work, if the work is in a Local Union jurisdiction other than the one it was marked up in.

When an Employer has work that is less than a 3 week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Union will be notified of the scope of work and the Employer’s proposed work assignments. The Union will have two weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Union of the final work assignments prior to the commencement of the work.

All work that does not meet the criteria set out in paragraphs 2 and 3 will be reviewed and assigned at a markup meeting.

EPSCA will provide written notice to the Union (Ontario Conference Office and Local Union Office) as far in advance as possible of markup meetings. The Union may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

8.3 The Employer who has the responsibility for the installation shall make a proposed assignment of the work involved. The Employer will specify a time limit for the Unions involved to submit evidence of their claims. The Employer will evaluate all evidence submitted as per Article 8.1 and make a final assignment of the work involved. The Employer will advise the Union of the final assignment prior to the work commencing. A copy of such assignments shall be submitted to the Business Manager of the Ontario Sheet Metal Workers’ Conference.

The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the process set out above may not be practical or possible.

REV * For the purposes of this Article, Nanticoke, Lambton, Lakeview/Hearn, Bruce Nuclear Power Development (BNPD), Pickering, Darlington, Lines and Stations and the five (5) Electricity Production Zones are each considered individual project sites.
Article 9

JURISDICTIONAL DISPUTES

9.1 When a jurisdictional dispute exists between Unions, and upon request by the Union, the Employer shall furnish the Business Manager of the Ontario Sheet Metal Workers' Conference with a signed letter from a duly authorized official of the company on Employer stationery, stating whether or not the Union was employed on specific types of work on a given project. The Employer shall supply the Business Manager of the Ontario Sheet Metal Workers' Conference with a copy of the evidence submitted by the other union(s) involved along with drawings and/or prints plus a description of the work or process in dispute when requested.

9.2 In the event that a jurisdictional dispute cannot be settled on a local basis by the Unions involved, it shall be submitted to the Unions involved for settlement without permitting it to interfere in any way with the progress of the work at any time. In the event the dispute is not settled by the Unions involved, EPSCA and/or the Union may then submit the dispute to the Ontario Labour Relations Board under the Labour Relations Act. EPSCA and the Ontario Sheet Metal Workers Conference will advise each other, in writing, of their intent to submit a jurisdictional dispute to the Ontario Labour Relations Board and will identify in detail the work in question. The decision of the Ontario Labour Relations Board with respect to the jurisdictional dispute will be final and binding on the parties to this Agreement. The Ontario Labour Relations Board will determine the jurisdictional dispute before it pursuant to its normal criteria.

9.3 In the event the Union pursues or responds to a jurisdictional dispute at the Ontario Labour Relations Board the hearings panel appointed by the Ontario Labour Relations Board pursuant to the Act is not authorized to award damages in respect of a misassignment of work, only in circumstances where the other Union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However, this paragraph 9.3 shall not apply where the jurisdictional dispute and the misassignment of work involves the same Employer and the same work previously the subject matter of a jurisdictional dispute, relating to a construction project covered by this Agreement or its predecessors, before the Ontario Labour Relations Board.

9.4 In the event the building trades in the Province of Ontario are successful in establishing a Provincial Impartial Jurisdictional Disputes Board, EPSCA and the Union agree to meet and discuss implementation of procedures set forth by said Board.
Article 10

UNION SECURITY

10.1 All employees will be members or will apply for and secure membership in one of the Local Unions and will maintain such membership in good standing as a condition of employment.

10.2 Where applicable and in accordance with local practice, the Employers agree to deduct Union dues. The Employers will supply full checkoff lists of employees subject to checkoff at regular intervals, and agree to collect monthly for the Union dues payable to the Union. The Employers will transmit the monies so collected to the designated officials of Locals of the Union. The Union will indemnify the Employers for any liability arising from the deduction of dues, as requested by the Union.

10.3 Any changes in dues will be confirmed, in writing, by the Business Manager of the Local Union having geographic jurisdiction for the project or work location to the General Manager of EPSCA before such changes are put into effect. Within three (3) weeks of receipt of an acceptable written notice the change in dues will be implemented. The effective date will be the date of implementation.

Article 11

EMPLOYMENT – LAYOFF

11.1 For the purposes of this Article, a geographic area will be established for each Project and for Lines and Stations Construction in accordance with the geographic jurisdiction established in Article 3, Section 3.2 of this Agreement.

11.2 An office will be established by EPSCA, or by the Employer with the approval of EPSCA, for each Project and for Lines and Stations Construction. A purpose of this office will be to coordinate employment, as specified in this Article.

11.3 EPSCA, or the Employer with the approval of EPSCA, and the Union will exchange the names of their representatives in each of the areas described in Section 11.1 who will be responsible for cooperating in the referral and employment of reliable and competent Union personnel.

11.4 EPSCA, or the Employer with the approval of EPSCA, will notify the Union of future manpower requirements for all employees coming within the scope of this Agreement.
11.5 Employers reserve the right to employ and transfer two (2) key tradesmen to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation projects and transmission and transformation construction.

The two (2) key tradesmen sent by an Employer to work on a contract at a project or work location in the territorial jurisdiction of another Local Union shall be permitted to work without interference from any Local Union for such period as the Employer may require them to do so. Such employees shall register with the EPSCA office and the Local Union office prior to commencing work.

11.6 The employment of qualified personnel, excluding two (2) key tradesmen, shall be carried out on the following basis and sequence:

(a) The EPSCA office, or the Employer's office with the approval of EPSCA, will request the appropriate Local Union office for personnel required. The request will include a description of the work, personnel required, and the name of the Employer for whom personnel will be working.

(b) Union personnel who are resident in the designated geographic area will be referred by the Local Union for employment through the EPSCA office. As much as their out-of-work lists will permit, the Local Union will supply personnel on a fan-out basis from the project or work location.

The Employers will either hire such person or substantiate their reasons, in writing, for not doing so.

(c) In the event the Local Union is unable to supply sufficient qualified and competent personnel, EPSCA may request the Business Manager of the Ontario Sheet Metal Workers' Conference to furnish such additional personnel as it requires and the Business Manager of the Ontario Sheet Metal Workers' Conference agrees to notify the Local Unions of the availability of work and request the Local Unions to refer personnel to the EPSCA office.

Out of Province personnel will only be recruited after all available members of Province of Ontario Local Unions are employed and only on the mutual agreement of the General Manager of EPSCA.

(d) Notwithstanding Article 10, Section 10.1, if upon request, the Local Union or the Business Manager of the Ontario Sheet Metal Workers' Conference is unable, within two (2) full working days, to supply personnel, including personnel with special skills, EPSCA may secure personnel from other available sources. The Employer agrees that such personnel shall be qualified and will be covered by the terms and conditions of this Agreement.
(e) The Union will cooperate with the Employer and advise the EPSCA office of the name and address of members being referred for work with Lines and Stations Construction as soon as they are known and before the employee commences work.

(f) Notwithstanding Article 11.5, Employers may transfer local employees from project to project or from work locations to work locations which are located within the geographic jurisdiction of the Local Union. Such employees shall register with the EPSCA office prior to commencing work.

11.7 Should it be necessary to reduce the working forces on the job, the Employer shall lay off or terminate his employees in the following sequence:

(i) members of other Local Unions
(ii) applicants for Local Union membership
(iii) Local Union members

Notwithstanding the above-noted sequence, Employers reserve the right to retain two (2) key tradesmen to utilize their special skills.

The Chief Steward shall be notified of the number of employees to be laid off a minimum of one (1) day in advance.

11.8 The Local Union reserves the right to replace employees who are members of other local Unions and are working on a project within the geographic jurisdiction of the Local Union with members of the Local Union who are unemployed and are available for work, subject to the following:

(a) Employees designated as key tradesmen shall not be replaced.

(b) No replacement shall take place within five (5) working days of the end of the job.

(c) The Local Union shall provide the Employer with a minimum of two (2) working days notice when an employee is to be replaced. Such replacement shall take place on the first working day of the week following the week in which appropriate notice is given.

(d) Members of the Local Union shall only replace non-local employees of the same classification.

(e) Notwithstanding Article 28, the local members who replace non-local employees shall not be entitled to initial travel monies and the non-local employees being replaced shall not be entitled to return travel monies.

(f) The Employer shall decide which employee or employees shall be replaced.
11.9 Re-employment of Sheet Metal members as required by the Workers' Compensation Board shall not be a violation of this collective agreement nor be subject to the provisions of Article 11.

Article 12

PAY PROCEDURE

12.1 NORMAL

(a) Employees shall be paid weekly and payment for any given week will be made not later than the sixth working day after the close of the payroll period, but in any event not later than Thursday of the following week.

(b) Wages shall be paid by the Employers on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee, setting forth:

(i) the period of time or the work for which the wages are being paid;

(ii) the rate of wages to which the employee is entitled;

(iii) the amount of wages to which the employee is entitled;

(iv) the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;

(v) any allowance or other payment to which the employee is entitled;

(vi) the amount of vacation pay for which the employee is being credited or paid;

(vii) the amount of recognized holiday pay for which the employee is being credited or paid; and

(viii) the net amount of money being paid to the employee.

(c) In cases of inclement weather being declared on payday, employees will receive their pay before leaving the site provided it is available on the site.
12.2 VOLUNTARY TERMINATION OR DISCHARGE FOR CAUSE

An employee who voluntarily terminates his employment or who is discharged for cause will have his final pay including his record of employment and vacation pay, if applicable, sent registered mail to his last known address on record with the Employer within five (5) working days of termination or discharge.

12.3 LAYOFF

REV (a) An employee who is laid off from a Generation Stations Project or a Lines and Stations Construction site will have his final pay and record of employment and vacation pay, if applicable, sent registered mail to his last known address on record with the Employer within five (5) working days of termination. This does not preclude an employee being issued his final pay and termination documents, on the job, prior to the five (5) day period.

REV (b) If the Employer does not mail an employee's final pay and record of employment and vacation pay as required in Section 12.3 (a) above, the Employer shall pay waiting time in excess of the five (5) day period at the rate of two (2) hours' pay for each working day until such pay and record of employment are mailed by the Employer.

(c) Employers will provide two (2) hours' notice of layoff or two hours' pay in lieu of notice to employees who are to be laid off.

12.4 APPRENTICES

An apprentice who completes the hourly contract requirement and becomes qualified as a journeymen sheet metal worker will be paid as a journeymen effective the date of successful completion of the Provincial qualifying examination.

Article 13

WAGES

13.1 The rates of pay for employees in the classifications listed in Article 2 of this Agreement shall be as set forth in the wage schedules, attached hereto.
Article 14

RECOGNIZED HOLIDAYS

14.1 The holidays recognized under this Agreement are:

- New Year's Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

14.2 EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

14.3 Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed either on the preceding Friday or following Monday.

14.4 EPSCA reserves the right to change the day of observance of a recognized holiday when such holiday falls on a Tuesday or Thursday.

Article 15

VACATION AND RECOGNIZED HOLIDAY PAY

15.1 The vacation and recognized holiday pay rate shall be ten percent (10%) [four percent (4%) vacation and six percent (6%) in lieu of recognized holidays] of total earnings.

15.2 The Employer, except as noted in Section 15.3 below, agrees to pay into operative vacation and recognized holiday pay plans established or recognized in the locality by Employers under agreement with the Union for construction work of a related nature.

15.3 For employees of Ontario Power Generation Inc (OPGI) and Hydro One, payment of vacation and recognized holiday pay shall be made on the regular weekly pay cheque.
Article 16

BENEFITS

16.1 The Employer agrees to pay into operative welfare, pension and SUB plans established or recognized in the locality by Employers under agreement with the Union for construction work of a related nature, the hourly or monthly amounts specified as welfare, pension and SUB in such agreement, whether in addition to the wage rates or deducted from the wage rates, for employees covered by this Agreement during the time they are employed in the specific locality covered by such agreement. The amount(s) of welfare, pension and SUB contributions to be paid will be set out in the wage schedules, attached hereto. The Employer agrees to remit welfare, pension and SUB contributions by the 15th day of the month following that month in which such contributions were accumulated.

16.2 Should the welfare, pension, SUB or any other contribution or deduction recognized under this Agreement change during the term of this Agreement then an adjustment will be made to the base rate. The total wage package will not be changed.

Within three (3) weeks of receipt of an acceptable written notice any such changes as noted above will be implemented. The effective date will be the date of implementation.

16.3 The Union agrees to supply the Employer with all information necessary to implement and administer the welfare, pension and SUB plans.

16.4 The trustees of the employee benefit plans referred to in this collective agreement shall promptly notify the Union of the failure by any Employer to pay any employee benefit contributions required to be made under this collective agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Plan may deem that there has been an assignment of compensation under the said program in compliance with the regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

16.5 The Employers agree to deduct from each employee and remit the amounts set forth in the wage schedules, attached hereto, and the area rate schedules for the Ontario Sheet Metal Workers’ Conference Union Dues Promotion Trust Fund.

All monies deducted and received in accordance with this Article are the property of the Ontario Sheet Metal Workers’ Conference, and shall be used by the Conference in its absolute discretion as directed by representatives of Locals 30, 47, 235, 269, 392, 397, 473, 504, 537, 539 and 562.
Article 17

REPORTING PAY

17.1 An employee who reports for work at his regular starting time and for whom no work is available for reasons other than inclement weather shall be paid for three (3) hours' work at the applicable rate, unless the employee has been notified before leaving his home or camp not to report.

17.2 An employee who reports for and commences work at the direction of his Employer shall receive four (4) hours' pay at the applicable rate. This allowance will be paid to an employee if he is requested to report for work for any part of the first half of the shift and an additional four (4) hours will also be paid if he is requested to report for work for any part of the second half of the same shift. An employee will not receive this allowance if he is unable to complete his shift as a result of inclement weather. It is not intended by this Article that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

17.3 When an Employer considers it necessary to shut down a job to avoid the possible loss of human life, because of an emergency situation that could endanger the life and safety of an employee, in such cases, employees will be compensated only for the actual time worked.

17.4 An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

Article 18

INCLEMENT WEATHER PAY

18.1 Except as noted in Section 18.3 below, an employee who reports for work at the beginning of a shift and is unable to commence work due to inclement weather will receive three (3) hours' pay at the applicable rate. To qualify, the employee must remain at a protected place designated by the Employer for three (3) hours unless excused by an authorized representative of his Employer.

18.2 Except as noted in Section 18.3 below, an employee who reports for and commences work but is unable to continue work due to inclement weather shall receive three (3) hours' pay at the applicable rate or pay for the actual time worked for that shift, whichever is the greater.

18.3 An employee engaged in sheeting and decking work shall receive two (2) hours' pay for the circumstances outlined in Section 18.1 and 18.2 above.

18.4 An employee in receipt of inclement weather pay shall also receive travel or board allowance, if applicable.
Article 19

EMPLOYER'S RESPONSIBILITY

19.1 Where the word "shop" is used in this Article, it shall be defined as a sheet metal shop under Agreement with the Sheet Metal Workers' International Association or one of its Local Unions or the Ontario Sheet Metal Workers' Conference. It being understood that such shops shall be shops using the yellow label of the International Association.

19.2 All sheet metal work at the option of the Employer shall be fabricated on the job site or in a shop.

19.3 Notwithstanding Section 19.2 above, EPSCA and the Union acknowledge that packaged equipment, catalogue items and engineered assemblies may be supplied for installation. Such packaged equipment, catalogue items and engineered assemblies shall be installed by members of the Union in accordance with their jurisdiction as provided for in Article 8, Work Assignment and Article 9, Jurisdictional Disputes of this Agreement.

19.4 Both EPSCA and the Union acknowledge that situations may arise where the terms packaged equipment, catalogue items or engineered assemblies may require interpretation. In such circumstances, this matter will be immediately referred to a permanent review panel consisting of three (3) members appointed by the Union and three (3) members appointed by EPSCA.

19.5 Nothing in this Collective Agreement shall be taken to interfere with the existing divisions of work in the plants of the Employer or affiliated companies, or as established between the Sheet Metal Workers' International Association and other certified or recognized unions operating in the plants where special building products are produced.

Article 20

FOREMEN AND SUBFOREMEN

20.1 It is understood that foremen and subforemen hold key positions in the relationship between the Employers and the Union. Both parties agree that every effort should be made to recruit and retain foremen and subforemen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of the Union, the Employers and the Union will make every effort to minimize problems that may arise which concern the relationship between the foremen and subforemen, the Employers and the Union.
20.2 The parties recognize the responsibilities of foremen and subforemen to discharge their managerial duties. If the Union feels that the foreman or subforeman is not discharging his managerial duties in a manner that is fair and equitable, or if an Employer feels that the Union is interfering with the foreman or subforeman in the performance of his managerial duties, the Employer or the Union may refer the problem to the Executive Committee for resolution. If the matter cannot be resolved by the Executive Committee, the grievance procedure may be invoked by either party.

20.3 The selection and retention of foremen and subforemen will be the responsibility of the Employers. When making appointments to the foreman and subforeman level, the Employers will give consideration to those employees they presently employ on a project or at a work location.

20.4 In the interest of efficiency and productivity, the Employer shall have the right to move foremen and subforemen from project to project or from work location to work location, providing the moving of these foremen and subforemen is consistent with the key tradesmen provisions of Article 11, if they are not from the Local Union geographic area.

20.5 The foremen's differential shall three dollars ($3.00) above the journeyman rate of the locally negotiated rate, whichever is greater.

The subforemen's differential shall be one dollar and fifty cents ($1.50) above the journeyman rate.

20.6 An Employer who employs Sheet Metal Workers shall assign a Sheet Metal Foreman for a Sheet Metal crew. This clause does not apply to composite crews.

**Article 21**

**CALL-IN PAY**

21.1 When an employee is called in outside of his normal hours of work, he shall receive a minimum of four (4) hours' work at the appropriate premium rate.

If the employee's normal hours of work commence within this four (4) hour period, the employee will be paid premium time until the start of his normal hours and will revert to his normal hourly rate at the commencement of his normal hours of work.
Article 22

HOURS OF WORK

22.1 One (1) or Two (2) Shift Operation

The weekly hours of work shall consist of forty (40) hours, worked between Monday and Friday, for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation.

The daily hours of work for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts or by having the employees work five (5) consecutive eight-hour shifts. These shifts may run concurrently. Daily hours of work will be established for a minimum period of 30 days. If an Employer intends to change the daily hours of work, a minimum of 15 days written notice shall be sent to the Local Union.

REV The start time for the day shift shall be 8:00 AM with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one (1) hour either way to coincide with the end of the day shift.

The shift differential for those employees working the afternoon shift when a two-shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

22.2 Three (3) Shift Operation

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours per shift at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift. A shift differential of one-seventh (1/7) shall be paid for all normal scheduled shift hours worked.

Those employees working on the night shift shall work seven (7) hours per shift. A shift differential of one-fifth (1/5) shall be paid for all normal scheduled shift hours worked.

22.3 A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked excluding Saturdays, Sundays and recognized holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the remainder of the hours that would have been worked had the employee not been reassigned.
22.4 It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Union.

22.5 When employees engaged in sheeting and decking work are not able, due to weather conditions, to work a full day, it is agreed that the daily time limit may be exceeded on any of the remaining working days of the week, providing the weekly time limit is not exceeded thereby, but in no case under this provision shall the daily limit be exceeded by more than one (1) hour without the consent of the Union. Pay for such extended hours shall be at the basic hourly rate.

Article 23

OVERTIME RATES

23.1 When working on an eight (8) hour day and five (5) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of 2 hours per day. All hours in excess of 10 hours per day shall be paid at two (2) times the base hourly rate.

When working on a ten (10) hour day and four (4) day per week work schedule (Monday to Friday inclusive), overtime work shall be paid at one and one-half (1 1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours up to a maximum of 2 hours per day. All hours in excess of 12 hours per day shall be paid at two (2) times the base hourly rate.

Overtime work performed on Saturday, Sunday, Recognized Holidays and non-shift days shall be paid at two (2) times the basic hourly rate.

23.2 Overtime rates of pay for employees in the classifications covered by this Agreement shall be as set forth on the wage schedules, attached hereto.

23.3 Overtime shall be assigned as equally and as impartially as possible among all members of the crew.

Article 24

REST PERIOD

24.1 Fifteen (15) minutes will be allotted at the direction of the Employer for employees to rest at their place of work for each half (1/2) shift worked.
24.2 For employees required to work two (2) hours of overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

24.3 For employees, working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two (2) hours of overtime worked.

Article 25

MEALS ON OVERTIME

25.1 If an employee is notified during the time he is working that he will be required to work for more than two (2) hours past the normal quitting time of the first or second shifts or for more than three and one-half (3-1/2) hours beyond the normal quitting time of the third shift, the Employer will provide a free meal to the employee after approximately two (2) hours of overtime worked and for each four (4) hours of overtime worked thereafter.

The employee will be allowed thirty (30) minutes paid at the straight time rate to eat each meal at the time directed by the Employer. When a paid meal period overlaps a rest period the paid meal period will supplant the rest period. The Employer will supply a hot meal when possible.

To qualify for the above-noted provisions on a Friday for work on the first and second shifts, an employee will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays and recognized holidays for employees who normally work the first or second shifts.

The above-noted is not applicable to the first six and one-half (6-1/2) hours worked on Sundays and recognized holidays for employees who normally work the third shift.

25.2 Where an employee has been notified the previous day, no meal will be provided, but the employee will be allowed thirty (30) minutes paid at the straight time rate to eat, at the time directed by the Employer.
DAILY TRAVEL ALLOWANCE

26.1 The daily travel allowance will be paid by the Employers to their employees who are not receiving free room and board as referred to in Section 26.2, on the following basis:

(a) If an employee lives within forty (40) radius kilometres* of the project, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day travel allowance effective May 1, 2000 ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002, $20.35 effective May 1, 2003) for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day travel allowance effective May 1, 2000 ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day travel allowance effective May 1, 2000 ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) for each day worked or reported for.

(e) Excluding Pickering and Darlington Generating Stations, if an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 26.2 below, or does not maintain a temporary accommodation at or near the project, he shall receive $29.85 per day travel allowance effective May 1, 2000 ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

(f) Pickering and Darlington Projects:
   An employee who becomes employed at the Pickering or Darlington Project on or after June 1, 1984 and who lives greater than 97 radius kilometers from the Project shall receive $29.85 per day travel allowance effective May 1, 2000 ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) for each day worked or reported for.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

Bruce G.S. "A", Bruce G.S. "B", and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee’s travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

ROOM AND BOARD

26.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project (except at Pickering and Darlington Generating Stations) refer to Article 26.1(f):

(a) An Employer may supply either:

(i) Free room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance.

(b) An employee may exercise his option not to stay in a camp or accept free room and board. An employee who exercises this option shall receive a subsistence allowance as follows:

(i) The Province will be divided into three (3) regions for the payment of subsistence allowance; a Northern region and a Southern region and the Bruce Project. The Northern region is the geographic area north of a line drawn between the mouth of the French River and Mattawa. The Southern region is comprised of all remaining geographic areas except that described for the Northern region and the Bruce Project.

* An employee’s "regular residence" is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps). This is in contrast to a boarding type of situation such as a hotel/motel room, or boarding house facility which is not self-contained; and

2. The total financial responsibility for the continued maintenance and upkeep of the residence rests solely with the employee. The employee must be able to show proof of such financial responsibility in accordance with the "Application for Daily Travel/Room and Board Allowance"; and

3. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.
(ii) An employee working at the Northern Region whose regular residence is more than 97 radius kilometers from the Project shall be paid a subsistence allowance of $70.00 per day effective May 1, 2000 ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for.

(iii) An employee working in the Southern Region, excluding the Bruce Project, whose regular residence is more than 97 radius kilometers from the Project in the Southern Region shall be paid a subsistence allowance of $57.00 per day effective May 1, 2000 ($59.00 effective May 1, 2001, $61.00 effective May 1, 2002, $63.00 effective May 1, 2003) for each day worked or reported for.

(iv) When an employee's regular residence is more than 97 radius kilometers from the Bruce Project, the employee shall be paid a subsistence allowance of $59.00 per day effective May 1, 2000 ($61.00 effective May 1, 2001, $63.00 effective May 1, 2002, $65.00 effective May 1, 2003) for each day worked or reported for.

26.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 26.1 and 26.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

26.4 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
DAILY TRAVEL ALLOWANCE

27.1 The daily travel allowance will be paid by the Employers to their employees who are not living in camp or receiving a subsistence allowance as referred to in Section 27.3 and 27.4 on the following basis:

(a) If an employee lives within forty (40) radius kilometres of the work location or declared assembly point, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the work location or declared assembly point, he shall receive $18.60 per day travel allowance effective May 1, 2000 ($19.10 effective May 1, 2001, $19.60 effective May 1, 2002, $20.10 effective May 1, 2003) for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the work location or declared assembly point, he shall receive $22.10 per day travel allowance effective May 1, 2000 ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the work location or declared assembly point, he shall receive $25.60 per day travel allowance effective May 1, 2000 ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) for each day worked or reported for.

(e) If an employee lives greater than 97 radius kilometers from the work location or declared assembly point, and does not qualify for subsistence allowance under Section 27.3 below, or does not maintain a temporary accommodation at or near the work location or declared assembly point, he shall receive $28.85 per day travel allowance effective May 1, 2000 ($29.35 effective May 1, 2001, $29.85 effective May 1, 2002, $30.35 effective May 1, 2003) provided he continues to travel greater than 97 radius kilometers daily for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

27.2 The Employer reserves the right to base daily travel allowance on the distance in radius kilometers from where an employee lives to either the work location or declared assembly point, depending on where the employee is directed to report.
ROOM AND BOARD

27.3 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the work location.

(a) An Employer may supply either:

(i) room and board in camp or a good standard of board and lodging; or

(ii) a subsistence allowance.

(b) An employee may exercise his option not to stay in a camp or accept free room and board. An employee who exercises this option shall receive a subsistence allowance as follows:

(i) The Province will be divided into two (2) regions for the payment of subsistence allowance; a Northern region and a Southern region. The Northern region is the geographic area north of a line drawn between the mouth of the French River and Mattawa. The Southern region is comprised of all remaining geographic areas except that described for the Northern region.

* For the purpose of this Article, "regular residence":

(i) For metropolitan areas (Toronto and Hamilton) is the place where an employee maintains a self-contained domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps). This is in contrast to a boarding type of situation such as a hotel/motel room, or boarding house facility which is not self-contained, and the total financial responsibility for the continued maintenance and upkeep of the residence rests solely with the employee.

The employee must be able to show proof of such financial responsibility in accordance with the "Application for Daily Travel/Room and Board Allowance"; and the employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.

(ii) For all other areas, shall be deemed to be the city or town hall of the municipality where an employee maintains a regular residence described in (i) above. In those municipalities where a city or town hall does not exist, then the post office serving his self-contained domestic establishment will apply.
(ii) An employee working at the Northern Region whose regular residence is more than 97 radius kilometers from the Project shall be paid a subsistence allowance of $70.00 per day effective May 1, 2000 ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for.

(iii) An employee working in the Southern Region, excluding the Bruce Project, whose regular residence is more than 97 radius kilometers from the Project in the Southern Region shall be paid a subsistence allowance of $57.00 per day effective May 1, 2000 ($59.00 effective May 1, 2001, $61.00 effective May 1, 2002, $63.00 effective May 1, 2003) for each day worked or reported for.

27.4 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 27.1 and 27.3 above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.

27.5 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled workday on which he does not work will be charged $25.00 per day unless he is excused from work by an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
Article 28

TRAVEL AND TRANSPORTATION

28.1 On recruitment of tradesmen who live between 97 and 161 radius kilometers from the project, the Employer shall pay $25.00 for the initial trip to the project.

28.2 ONTARIO RESIDENTS

REV

On recruitment of tradesmen who live in Ontario but beyond 161 radius kilometers from the project, the Employer shall pay 27¢ per radius kilometer effective May 1, 2000 (28¢ effective May 1, 2001, 29¢ effective May 1, 2002, 30¢ effective May 1, 2003), plus travel time based on one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the project from where the tradesman lives or place of recruitment, whichever is closer to the project.

28.3 NON-ONTARIO RESIDENTS

On recruitment of tradesmen who live outside Ontario and beyond 161 radius kilometers from the project, the Employer shall pay the equivalent of the cost of public transportation plus travel time based on one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay, for the initial trip to the project from where the tradesman lives or place of recruitment, whichever is closer to the project.

28.4 To qualify for payment in Sections 28.1, 28.2, or 28.3, the employee must remain at the project for a minimum of thirty (30) working days or the duration of the job, whichever is lesser.

28.5 On termination of employment for reasons other than discharge for cause, an employee entitled to payment under Sections 28.1, 28.2, or 28.3 shall be entitled to return expenses calculated in the same manner as in Sections 28.1, 28.2, or 28.3 above for the return trip from the project to where the tradesman lives or place of recruitment, whichever is closer to the project. To be eligible for return payment an employee must remain at the project for a minimum of thirty (30) days or the duration of the job, whichever is the lesser.

Article 29

LUNCHROOM FACILITIES

29.1 The Employer will provide clean and adequately heated (68° Fahrenheit) facilities for employees to eat their lunch at all major work locations, where such facilities may reasonably be provided. Such facilities shall have sufficient tables and benches or seats for the employees on the job.
Article 30

GRIEVANCE PROCEDURE

30.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by EPSCA and the Union. Settlement discussions shall be held without prejudice. In the interests of expediting the procedure, the parties shall process grievances in the following manner:

30.2 PRELIMINARY DISCUSSION

Disputes arising out of the interpretation or alleged violation of this Agreement should, if possible, be settled by discussion between the employee and/or his steward and the employee’s supervisor.

30.3 FIRST STEP

If a dispute cannot be resolved by this method, the Accredited Union Representative for the Union may file a formal grievance on the prescribed form with the Manager of Construction or the Lines, Stations and Miscellaneous Construction Superintendent within fifteen (15) working days of the alleged grievous act.

Within ten (10) working days of the filing of the grievance, the Manager of Construction or Lines, Stations and Miscellaneous Construction Superintendent shall investigate the grievance and convene a meeting which he or the Accredited Union Representative considers necessary to resolve it. The Manager of Construction or Lines, Stations and Miscellaneous Construction Superintendent shall give his reply on the prescribed form to the Accredited Union Representative within five (5) working days from the date of the First Step meeting.

Copies of completed grievance forms signed by the appropriate parties shall be filed by the Manager of Construction or the Lines, Stations and Miscellaneous Construction Superintendent with the General Manager of EPSCA and by the Accredited Union Representative with the Business Manager of the Ontario Sheet Metal Workers' Conference.

If a first step grievance meeting is considered appropriate, the Management Committee shall comprise the Manager of Construction, or the Lines, Stations and Miscellaneous Construction Superintendent, or their designate, plus at least one representative against whom the grievance has been filed. The Union Committee shall comprise the Accredited Union Representative plus two (2) additional Union officials.
30.4 SECOND STEP

If a dispute has not been resolved at the First Step of the grievance procedure, the Accredited Union Representative may refer the grievance on the prescribed form to EPSCA’s Grievance Officer. Such grievances shall be referred within ten (10) working days after the disposition has been issued under the First Step of this procedure. A copy of the grievance form shall be forwarded by the Accredited Union Representative to the Business Manager of the Ontario Sheet Metal Workers' Conference.

The EPSCA Grievance Officer shall investigate the grievance and convene a meeting which he or the Business Manager of the Ontario Sheet Metal Workers' Conference considers necessary to resolve it and give his reply on the prescribed form to the Business Manager of the Ontario Sheet Metal Workers' Conference within five (5) working days from the receipt of the grievance form which was completed at First Step.

If a Second Step grievance meeting is considered appropriate, the Management Committee shall comprise the EPSCA Grievance Officer plus two (2) other management representatives, one of whom shall be a representative of the Employer against whom the grievance has been filed. The Union Committee shall comprise three (3) persons, including the Business Manager of the Ontario Sheet Metal Workers' Conference and the Accredited Representative for the grievor, plus one other representative of the Union.

30.5 EPSCA OR UNION GRIEVANCES

The processing of EPSCA grievances shall begin at the Second Step. EPSCA may submit either policy or specific grievances. The Union may also institute policy grievances at this Step. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.

30.6 TIME LIMITS

The time limits as to both documents and procedure set out in the above sections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, the employee concerned, the Union or EPSCA shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been settled and ineligible for arbitration.

30.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at First Step.

30.8 GRIEVANCE FACILITIES

EPSCA shall provide the necessary facilities for all grievance meetings.
Article 31

ARBITRATION

31.1 If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Article 30, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either EPSCA or the Union to a Board of Arbitration for adjudication. The party desiring to submit the dispute to arbitration shall notify the other party, in writing, of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, the appointment shall be made by the Minister of Labour for Ontario upon the request of either party. If the two nominees fail to agree upon a Chairman, the services of the Minister of Labour for Ontario shall be utilized and the request to the Minister may be made by either party. The Arbitration Board, when selected or appointed, shall proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. The decision of a majority is the decision of the Arbitration Board, but if there is no majority, the decision of the Chairman governs.

31.2 The Arbitration Board shall have no power to add to or subtract from or modify any of the terms of this Agreement. The Arbitration Board shall not substitute its discretion for that of the parties except where the board determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the Arbitration Board may substitute such other penalty for the discharge or discipline as to the arbitration board seems just and reasonable in all circumstances. The Arbitration Board shall not exercise any responsibility or function of the parties. The Arbitration Board shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.

31.3 In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario and the fees and expenses of the Chairman shall be shared equally by the parties.

31.4 The time limits as to both documents and procedure set out in the above sections shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed.
Article 32

STANDOFF

32.1 When unable to proceed with his work, an Employer may elect to either layoff or standoff part or all of his crew. If an employee is stoodoff, the employee may elect to remain on standoff or be laid off.

(a) Layoff

If layoff is elected, it shall be carried out in accordance with the terms of this Collective Agreement. An employee laid off will be issued a Record of Employment Form indicating "Layoff - Shortage of Work".

(b) Standoff

If standoff is elected, the Employer reserves the right to standoff its employees without pay up to a maximum of three (3) consecutive working days. Notification of standoff will be made by the Employer during normal working hours. No travel allowance will be paid to an employee for the standoff period. If standoff continues beyond three (3) consecutive working days, an employee shall be issued a Record of Employment Form indicating "Standoff - Lack of Work" dating back to his first day on standoff.

32.2 An employee qualifying for subsistence allowance who is placed on standoff will be paid subsistence allowance up to a maximum of three (3) consecutive days.

Article 33

NO STRIKE - NO LOCKOUT

33.1 There shall be no strikes or lockouts so long as this Agreement continues to operate.
**Article 34**

**TOOL LIST**

34.1 All journeymen sheet metal workers and apprentices shall provide themselves with a lockable toolbox and the full complement of tools as set out below:

<table>
<thead>
<tr>
<th>Tool Description</th>

34.2 Journeymen sheet metal workers and apprentices who report for work and are not in possession of a full set of tools as set out above shall not be eligible for employment and the Employer shall have the right to refuse employment or to continue to employ such journeymen or apprentices. In such instances the Employer shall not be required to pay reporting pay as established under the relative Article of this Agreement.
34.3 Employees engaged in sheeting and decking work shall provide themselves with and have in their possession on the job a lockable toolbox and the following tools:

<table>

**Article 35**

**ASSOCIATION FUND**

35.1 Each Employer bound by this agreement shall contribute to the Electrical Power Systems Construction Association Fund, the amount specified on the wage schedules, attached hereto, for each hour worked by each employee covered by this Agreement.

The Employer shall remit such contribution together with the supporting information as required on the reporting forms.
Article 36

PROTECTIVE CLOTHING AND EQUIPMENT

36.1 All employees shall provide themselves with and maintain in good condition the clothing required for performance of their normal duties including approved safety helmet and approved safety footwear.

The Employer shall provide all specialized equipment, e.g., safety glasses, glare shields, welding goggles, welders' gloves, painters' masks or other specialized clothing necessary for the safe operation of an employee's normal employment. The protective clothing and equipment that is provided by the Employer will be charged out to the employee and the employee will be responsible for the return of such clothing and equipment to his Employer. Employees will be charged for clothing and equipment which are lost and not reported immediately.

36.2 An employee shall be required to provide himself with the tools of his trade as set out in Article 34. The Employer shall not be held responsible for losses, except as noted hereunder:

(a) When personal tools valued in excess of $15.00 are lost due to fire, the Employer will consider the full estimated value on the merit of each case in determining replacement or payment. This will include only personal tools that a tradesman is required to have to perform his normal duties with his Employer.

(b) The Employer will compensate his employees for ordinary hand tools and clothing lost by theft from locked storage provided by the Employer for the employees. Claims must be submitted, in writing, and must provide substantiating evidence of forcible entry to locked storage. Payment or replacement for personal clothing lost by theft on the worksite shall be limited to clothing that a tradesperson is required to have to perform his normal duties with his Employer.

(c) In the event of loss by fire at an Employer's camp or on the work site in an Employer designated storage area, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $500.00 for the loss of personal clothing will be made by the Employer. Payment or replacement for personal clothing cost by fire on the work site shall be limited to clothing that a tradesperson is required to have to perform his normal duties with his Employer.

36.3 REV Employees working in a radiation area, in plastic suits or replacement material of the fully enveloping type with an independent air supply, will receive $8.10 per day. A day for the purposes of this item shall be defined as any period up to twelve (12) hours.
Article 37

WELDING TESTS

37.1 An existing employee who is required to take a welding test by his Employer will remain in the employ of his Employer while taking such a test and will continue to receive his appropriate pay and all applicable benefits.

New employees required to take the test shall not be paid for the time spent taking the test. New employees who fail the welding tests will be paid the appropriate travel allowance at the applicable rate.

37.2 Results of the welding test shall be given to the welder by his Employer as soon as reasonably possible.

Article 38

STABILIZATION FUND

38.1 All Employers bound by this agreement agree to pay into operative Sheet Metal Workers' Union Stabilization Funds in Locals 562, 473 and 539 established or recognized in the locality by Employers under agreement with the Union for construction work of a related nature.

The Employers will contribute the amounts specified in the wage schedules, attached hereto, for every hour worked by each of their employees within the jurisdictions of Locals 562, 473 and 539.

38.2 In the event that this fund is discontinued for any reason whatsoever, the hourly contributions herein will then become part of the hourly wages of the employee on whose behalf they have been formerly contributed.

Article 39

RADIATION WORK

39.1 (a) Local Union to be provided with a copy of Ontario Power Generation Inc (OPGI) Radiation Protection Regulations and any revisions.

(b) Local Union to be provided with a copy of Ontario Power Generation Inc (OPGI) Radiation Protection Procedures and any revisions.

(c) Each employee will have access to his personal radiation exposure record.

(d) Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

(e) Short-term employees will be given a guaranteed period of employment at their time of hire.
39.2 Construction Radiation Protection Assistant is a Construction Trades Person who has achieved the full radiation qualification (Green) via the approved Ontario Power Generation Inc (OPGI) Training Program, plus has successfully completed the Construction R.P.A. training and checkouts, also has performed R.P.A. functions while under supervision of a fully qualified Construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.

R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of Union or trade affiliation.

Article 40

AIR BALANCING

40.1 When air balancing is subcontracted to an independent air balancing contractor, one (1) journeyman sheet metal worker from the Local Union will be supplied to the air balancing contractor by the contractor subcontracting the work.

Article 41

APPRENTICESHIP AND TRAINING PROGRAM

41.1 The Association will identify as far in advance as possible its training needs and communicate those needs to the Local Training Committee. The Association agrees to co-ordinate with the Local Union the specialized training required to accommodate new technology, methods, etc.

Article 42

TERM OF AGREEMENT

42.1 This Agreement shall continue in full force and effect for a term of four (4) years, from May 1, 2000 to April 30, 2004.

This Agreement shall be considered automatically renewed for successive periods of twelve (12) months commencing May 1, 2004, unless at least sixty (60) days prior to the end of any twelve (12) month period either party serves written notice upon the other that it desires termination, revision, or modification of any provision of this Agreement.
Article 43

ABORIGINAL CONTENT COMMITMENT

Where an aboriginal commitment has been established on a project, the Union will co-operate in meeting the content commitments.

For a project, or jobs within a project, that are less then $100,000 field labour, and have aboriginal content commitments, the terms of this collective agreement will not apply to those aboriginal content commitments.

Dated at Toronto, this 21st day of November, 2000.

APPENDIX A

MOOSE RIVER BASIN: NORTHERN ONTARIO

Where the Employer elects to establish a camp, the following conditions will apply for employees working in the Moose River Basin:

Camp Conditions

(a) An Employer may elect to provide free room and board in camp at no cost to the employee. Where the Employer elects to provide a camp such employees will not be entitled to receive a daily travel or room and board allowance.

(b) When an Employer does not elect to provide free room and board in camp, the employee will be entitled to receive a daily travel or room and board allowance as set out in Article 26.

(c) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(d) An employee who is absent from work without approval and who remains in camp and who is still absent from work the following day without approval will be charged $25.00 for the day of absence and each successive day of unapproved absence.

Hours of Work

(a) The hours of work will consist of a 21 day cycle of fourteen (14) consecutive work days followed by seven (7) consecutive days off.

(b) Regularly scheduled hours of work of ten (10) hours per day shall be paid at straight time hourly rates.

(c) Regularly scheduled hours of work on Saturday, Sunday, Recognized Holidays, and the fifth (5th) consecutive weekday shall be paid at two times the straight time hourly rate.

Wrap Around

An employee shall qualify for a return trip from the project every second twenty-one (21) day cycle he is on the project on the following basis:

(a) If an employee lives within 161 radius kilometres from the project, the Employer shall pay forty dollars ($40.00).

(b) If an employee lives greater than 161 radius kilometres from the project, the Employer shall pay as an allowance, forty dollars ($40.00) plus travel time based on the equivalent of one (1) hours base rate of pay for each eighty (80) radius kilometres, or portion thereof, of travel time to a maximum of 800 kilometres from where the employee lives or place of recruitment, whichever is closer to the project.

43
APPENDIX B

7-DAY COVERAGE

When working under the provisions of this Appendix, all conditions listed will supersede those contained in the main agreement. Where this Appendix is silent, the appropriate article in the Collective Agreement applies.

This shift schedule is intended for work greater than four (4) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

If in the transition onto or off this 7-day shift schedule, an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours’ pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a one, two, or three-shift per day basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked. The Employer will provide the Union with 48 hours’ notice prior to the implementation of these shift provisions.

First Shift

Regularly scheduled hours of work of up to ten (10) hours per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates.

Second Shift

Regularly scheduled hours of work of up to ten (10) hours per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential of one-seventh of the straight time hourly rate.

Third Shift

Regularly scheduled hours of work of up to ten (10) hours per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential of one-fifth of the straight time hourly rate.
All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at two times the straight time hourly rate. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
Letter of Understanding No. 1

between the

ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

and the

ONTARIO SHEET METAL WORKERS’ CONFERENCE

For
Locals 30, 47, 235, 269, 392, 397, 473, 504
537, 539 AND 562

Local Union Hiring Practices

It has been agreed that employers working under the EPSCA collective agreement will be able to utilize the current Local Union Hiring Hall Practices when they wish to name hire tradespersons.

It is also agreed that an employer may transfer employees from one project to another within the geographic jurisdiction of the Local Union. This provision shall have no sectoral restrictions.

Dated at Toronto this 3rd of May 2000.

ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

and the

ONTARIO SHEET METAL WORKERS’ CONFERENCE
For
Locals 30, 47, 235, 269, 392, 397, 473, 504
537, 539 AND 562

Employment Referrals

It is agreed by the parties to this understanding that, prior to any member being referred for employment under this collective agreement, the member must submit to a security check. Only members who successfully obtain security clearance will be referred to the facility for employment, subject to Articles 11.6 (b) or Article 30.7. Once these referrals have been hired on, they will receive on the first paycheque fifty dollars ($50) in consideration of the time and cost associated with the procedure for completing the authorizing forms and submitting to a Security Clearance check.

The union will be notified, as soon as possible, whether or not an individual has successfully obtained security clearance. This pre-clearance process does not prohibit the Union from filing a grievance against the Employer on behalf of any member who is refused employment due to his/her failure to obtain security clearance.

Dated at Toronto this 3rd of May 2000.

HIRING AND MOBILITY REOPENER

The Unions agree that, in the event of legislation being introduced in the ICI sector that would put EPSCA at a disadvantage regarding hiring and mobility, they would reopen negotiations to deal with these issues.

## Overtime

- **Mon-Fri**: Scheduled Work Days - 1 1/2 times for up to and including 2 hours beyond the normal daily scheduled number of hours. This applies for both 4 day x 10 hours per day schedule and a 5 day by 8 hour per day schedule. For overtime worked in excess of the 2 overtime hours per day at 1 1/2, the overtime rate shall be 2 times the basic hourly rate. Non-Scheduled Work Days - 2 times for all hours worked.
- **Sat**: 2 times for all hours worked.
- **Sun & Holidays**: 2 times for all hours worked.

## Deductions

Deductions include the following items:
- Ontario Sheet Metal Union Dues Promotion Fund (OSMUDPF) - $0.21 per hour worked

These deductions are to be sent to the following location:
- Ontario Sheet Metal Workers' and Roofers' Conference
- 1312 Huronronto Street
- MISSISSAUGA, ON
- L5G 3H3

Both the OSM UDPP and the UDPP (when listed as a deduction rather than a contribution) are to be deducted like a dues deduction, that is, from the Base Hourly Rate.

Note that these amounts are not included in either UNION DUES or CONTRIBUTIONS.

## Contributions and Union Dues

Neither Contributions (e.g. Pension, Welfare, Stabilization Fund, etc.) nor Union Dues are included in DEDUCTIONS.

- **Contributions**:
  - Special Dues - $0.18 per hour worked
  - Stabilization Fund - $1.00 per hour worked (varies with classification)
  - Provincial Training Trust Fund - $0.12 per hour worked

- **Union Dues**:
  - This Local has no Union Dues Checkoff.

Provincial Training Trust Fund should be forwarded to the following location:
- Peterson Goh Paganelli
- 390 Bay Street, Suite 201
- TORONTO, ON
- M5H 2Y2

Other Contributions should be forwarded to the following location:
- Local 537 Funds Administrator
- 479 Main Street, East
- HAMILTON, ON
- L8N 1K1
- Tel: 905-528-2407
- Fax: 905-528-7241

COLLECTIVE AGREEMENT

between

THE ELECTRICAL POWER SYSTEMS

CONSTRUCTION ASSOCIATION

and the

INTERNATIONAL ASSOCIATION OF HEAT

AND FROST INSULATORS AND ASBESTOS WORKERS

May 1, 2000 – April 30, 2004
This Collective Agreement distinguishes between two broad categories of work; namely, work that is covered by the “modified provisions” of this construction agreement and work that is not. “Modified provisions” apply to all work on Hydro One (Lines & Stations) and most work on existing generating sites. Following is a more detailed explanation:

The “Modified Provisions” of this Construction Agreement will apply to:

(a) all work on Hydro One (Lines and Stations), and

(b) all work on existing generating sites except the construction of:
   • a new facility which provides a new function
   • a new (i.e. additional) generating unit

Appendix D - contains the “Modified Provisions of this Construction Agreement”. All terms of this collective agreement shall apply to work covered by Appendix D, with the exception of Article 24 - Generation Projects Daily Travel Allowance and Room and Board and Article 35 - Hours of Work. Articles 24 and 35 do not apply when working under the terms and conditions of the “modified provisions”, as they are replaced by Sections 1 and 2 respectively.

When work does not fall within the definition of Appendix D, all terms of this agreement, with the exception of Appendix D, apply.

COLLECTIVE AGREEMENT

by and between

THE ELECTRICAL POWER SYSTEMS CONSTRUCTION ASSOCIATION
(hereinafter called "EPSCA")

and the

INTERNATIONAL ASSOCIATION OF HEAT AND FROST
INSULATORS AND ASBESTOS WORKERS
(hereinafter called the "Union")

WHEREAS EPSCA is an Association formed to represent Employers in collective bargaining and on their behalf enter into collective agreements covering those of their employees in the bargaining unit as hereinafter defined;

AND WHEREAS the Union and the Association desire to mutually establish and stabilize wages, hours and working conditions for journeymen and apprentices employed by Employers within the Electrical Power Systems Sector of the construction industry, in the Province of Ontario and further to encourage closer co-operation and understanding between the Association and the Union to the end that a satisfactory, continuous and harmonious relationship will exist between the parties to this Agreement;

NOW THEREFORE the parties hereby agree as follows:
Article 1

RECOGNITION

1.1 EPSCA recognizes the Union as the exclusive bargaining agency for a bargaining unit comprising employees as defined in Article 1.3 engaged in all construction industry work* performed in the Province of Ontario on Ontario Power Generation Inc. and Hydro One property for the bulk power system, save and except the building of commercial-type office facilities at urban locations remote from operating facilities.

For the purpose of clarity, the bulk power system comprises generating stations, hydraulic works, heavy water facilities, transmission lines (voltages over 50 kV), transmission stations, microwave and repeater stations.

1.2 The Union recognizes EPSCA as the exclusive bargaining representative for all Employers in respect of work performed by their respective employees in the bargaining unit set forth in Article 1.1.

1.3 The term "employee" shall include all employees of the Employers in the classifications set out below:

- Insulating Mechanic
- Apprentice
- Temporary Help
- Subforeman
- Foreman
- Working Foreman

1.4 Working Foreman

Foremen working within their local geographic area may work with the tools upon mutual agreement of the Employer and union when the crew size is 5 or less.

Article 1.4 is applicable only to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Hydro One and at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Appendix D, Section 5 – Modified Provisions of this Construction Agreement.

* For the purpose of The Electrical Power Systems Construction Association, the work performed is deemed to be under the responsibility of the Engineering and Construction Services Branch. The work encompasses:

- construction of new facilities
- additions to existing facilities
- major modifications
- rehabilitation
- reconstruction of existing facilities
1.5 The term "Employers" shall include individual members of EPSCA and any company, partnership, sole proprietorship, joint venture, contractor, subcontractor or any person that is bound by the terms and conditions of this Agreement.

1.6 EPSCA and the Union agree that the use of nomenclature is meant to refer to both genders.

**Article 2**

**FOREMEN**

2.1 It is understood that foremen hold a key position in the relationship between the Employers and the Union. Both parties agree that every effort should be made to recruit and retain foremen who have a high degree of efficiency in the performance of their jobs and in the handling of their men. Recognizing the responsibilities involved in being a supervisor and a member of a Union, the Employers and the Union will make every effort to minimize problems that may arise which concern the relationship between the foremen, the Employers and the Union.

2.2 Foremen are the first level of management supervision and, as such, are management representatives. In this capacity, they will exercise duties and responsibilities, as established by their Employers, and will not work with the tools of the trade, except as provided for in the working foreman classification.

The parties recognize the responsibility of foremen to discharge their managerial duties. If the Union feels that a foreman is not discharging his managerial duties in a manner that is fair, equitable and without bias, or if an Employer feels that the Union is interfering with a foreman in the performance of his managerial duties, the Employer or the Union may refer the problem to the Project Committee for resolution. If the matter cannot be resolved by the Project Committee, the grievance procedure may be invoked by either party.

2.3 The selection and retention of foremen will be the responsibility of the Employers. When making appointments to the foreman level, the Employers will give consideration to those journeymen they presently employ. The appointment of foremen in charge of composite or mixed crews will take into account the nature of the work to be done.

2.4 **Wages**

The rates of pay for foremen shall be the greater of:

(i) $3.00 per hour above the journeyman rate; or

(ii) the Employer's current practice; or

(ii) the rate negotiated in appropriate local agreements.
2.5 Mobility

To maintain efficiency and productivity, an Employer shall have the right to move foremen from construction site to construction site, as determined at the pre-job conference.

2.6 Tools and Clothing

On a charge-out basis, the Employer shall supply foremen with protective clothing appropriate for the conditions under which the work is being done.

Foremen shall be accountable, but not liable, for gang tools used by their crew.

Article 3

ACCREDITED UNION REPRESENTATIVES

3.1 The senior representative of the Union will designate local union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement on the basis of not more than two representatives for each Major Project and a suitable number for the Construction and Services Division. The Union will notify the General Manager of EPSCA, in writing, of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Such representatives, after identifying themselves to the EPSCA representative upon entering the job site, will be free to observe the progress and conduct of the work and to conduct normal union business. The Union undertakes that these representatives will not hinder or interfere in any way with the said work.

3.2 An Accredited Union Representative may be appointed by the International Representative to be his designate in matters requiring the involvement of the International Representative.

The International Representative will inform EPSCA, in writing, of the name, duration of, appointment and function of such designate.

Article 4

UNION STEWARDS

4.1 Accredited Union Representatives shall inform the appropriate EPSCA Representative and the Employer of the steward, in writing, of the names of all stewards, one of whom shall be designated Chief Steward, as they are appointed and when they cease to act as stewards. A steward, other than a Chief Steward, shall exercise his duties only in respect to employees of his Employer. A Chief Steward, in order to carry out his duties in respect to employees of other than his Employer, shall first involve the EPSCA Representative. A steward shall obtain permission from his immediate supervisor before leaving his work area for union business. Such permission shall not be unreasonably denied.
Except at Bruce Nuclear Power Development (BNPD):

Only in situations where an accredited Union Representative is unable to attend pre-job and/or mark-up meetings, may the Chief Steward be designated and attend, as part of the Chief Steward's duties, on behalf of the accredited union representative.

4.2 The Union shall receive written notice before the employment of a steward is terminated by his Employer, and provided the steward is able to perform the work required, he will be the last employee to be retained by his Employer in a layoff/standoff situation.

4.3 The Chief Steward will be informed of all overtime and shall be given the opportunity to work. In the event he declines the work he shall be responsible to designate a steward to work the overtime who is qualified to perform the available work.

4.4 No foreman or subforeman shall be permitted to act as a steward.

Article 5

ADVANCE NOTICE

5.1 EPSCA will advise the Union of all new Generation Station Projects and Hydro One - Lines and Stations Construction Projects coming under the provisions of this Agreement for the construction field forces of the Employers.

Upon the request of the Union, EPSCA will convene a prejob conference before work commences to discuss preliminary details of the proposed work to be performed and to establish conditions in accordance with this Agreement for the project. EPSCA will record the minutes of prejob conferences and forward them within fifteen (15) working days to the Union.

5.2 Subsequent prejob conferences will be convened by EPSCA before specific portions of work commence to discuss the final details of the work and to establish conditions in accordance with this agreement for that work.

5.3 EPSCA will provide written notice to the Union as far in advance as possible of new work and prejob conferences as noted in Articles 5.1 and 5.2 above. For work of less than one week's duration and requiring five (5) or less employees, prejob meetings must be arranged with as much advance notice as possible by the office of the General Manager of EPSCA, but without formal notice, in writing, unless the prejob meeting has been waived by the parties.
Article 6

WORK ASSIGNMENT

6.1 The jurisdiction of the Union shall be that jurisdiction established by Agreements between International Unions claiming the work or Decisions of Record recognized by the AFL-CIO for the various classifications and the character of work performed, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction. An Agreement or Decision of Record is one that is published by the Building and Construction Trades Department, AFL-CIO (Agreement and Decisions Rendered Affecting the Building Industry).

Where no Decision or Agreement applies, the Employer agrees to consider evidence of established practices within the industry when making jurisdictional assignments.

6.2 (a) A markup process will be utilized when an Employer intends to perform work on a project site*. The purpose of this markup process is to indicate to the Union the work which is planned to be carried out by the Employer in order to minimize the potential for jurisdictional disputes.

(b) When work is to be performed on a project site and it meets the following criteria: same employer, same work, same project site, the markup process will not be required. This procedure shall not preclude a Union’s right to contest previously disputed work.

In the Electricity Production Zones when work falls within this criteria the EPSCA Office will send out a “Notification of Work” along with a copy of the original minutes of mark-up meeting(s) to the Local Unions prior to work commencing. This procedure shall not preclude the Union’s right to contest previously assigned work, if the work is in a Local Union jurisdiction other than the one it was marked up in.

(c) When an Employer has work that is less than a 3 week duration and there are ten (10) or fewer employees covered by EPSCA Collective Agreements employed on this specific work, the Union will be notified of the scope of work and the Employer’s proposed work assignments. The Union will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to the Employer for consideration. The Employer will notify the Union of the final work assignments prior to the commencement of the work.

(d) All work that does not meet the criteria set out in clauses 6.2(b) or 6.2(c) will be reviewed and assigned at a markup meeting.

(e) EPSCA will provide written notice to the Union as far in advance as possible of markup meetings. The Union may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

* For the purposes of this Article, Nanticoke, Lambton, Lakeview/Hearn, BNPD, Pickering, Darlington, Hydro One (Lines and Stations) and the five (5) Electricity Production Zones are each considered individual project sites
(f) The Employer who has the responsibility for the work shall make a proposed assignment of the work involved. The Employer shall be responsible for providing copies of proposed assignments to the Unions in attendance at the markup meeting. The Employer will specify a reasonable time limit for the Unions involved to submit evidence of their claims. The Employer will evaluate all evidence submitted and make a final assignment of the work involved. This final assignment will be in accordance with the procedural rules established by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. The Employer will advise the Unions of the final assignments prior to the work commencing.

(g) The EPSCA representative will record the proposed assignments and jurisdictional claims and forward a copy of them within fifteen (15) working days to the Unions.

(h) The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the process set out above may not be practical or possible, however reasonable effort will be made by the Employer to adhere to the appropriate trade jurisdiction.

Article 7

JURISDICTIONAL DISPUTES

7.1 (a) In the event there is a jurisdictional dispute which cannot be settled on a local basis by the Unions involved, it shall be submitted to the International Unions involved for settlement without permitting it to interfere in any way with the progress of the work at any time.

Any Union shall have the right to elect to pursue or respond to any jurisdictional disputes at the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. In the event the Union elects to pursue or respond to the jurisdictional disputes at the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry, clauses 7.1(b), 7.2, 7.3, and 7.4 will apply.

In the event another Union (or other Unions) not signatory to this collective agreement has (have) the option to pursue jurisdictional disputes at the Ontario Labour Relations Board, the Union shall have the right to pursue or respond to any jurisdictional disputes at the Ontario Labour Relations Board when these Unions are involved in the jurisdictional dispute.

In the event the Union elects to pursue or respond to the jurisdictional dispute at the Ontario Labour Relations Board, clauses 7.1(b), 7.2, 7.3, and 7.4 will NOT apply.
(b) In the event that a jurisdictional dispute arises over a work assignment, the Employer will make an assignment for the work in dispute in accordance with the Procedural Rules and Regulations of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry. Any Union which protests that a contractor has failed to assign work in accordance with the procedures specified above, shall remain at work and process the complaint through its international office. The parties will settle such jurisdictional dispute in accordance with procedure as outlined by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry of the Building Trades Department, AFL-CIO or any successor agency of the Impartial Jurisdictional Disputes Board authorized by the Building Trades Department.

7.2 In the event the dispute is not settled by the International Unions involved, it shall then be submitted to the Administrator of the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry for resolution. In the event that the International Office of the Union elects not to file with the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry, EPSCA agrees to file the dispute at the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry at the request of the International Representative of the Union. Those Unions and Employers involved shall advise the Union and EPSCA respectively, in writing, of an intent to submit a jurisdictional dispute to the Impartial Jurisdictional Disputes Board and will identify the work in question. An arbitration decision under the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry will be final and binding to the parties to this Agreement with no further recourse to the Ontario Labour Relations Board on the issue decided by the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry.

7.3 EPSCA shall have direct recourse to the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry when the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry has under its consideration a dispute involving the assignment of work being done by employees who are covered by this Agreement.

7.4 In the event that an arbitration decision under the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry is not rendered within sixty (60) days of the disputed assignment being referred to the Plan, EPSCA and/or the Union shall have recourse to the Ontario Labour Relations Board for a decision provided it is processed as a jurisdictional dispute.

7.5 When a jurisdictional dispute exists in the electrical power systems sector, upon request by the International Representative of either of the Unions involved, Employers shall furnish the International Representative with a letter from a duly authorized official of the Employer on the Employer's stationery, stating that the Union requesting the letter was employed on specific types of work on a given project. The Union requesting the information will supply the Employer with the name of the other Union involved in the dispute and the Employer will provide that Union's International Representative with a copy of the letter being given to the requesting Union.
When a jurisdictional dispute exists in the electrical power system sector between Unions and upon written request by the International Representative of the Union, the Employer shall supply the International Representative of the Union involved with a copy of the evidence submitted by the other Union(s) involved along with drawings and/or prints plus a description of the work or process in dispute.

7.6 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Ontario Labour Relations Board as governed by 7.4 above, the arbitration board panel appointed by the Ontario Labour Relations Board pursuant to the Act is not authorized to award damages in respect of a mis-assignment of work only in circumstances where the other union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However this clause 7.6 shall not apply where the Jurisdictional Dispute and the mis-assignment of work involves the same employer and the same work, and on the same job previously the subject of a Jurisdictional Dispute before the Ontario Labour Relations Board or the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry.

7.7 The board panel appointed by the Ontario Labour Relations Board will govern its decision pursuant to its normal criteria.

7.8 In the event the Union elects to pursue or respond to the Jurisdictional Dispute at the Ontario Labour Relations Board as governed by 7.4 above, the decision of the panel of the Ontario Labour Relations Board will be final and binding upon the parties to this agreement with no further recourse to the Plan on the issue decided by the Ontario Labour Relations Board.

Article 8

UNION SECURITY

8.1 UNION MEMBERSHIP

(a) Employees

As a condition of employment, all employees covered by this Agreement shall either be members of, or will apply for membership in the Union within seven (7) days of employment. It shall also be a condition of continued employment that employees maintain their union membership in good standing.

(b) Foremen

As a condition of employment, all foremen covered by this Agreement shall either be members of, or will apply for membership in the Union within seven (7) days of employment. It shall also be a condition of continued employment that foremen maintain their union membership in good standing.
8.2 CHECKOFF

The Employers shall deduct union initiation fees and dues from their employees' and foremen's wages. Such fees and dues will be deducted weekly or monthly and transmitted to the designated officials of the Union, on or before the 15th day of the month following the month in which deductions are made, together with full checkoff lists of employees and foremen subject to checkoff.

The Union shall indemnify EPSCA and the Employers for any liability arising from the deduction of initiation fees and dues.

The Union, through its International Office, will notify EPSCA, in writing, of the appropriate initiation fees and Union dues and of any changes to such fees and dues. Within three (3) weeks of receipt of an acceptable written notice, any changes to such fees and dues will be implemented. The effective date will be the date of implementation.

The Employer will check off initiation fees on receipt from the Union of authorization signed by the employee.

8.3 The Union may designate dues from any of the following options:

- a fixed dollar amount per month,
- a fixed percentage of vacationable gross earnings per month,
- a fixed cents per hour worked or paid,
- a fixed cents per hour worked or paid plus a fixed dollar amount per week or month,
- a fixed dollar amount per month plus a percentage of vacationable gross earnings.

Regardless of the option selected, the Employer will only remit monies to a single location. Any redistribution is the responsibility of the Union. By mutual agreement with the Union, an Employer may elect to continue current administrative practices relative to the deduction of union dues.

Article 9

BENEFITS

9.1 The Employer agrees to pay into operative welfare, pension and supplementary unemployment benefit plans the amount specified for welfare, pension, and supplementary unemployment benefits as set forth in the wage schedules, attached hereto, for employees covered by this agreement.
9.2 The Union agrees to supply the Employer with all information regarding the welfare, pension and supplementary unemployment benefit plans and also all administrative material that is required for the implementation of them.

9.3 Any changes in welfare, pension or S.U.B. plan contributions recognized under this Agreement will be confirmed, in writing, by the Union to EPSCA before such changes are put into effect. Within three (3) weeks of receipt of an acceptable written notice, such changes will be implemented. The effective date will be the date of implementation. Should the welfare or pension plan contributions change during the term of this Agreement, then an adjustment may be made to the base rate. The total wage package will not be changed.

9.4 In the event an Employer is more than fifteen (15) days in arrears of the requirement to forward contributions and/or deductions to the Trustees by the fifteenth of the month following, the Employer shall pay as liquidated damages and not as a penalty an amount equal to two (2%) percent (equivalent to 24%) per annum for each month or part thereof that the contributions and/or deductions are in default for greater than fifteen (15) days provided the Employer has received five (5) days' written notice to correct such default. The trustees may require a delinquent Employer to pay for the costs, legal or otherwise, of collecting the amount owing, as outlined in the operative benefit plan trust documents.

9.5 The Trustees of the Employee Benefit Plans referred to in this Collective Agreement shall promptly notify the Union of the failure by the Employer to pay any employee benefit contributions required to be made under this Collective Agreement and which are owed under the said plans in order that the program administrator of the Employee Wage Protection Program may deem that there has been an assignment of compensation under the said program in compliance with the Regulation to the Employment Standards Amendment Act, 1991 in relation to the Employee Wage Protection Program.

Article 10

EMPLOYMENT

10.1 (a) For purposes of this Article, a geographic area will be established for each Major Project and geographic areas for the Construction and Services Division. The size of these geographic areas will be dependent upon the location of the work and the trade concerned.

(b) The boundaries of the geographic areas will be jointly established at prejob conferences.

10.2 An office will be established by EPSCA, or the Employer with the approval of EPSCA, for each Major Project and the Construction and Services Division. A purpose of this office will be to co-ordinate employment as specified in this Article.
10.3 EPSCA, or the Employer with the approval of EPSCA, and the Union will exchange the names of their representatives in each of the areas described in 10.1(a), who will be responsible for cooperating in the referral and employment of reliable and competent union members.

10.4 EPSCA, or the Employer with the approval of EPSCA, will notify the Union of future manpower requirements for all employees coming within the scope of this Agreement.

10.5 Employers reserve the right to transfer employees from one location to another to effectively utilize their special skills, having regard for the special requirements of thermal, nuclear or hydraulic generation and transmission and transformation construction.

Where possible, the number of key tradesmen to be transferred shall be determined at a pre-job conference.

The employers reserve the right to transfer employees providing these employees are from the same listed municipality union hiring hall where the project is located.

10.6 The employment of additional tradesmen and apprentices, excluding key tradesmen and employees transferred to the project, shall be carried out on the following basis and sequence:

(i) Referrals from the out of work list up to the number of transferred employees

(ii) Fifty percent (50%) name-hire from the local municipal hiring hall

(iii) The EPSCA office, or the Employer with the approval of EPSCA, will request the local union office for tradesmen and apprentices required. The request will include a description of the work, the number of qualified tradesmen and apprentices required, and the name of the Employer for whom the tradesmen and apprentices will be working.

(iv) The Union members who are resident in the designated geographic area will be referred by the Union for employment through the EPSCA office. As much as their out-of-work lists will permit, the Unions will supply members on a fan-out basis from the project or work location.

The Employers will either hire such persons or substantiate their reasons, in writing, for not doing so.

The Union will co-operate with the Employer and advise the EPSCA office of the name, address and telephone number of members being referred for work with Hydro One (Lines and Stations Construction) as soon as they are known.
(v) If, after a request has been made, the Union is unable to supply sufficient tradesmen and apprentices to meet the manpower requirements of the Employers, the Employers may employ tradesmen and apprentices who are resident within the geographic area. Such tradesmen and apprentices shall comply with the requirements of Article 8 of this Agreement. EPSCA shall promptly notify the Accredited Union Representative, in writing, of the names, addresses, date of hire, social insurance numbers, telephone numbers, job location and classification of the persons hired.

(vi) Once the supply of suitable tradesmen and apprentices within the geographic area has been exhausted and additional tradesmen and apprentices are required, EPSCA will contact the International Representative for the trade concerned, or his designee, in order to determine whether suitable union tradesmen and apprentices are available outside of the geographic area. EPSCA will co-operate in providing employment to such union tradesmen and apprentices on the basis that they be supplied from the nearest location where they are available.

10.7 Notwithstanding the provisions of Articles 10.5 and 10.6, re-employment as required by the Workers Compensation Board shall not be a violation of this collective agreement nor be subject to the provisions of Articles 27 and 28.

Article 11

EMPLOYMENT - EMERGENCY SITUATIONS

11.1 When the Union has failed to supply the required number of competent and qualified employees (including the appropriate term apprentices for asbestos removal) after two (2) working days following a written request by an Employer, the Employer may declare that an emergency situation exists. Notice of such declaration shall be made, in writing, or by telegram to the Union.

When an emergency situation is declared the Employer shall have the right to procure workmen from available sources other than the Union on jobs located within the geographic jurisdiction of the Union. Immediately upon being hired, such employees shall be classified as temporary help.

11.2 An emergency situation shall be deemed terminated when the Union has notified the Employer of the Union's ability to fulfill the Employer's manpower requirements. The Employer shall agree to hire such available Union members and agree to lay off temporary help within two (2) working days of such notice.

11.3 The Employer shall notify the Union each time a temporary employee is hired. Upon receiving such notice the Union will immediately issue referral cards to the Employer on behalf of such employees.
Article 12

EMPLOYMENT - ASBESTOS REMOVAL OPERATIONS

12.1 Asbestos removal work shall be performed by crews of mechanics and apprentices maintaining a one (1) to five (5) ratio. The first hire must be a mechanic. Every crew of (5) apprentices shall consist of a maximum of one (1) 4th year, and a minimum of two (2) 1st year (or 2 temporary helpers). Any deviation from the above mix must be approved in advance by the local EPSCA representative.

12.2 If the total crew size is less than six (6) on any job, the apprentice crew mix will be mutually agreed upon by the Union, Employer and the local EPSCA representative.

12.3 In the event the Union is unable to provide the required manpower as provided in the above paragraph, Article 11 of this Agreement will apply.

Article 13

LAYOFF PROCEDURE

13.1 In the event of a reduction of staff, the Employer shall layoff employees in the following sequence:

(i) Temporary Help
(ii) Travel Card Members from Out-of-Province
(iii) Members of Local Union

During a reduction of staff, the normal ratio of apprentices to journeymen shall be maintained.

Article 14

WAGES

14.1 Effective May 1, 2000 and until April 30, 2004, the rates of pay for employees in the classifications listed in Article 1 of this Appendix shall be as set forth in the wage schedules, attached hereto.

14.2 The rate for subforemen covered by this Agreement shall be the appropriate mechanic rate plus $1.50 per hour and shall be set forth in the wage schedules, attached hereto.
Article 15

SHIFT DIFFERENTIAL

15.1 Employees required to work shift work other than the regular day shift will receive a shift differential of one-seventh (1/7) for normal scheduled shift hours worked.

Employees required to work shift work on the third shift of a three shift operation shall receive a shift differential of one-fifth (1/5) for normal scheduled hours worked.

Article 16

OVERTIME RATES

16.1 Overtime will be paid at two times the basic rate for work performed outside of normal hours as defined in the "Hours of Work" article of this Agreement and for work performed on Saturday, Sunday and the Statutory Holidays listed in Article 24 of this Agreement. Overtime rates shall be set forth in the wage schedules, attached hereto.

Article 17

PAY PROCEDURE

17.1 NORMAL

(a) Employees shall be paid weekly and payment for any given week will be made not later than the sixth working day after the close of the payroll period, but in any event not later than Thursday of the following week. Except as provided for in 17.1(c) employees who are at work on Thursday and are not paid will be paid on Friday. Such employees will be released one (1) hour, with pay, prior to normal quitting time on Friday to enable them to cash their cheque.

(b) Wages shall be paid by the Employers on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee, setting forth:
(i) the period of time or the work for which the wages are being paid;
(ii) the rate of wages to which the employee is entitled;
(iii) the amount of wages to which the employee is entitled;
(iv) the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;
(v) any allowance or other payment to which the employee is entitled;
(vi) the amount of vacation pay for which the employee is being credited;
(vii) the amount of statutory holiday pay for which the employee is being credited; and
(viii) the net amount of money being paid to the employee.

(c) In cases of inclement weather being declared on payday, employees will receive their pay before leaving the site provided it is available on the site.

17.2 ON TERMINATION

(a) An employee who voluntarily terminates his employment will be provided his final pay on the next regular payday.

(b) An employee who is laid off from a Generation Project will have his final pay and termination documents mailed to his last known address on file with the Employer by Priority Post within five (5) working days of termination. An employee who is laid off from a Hydro One (Lines and Stations) construction site will have his final pay and termination documents mailed to his last known address on file with the Employer within eight (8) working days of termination. This does not preclude an employee being issued his final pay and termination documents on the job prior to the five or eight-day period. After 48 hours of notifying the Employer, the Employee will be entitled to four (4) hours at straight time for each normal workday for which there is non-compliance thereafter.

(c) An employee who is discharged shall be provided with his final pay immediately if the Employer's pay facilities are on site or as per 17.2 (b) if the Employer's pay facilities are not on site.

(d) Employers will provide one hour's notice of layoff or one hour's pay in lieu of notice to employees who are to be laid off.

When possible, the Employer shall notify the Local Union three (3) days prior to layoff.

(e) When an employee is laid off, he will be paid for a reasonable amount of time by the Employer if he is required to travel or wait unduly before he receives his final pay.

(f) In established cases of long-term sickness, compensable accident or jury duty, an employee will be maintained on the Employer's payroll until his normal date of layoff.
Article 18

INCLEMENT WEATHER PAY

18.1 When an employee reports for work at the beginning of a shift and inclement weather is declared, an employee shall be entitled to the following payment unless notified not to report by his Employer:

(a) If not put to work, a minimum of two (2) hours' pay at the appropriate rate, providing he remains at his place of work for two (2) hours unless given his Employer's permission to leave;

OR

(b) If put to work, a minimum of four (4) hours' pay at the appropriate rate. If inclement weather is declared during the shift, an employee shall receive a minimum of two (2) hours' pay at the appropriate rate;

OR

(c) Pay for the actual time worked for that shift, whichever is the greater.

Article 19

PREMIUMS

19.1 When work is performed from a bosun chair or swing stage, the following premium shall be paid:

- over 15 meters above a working floor or platform - 20¢ per hour worked

- over 30 meters above a working floor or platform - 50¢ per hour worked

19.2 Construction Radiation Protection Assistant (R.P.A.) is a Construction Trades Person who has achieved the full radiation qualification via the approved Ontario Power Generation Training Program. This requires successful completion of the construction R.P.A. training and checkouts and the performance of R.P.A. functions while under the supervision of a fully qualified construction R.P.A. to the satisfaction of the Construction Site Safety Officer and the Station Health Physics Unit.
R.P.A. will be paid the appropriate equivalent foreman's rate when performing an R.P.A. function and will report to the Site Safety Unit. An R.P.A. is a "qualification" and not a "trade function" irrespective of union or trade affiliation.

19.3 In the case of a recall to work, Employers reserve the right to recall Green qualified Atomic Radiation Workers (R.P.A.) in sequence from the out-of-work list to the location from where they were laid off. Recalled Greenmen (R.P.A.) will perform sufficient Greenman work to maintain their skill level, or be laid off.

Article 20

CALL-IN PAY

When an employee is called in to work outside of his normal hours of work, he shall receive a minimum of four (4) hours' work at the appropriate premium rate plus travel allowance where applicable.

If the employee's normal hours of work commence within this four (4) hour period, the employee will be paid premium time from the time he commences work until the start of his normal hours and will revert to his normal hourly rate at the commencement of his normal hours of work.

Article 21

REPORTING PAY

Article 21 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Hydro One and at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Appendix A, Section 3 – Modified Provisions of this Construction Agreement.

21.1 An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of four (4) hours' pay at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for work for any part of the first half of a shift and an additional four (4) hours on the first and second shifts or two and one-half (2-1/2) hours on the third shift will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Article that an employee receive a reporting pay allowance greater than his pay for normal daily hours.
21.2 An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

21.3 Notwithstanding that work is available and an employee is able to commence or continue work, the Employer may shut down a job to avoid the possible loss of human life because of an emergency situation such as H₂S leaks, bomb threats, fire, etc., that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked.

Article 22

VACATION PAY

22.1 The Vacation Pay rate shall be four (4) percent of vacationable gross earnings*. Payment shall be made weekly on the employee’s regular pay cheque.

A three (3) week leave of absence for the purpose of taking an annual vacation will be granted in the calendar year in which the employee completes one year of continuous service with the Employer. In special circumstances, where the work schedule permits, additional time off may be granted an employee. The additional time off will not be unreasonably denied.

Article 23

STATUTORY HOLIDAYS

23.1 The Statutory Holiday pay rate shall be six (6) percent of vacationable gross earnings. Payment shall be made weekly on the employee’s regular pay cheque.

The Statutory Holidays recognized under this Agreement are:

- New Year’s Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

EPSCA agrees to recognize Heritage Day when proclaimed by legislation.

* "Vacationable gross earnings" means pay for regular hours, overtime, premium pay, shift differential, lines and stations daily travel time, retroactive pay adjustments, reporting pay, inclement weather pay, call-in pay, Saturday and Sunday premiums and trade training, but does not include payment for initial and return travel.
Recognized holidays falling on a Saturday or Sunday shall be observed on the following
Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the
following Monday and Boxing Day on the following Tuesday. When New Year’s Day falls on
a Saturday or Sunday, it shall be observed on either the preceding Friday or the following
Monday.

EPSCA reserves the right to change the day of observance of a Statutory Holiday when such a
holiday falls on a Tuesday or Thursday.

Article 24

GENERATION PROJECTS DAILY TRAVEL ALLOWANCE
AND ROOM AND BOARD

Article 24 is applicable to work at Existing Generating Sites
where work involves construction of a new facility (new function)
and/or new (additional) generating unit(s) and at
New Generating Sites (i.e. Greenfield Work).

For work at Hydro One (Lines and Stations Sites) and Existing Generating Sites
excluding work involving construction of a new facility (new function)
and/or new (additional) generating unit(s) please refer to
Appendix D, Section 1 - Modified Provisions of this Construction Agreement.

DAILY TRAVEL ALLOWANCE

24.1 The daily travel allowance will be paid by the Employers to employees who are not
receiving room and board as referred to in Section 24.2, on the following basis:

(a) If an employee lives within twenty (20) radius kilometers* of the project, no travel
    allowance will be paid.

(b) If an employee lives within 20 to 40 radius kilometers of the project, he shall receive
    $15.60 per day effective May 1, 2000 (effective May 1, 2001 $16.10 per day;
    effective May 1, 2001 $16.60 per day; effective May 1, 2003 $17.10 per day) travel
    allowance for each day worked or reported for.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on
each project.

Bruce G.S. "A", Bruce G.S. "B", and the Bruce Heavy Water Plants will be combined to form the Bruce
Complex. Travel allowance for the Bruce complex will be calculated from the midpoint of a straight line
joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
(c) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day effective May 1, 2000 (effective May 1, 2001 $19.35 per day; effective May 1, 2002 $19.85 per day; effective May 1, 2003 $20.35 per day) travel allowance for each day worked or reported for.

(d) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day effective May 1, 2000 (effective May 1, 2001 $22.60 per day; effective May 1, 2002 $23.10 per day; effective May 1, 2003 $23.60 per day) travel allowance for each day worked or reported for.

(e) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day effective May 1, 2000 (effective May 1, 2001 $26.10 per day; effective May 1, 2002 $26.60 per day; effective May 1, 2003 $27.10 per day) travel allowance for each day worked or reported for.

(f) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 16.2 below, he will receive $29.85 per day effective May 1, 2000 (effective May 1, 2001 $30.35 per day; effective May 1, 2002 $30.85 per day; effective May 1, 2003 $31.35 per day) travel allowance provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

ROOM AND BOARD

24.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

* An employee's 'regular residence' is:

The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.
(a) An Employer may supply either:

(i) Room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;

subject to Sections 24.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $56.00 per day effective May 1, 2000 (effective May 1, 2001 $58.00 per day; effective May 1, 2002 $60.00 per day; effective May 1, 2003 $62.00 per day) for each day worked or reported for when employed at a location south of the French River and $70.00 per day effective May 1, 2000 (effective May 1, 2001 $72.00 per day; effective May 1, 2002 $74.00 per day; effective May 1, 2003 $76.00 per day) for each day worked or reported for when employed at a location north of the French River subject to Sections 24.2(c) and 24.2(d) below.

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near a project. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled to $31.60 per day effective May 1, 2000 (effective May 1, 2001 $33.60 per day; effective May 1, 2002 $35.60 per day; effective May 1, 2003 $37.60 per day) for each day worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for a subsistence allowance as provided for above shall receive a subsistence allowance of $41.50 per day effective May 1, 2000 (effective May 1, 2001 $44.50 per day; effective May 1, 2002 $47.50 per day; effective May 1, 2003 $50.50 per day) for each day worked or reported for.

24.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 24.1 and 24.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

24.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

24.5 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:
(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

**Article 25**

**HYDRO ONE (LINES AND STATIONS CONSTRUCTION)**

**DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD**

*Article 25 is applicable to all work on Hydro One Sites (Lines & Stations) at both existing and new sites*

**DAILY TRAVEL ALLOWANCE**

25.1 The daily travel allowance will be paid by the Employers to their employees who are not living in camp or receiving a subsistence allowance as referred to in Section 25.3 on the following basis:

(a) Effective May 1, 1996, if an employee lives within forty (40) radius kilometers of the work location or declared assembly point, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the work location or declared assembly point, he shall receive $18.60 per day effective May 1, 2000 (effective May 1, 2001 $19.10 per day; effective May 1, 2002 $19.60 per day; effective May 1, 2003 $20.10 per day) for each day worked or reported for.
(c) If an employee lives within 56 to 80 radius kilometers of the work location or declared assembly point, he shall receive $22.10 per day effective May 1, 2000 (effective May 1, 2001 $22.60 per day; effective May 1, 2002 $23.10 per day; effective May 1, 2003 $23.60 per day) for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the work location or declared assembly point, he shall receive $25.60 per day effective May 1, 2000 (effective May 1, 2001 $26.10 per day; effective May 1, 2002 $26.60 per day; effective May 1, 2003 $27.10 per day) for each day worked or reported for.

(e) If an employee lives greater than 97 radius kilometers from the work location or declared assembly point, and does not qualify for subsistence allowance under Section 17.3 below, he shall receive $28.85 per day effective May 1, 2000 (effective May 1, 2001 $29.35 per day; effective May 1, 2002 $29.85 per day; effective May 1, 2003 $30.35 per day) provided he continues to travel greater than 97 radius kilometers daily for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement. A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between radius kilometers and actual kilometers travelled.

25.2 The Employer reserves the right to base daily travel allowance on the distance in radius kilometers from where an employee lives to either the work location or declared assembly point, depending on where the employee is directed to report.

ROOM AND BOARD

25.3 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the work location:

* An employee's 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.

3. For metro areas (Toronto and Hamilton) the calculation of distance shall be from the employee's regular residence.

4. For all other areas, the calculation of distance shall be based on the location of the city or town hall of the municipality where an employee maintains a self-contained domestic establishment described above. In those municipalities where a city or town hall does not exist, then the post office serving his regular residence will apply.
(a) An employer may supply either:

(i) room and board in camp or a good standard of board and lodging; or

(ii) a subsistence allowance;

subject to Sections 25.3(b) and (c) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $69.00 per day effective May 1, 2000 ($71.00 effective May 1, 2001, $73.00 effective May 1, 2002 and $75.00 effective May 1, 2003) for each day worked or reported for subject to Section 25.3(c) below.

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near the work location. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled to $29.85 per day effective May 1, 2000 (effective May 1, 2001 $31.85 per day; effective May 1, 2002 $33.85 per day; effective May 1, 2003 $35.85 per day) for each day worked or reported for.

25.4 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 25.1 and 25.3 above, when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer. Such permission shall not be unreasonably denied.

25.5 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

25.6 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled workday on which he does not work will be charged $25.00 per day unless he is excused from work by an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

Article 26

HYDRO ONE (LINES AND STATIONS CONSTRUCTION)
DAILY TRAVEL TIME

26.1 All travel time will be outside of normal working hours.

26.2 (a) An employee will be paid his straight-time rate for all time spent travelling from his assembly point to his work location on normal working days.

An employee will be paid premium time for all time spent travelling from his assembly point to his work location on days other than normal working days.

(b) An employee will travel up to a maximum of one hour on his own time when returning from his work location to his assembly point. An employee will be paid his straight-time rate for all time spent travelling in excess of one hour.

26.3 All time in excess of one hour spent travelling from the work location to the assembly point on non-working days shall be compensated for at the appropriate premium rates of pay.

26.4 The Employer will supply transportation between the assembly points and work locations.

26.5 When an employee’s regular residence is more than five hundred (500) radius kilometers from the project, and the job or project is worked on a four ten (4x10) hour work week, the employee shall receive room and board allowance on a five day basis for a regular work week. If the employee is required to work an additional ten (10) hour shift beyond the normal four ten (4x10) hour shift, the employee will be entitled to room and board allowance for an additional ten (10) hour shift worked to a maximum of seven (7) days room and board in a week.

TRAVEL AND TRANSPORTATION

27.1 INITIAL EMPLOYMENT

On recruitment of tradesmen whose regular residence* or place of recruitment, whichever is closer to the project, is between 81 to 161 radius kilometers from the project, the Employer shall pay $26.00 for the initial trip effective May 1, 2000 (effective May 1, 2001 $27.00; effective May 1, 2002 $28.00; effective May 1, 2003 $29.00) to the project.

* As defined in Article 24 of this Agreement.
27.2 ONTARIO RESIDENTS

On recruitment of tradesmen whose regular residence is beyond 161 radius kilometers from the project, the Employer shall pay mileage based on 27¢ per radius kilometer effective May 1, 2000 (effective May 1, 2001 28¢; effective May 1, 2002 29¢; effective May 1, 2003 30¢) plus an allowance for travel time equivalent to one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay for the initial trip to the project from the tradesman's regular residence or place of recruitment, whichever is closer to the project.

27.3 NON-ONTARIO RESIDENTS

On recruitment of tradesmen whose regular residence is beyond 161 radius kilometers from the project, the Employer shall pay the equivalent of the cost of rail fare, plus an allowance for travel time equivalent to one (1) hour's pay for each 80 radius kilometers of travel to a maximum of eight (8) hours' pay for the initial trip to the project from the tradesman's regular residence or place of recruitment, whichever is closer to the project.

27.4 To qualify for payment in 27.1, 27.2 or 27.3, the employee must remain at the project for a minimum of fifteen (15) working days or the duration of his job, whichever is lesser.

27.5 On termination of employment due to a reduction of staff, an employee entitled to payment under 27.1, 27.2 or 27.3 shall be entitled to return expenses calculated in the same manner as in 27.1, 27.2 or 27.3 above, for the return trip from the project to the tradesman's regular residence or place of recruitment whichever is closer to the project. An employee whose employment terminates for any reason other than reduction of staff shall not be eligible for return payment.

27.6 On the Thunder Bay and Atikokan projects, an employee shall qualify for a return air fare from the project every sixty (60) calendar days, to place of recruitment or his regular residence, whichever is closer to the project; however, to qualify, the regular residence or place of recruitment must be more than 402 radius kilometers from the project.

Article 28

STANDOFF

28.1 When unable to proceed with his work, an Employer may elect to Standoff part or all of his crew. The parties agree Standoff is not intended to circumvent the layoff procedure.

The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by the Employer during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel allowance will be paid to an employee for the Standoff period.
28.2 An employee who qualifies for subsistence allowance and who is placed on Standoff will be paid subsistence allowance up to a maximum of ten (10) consecutive working days.

28.3 If Standoff continues beyond ten (10) consecutive working days, an employee, at his option, may elect to remain on Standoff for an additional twenty (20) consecutive working days or be removed from Standoff. The Employer retains recall rights on employees electing to continue on Standoff. Subsistence allowance will cease after ten (10) consecutive working days on Standoff.

28.4 If an employee elects layoff beyond the tenth (10th) consecutive working day, it shall be carried out in accordance with the terms of the Layoff/Seniority provisions of the appropriate Trade Appendix of this Agreement. An employee laid off will be issued a Record of Employment form on his date of layoff indicating “Layoff – Shortage of Work”. The Employer does not retain recall rights if the employee elects Layoff.

28.5 Standoff shall only continue beyond thirty (30) consecutive working days with the mutual consent of the Employer and the Union, in writing.

- For the purpose of this Article, when working on a 4 x 10 hour shift arrangement, the following will apply:

- eight (8) scheduled working days will be considered the equivalent of ten (10) consecutive working days.

- sixteen (16) scheduled working days will be considered the equivalent of twenty (20) consecutive working days.

- twenty-four (24) scheduled working days will be considered the equivalent of thirty (30) consecutive working days.

**Article 29**

**REST PERIOD**

29.1 For employees working normal hours, a fifteen (15) minute rest period will be allotted, at the time and in a reasonable location as directed by the Employer, for each half shift worked. Where a half shift is less than four (4) hours, there shall be no rest period.

29.2 For employees required to work overtime, a ten (10) minute rest period will be allotted prior to the end of the normal shift before commencing overtime work.

29.3 For employees working overtime, a fifteen (15) minute rest period will be allotted, at the time directed by the Employer, after each two hours of overtime worked.
Article 30

LUNCHROOM FACILITIES

Adequately heated accommodation separate from changerooms and washrooms shall be provided by the Employer on each project when necessary and where such accommodation can be reasonably provided for. Such accommodation shall be weatherproof and shall be kept reasonably clean. A table and sufficient benches or seats for the employees on the job shall be provided in the accommodation. Trailerized or portable accommodation shall include tables, benches, light, heat maintained at a minimum sixty-eight (68) degrees Fahrenheit, proper access and egress, and shall not be used for material storage.

Article 31

MEALS ON OVERTIME

Article 31 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (ie: Greenfield Work).

For work at Hydro One and at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Appendix D, Section 4 – Modified Provisions of this Construction Agreement.

31.1 If an employee is notified during the time he is working that he will be required to continue working for more than two (2) hours past the normal quitting time of the first or second shifts or for more than three and one-half (3-1/2) hours beyond the normal quitting time of the third shift, the Employer will provide a free meal to the employee after approximately two (2) hours of overtime worked (first or second shifts) or three and one-half (3-1/2) hours of overtime worked (third shift) and for each four (4) hours of overtime worked thereafter. The employee will be allowed thirty (30) minutes paid at the straight time rate to eat each meal at the time directed by the Employer. When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period. The Employer will supply a hot meal when possible. When a free meal is not provided, the Employer will pay the employee one-half (1/2) hour at his appropriate rate.

31.2 To qualify for the above-noted on a Friday for work on the first and second shifts, an employee will be required to work for more than four (4) hours beyond the normal quitting time of his shift.

31.3 The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Statutory Holidays for employees who normally work the first or second shifts, nor is it applicable to the first six and one-half (6-1/2) hours worked on Sundays or recognized holidays for employees who normally work the third shift.
31.4 Where an employee has been notified the previous day, no meal will be provided but the employee will be allowed thirty (30) minutes paid at the straight time rate to eat each meal at the time directed by the Employer.

Article 32

TOOLS AND CLOTHING

32.1 An employee shall be required to provide himself with the ordinary hand tools of his trade as specified in the tool list attached hereto. Each Employer will provide, insofar as is practical, separate facilities for storing the tools of each trade, but shall not be held responsible for losses, except as noted hereunder:

(a) When personal tools valued in excess of $15.00 are lost due to fire, the Employer will consider the full estimated value on the merit of each case in determining replacement or payment. This will include only personal tools that a tradesman is required to have to perform his normal duties with his Employer.

(b) Each Employer will compensate his employees for ordinary hand tools and clothing lost by theft from locked storage provided by him for his employees. Claims must be submitted, in writing, and must provide substantiating evidence of forcible entry to locked storage. Payment or replacement for personal clothing lost by theft on the work site shall be limited to clothing that a tradesman is required to have to perform his normal duties with his Employer.

(c) In the event of loss by fire at an Employer's camp or on the work site in an Employer designated storage area, replacement or payment of the full estimated value in excess of $15.00 but not exceeding $500.00 for the loss of personal clothing will be made by the Employer. Payment or replacement for personal clothing lost by fire on the work site shall be limited to clothing that a tradesman is required to have to perform his normal duties with his Employer.

32.2 An employee who has obtained tools from his Employer shall be allowed sufficient time, in the opinion of Management, to return such tools to his Employer during working hours. An employee receiving tools from his Employer shall be held responsible for the return of such tools in good condition, subject to normal wear and tear. On layoff, an employee will be allowed reasonable time to return tools to his Employer.

32.3 Gang tools are tools which are issued to a Foreman and are used by one or more member of the crew. Such tools are not identified on the trades tool list, nor are they the tools and equipment identified in 24.1 and 24.2 of this Article.

32.4 If an employee requires a set of banding tools to perform his work, the Employer will supply these tools, and the employee shall sign for the same. Failure to return such tools upon termination of employment will result in the employee being charged the replacement cost of these tools.
32.5 Employees working in a radiation area, in plastic suits or replacement material of the fully
enveloping type with an independent air supply, will receive $8.00 per day. A day for the
purposes of this item shall be defined as any period up to twelve (12) hours.

Article 33

PROTECTIVE CLOTHING AND EQUIPMENT

Employees are required to wear protective clothing and use protective equipment, as
determined by the Employer, for the work being done.

The protective clothing and equipment that is provided by the Employer shall be charged out to
the employee and the employee shall be responsible for the return of such clothing and
equipment to his Employer.

Article 34

APPRENTICESHIP AND TRAINING PROGRAMS

34.1 The Employer agrees to pay into operative apprenticeship or training funds the amounts
specified for apprenticeship or training as set forth in the wage schedules, attached hereto, for
employees covered by this Agreement during the time they are employed.

34.2 The Union agrees to supply EPSCA with all pertinent information regarding the funds including
all administrative material that is required for their implementation and provide EPSCA with the
opportunity to participate in the training committees.

34.3 Training programs established by the Employers to provide skills required in the electrical
power systems sector shall be funded by reducing the Employers' contributions to the training
fund in the specific locality where the training is taking place by an amount of money
equivalent to the cost of such programs.

34.4 For the purposes of continued employment and/or training the Employer, with agreement of the
Union, may transfer apprentices to any work location.
Article 35

HOURS OF WORK

Article 35 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e. Greenfield Work).

For work at Hydro One (Lines & Stations) Sites and at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Appendix D, Section 2 - Modified Provisions of this Construction Agreement.

35.1 The normal weekly hours of work for all employees of Employers covered by this Agreement shall be thirty-eight (38), except as described in Section 36.2.

The weekly hours shall be worked in four (4) eight (8) hour days, Monday to Thursday inclusive, with the remaining six (6) hours to be worked on Friday.

35.2 The normal weekly hours of work for employees working the third shift shall be thirty-two and one-half (32-1/2), made up of five (5) days of six and one-half (6-1/2) hours each.

The hours of work at Miscellaneous Projects (excluding Lakeview and R.L. Hearn Generating Stations), shall be 40 hours per week made up of five (5) days of eight (8) hours each, Monday to Friday inclusive. The normal daily hours are to be worked between 7:30 am and 5:00 pm.

A Miscellaneous Project is any work undertaken by Ontario Power Generation Projects Division which will require less than one year to complete and comprise a total project work force of not more than one hundred men at one time.

35.3 PROJECT DAILY HOURS

(a) Day Work Only

The normal starting time for day work hours shall be 8:00 a.m. By mutual agreement between EPSCA and the Union, the starting time may be varied by one-half hour either way. This variance will be established at the prejob conference or while the job is in progress.
(b) **Shift Work**

(i) Shift work will be deemed to be established providing there are at least four consecutive days of shifts to be worked excluding Saturdays, Sundays and Statutory Holidays.

(ii) The normal starting time for day shift hours shall be the same as the day work hours described in Section 35.3(a).

(iii) Where shift work is established, the normal shift hours for the first (day) and second shifts shall be the same as the day hours. The third shift normal hours shall be six and one-half (6-1/2) hours' work, to be worked between 1:00 a.m. and 8:00 a.m., with an unpaid one-half (1/2) hour lunch period.

(iv) On Monday to Thursday inclusive, the second shift hours shall start at 4:30 p.m. or a variance of one-half hour either way, to coincide with the end of the day shift. On Friday, the second shift hours may start at 4:30 p.m. or at the end of the day shift.

(v) The third shift to start at 1:00 a.m. Monday.

(vi) Where the third shift is established as starting at 1:00 a.m. Monday, it shall be worked between 1:00 a.m. and 8:00 a.m. Monday, Tuesday, Wednesday, Thursday and Friday.

(c) **Hours of Work - Special Circumstances**

It may be necessary from time to time to vary the hours of work established in Sections 35.3(a) and (b). Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Union at the prejob conference or while the job is in progress.

35.4 The shift rate will be based on the day in which the shift begins.

35.5 **LUNCH PERIODS FOR MAJOR PROJECTS, AND CONSTRUCTION AND SERVICES DIVISION**

A lunch period will be given no earlier than four (4) hours and no more than five (5) hours after the start of the shift and will be one-half (1/2) hour in duration.

A lunch period will be given no earlier than three and one-half (3-1/2) hours and no more than five (5) hours after the start of the third shift and will be one-half (1/2) hour in duration.
When an employee is required to return to work without an eight (8) hour break, all work performed shall be at the premium rate until such time as the employee receives an eight (8) hour break. This provision does not apply when a change in an employee's normal shift (as defined in this Article) occurs or to call-in situations.

Article 36

GRIEVANCE PROCEDURE

36.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by EPSCA and the Union. In the interests of expediting the procedure, the parties shall process grievances in the following manner:

The grievance procedure and arbitration procedure in Article 36 do not apply to jurisdictional disputes.

36.2 PRELIMINARY DISCUSSION

Disputes arising out of the interpretation or alleged violation of this Agreement should, if possible, be settled by discussion between the employee and/or his steward and the employee's supervisor. If the employee affected is a foreman, the preliminary discussion will be between the Accredited Union Representative and the foreman's supervisor.

36.3 FIRST STEP

If a dispute cannot be resolved by this method, the Accredited Union Representative for the trade concerned may file a formal grievance on the prescribed form with the Manager of Construction or the Field Construction Manager within fifteen (15) working days of the alleged grievous act.

Within ten (10) working days of the filing of the grievance, the Manager of Construction or Field Construction Manager shall investigate the grievance and convene a First Step meeting which he or the Accredited Union Representative considers necessary to resolve it.

The Management Committee shall be comprised of the Manager of Construction or the Field Construction Manager or their designate plus at least one representative of the Employer named in the grievance. The Union Committee shall include at least two persons, one of whom shall be the Accredited Union Representative for the grievor.
The Manager of Construction or Field Construction Manager shall give his reply on the prescribed form to the Accredited Union Representative within five (5) working days from the date of the First Step meeting.

Copies of completed grievance forms signed by the appropriate parties shall be filed by the Manager of Construction or the Field Construction Manager with the General Manager of EPSCA. The Accredited Union Representative for the grievor will file a copy with the Union.

The EPSCA Representative will send a copy of any signed first step grievance settlement between the Accredited Union Representative and EPSCA to the Union and the EPSCA office.

36.4 SECOND STEP

Within ten (10) working days after the disposition has been issued under the First Step of this procedure, the Accredited Union Representative may refer the grievance on the prescribed form to EPSCA's Grievance Officer. A copy of the grievance form shall be forwarded by the Accredited Union Representative to the International Representative of the Union.

The EPSCA Grievance Officer shall investigate the grievance and convene a meeting which he or the International Representative considers necessary to resolve it and give his reply on the prescribed form to the International Representative of the Union within five (5) working days from the receipt of the grievance form which was completed at First Step.

The Management Committee shall comprise the EPSCA Grievance Officer plus two other Management Representatives, one of whom shall be a representative of the Employer named in the grievance. The Union Committee shall be comprised of at least the International Representative or his designate for the grievor. If the International Representative elects to appoint a designate, he shall inform EPSCA, in writing, of the name of the designate and the duration of appointment.

36.5 EPSCA GRIEVANCES

The processing of EPSCA grievances will begin at the Second Step. EPSCA may submit either policy or specific grievances. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.

36.6 TIME LIMITS

The time limits as to both documents and procedures set out in the above sections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, the employee concerned, the Union or EPSCA shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been settled and ineligible for arbitration.
36.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at First Step.

36.8 GRIEVANCE FACILITIES

EPSCA shall provide the necessary facilities for all grievance meetings.

Article 37

ARBITRATION

37.1 If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Article 37, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either EPSCA or the Union to a Board of Arbitration for adjudication.

The party desiring to submit the dispute to arbitration shall notify the other party, in writing, of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, or if the nominees fail to agree upon a Chairman, the appointment shall be made by the Minister of Labour for Ontario upon the request of either party. The arbitration board, when selected or appointed, will proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. The decision of a majority is the decision of the arbitration board, but if there is no majority, the decision of the Chairman governs.

37.2 The arbitration board shall have no power to add to or subtract from or modify any of the terms of this Agreement. The arbitration board shall not substitute its discretion for that of the parties except where the board determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the arbitration board may substitute such other penalty for the discharge or discipline as to the arbitration board seems just and reasonable in all circumstances. The arbitration board shall not exercise any responsibility or function of the parties. The arbitration board shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.
37.3 In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario, and the fees and expenses of the Chairman shall be shared equally by the parties.

37.4 The time limits as to both documents and procedure set out in the above sections shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed.

**Article 38**

**NO STRIKE - NO LOCKOUT**

There shall be no strikes or lockouts so long as this Agreement continues to operate.

**Article 39**

**ASSOCIATION FUND**

Each Employer bound by this agreement shall contribute to the Electrical Power Systems Construction Association Fund, the amount specified on the wage schedules attached hereto for each hour worked by each employee covered by this agreement.

The Employer shall remit such contribution together with the supporting information as required on the reporting forms.

EPSCA shall indemnify the Union for any liability arising from an Employer's failure to remit such contributions.

**Article 40**

**RADIATION WORK**

(a) Local Union to be provided with a copy of Ontario Power Generation Radiation Protection Regulations and any revisions.

(b) Local Union to be provided with a copy of Ontario Power Generation Radiation Protection Procedures and any revisions.

(c) Each employee will have access to his personal radiation exposure record.

(d) Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

(e) Short-term employees will be given a guaranteed period of employment at their time of hire.
Article 41

ABORIGINAL CONTENT COMMITMENT

Where an aboriginal commitment has been established on a project, the Union will co-operate in meeting the content commitments.

For a project, or jobs within a project, that are less than $100,000 field labour, and have aboriginal content commitments, the terms of the collective agreement will not apply to those aboriginal content commitments.

Article 42

TERM OF AGREEMENT

This Agreement shall continue in full force and effect from May 1, 2000 until April 30, 2004 inclusive, and thereafter it shall be considered automatically renewed for successive periods of two (2) years unless at least sixty (60) days prior to the end of any two (2) year period, either party serves written notice upon the other that it desires termination, revision or modification of any provision or provisions of this Agreement.

In Witness Whereof, EPSCA and the Union have caused this Agreement to be executed in their names by duly authorized representatives at Toronto this 30th day of May, 2000

Where the Employer elects to establish a camp, the following conditions will apply for employees working in the Moose River Basin:

**Camp Conditions**

(a) An Employer may elect to provide free room and board in camp at no cost to the employee. Where the Employer elects to provide a camp such employees will not be entitled to receive a daily travel or room & board allowance.

(b) When an Employer does not elect to provide free room and board in camp, the employee will be entitled to receive a daily travel or room and board allowance as set out in Articles 24.1 and 24.2.

(c) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(d) An employee who is absent from work without approval and who remains in camp and is still absent from work the following day without approval will be charged $25.00 for the day of absence and each successive day of unapproved absence.

**Hours of Work**

(1) The hours of work will consist of a twenty-one (21) day cycle of fourteen (14) consecutive work days followed by seven (7) consecutive days off.

(2) Regularly scheduled hours of work of ten (10) hours per day shall be paid at straight time hourly rates.

(3) Regularly scheduled hours of work on Saturday, Sunday, Recognized Holidays, and the fifth (5th) consecutive weekday shall be paid at two times the straight time hourly rate.

**Wrap Around**

An employee shall qualify for a return trip from the project every second twenty-one (21) day cycle he is on the project on the following basis:

(a) If an employee lives within 161 radius kilometres from the project, the Employer shall pay forty dollars ($40.00).

(b) If an employee lives greater than 161 radius kilometres from the project, the Employer shall pay as an allowance, forty dollars ($40.00) plus travel time based on the equivalent of one (1) hour’s base rate of pay for each eighty (80) kilometres from where the employee lives or place of recruitment, whichever is closer to the project.
APPENDIX B

7-DAY COVERAGE

When working under the provisions of this 7-day shift schedule, all conditions listed below will supersede those in the other Articles/Sections of this Collective Agreement. Where this shift schedule is silent, the appropriate Article/Section in the Collective Agreement applies.

These provisions would only apply to work performed on a Nuclear Facility and the work must be covered by the “Modified Provisions of this Construction Agreement”.

This shift schedule is intended for work of at least five (5) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours’ pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a two or three ten (10) hour per day shift basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked.

Notice Provision

If this shift schedule is to be used for work on a “planned outage”, the Employer will provide the Union with two (2) weeks’ notice prior to the implementation of these shift provisions.

Shift Provisions

Day Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates.

Afternoon Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential of one-seventh (1/7) for normal scheduled shift hours worked.
Night Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential of one-fifth (1/5) for normal scheduled shift hours worked.

All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid at the appropriate overtime rate. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
APPENDIX C
7-DAY COVERAGE
HYDRO ONE (LINES AND STATIONS)

This shift schedule is intended for work greater than two (2) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

These provisions will only apply to work performed on Lines and Stations as follows:

"for emergency work until the system is restored to the pre-emergent state"

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours' pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a one, two, or three shift per day basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked. The Employer will provide the Union with 48 hours’ notice prior to the implementation of these shift provisions.

First Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates.

Second Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential of one-seventh (1/7) the normal scheduled hours worked.

Third Shift

Regularly scheduled hours of work, Monday to Friday inclusive, shall be paid at straight time hourly rates, plus a shift differential of one-fifth (1/5) the normal scheduled hours worked.
All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays shall be paid the appropriate overtime rate. Recognized Holidays will be observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this occurs, a revised shift arrangement will be established.
APPENDIX D

MODIFIED PROVISIONS OF THIS CONSTRUCTION AGREEMENT

These provisions will apply to:

(a) all work on Hydro One (Lines and Stations), and

(b) all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

Definitions:

Facility
Something that is built composed of multi-systems which serves a specific function

Function
Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the 'Modified Provisions of this Construction Agreement' apply to the construction of a new facility will be referred to the Executive Committee for resolution and the Executive Committee will meet within 5 (five) working days. If the Executive Committee is unable to resolve the dispute, the dispute will be referred to a single arbitrator within 10 (ten) working days for a final and binding resolution. The arbitrator shall give an oral decision within 5 (five) working days, and a written decision, if requested, within 20 (twenty) working days.

All terms of this collective agreement shall apply to work covered by this Appendix, with the exception of Article 21 – Reporting Pay, Article 24 – Generation Projects Daily Travel Allowance and Room and Board, Article 31 – Meals on Overtime and Article 35 – Hours of Work.
EPSCA/INSULATOR COLLECTIVE AGREEMENT

SECTION 1

GENERATION PROJECTS DAILY TRAVEL ALLOWANCE
AND ROOM AND BOARD

DAILY TRAVEL ALLOWANCE

1.1 The daily travel allowance will be paid by the Employers to employees who are not receiving room and board as referred to in Article 24.2, on the following basis:

(a) Effective May 1, 1996, if an employee lives within forty (40) radius kilometers* of the project, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day effective May 1, 2000 (effective May 1, 2001 $19.35 per day; effective May 1, 2002 $19.85 per day; effective May 1, 2003 $20.35 per day) travel allowance for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day effective May 1, 2000 (effective May 1, 2001 $22.60 per day; effective May 1, 2002 $23.10 per day; effective May 1, 2003 $23.60 per day) travel allowance for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day effective May 1, 2000 (effective May 1, 2001 $26.10 per day; effective May 1, 2002 $26.60 per day; effective May 1, 2003 $27.10 per day) travel allowance for each day worked or reported for.

(e) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 33.5.2 below, he will receive $29.85 per day effective May 1, 2000 (effective May 1, 2001 $30.35 per day; effective May 1, 2002 $30.85 per day; effective May 1, 2003 $31.35 per day) travel allowance provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

Bruce G.S. "A", Bruce G.S. "B", and the Bruce Heavy Water Plants will be combined to form the Bruce Complex. Travel allowance for the Bruce complex will be calculated from the midpoint of a straight line joining the centres of the Bruce G.S. "A" and Bruce G.S. "B" turbine halls.
When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

ROOM AND BOARD

1.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(a) An Employer may supply either:

(i) Room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;

subject to Sections 1.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $56.00 per day effective May 1, 2000 (effective May 1, 2001 $58.00 per day; effective May 1, 2002 $60.00 per day; effective May 1, 2003 $62.00 per day) for each day worked or reported for when employed at a location south of the French River and $70.00 per day effective May 1, 2000 (effective May 1, 2001 $72.00 per day; effective May 1, 2002 $74.00 per day; effective May 1, 2003 $76.00 per day) for each day worked or reported for when employed at a location north of the French River subject to Sections 1.2(c) and 1.2(d) below.

* An employee's 'regular residence' is:

The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.
Modified Provisions

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near a project. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled to $31.60 per day effective May 1, 2000 (effective May 1, 2001 $33.60 per day; effective May 1, 2002 $35.60 per day; effective May 1, 2003 $37.60 per day) for each day worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for a subsistence allowance as provided for above shall receive a subsistence allowance of $41.50 per day effective May 1, 2000 (effective May 1, 2001 $44.50 per day; effective May 1, 2002 $47.50 per day; effective May 1, 2003 $50.50 per day) for each day worked or reported for.

1.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 1.1 and 1.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

1.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

1.5 The Union recognizes the Employer's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.
Modified Provisions

SECTION 2

HOURS OF WORK

2.1 One (1) or Two (2) Shift Operation

The weekly hours of work for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts, either Monday – Thursday or Tuesday – Friday but not concurrently on the same project, or by having the employees work five (5) consecutive eight-hour shifts. Weekly hours of work will be established for a minimum period of thirty (30) days. If an employer, with the approval of the owner, intends to change the weekly hours of work, a minimum of fifteen (15) days written notice shall be sent to the Local Union.

The start time for the day shift shall be 8:00 a.m. with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one (1) hour either way to coincide with the end of the day shift.

The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

Three (3) Shift Operation

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours per shift at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift at the straight time plus the appropriate shift differential.

Those employees working on the night shift shall work seven (7) hours per shift plus the appropriate shift differential.

2.2 Shift Change

A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked excluding Saturdays, Sundays and recognized holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the balance of the four (4) consecutive shifts that would have been worked had the employee not been reassigned.
2.3 It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between EPSCA and the Union.

2.4 A lunch period will be given no earlier than four (4) hours and no more than five (5) hours after the start of the shift and will be one-half (1/2) hour in duration.

A lunch period will be given no earlier than three and one-half (3-1/2) hours and no more than five (5) hours after the start of the third shift and will be one-half (1/2) hour in duration.

2.5 When an employee is required to return to work without an eight (8) hour break, all work performed shall be at the premium rate until such time as the employee receives an eight (8) hour break. This provision does not apply when a change in an employee's normal shift (as defined in this Article) occurs or to call-in situations.

SECTION 3

REPORTING PAY ON 8 HOUR AND 10 HOUR SHIFTS

3.1 An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of a half shifts pay (4 hours or 5 hours) at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for any part of the first half of a shift and an additional half shifts pay (4 hours or 5 hours) will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Section that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

Notwithstanding that work is available and an employee is able to commence or continue work, the Employer may shut down a job to avoid the possible loss of human life because of an emergency situation such as H2S leaks, bomb threats, fire, etc., that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked.”
SECTION 4

MEALS ON OVERTIME

4.1 Scheduled Eight (8) Hour Shifts

When an employee has not been notified the previous day that he will be required to work for more than two (2) hours beyond the normal quitting time of the first or second shifts or for more than three and one half (3 ½) hours beyond the normal quitting time of the third shift, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the base hourly rate of pay. This meal break will be taken following the first two (2) hours of overtime worked. After each additional four (4) is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided after the first two (2) hours of overtime worked, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first or second shifts.

The above-noted is not applicable to the first six and one half (6 ½) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the third shift.

4.2 Scheduled Ten (10) Hour Shifts

When an employee has not been notified the previous day that he will be required to work beyond his normal quitting time, prior to commencing the overtime work, he shall be provided with a meal and be allowed thirty (30) minutes to consume same and the employee shall be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided prior to commencement of overtime work, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal.
The above-noted is not applicable to the first ten (10) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first and second shifts.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

SECTION 5

WORKING FOREMEN

When the crew size is five (5) or less, including the foreman, the foreman may be required to work with the tools of the trade.
STATEMENT OF UNDERSTANDING NO. 1

Between

THE ELECTRICAL POWER SYSTEMS
CONSTRUCTION ASSOCIATION

And

INTERNATIONAL ASSOCIATION OF HEAT AND FROST
INSULATORS AND ASBESTOS WORKERS

EMPLOYMENT REFERRALS

It is agreed by the Parties to this understanding, that prior to any member being referred for employment under this agreement, the member must submit to a security check. Only members who successfully obtain security clearance will be referred for employment. Once a member has been hired on, they will receive an allowance of $50.00 on their first week's pay cheque, in consideration of their time spent filling out the security clearance forms.

The union will be notified, as soon as possible, whether or not an individual has successfully obtained security clearance. This pre-clearance does not prohibit the Union from filing a grievance against the Employer on behalf of any member who is refused employment due to his/her failure to obtain security clearance.

Dated at Toronto, this 30th day of May, 2000.

**Overtime**

- Mon - Fri = 2x
- Sat = 2x
- Sun & Hol = 2x

**Union Funds**

Union Funds include the following items:

- Joint Apprenticeship: $0.30 per hour worked
- Welfare: $1.82 per hour worked
- Bill 162 (WSIB): $2.07 per hour worked - effective February 1st, 2005

**Union Dues**

Union Dues are not included in Union Funds.

Union Dues - $1.07 ($1.00 Dues and $0.07 Apprenticeship) per hour worked

Union Dues are to be remitted as noted below, along with all other remittances.

Note: Union Dues are to be deducted from the Base Hourly Rate.

**Benefits**

All remittances (employee deductions, employer contributions and union dues), excluding the EPSCA Association Fund are to be sent to:

PRINCIPAL AGREEMENT

between

ONTARIO POWER GENERATION INC.
(hereinafter called “OPGI” or "The Employer")

and

THE BRICK AND ALLIED CRAFT UNION of CANADA

(hereinafter called the 'BACU')

November 7, 2002 – April 30, 2004
This Collective Agreement distinguishes between two broad categories of work; namely, work that is covered by the "modified provisions" of this construction agreement and work that is not. "Modified provisions" apply to most work on existing generating sites. Following is a more detailed explanation:

The "Modified Provisions" of this Construction Agreement will apply to:

all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (ie. additional) generating unit

Appendix C contains the "Modified Provisions of this Construction Agreement". All terms of this collective agreement shall apply to work covered by Appendix C, with the exception of Article 20 - Hours of Work, Article 15 - Daily Travel Allowance and Room and Board, Article 16 Overtime and Article 14 Reporting Pay. The above Articles 20, 15, 16 and 14 do not apply when working under the terms and conditions of the "modified provisions", as these Sections are replaced by Appendix C.

When work does not fall within the scope of Appendix C, all terms of this agreement, with the exception of Appendix C, apply.

A chart to illustrate the above applications follows:

<table>
<thead>
<tr>
<th>Generating - Existing Sites Excluding construction of new facility (new function ) &amp;/or new (additional) generating unit(s)</th>
<th>Generating – Existing Sites Involving construction of new facility (new function ) and/or new (additional) generating unit(s)</th>
<th>Generating - New Sites (ie. Greenfield Work)</th>

Statement of Understanding – Employment Referrals
COLLECTIVE AGREEMENT

by and between

ONTARIO POWER GENERATION Inc

(hereinafter called 'OPGI' or "the employer"

and

BRICK AND ALLIED CRAFT UNION of CANADA

(hereinafter called 'BACU')

WHEREAS it is the desire of the parties to conclude an agreement with a new concept designed to bring stability, harmony, and an effective method to amicably resolve problems in the electrical power systems sector of the construction industry, in the Province of Ontario;

NOW THEREFORE the parties hereby agree as follows:

Article 1

RECOGNITION

1.1 OPGI recognizes BACU as the exclusive bargaining agent of all bricklayers, stonemasons and plasterers, their respective apprentices, improvers and working foremen in the employ of OPGI engaged in all construction industry work performed in the province of Ontario on Ontario Power Generation property for the bulk power system, save and except the building of commercial-type office facilities at urban locations remote from operating facilities.

1.2 The term 'employee' shall include all employees of OPGI in the classifications set out in 1.3 below:

1.3 The following is a list of classifications covered by this Agreement:

Working foreman
Bricklayer journeyman
Bricklayer improver
Stonemason apprentice
Plasterer journeyman
Plaster improver

Sub-foreman
Bricklayer apprentice
Stonemason journeyman
Stonemason improver
Plasterer apprentice
1.4 The classifications referred to in Section 1.3 do not establish craft jurisdiction. Such jurisdiction is established in Section 10.1.

1.5 OPGI and BACU agree the use of nomenclature is meant to refer to both genders.

1.6 OPGI or any contractor shall only contract or sub-contract work to employers who agree in writing to abide by the terms and conditions of this Agreement. This will be accomplished via the Labour Requirements Clause in OPGI’s tendering process or any subsequent process.

1.7 The term "Local Union" in this Agreement refers to local unions identified by the BACU as having specific territorial jurisdiction under this Agreement.

Article 2

TERM OF AGREEMENT

2.1 This Agreement shall continue in full force and effect from November 7, 2002 until April 30, 2004 inclusive, and thereafter it shall be considered automatically renewed for successive periods of two (2) years unless, not more than 120 days and not less than sixty (60) days prior to the end of any two (2) year period, either party serves written notice upon the other that it desires termination, revision or modification of any provision or provisions of this Agreement.

Article 3

MANAGEMENT RIGHTS

3.1 BACU agrees and acknowledges that OPGI has the exclusive right to manage the business and to exercise such right without restrictions save and except as such prerogatives of management may be specifically modified by the terms and conditions of this Agreement.

3.2 Without restricting the generality of the foregoing section, it is the exclusive function of OPGI:

(a) to hire, direct, promote, demote, lay off, transfer, discipline and discharge any employee and to increase and decrease working forces, provided that a claim that an employee has been discharged or disciplined without cause may be the subject of a grievance and dealt with, as herein provided;
(b) to determine the materials to be used, design of the products to be handled, the facilities and equipment required, scheduling of work and location of equipment.

Article 4

SAFETY

4.1 It is mutually agreed by both OPG and BACU that they shall comply with The Occupational Health and Safety Act and Regulations for Construction Projects and as amended from time to time.

4.2 Mason lines, paper cups and potable drinking water shall be supplied to the employees, from a clean covered container having a drain faucet, and an adequate supply of potable drinking water and paper cups shall be readily accessible for the workmen at all times. All such cups shall be deposited in receptacles, as provided.

OPG agrees to supply all special tools and equipment which are not normally contained in the tool kits of the employees covered by this Agreement.

4.3 It is agreed that when using 20 cm solids (100%), 25 cm and 30 cm regular, semi-solid (75%) and solid (100%) standard aggregate concrete blocks, two (2) employees shall work in pairs to lay said blocks. This shall not, however, apply to L.W. block, such as cinder, haydite or slag, other than 25 cm (100% solid) and 30 cm semi-solid (75%) or solid (100%) haydite, cinder and slag.

Article 5

APPRENTICES

5.1 OPG and BACU mutually agree that, in the best interests of the Industry, Apprentices ought to be hired and properly trained, and further agree that a provincial training trust fund shall be established immediately.

5.2 Indentured Apprentices must be registered with the Industrial Training Branch, Ministry of Colleges and Universities.

5.3 The minimum rate for Apprentices and Improvers shall be:

50% of a Journeyman’s rate for the first period
65% of a Journeyman’s rate for the second period
80% of a Journeyman’s rate for the third period
90% of a Journeyman’s rate for the fourth period.
The minimum rate for Apprentices who successfully complete the modified Apprenticeship Program at the Ontario Masonry Training Centre shall be as follows:

- 65% of a Journeyman's rate for the first "400 hours" on the job site
- 72% of a Journeyman's rate for the next "400 hours" (401-800)
- 80% of a Journeyman's rate for the next "400 Hours" (801-1200)
- 90% of a Journeyman's rate for the next "400 Hours" (1201-1600)
- 100% of a Journeyman's rate after 1600 hours on the job site.

5.4 No Apprentice shall operate a Masonry Saw for more than eight (8) hours in any one work week.

5.5 For the purpose of continued employment Apprentices or Improvers may be transferred to any Local of the Union, providing that the Local Union in which the Apprentice is to work does not have any Apprentices or Improvers available for employment.

5.6 The ratio of Apprentices or Improvers to be applicable to any one project shall be one (1) Apprentice or Improver for the first Journeyman employed plus an additional Apprentice or Improver for each additional five (5) Journeymen employed; said Apprentices or Improvers will be registered with the Union and will be paid a rate of wages not less than stated above.

5.7 OPG's participation in wages while the Apprentice is attending trade school shall be a minimum of twenty-five dollars ($25.00) per week. However, an Apprentice shall apply and if eligible to receive EI benefits, this provision shall not be applicable when such benefits commence.

**Article 6**

**OLDER MEMBERS**

6.1 OPG agrees that where six (6) or more employees are employed, that OPG shall hire, if available, one (1) employee who comes within the category of "Older Member". The Union further agrees that the Older Member may be hired either before the work force reaches the number of six (6) or when a seventh employee is required and similarly as the employee work force increases.

6.2 It is understood and agreed that the employment of Older Members means that the ratio applicable is in terms of the total number of the Bricklayer, Stonemason or Plasterer work force employed by Trade by a single Employer.

**Article 7**

**RECOGNIZED HOLIDAYS**
7.1 The Holidays recognized under this Agreement are:

- New Year's Day
- Good Friday
- Easter Monday
- Victoria Day
- Canada Day
- Civic Holiday
- Labour Day
- Thanksgiving Day
- Christmas Day
- Boxing Day

and Heritage Day when it is declared a holiday by the Government of Ontario under the Employment Standards Act.

7.2 OPGI reserves the right to change the day of observance of a recognized holiday when such holiday falls on a Tuesday or Thursday.

7.3 Recognized holidays falling on a Saturday or Sunday shall be observed on the following Monday. When Christmas Day falls on a Saturday or Sunday, it shall be observed on the following Monday and Boxing Day on the following Tuesday. When New Year's Day falls on a Saturday or Sunday, it shall be observed on either the preceding Friday or the following Monday.

---

**Article 8**

**ACCREDITED UNION REPRESENTATIVES**

8.1 BACU will designate local union representatives as Accredited Union Representatives to handle the day-to-day administration of this Agreement. BACU will notify OPGI in writing of the names of such Union representatives, or alternates in the event of illness or unavailability, so that they may be issued identification cards to permit entry to the site. Such representatives, after identifying themselves to OPGI upon entering the job site, will be free to observe the progress and conduct of the work and to conduct normal union business. BACU undertakes that these representatives will not hinder or interfere in any way with the said work.
Article 9

UNION STEWARDS

9.1 Accredited Union Representatives shall inform OPGI of the steward, in writing, of the names of all stewards, one of whom shall be designated Chief Steward, as they are appointed and when they cease to act as stewards. A steward shall obtain permission from his immediate supervisor before leaving his work area for union business. Such permission shall not be unreasonably denied.

Only in situations where an accredited Union Representative is unable to attend pre-job and/or mark-up meetings, may the Chief Steward be designated and attend, as part of the Chief Steward’s duties, on behalf of the accredited union representative.

9.2 BACU shall receive written notice before the employment of a steward is terminated and provided the steward is able to perform the work required, he will be one of the last 2 employees to be retained in a layoff/standoff situation.

Should the work resume, he shall be one of the first employees recalled.

9.3 The chief steward will be informed of all scheduled overtime. Where practical, a steward shall be given the first opportunity to work the overtime providing he is qualified to perform the work.

9.4 No foreman or subforeman shall be permitted to act as a steward.

Article 10

WORK ASSIGNMENT

10.1 OPGI recognizes the traditional work jurisdiction of the union and when making assignments agrees to assign in accordance with this.

10.2 (a) A markup process will be utilized when OPGI intends to perform work on a project site*. The purpose of this markup process is to indicate to BACU the work which is planned to be carried out by OPGI in order to minimize the potential for jurisdictional disputes.

(b) When work is to be performed on a project site and it meets the following criteria: same employer, same work, same project site, the markup process will not be required. This procedure shall not preclude BACU’s right to contest previously disputed work.
(c) When OPG has work that is less than a 3 week duration and there are ten (10) or fewer employees employed on this specific work, BACU will be notified of the scope of work and OPG's proposed work assignments. BACU will have two (2) weeks from the date of notification to submit jurisdictional claims and supporting evidence to OPG for consideration. OPG will notify BACU of the final work assignments prior to the commencement of the work.

(d) All work that does not meet the criteria set out in clauses 10.2(b) or 10.2(c) will be reviewed and assigned at a markup meeting.

(e) OPG will provide written notice to BACU as far in advance as possible of markup meetings. The Union may attend these markup meetings, and every effort will be made to settle questions of jurisdiction before the work is expected to commence.

(f) OPG shall make a proposed assignment of the work involved. OPGI shall be responsible for providing copies of proposed assignments to those attending the markup meeting. OPGI will specify a reasonable time limit for BACU to submit evidence of their claims. OPGI will evaluate all evidence submitted and make a final assignment of the work involved. OPGI will advise BACU of the final assignments prior to the work commencing.

(g) OPGI will record the proposed assignments and jurisdictional claims and forward a copy of them within fifteen (15) working days to BACU.

(h) The parties recognize that circumstances may arise, particularly with discovery and emergency work, where the process set out above may not be practical or possible, however reasonable effort will be made by OPGI to adhere to the appropriate trade jurisdiction.

* For the purposes of this Article, Nanticoke, Lambton, Lakeview/Hearn, Pickering, Darlington and the 5 Electricity Production Zones are each considered individual project sites.

Article 11

JURISDICTIONAL DISPUTES

11.1 In the event that a jurisdictional dispute arises over a work assignment, such assignments will remain in effect until the dispute is resolved, if necessary, by the Ontario Labour Relations Board, and will not interfere in any way with the progress of the work.

11.2 In the event the Union elects to pursue or respond to the Jurisdictional Dispute, the Board pursuant to the Act is not authorized to award damages in respect of a mis-
assignment of work only in circumstances where the other union(s) involved in the proceedings is (are) equally restricted in their ability to claim for damages. However, this paragraph shall not apply when the Jurisdictional Dispute and the mis-assignment of work results from a bad faith assignment on the same work that was previously the subject of a Jurisdictional Dispute before the OLRB.

11.3 OPGI shall have direct recourse to the Ontario Labour Relations Board when the Board has under its consideration a dispute involving the assignment of work being done by employees covered by this agreement.

Article 12

EMPLOYMENT AND UNION SECURITY

12.1 An office will be established by OPGI for each Project. A purpose of this office will be to coordinate employment, as specified in this Article.

12.2 OPGI and BACU will exchange the names of their representatives in each areas. These individuals will be responsible for cooperating in the referral and employment of reliable and competent union members.

12.3 The employment of tradesmen, apprentices and improvers shall be carried out on the following basis and sequence:

(a) OPGI agrees to first hire members of the Local Union on projects within the territorial area of the Local Union. The Employer shall hire through the Local Union office 100% of all Bricklayers, Masons and Plasterers who are members of the Union as long as the Local Union is able to supply members in sufficient numbers to take care of the needs of the Employer. 50% of this number may be name requests. This ratio shall be maintained at all times. It is agreed that the Employer may transfer members from one job to another within the territorial jurisdiction of the Local Union. It is agreed that all members must produce a referral slip signed by the Business Representative before being hired or starting work.

(b) This also applies to the out-of-town men coming to work within the jurisdiction of the Local Union and no other means of hiring will be allowed. All employees in the employ of OPG shall be members in good standing as long as they are employed by OPGI. It is agreed that the Union will give preference to OPGI in the employment of its union members and OPGI agrees to first hire and to employ Local Union members.

(c) Should OPGI’s requirements still not be complied with, it shall have the right to hire employees from other sources, providing such employees make application to become members of BACU prior to commencement of work.
12.4 **Union Membership**

As a condition of employment, all employees and working foremen covered by this Agreement shall either be members of, or will apply for membership in, the Union and, with respect to initiation fees and dues, will maintain such membership in good standing.

12.5 OPGI shall deduct union dues from each employee’s and working foreman’s wages. Such dues shall be deducted monthly and forwarded to the designated officials of the Union on or before the 15th day of the month following the month in which the deductions are made. The Union will indemnify OPGI for any liability arising from the deduction of union dues.

BACU will notify OPGI in writing of any changes in BACU dues or Local Union dues.

12.6 It is agreed that if a company is comprised of two or more Principals or Owners not more than one Principal or Owner shall be permitted to work with the tools of the trade on any one project. Any Principal or Owner working with the tools of the trade or any member of the Union shall only do so in compliance with the same working conditions having particular regard to the hours of work and other related working conditions.

**Article 13**

**PAY PROCEDURE**

13.1 **NORMAL**

Employees shall be paid weekly and payment for any given week will be made not later than the sixth working day after the close of the payroll period, but in any event not later than Thursday of the following week. Any employee failing to receive his pay on his regular payday shall give notice to his Employer or his representative. If the Employer does not make payment of wages before twelve-noon on the following working day, the Employer shall pay two (2) hours’ pay at the applicable straight time hourly rate in addition to his wages to the employee.

(b) Wages shall be paid by OPGI on the job site, before quitting time, in cash or by cheque, payable at par in the locality of the job site. Accompanying each payment of wages shall be a statement, in writing, which can be retained by the employee, setting forth:

(i) the period of time or the work for which the wages are being paid;
(ii) the rate of wages to which the employee is entitled;
(iii) the amount of wages to which the employee is entitled;
the amount of each deduction from the wages of the employee and the purpose for which each deduction is made;

any allowance or other payment to which the employee is entitled;

the amount of vacation pay for which the employee is being credited;

the amount of statutory holiday pay for which the employee is being credited; and

the net amount of money being paid to the employee.

(c) In cases of inclement weather being declared on payday, employees will receive their pay before leaving the site provided it is available on the site.

(d) The parties recognize that electronic pay may be introduced during the term of this Agreement.

13.2 ON TERMINATION

(a) An employee who voluntarily terminates his employment will be provided his final pay on the next regular payday.

(b) Employees who do not receive their pay, record of employment and hospitalization forms per (a) above shall receive two (2) hours’ pay at the regular hourly rate for each working day or designated shift until such time as OPGI mails the employee’s pay by registered or certified mail. The days for which the allowance of two (2) hours is paid shall not include the day on which the employee’s pay was mailed.

(c) An employee who is discharged shall be provided with his final pay immediately if OPGI’s pay facilities are on site or as per 14.2(b) if OPGI’s pay facilities are not on site.

(d) Employers will provide one hour’s notice of layoff or one hour’s pay in lieu of notice to employees who are to be laid off.

When possible, the Employer shall notify BACU three (3) days prior to layoff.

(e) When an employee is laid off, he will be paid for a reasonable amount of time by the Employer if he is required to travel or wait unduly before he receives his final pay.

(f) In established cases of long-term sickness, compensable accident or jury duty, an employee will be maintained on OPGI’s payroll until normal date of layoff.

Article 14

REPORTING PAY
Article 14 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e. Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 4, Appendix C - Modified Provisions of this Construction Agreement.

14.1 An employee who reports for work, unless directed not to report the previous day by OPGI, shall receive a minimum of four (4) hours' pay at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for work for any part of the first half of a shift and an additional four (4) hours on the first and second shifts or two and one-half (2-1/2) hours on the third shift will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Article that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

14.2 An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

14.3 Notwithstanding that work is available and an employee is able to commence or continue work, OPGI may shut down a job to avoid the possible loss of human life because of an emergency situation such as H₂S leaks, bomb threats, fire, etc., that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked.

Article 15

DAILY TRAVEL ALLOWANCE
AND ROOM AND BOARD

Article 15 is applicable to work at Existing Generating Sites where work involves construction of a new facility (new function) and/or new (additional) generating unit(s) and at New Generating Sites (i.e. Greenfield Work).

For work at Existing Generating Sites excluding work involving construction of a new facility (new function) and/or new (additional) generating unit(s) please refer to Section 1, Appendix C - Modified Provisions of this Construction Agreement.

DAILY TRAVEL ALLOWANCE

15.1 The daily travel allowance will be paid by OPGI to employees who are not receiving room and board as referred to in Section 17.2, on the following basis:

(a) If an employee lives within twenty (20) radius kilometers* of the project, no travel allowance will be paid.
(b) If an employee lives within 20 to 40 radius kilometers of the project, he shall receive $15.60 per day travel allowance effective May 1, 2000 ($16.10 effective May 1, 2001, $16.60 effective May 1, 2002, $17.10 effective May 1, 2003) for each day worked or reported for.

(c) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day travel allowance effective May 1, 2000 ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002, $20.35 effective May 1, 2003) for each day worked or reported for.

(d) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day travel allowance effective May 1, 2000 ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) for each day worked or reported for.

(e) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day travel allowance effective May 1, 2000 ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) for each day worked or reported for.

(f) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 17.2 below, he will receive $29.85 per day travel allowance effective May 1, 2000 ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee's travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.

ROOM AND BOARD

15.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(a) OPGI may supply either:

(i) Room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;
subject to Sections 17.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $56.00 per day effective May 1, 2000 ($58.00 effective May 1, 2001, $60.00 effective May 1, 2002, $62.00 effective May 1, 2003) for each day worked or reported for when employed at a location south of the French River and $70.00 per day effective May 1, 2000 ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for when employed at a location north of the French River subject to Sections 17.2(c) and 17.2(d) below.

* An employee's 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near a project. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled $31.60 per day effective May 1, 2000 ($33.60 effective May 1, 2001, $35.60 effective May 1, 2002, $37.60 effective May 1, 2003) worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for a subsistence allowance as provided for above shall receive a subsistence allowance of $41.50 per day effective May 1, 2000 ($44.50 effective May 1, 2001, $47.50 effective May 1, 2002, $49.50 effective May 1, 2003) worked or reported for.

15.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 17.1 and 17.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

15.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

15.5 BACU recognizes OPGI's right to charge for board and other existing services. OPGI fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:
(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(c) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

* An employee’s ‘regular residence’ is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and

2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.

3. For metro areas (Toronto and Hamilton) the calculation of distance shall be from the employee’s regular residence.

4. For all other areas, the calculation of distance shall be based on the location of the city or town hall of the municipality where an employee maintains a self-contained domestic establishment described above. In those municipalities where a city or town hall does not exist, then the post office serving his regular residence will apply.

Article 16

OVERTIME
Article 16 is applicable to work which is not covered by Section 3 Appendix C - Modified Provisions of this Construction Agreement. Please refer to the GENERAL NOTE preceding the Index Page of this Agreement.

16.1 Work performed in excess of regular hours of work Monday to Friday shall be paid at the rate of one and one-half (1-1/2) times the basic wage rate as defined in Article 24 - Wages for the first two (2) hours worked. Work performed in excess of the first two (2) hours shall be paid at the rate of two (2) times the basic wage rate, as defined in Article 26 - Wages.

16.2 Notwithstanding Section 16.1 above, work performed in excess of regular hours of work Monday to Friday shall be paid at two (2) times the basic wage rate, as defined in Article 24 - Wages in the following Local Union Areas.

#1  Hamilton  #23  Sarnia
#5  Windsor and London  #29  Thunder Bay
#12  Kitchener  #29  Sault Ste. Marie

16.3 Work performed on Saturdays, Sundays and Holidays recognized under this Agreement, shall be paid at two (2) times the basic wage rate, as defined in Article 26 - Wages.

16.4 All employees shall cooperate with the Employer in performing overtime work when such is reasonably required.

16.5 Wherever practical, the Chief Steward will be informed of all overtime.

Article 17

WORK BREAK

17.1 It is agreed that employees shall be given two (2) fifteen (15) minute breaks on each regular shift, with no loss of pay, to be taken at a place designated by OPGI. OPGI shall exercise its discretion as to when the breaks shall occur, but every reasonable effort shall be made to schedule such breaks at the midway points of each half shift. Where a normal half shift is less than four (4) hours, there shall be no rest period in that half shift.

17.2 OPGI shall provide accommodation with adequate tables and seating facilities for employees covered by this Collective Agreement. This shelter shall be provided at the
commencement of the work. Adequately heated accommodation separate from changerooms and washrooms shall be provided by OPGI on each project when necessary and where such accommodation can be reasonably provided for. Such accommodation shall be weatherproof and shall be kept reasonably clean. A table and sufficient benches or seats for the employees on the job shall be provided in the accommodation. Trailerized or portable accommodation shall include tables, benches, light, heat maintained at a minimum sixty-eight (68) degrees Fahrenheit, proper access and egress, and shall not be used for material storage.

17.3 Employees shall receive a one half hour unpaid lunch break

Article 18

STANDOFF

18.1 When unable to proceed with his work, OPGI may elect to Standoff part or all of a crew. The parties agree Standoff is not intended to circumvent the layoff procedure.

The Employer reserves the right to Standoff its employees without pay up to a maximum of ten (10) consecutive working days. Notification of Standoff will be made by OPGI during normal working hours. A Record of Employment will be issued upon the commencement of the Standoff. No travel allowance will be paid to an employee for the Standoff period.

18.2 An employee who qualifies for subsistence allowance and who is placed on Standoff will be paid subsistence allowance up to a maximum of ten (10) consecutive working days.

18.3 If Standoff continues beyond ten (10) consecutive working days, an employee, at his option, may elect to remain on Standoff for an additional twenty (20) consecutive working days or be removed from Standoff. OPGI retains recall rights on employees electing to continue on Standoff. Subsistence allowance will cease after ten (10) consecutive working days on Standoff.

18.4 If an employee elects layoff beyond the tenth (10th) consecutive working day, it shall be carried out in accordance with the Collective Agreement. An employee laid off will be issued a Record of Employment form on his date of layoff indicating “Layoff – Shortage of Work”. The Employer does not retain recall rights if the employee elects Layoff.

18.5 Standoff shall only continue beyond thirty (30) consecutive working days with the mutual consent of OPGI and the Union, in writing.
• For the purpose of this Article, when working on a 4 x 10 hour shift arrangement, the following will apply:

• eight (8) scheduled working days will be considered the equivalent of ten (10) consecutive working days.

• sixteen (16) scheduled working days will be considered the equivalent of twenty (20) consecutive working days.

• twenty-four (24) scheduled working days will be considered the equivalent of thirty (30) consecutive working days.

Article 19

TOOLS AND CLOTHING

19.1 Employees’ tools and clothing lost by fire or theft from an OPGI designated storage area shall be compensated for by OPGI on written proof of loss. This provision will include only personal tools and clothing that a tradesman is required to have to perform his normal duties with his Employer.

19.2 An employee who has obtained tools from OPGI shall be allowed sufficient time, in the opinion of Management to return such tools to his Employer during working hours. An employee receiving tools from OPGI shall be held responsible for the return of such tools in good condition, subject to normal wear and tear. On layoff, an employee will be allowed reasonable time to return tools to OPGI.

Employees will immediately report the theft or loss of any OPGI-supplied tools, and OPGI will charge any employee who fails to do so, the value of such tools or clothing.

Gang tools shall be the responsibility of OPGI.

19.3 Employees working in a radiation area, in plastic suits or replacement material of the fully enveloping type with an independent air supply, will receive $8.00 per day. A day for the purpose of this item shall be defined as any period up to twelve (12) hours.

Article 20

HOURS OF WORK
Article 20 is applicable to work which is not covered by Section 2, Appendix C - Modified Provisions of this Construction Agreement.

Please refer to the GENERAL NOTE preceding the Index Page of this Agreement.

20.1 The normal weekly hours of work for all employees of Employers covered by this Agreement shall be thirty-eight (38), except as described in Section 20.2 below.

The weekly hours shall be worked in five (5) days - four (4) eight (8) hour days, Monday to Thursday inclusive, with the remaining six (6) hours to be worked on Friday.

20.2 The hours of work at all Miscellaneous Projects (excluding Lakeview and R.L. Hearn Generating Stations) shall be forty (40) hours per week made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.

A Miscellaneous Project is any work which will require less than one year to complete and comprise a total project work force of not more than one hundred (100) men at one time.

The hours of work for the Moose River Basin: Northern Ontario shall be, as outlined in Appendix A.

20.3 Shift Schedules for Masonry Work

(a) 38-Hour Schedules

(i) Shift schedules for all Local Unions except: Local Unions #1 Hamilton, #5 Windsor and London, #23 Sarnia, #29 Thunder Bay and Sault Ste. Marie.

Note: Starting time may be adjusted by mutual consent.

Times for the third work break on a ten (10) hour shift operation, and the second lunch period and third work break on a twelve (12) hour shift operation will be arranged by mutual agreement.
20.4 **Refractory Conditions**

When refractory work is being performed the hours and conditions of work which shall apply are those established in Appendix 1 of this Agreement.

20.5 **Make-up Time**

By mutual consent of both parties and/or the Local Union and the affected Employer, should inclement weather cause employees to lose eight hours or more, during a Monday to Friday work week, then Saturday may be worked as make-up time at straight time rates. Employees working on the Saturday shall not work in excess of forty hours on Miscellaneous Projects (excluding Lakeview and R.L. Hearn Generating Stations) or thirty-eight hours on the remaining projects on a Monday-to-Saturday basis. If the employee works the regularly scheduled hours then double time rates will be applicable.

It is understood and agreed that make-up time is on a voluntary basis only. Employees not wishing to work the make-up time shall not be subjected to disciplinary action.

---

**Article 21**

**GRIEVANCE PROCEDURE**

21.1 Grievances within the meaning of the grievance and arbitration procedure shall consist only of disputes about the interpretation or application of particular clauses of this Agreement and about alleged violations of this Agreement. In the event of any dispute concerning the meaning or application of any provision of this Agreement or a dispute concerning an alleged violation of this Agreement, there shall be no suspension or disruption of work, but such dispute shall be treated as a grievance and shall be settled, if possible, by OPGI and BACU. In the interests of expediting the procedure, the parties shall process grievances in the following manner:

The grievance procedure and arbitration procedure in Article 27 do not apply to jurisdictional disputes.

21.2 **PRELIMINARY DISCUSSION**

Disputes arising out of the interpretation or alleged violation of this Agreement should, if possible, be settled by discussion between the employee and/or his steward and the employee’s supervisor. If the employee affected is a foreman, the preliminary discussion will be between the Accredited Union Representative and the foreman’s supervisor.
21.4 SECOND STEP

If a grievance cannot be resolved at Preliminary Discussion, within ten (10) working days the Accredited Union Representative may file a formal grievance on the prescribed form with OPGI.

OPGI shall investigate the grievance and within 10 working days convene a meeting which it or the Accredited Representative considers necessary to resolve it and give his reply on the prescribed form to the Accredited Representative of the Union within five (5) working days from the date of the meeting.

21.5 OPGI GRIEVANCES

OPGI grievances will begin at the Second Step. OPGI may submit either policy or specific grievances. Such policy or specific grievances shall be submitted within thirty (30) days of the alleged grievous act.

21.6 TIME LIMITS

The time limits as to both documents and procedures set out in the above sections shall be complied with by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed. Where no answer is given within the time limits specified in the grievance procedure, OPGI or BACU shall be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the time limits specified in the grievance procedure shall be deemed to have been settled and ineligible for arbitration.

21.7 Alleged unjustified termination, discharge, suspension or disciplinary action may be grieved beginning at Second Step.

21.8 GRIEVANCE FACILITIES

OPGI shall provide the necessary facilities for all grievance meetings.

Article 22

ARBITRATION

22.1 If any dispute about the interpretation or application of particular clauses of this Agreement or about an alleged violation of this Agreement cannot be settled through the grievance procedure outlined in Article 21, the matter may be submitted within thirty (30) days of its failure of settlement by grievance procedure by either OPGI or BACU to a Board of Arbitration for adjudication.
The party desiring to submit the dispute to arbitration shall notify the other party, in writing, of its desire and the notice shall contain the name of the first party's nominee to an arbitration board. The recipient of the notice shall, within five (5) working days, inform the other party of the name of its nominee to the arbitration board. The two nominees so selected shall, within ten (10) working days of the appointment of the second of them, appoint a third person who shall be the Chairman. If the recipient of the notice fails to appoint a nominee, or if the nominees fail to agree upon a Chairman, the appointment shall be made by the Minister of Labour for Ontario upon the request of either party. The arbitration board, when selected or appointed, will proceed as soon as practicable to hear and determine the dispute and it shall issue a decision which is final and binding upon the parties and upon their respective members. The decision of a majority is the decision of the arbitration board, but if there is no majority, the decision of the Chairman governs.

22.2 The arbitration board shall have no power to add to or subtract from or modify any of the terms of this Agreement. The arbitration board shall not substitute its discretion for that of the parties except where the board determines that an employee has been discharged or otherwise disciplined for cause when this Agreement does not contain a specific penalty for the infraction that is the subject matter of the arbitration. In such cases, the arbitration board may substitute such other penalty for the discharge or discipline as to the arbitration board seems just and reasonable in all circumstances. The arbitration board shall not exercise any responsibility or function of the parties. The arbitration board shall not deal with any matter not contained in the original statement of grievance filed by the party referring the matter to arbitration.

22.3 In arbitration proceedings, each party shall pay the fees and expenses of its nominee, whether appointed by the party or by the Minister of Labour for Ontario, and the fees and expenses of the Chairman shall be shared equally by the parties.

22.4 The time limits as to both documents and procedure set out in the above sections shall be observed by the parties to this Agreement provided, however, that the parties may mutually agree, in writing, in respect to an extension or waiver of any of the time limits imposed.

Article 23

NO STRIKE - NO LOCKOUT

23.1 There shall be no strikes or lockouts so long as this Agreement continues to operate.
Article 24

RADIATION WORK

24.1 (a) Local Union to be provided with a copy of Ontario Power Generation Inc Radiation Protection Regulations and any revisions.

(b) Local Union to be provided with a copy of Ontario Power Generation Inc Radiation Protection Procedures and any revisions.

(c) Each employee will have access to his personal radiation exposure record.

(d) Long-term employees who reach their exposure limit will be given alternate employment until they can resume radiation work.

(e) Short-term employees will be given a guaranteed period of employment at their time of hire.

Article 25

ABORIGINAL CONTENT COMMITMENT

Where an aboriginal commitment has been established on a project, the Union will co-operate in meeting the content commitments.

For a project, or jobs within a project, that are less than $100,000 field labour, and have aboriginal content commitments, the terms of the collective agreement will not apply to those aboriginal content commitments.

Article 26

Wages

26.1 As outlined in the Memorandum of Settlement, dated November 7, 2002.
APPENDIX A

MOOSE RIVER BASIN: NORTHERN ONTARIO

Where OPGI elects to establish a camp, the following conditions will apply for employees working in the Moose River Basin:

**Camp Conditions**

(a) OPGI may elect to provide free room and board in camp at no cost to the employee. Where OPGI elects to provide a camp such employees will not be entitled to receive a daily travel or room & board allowance.

(b) When OPGI does not elect to provide free room and board in camp, the employee will be entitled to receive a daily travel or room and board allowance as set out in Articles 17.1 and 17.2.

(c) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day unless he is excused from work for a legitimate reason by the project medical attendant or an authorized OPGI representative.

(d) An employee who is absent from work without approval and who remains in camp and is still absent from work the following day without approval will be charged $25.00 for the day of absence and each successive day of unapproved absence.

**Hours of Work**

(1) The hours of work will consist of a 21 day cycle of fourteen (14) consecutive work days followed by seven (7) consecutive days off.

(2) Regularly scheduled hours of work of ten (10) hours per day shall be paid at straight time hourly rates.

(3) Regularly scheduled hours of work on Saturday, Sunday, Recognized Holidays, and the fifth (5th) consecutive weekday shall be paid at two times the straight time hourly rate.
Wrap Around

An employee shall qualify for a return trip from the project every second twenty-one (21) day cycle he is on the project on the following basis:

(a) If an employee lives within 161 radius kilometres from the project, the Employer shall pay forty dollars ($40.00).

(b) If an employee lives greater than 161 radius kilometres from the project, the Employer shall pay as an allowance, forty dollars ($40.00) plus travel time based on the equivalent of one (1) hour’s base rate of pay for each eighty (80) kilometres from where the employee lives or place of recruitment, whichever is closer to the project.
APPENDIX B

7-DAY COVERAGE

NUCLEAR SITES

When working under the provisions of this 7-day shift schedule, all conditions listed below will supersede those in the other Articles/Sections of this Collective Agreement. Where this shift schedule is silent, the appropriate Article/Section in the Collective Agreement applies.

These provisions would only apply to work performed on a Nuclear Facility and the work must be covered by the “Modified Provisions of this Construction Agreement.

This shift schedule is intended for work of at least five (5) weeks in duration; however, it is recognized that unforeseen circumstances may require the cancellation of this schedule.

If in the transition onto or off this 7-day shift schedule an employee would receive less than 40 paid hours in a pay period, the employee shall receive the difference between the total paid hours for that pay period and 40 hours’ pay. This does not apply to those employees who are laid off during or at the end of the schedule.

The employee(s) shift schedule consists of four consecutive shifts (day, afternoon, or night) followed by four scheduled days off. Shift overlap may be required.

Shift work may be established by the Employer to provide seven days per week work coverage, on a two or three ten (10) hour per day shift basis. When this occurs, a specific shift arrangement will be established by the Employer detailing the shift schedule to be worked.

Notice Provision

If this shift schedule is to be used for work on a “planned outage”, the Employer will provide the Union with two (2) weeks’ notice prior to the implementation of these shift provisions.

Shift Provisions

Day Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight time hourly rates.
Afternoon Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight
time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found
in the appropriate trade appendix for this shift.

Night Shift

Regularly scheduled hours of work per shift, Monday to Friday inclusive, shall be paid at straight
time hourly rates, plus a shift differential which shall be equal to the Shift Differential as found
in the appropriate trade appendix for this shift.

All Shifts

Regularly scheduled hours of work on Saturday, Sunday, Statutory and Recognized Holidays
shall be paid at the appropriate overtime rate for that trade. Recognized Holidays will be
observed on the actual day on which the holiday occurs or as declared by legislation.

The rate for the shift will be based on the day in which the shift begins.

An unpaid lunch period of one-half hour shall be allowed to be taken no later than five hours
after the commencement of a shift.

For employees working regularly scheduled hours, two fifteen (15) minute rest periods will be
allotted at a time and location directed by the Employer for employees to rest.

It may be necessary, from time to time, to vary the established shift arrangements. When this
occurs, a revised shift arrangement will be established.
APPENDIX C

MODIFIED PROVISIONS
OF THIS CONSTRUCTION AGREEMENT

These provisions will apply to all work on existing generating sites except the construction of:

- a new facility which provides a new function
- a new (i.e. additional) generating unit

Definitions:

*Facility*  Something that is built composed of multi-systems which serves a specific function

*Function*  Examples - Generation, Administration, Warehousing, Heavy Water Production, Flue Gas Desulphurization, Tritium Removal, Site Services (e.g. Shops)

Dispute Resolution Process

A dispute as to whether the 'Modified Provisions of this Construction Agreement' apply to the construction of a new facility will be referred to a single arbitrator within 10 (ten) working days for a final and binding resolution. The arbitrator shall give an oral decision within 5 (five) working days, and a written decision, if requested, within 20 (twenty) working days.

All terms of this collective agreement shall apply to work covered by this Appendix, with the exception of Article 16 – Reporting Pay, Article 17 – Generation Projects Daily Travel Allowance and Room and Board, Article 23 – Meals on Overtime and Article 26 – Hours of Work.
OPGI/BACU COLLECTIVE AGREEMENT

APPENDIX C

MODIFIED PROVISIONS

OF THIS CONSTRUCTION AGREEMENT

INDEX

Section 1  Daily Travel Allowance and Room and Board
Section 2  Hours of Work
Section 3  Overtime
Section 4  Reporting Pay on 8 Hour and 10 Hour Shifts
Section 5  Meals on Overtime
Modified Provisions

Section 1

DAILY TRAVEL ALLOWANCE AND ROOM AND BOARD

DAILY TRAVEL ALLOWANCE

1.1 The daily travel allowance will be paid by the Employers to employees who are not receiving room and board as referred to in Section 1.2, on the following basis:

(a) If an employee lives within forty (40) radius kilometers* of the project, no travel allowance will be paid.

(b) If an employee lives within 40 to 56 radius kilometers of the project, he shall receive $18.85 per day travel allowance effective May 1, 2000 ($19.35 effective May 1, 2001, $19.85 effective May 1, 2002, $20.35 effective May 1, 2003) for each day worked or reported for.

(c) If an employee lives within 56 to 80 radius kilometers of the project, he shall receive $22.10 per day travel allowance effective May 1, 2000 ($22.60 effective May 1, 2001, $23.10 effective May 1, 2002, $23.60 effective May 1, 2003) for each day worked or reported for.

(d) If an employee lives within 80 to 97 radius kilometers of the project, he shall receive $25.60 per day travel allowance effective May 1, 2000 ($26.10 effective May 1, 2001, $26.60 effective May 1, 2002, $27.10 effective May 1, 2003) for each day worked or reported for.

(e) If an employee lives greater than 97 radius kilometers from the project and does not qualify for subsistence allowance under Section 17.2 below, he will receive $29.85 per day travel allowance effective May 1, 2000 ($30.35 effective May 1, 2001, $30.85 effective May 1, 2002, $31.35 effective May 1, 2003) provided he continues to travel greater than 97 radius kilometers for each day worked or reported for.

When an employee is directed to report to a location that involves travelling around a natural barrier, the distance around the natural barrier shall be the shortest distance measured by a series of straight lines. The sum of the distances of these straight lines shall be applied to the ring concept to establish the employee’s travel allowance entitlement.

A natural barrier is defined as any obstruction or impediment which creates an unreasonable relationship between the radius kilometers and actual kilometers travelled.

* For the purpose of this Article, "radius kilometers" shall be measured from the centre of the turbine hall on each project.
ROOM AND BOARD

1.2 The following conditions will apply for employees whose regular residence* is more than 97 radius kilometers from the project:

(a) OPGI may supply either:

(i) Room and board in camp or a good standard of board and lodging within a reasonable distance of a project; or

(ii) a subsistence allowance;

subject to Sections 1.2(b), (c) and (d) below.

(b) An employee may exercise his option not to stay in a camp or accept room and board. An employee who exercises this option and qualifies for subsistence allowance shall receive a subsistence allowance of $56.00 per day effective May 1, 2000 ($58.00 effective May 1, 2001, $60.00 effective May 1, 2002, $62.00 effective May 1, 2003) for each day worked or reported for when employed at a location south of the French River and $70.00 per day effective May 1, 2000 ($72.00 effective May 1, 2001, $74.00 effective May 1, 2002, $76.00 effective May 1, 2003) for each day worked or reported for when employed at a location north of the French River subject to Sections 1.2(c) and 1.2(d) below.

(c) To qualify for subsistence allowance an employee must maintain temporary accommodation at or near a project. Employees who travel daily to locations beyond 97 radius kilometers from the project will be entitled $31.60 per day effective May 1, 2000 ($33.60 effective May 1, 2001, $35.60 effective May 1, 2002, $37.60 effective May 1, 2003) worked or reported for.

(d) An employee employed at the Pickering or Darlington Project who qualifies for a subsistence allowance as provided for above shall receive a subsistence allowance of $41.50 per day effective May 1, 2000 ($44.50 effective May 1, 2001, $47.50 effective May 1, 2002, $49.50 effective May 1, 2003) worked or reported for.

* An employee’s 'regular residence' is:

1. The place where the employee maintains a self-contained, domestic establishment (a dwelling house, apartment or similar place of residence where a person generally eats and sleeps and for which he can show proof of financial commitment). This is in contrast to a boarding house facility which is not self-contained; and
2. The employee normally resides in the residence except for those periods of time when, because of the location of the work, the employee is forced to obtain temporary accommodation at that work location.

1.3 An employee shall not qualify for daily travel allowance or room and board allowance as provided for in Sections 1.1 and 1.2 above when such employee reports for work but does not remain at work for his scheduled daily hours unless excused by an authorized representative of his Employer.

1.4 An employee who maintained a regular residence within the geographic area for the purposes of employment and who relocates outside the geographic area will not be entitled to an increase in travel or room and board allowance entitlement as a result of this relocation.

1.5 BACU recognizes OPGI's right to charge for board and other existing services. The Employer fixes the charge for board and other existing services in camps at $25.00 per day. This will be applied on the following basis:

(a) An employee who remains in camp on a normally scheduled work day on which he does not work will be charged $25.00 per day, unless he is excused from work for a legitimate reason by the project medical attendant or an authorized representative of his Employer.

(b) An employee who is absent from work on Friday without approval and who remains in camp and who is still absent from work on the following Monday without approval will be charged for room and board for Friday, Saturday, Sunday and Monday.

(c) An employee who is absent from work without approval on Friday but who works the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

(d) An employee who works the Friday and is absent from work without approval on the following Monday will be charged for the day of absence and will not be charged for Saturday and Sunday.

Section 2

HOURS OF WORK

2.1 One (1) or Two (2) Shift Operation

The weekly hours of work shall consist of forty (40) hours, worked between Monday and Friday, for all employees covered by this agreement and working on a one (1) or two (2) shift operation except as described in Sections 2.2, 2.3, 2.4, 2.5 and 2.6.

35
Modified Provisions

The weekly hours of work for all employees may be arrived at by having the employees work four (4) consecutive ten-hour shifts, either Monday – Thursday or Tuesday – Friday but not concurrently on the same project, or by having the employees work five (5) consecutive eight-hour shifts. Weekly hours of work will be established for a minimum period of thirty (30) days. If an employer, with the approval of the owner, intends to change the weekly hours of work, a minimum of fifteen (15) days written notice shall be sent to the Local Union.

The start time for the day shift shall be 8:00 a.m. with a possible one (1) hour variance either way. The start time for the afternoon shift shall be immediately following the day shift or within one (1) hour either way to coincide with the end of the day shift.

The shift differential for those employees working the afternoon shift when a two shift operation has been established by the Employer will be one-seventh (1/7) for scheduled hours worked on that shift.

Three (3) Shift Operation

When a three (3) shift operation is established by the Employer, the following conditions will apply:

Those employees working on the day shift shall work eight (8) hours per shift at the straight time rate.

Those employees working on the afternoon shift shall work seven and one-half (7 1/2) hours per shift at the straight time plus the appropriate shift differential as set out in the trade appendices.

Those employees working on the night shift shall work seven (7) hours per shift plus the appropriate shift differential as set out in the trade appendices.

2.2

The hours of work for such work as driveway and parking lot construction, railroad construction, landscaping, tunnelling, precast concrete erection, fencing or demolition, shall be as established in applicable local agreements for the class and character of work.

An applicable local agreement shall be an agreement between a local of any union signatory to this Agreement and a builders' exchange, contractors' association or contractor applicable in the locality of the project for the class and character of the work.
2.3 The weekly hours of work for structural steel erection shall be forty (40) hours made up of five (5) days of eight (8) hours each, Monday to Friday inclusive.

2.4 The weekly hours of work for site preparation and earth dams shall be 45 hours made up of five (5) days of nine (9) hours each, Monday to Friday inclusive.

2.5 The weekly hours of work for Watchmen shall be as set forth in the Laborers’ International Union of North America Appendix, attached hereto.

2.6 The weekly hours of work for Operating Engineers engaged in tunnel work shall be as set forth in the International Union of Operating Engineers’ Appendix attached hereto.

2.7 Shift Change

A shift will be deemed to be established providing at least four (4) consecutive days of a shift are to be worked excluding Saturdays, Sundays and recognized holidays. If an employee is removed from their scheduled shift prior to completing four (4) consecutive shifts, the employee will be paid shift differential for the balance of the four (4) consecutive shifts that would have been worked had the employee not been reassigned.

2.8 It may be necessary from time to time to vary the hours of work established in this Article. Any amendments to the hours of work will be established by mutual agreement between OPGI and BACUL.

2.9 **LUNCH PERIODS FOR MAJOR PROJECTS**

A lunch period will be given no earlier than four (4) hours and no more than five (5) hours after the start of the shift and will be one-half (1/2) hour in duration.

A lunch period will be given no earlier than three and one-half (3-1/2) hours and no more than five (5) hours after the start of the third shift and will be one-half (1/2) hour in duration.

2.10 When an employee is required to return to work without an eight (8) hour break, all work performed shall be at the premium rate until such time as the employee receives an eight (8) hour break. This provision does not apply when a change in an employee’s normal shift (as defined in this Article) occurs or to call-in situations.
Section 3

OVERTIME

3.1 On Monday to Friday inclusive, overtime work shall be paid at one and one-half (1-1/2) times the basic hourly rate for all hours worked beyond the normal daily scheduled number of hours.

When overtime is scheduled for Friday or Monday when the regular schedule is 4 X 10 hour shifts the time will be compensated as follows:

First 2 hours Time and a half
Balance of shift Double Time

Overtime work performed on Saturday, Sunday and Recognized Holidays shall be paid at two (2) times the basic hourly rate.

3.2 All employees shall cooperate with OPGI in performing overtime work.

3.3 Wherever practical, the Chief Steward will be informed of all overtime.

Section 4

REPORTING PAY ON 8 HOUR AND 10 HOUR SHIFTS

4.1 An employee who reports for work, unless directed not to report the previous day by his Employer, shall receive a minimum of a half shifts pay (4 hours or 5 hours) at the applicable rate when he reports for work, but is given no opportunity to work because none is available. This allowance will be paid to an employee if he is requested to report for any part of the first half of a shift and an additional half shifts pay (4 hours or 5 hours) will also be paid if he is requested to report for work for any part of the second half of the same shift. It is not intended by this Section that an employee receive a reporting pay allowance greater than his pay for normal daily hours.

4.2 An employee in receipt of reporting pay shall also receive travel or board allowance, if applicable.

4.3 Notwithstanding that work is available and an employee is able to commence or continue work, the Employer may shut down a job to avoid the possible loss of human life because of an emergency situation such as H2S leaks, bomb threats, fire, etc., that could endanger the life and safety of an
employee. In such cases, employees will be compensated only for the actual
time worked.

Section 5

MEALS ON OVERTIME

Scheduled Eight (8) Hour Shifts

When an employee has not been notified the previous day that he will be required
to work for more than two (2) hours beyond the normal quitting time of the first or
second shifts or for more than three and one half (3 ½) hours beyond the normal
quitting time of the third shift, he shall be provided with a meal and be allowed
thirty (30) minutes to consume same and the employee shall be paid at the base
hourly rate of pay. This meal break will be taken following the first two (2) hours of
overtime worked. After each additional four (4) is worked and when work is
required beyond that four (4) hour period, the employee shall be allowed thirty (30)
minutes to eat and be paid at the base hourly rate of pay and he shall be provided
with a meal. The Employer will supply a hot meal when possible. Where an
employee has been notified the previous day, no meal will be provided after the first
two (2) hours of overtime worked, but the employee will be allowed thirty (30)
minutes to eat and be paid at the base hourly rate of pay. After each additional
four (4) hours is worked and when work is required beyond that four (4) hour
period, the employee shall be allowed thirty (30) minutes to eat and be paid at the
base hourly rate of pay and he shall be provided with a meal.

When a paid meal period overlaps a rest period, the paid meal period will supplant
the rest period.

The above-noted is not applicable to the first eight (8) hours worked on Saturdays,
Sundays or Recognized Holidays for employees who normally work the first or
second shifts.

The above-noted is not applicable to the first six and one half (6 ½) hours worked on
Saturdays, Sundays or Recognized Holidays for employees who normally work the
third shift.

Scheduled Ten (10) Hour Shifts

When an employee has not been notified the previous day that he will be required to
work beyond his normal quitting time, prior to commencing the overtime work, he
shall be provided with a meal and be allowed thirty (30) minutes to consume same
and the employee shall be paid at the base hourly rate of pay. After each additional
four (4) hours is worked and when work is required beyond that four (4) hour
period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal. The Employer will supply a hot meal when possible. Where an employee has been notified the previous day, no meal will be provided prior to commencement of overtime work, but the employee will be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay. After each additional four (4) hours is worked and when work is required beyond that four (4) hour period, the employee shall be allowed thirty (30) minutes to eat and be paid at the base hourly rate of pay and he shall be provided with a meal.

The above-noted is not applicable to the first ten (10) hours worked on Saturdays, Sundays or Recognized Holidays for employees who normally work the first and second shifts.

When a paid meal period overlaps a rest period, the paid meal period will supplant the rest period.

</table>

Note: Starting time may be adjusted by mutual consent.

Times for the third work break on a ten (10) hour shift operation, and the second lunch period and third work break on a twelve (12) hour shift operation will be arranged by mutual consent.

* Meaning "Firebrick, Acid Resistant Structural Materials, Carbon Graphite Materials, Gunite, Acid Resistant, Tar Impregnated Brick and All Other Refractory Materials".

* Also to include a hot meal where over ten (10) hour shifts are worked. Time of meal to be arranged by mutual agreement.

* On work over a ten (10) hour shift and a hot meal cannot be provided, the Employer agrees to pay the equivalent of 1/2 hourly wage rate at the regular rate in lieu of the cost of the hot meal.

** All overtime on the regular hours of work shall be paid at the rate of double time the applicable refractory rates.
1.2 **Sawman**

(a) Employees, while engaged as a Sawman, shall receive a premium rate of thirty cents (30¢) an hour above the basic refractory rate for the hours spent operating the saw and shall wear all safety clothing provided.

(b) All protective equipment to be supplied by the Employer.

(c) Employers will, where practical, assign one Bricklayer for each saw.

1.3 **Stackwork**

(a) *For work on a stack the wage rate shall be the base rate, as stipulated in Section 1.5 below, refractory conditions plus a premium of two dollars ($2.00) per hour commencing at the base of the structure and shall cease when the structure is completed. The premium pay shall not apply to reporting pay and further shall not be multiplied by overtime premiums.*

(b) *The above premium shall not apply to blast furnace work.*

1.4 **Facilities**

(a) As warranted when graphite, carbon, acid, tar-impregnated brick, gunite work and on all work on blast furnace relines and coke oven repairs, coveralls and gloves shall be provided by the Employer and such clothing shall remain the property of the Employer.

(b) *The Employer agrees to provide clean hot and cold water, soap and clean individual paper towels and provide sufficient time to wash up. Such facilities described herein shall be provided at commencement of the appropriate work herein.*

(c) *Where dust conditions prevail, adequate ventilation will be provided, and employees will be provided with proper respiratory equipment.*

1.5 **Basic Refractory Wages and Premiums**

(a) Minimum basic refractory rate shall be paid at a premium of no less than thirty-five cents (35¢) per hour earned over the established rate as set out in the area rate schedules and the wage schedules, attached hereto.

(b) Employees working with carbon and/or graphite materials shall be paid a premium of fifty cents (50¢) per hour earned over the prescribed basic refractory rate, as set out in Subsection 1.5 (a) above.

(c) *Employees working where the temperature of the immediate working area is one hundred and fifty degrees (150°) Fahrenheit or sixty-five degrees (65°) Celsius, shall be paid a premium of fifty cents (50¢) per hour earned over the prescribed basic refractory rate, as set out in Subsection 1.5 (a) above.*

42
(d) When refractory work is carried out in Local #12, the base rate of wages shall be the same as that shown for Local 1, Hamilton.

1.6 Laid Off or Dismissed

The Employer agrees to notify the Steward forthwith when an employee has been laid off or dismissed.

1.7 Local 23, Sarnia

When refractory work is carried out in the geographic area of Local 23, Sarnia, the following conditions shall apply.

(a) Wages

In addition to the rates established in the area rate schedules and wage schedules, an additional one dollar and forty cents ($1.40) per hour shall be paid for the laying of acid and firebrick, also all types of refractory work to include all refractory material. Twenty cents (20¢) per hour (forty cents (40¢) per hour on overtime) above refractory rate of pay to be paid to Nozzle Operators.

(b) Stacks and Silos

A premium of two dollars ($2.00) per hour will be paid above the prevailing wage rate for work up to three hundred feet (300'). This shall include overhand work or free fall area. For each additional fifty feet (50') an additional premium of one dollar ($1.00) will be paid.

(c) Shift Work

Shift work shall be defined as follows:

(i) an employee or group of employees in relay with one another;

(ii) when work is scheduled to start after the regular starting time it shall be deemed as shift work;

(iii) no bricklayer shall work more than one shift in any twenty-four (24) hour period;

(iv) when it is deemed necessary to change the scheduled shift, the Employer must notify the Business Agent or his Representative;

(v) when Bricklayers report for work and are notified that the length of the shift has been changed, they shall receive a minimum of eight (8) hours' pay;
(vi) employees who are called in to fill a shift but who do not complete five (5) full shifts are to be paid regular overtime rates for all time worked. Employees who quit or are discharged for just cause shall be paid at the regular shift wage rate;

(vii) Bricklayers will be entitled to a smoke break every two (2) hours in a smoking area with no loss of time.
STATEMENT OF UNDERSTANDING

between

OPGII

and

BACU

EMPLOYMENT REFERRALS

It is agreed by the Parties to this understanding, that prior to any member being referred for employment under this agreement, the member must submit to a security check. Only members who successfully obtain security clearance will be referred for employment. Once a member has been hired on, they will receive an allowance of $50.00 on their first weeks pay cheque, in consideration of their time spent filling out the security clearance forms.

The union will be notified, as soon as possible, whether or not an individual has successfully obtained security clearance. This pre-clearance does not prohibit the Union from filing a grievance against the Employer on behalf of any member who is refused employment due to his/her failure to obtain security clearance.

Dated at Toronto, this 7th day of November, 2002.
MEMORANDUM OF SETTLEMENT

Between

Ontario Power Generation Inc.
(OPGI)

and

THE BRICK AND ALLIED CRAFT UNION OF CANADA

(hereinafter called "BACU")

Dated this 3rd day of March 2005
Memorandum of Settlement

1.0 Article 1 - Recognition

Article 1.1 Status quo.

Article 1.6
Replace with attached.

2.0 Article 2 - Term of Agreement

Term of agreement shall be from May 1st, 2004-April 30th, 2010

3.0 Appendix C - Modified Provisions

Modified provisions - hours of work, reporting pay and meals on overtime
Sections under Modified provisions are to be removed from (appendix C)
Sections 2, 4 and 5 and replace the corresponding language in the main
agreement Articles 19, 13 and new 15.6

4.0 Article 12 - Employment and Union Security

(i) Replace paragraph 2 of Article 12. 5 with:

"Wage schedule, dues and remittance changes are to be provided in
writing to Ontario Power Generation Inc. and changes shall only take
place during the months of April and November of each calendar year.
The effective date of such changed wage schedules, dues and
remittances shall be within 30 days of change notice. All remittances
will be in cents per hour worked."

The first year and the fourth year of the collective agreement will not
necessarily be April and November. They will be upon signing of the
collective agreements.

5.0 Article 13 - Pay Procedure

(i) Amend article 13.1 (d) to read

"The parties agree to direct deposit for direct hire employees of Ontario
Power Generation Inc. An employer will provide assistance to
employees who require assistance obtaining bank account. Employers
other than Ontario Power Generation Inc. may implement direct deposit
with employee consent."

(ii) Amend article 13.1 (b) to include direct deposit.
6.0 Article 18 - Standoff

(i) Amend 2\textsuperscript{nd} paragraph last sentence of Article 18 as follows:

"No travel or subsistence allowance will be paid to an employee for the Standoff period."

(ii) Delete 18.2

(iii) Delete last sentence of Article 18.3

7.0 Section 2/Appendix C - Hours of Work: Modified Provisions to be placed into Article 20 together with the following amendments:

(i) Amend 2\textsuperscript{nd} and 3\textsuperscript{rd} paragraph of Section 2.1 as follows:

The weekly hours of work Monday to Friday inclusive shall consist of forty (40) hours for all employees of Employers covered by this agreement and working on a one (1) or two (2) shift operation. The weekly hours of work may be arrived at by having the employees work either:

- Four (4) consecutive ten-hour shifts, Monday to Thursday or;
- Four (4) consecutive ten-hour shifts, Tuesday to Friday or;
- Five (5) consecutive eight-hour shifts

but not concurrently on the same work program.*

Employees will not be moved from work program to work program to circumvent overtime. Disputes arising from this Article are subject to the grievance procedure.

Each employer will notify the Local Union of the weekly hours of work for each work program* at the site.

Weekly hours of work will be established for a minimum period of two (2) weeks.

If an employer, with the approval of the owner, intends to change the weekly hours of work, a minimum of seven (7) days written notice shall be sent to the Local Union.
* For the purposes of this section, a work program may be defined as work taking place on a site that could include the following:

- Outages,
- Specific contracted scopes of work,
- Various and different modifications in an operating plant where the owner dictates the hours of work, or
- Subcontracts for a prime contractor where the prime contractor dictates the hours of work.

(ii) Amend start time in 3rd paragraph of section 2.1 to read 7:00 am.

(iii) Amend the second sentence to read: “The start time for the afternoon shift shall be immediately following the day shift or within two (2) hours either way of the end of the day shift.”

(iv) Add to Section 2:

“Shift differential will not be paid on overtime hours.”

8.0 Monetary

Daily Travel Allowance Room and Board - Section 1

Travel rings and Board and Travel to be increased (and rounded to the nearest 5 cents) as follows:

- Upon signing - 4%
- May 1, 2005 - 2%
- May 1, 2006 - 2%
- May 1, 2007 - 4%
- May 1, 2008 - 2%
- May 1, 2009 - 2%

9.0 Wages - Article 26

Total Wage Packages as Set Out in Article 26 Shall Be Increased As Follows:

Effective October 8, 2004 $2.00
May 1, 2005 Increase of $1.00
May 1, 2006 increase of $0.75

Total increase of $3.75 per hour for the first 3 years of the Agreement.

The last 3 years - ICI increase and date.
The increases are incorporated into the appropriate wage schedules.

The allocation of the wage package shall be provided by the applicable Local Union in writing. The parties agree a Local Union may amend the breakdown of the wage package but in no case will it affect the amount of the total wage package. Subject to amended Article 12.5.

(For clarity the parties acknowledge the foreman rate is $2.50 per hour above the journeyman rate)

10.0 Tools and Clothing - Amend Article 19

$12.00 per day upon signing
$15.00 per day effective May 1, 2006

11.0 Employment and Union Security

Amend 12.3 (a) as follows:

“It is agreed that the employer may transfer members from one job to another within the territorial jurisdiction of the local union, but not from one sector to another”.

Dated at Toronto Ontario this 3rd day of March, 2005

______________________________
Ontario Power Generation Inc.  

______________________________
BACU
Memorandum of Settlement
Ontario Power Generation and Bruce Power
March 3, 2005

Article 1.6 to read

1.6
The current collective agreement requires Ontario Power Generation Inc. to contract and subcontract work in accordance with its past practice and the past practice of its predecessor.

For the life of the current collective agreement, the parties acknowledge and agree that such practice is to contract and subcontract work covered by the current collective agreement only to employers who apply all of the terms and conditions of the current collective agreement to the performance of such work.

Contractors and subcontractors are required to sign Appendix E.

The parties agree that this acknowledgement and agreement will end with the expiry of the current collective agreement.
