

Performance Report for Pickering Nuclear

Q3 2020
Results

Performance Update

As part of our commitment to keep you informed, this report tracks performance for Ontario Power Generation's Pickering Nuclear in the areas of safety, operational and environmental performance and significant accomplishments during the third quarter of 2020.

Electricity Production – (the electrical energy generated, minus station needs):

OPG's nuclear electricity generation for Q3 of 2020 totalled 11.3 terawatt hours (TWh) compared to 11.5 TWh in 2019 in the same quarter. In Q3, Pickering Nuclear produced 5.2 TWh of electricity, which was 13 per cent of the electricity produced in Ontario.

Reliability – Unit Capability Factor:

Compared to Q3 in 2019, Pickering's unit capability factor for Q3 2020 was lower (79.42) primarily as a result of an increase in the number of days the station was shut down for maintenance outages.

Environment – Spills to the Environment:

During Q3 2020, there were no spills to the environment at Pickering Nuclear that were reportable to a regulatory authority. The year-to-date total remains at zero.

Safety

Total Recordable Injury Frequency:

The Total Recordable Injury Frequency (TRIF) measures the number of injuries involving OPG employees that result in a fatality, a lost time, requiring restricted work and requiring medical treatment per 200,000 hours. In Q3 2020, Pickering Nuclear recorded 0.20 injuries per 200,000 hours worked.

Legend

Performance Report for Pickering Nuclear

About OPG's Nuclear Power Stations

Ontario Power Generation owns and operates the Pickering and Darlington Nuclear Generating Stations. The two stations have a combined generating capacity of about 6,600 megawatts. Accounting for 28 per cent of the electricity produced in Ontario in Q3, OPG's 10 nuclear units generated 11.3 terawatt hours.

Keeping you informed about milestones and items of interest achieved by Pickering Nuclear and across OPG:

Pickering and Darlington recognized for biodiversity efforts: The Pickering and Darlington Nuclear Generating Stations have earned Gold-level Certification from the Wildlife Habitat Council (WHC), in recognition of OPG's strong focus on sustainability and biodiversity efforts.

The WHC certifies conservation programs on corporate lands around the world and promotes environmental management through various partnerships and educational programs.

Thank you to the many local schools, organizations and community members who continue to work alongside OPG as we work to protect and nurture the diversity of species and habitats in our community. We look forward to seeing you at our Spring 2021 events.

PowerON Tuesdays program a great success: Thank you to the many neighbours who enjoyed fun family activities as part of OPG's adapted yearly Tuesdays on the Trail program, PowerON Tuesdays.

OPG collaborated with community partners to offer a curbside pick-up program in Pickering and Clarington where we provided more than 2,100 free 'power pack' science, environment or education-based activity kits to local families. Thank you to the many community partners that participated during this challenging year; Clarington Public Library, Girls Inc., A Gift of Art, Scientists in School, Toronto and Region Conservation Authority, Centre Lake

Ontario Conservation Authority, Valleys 2000 and the Ontario Turtle Conservation Authority.

Through the generosity of the hundreds of families who participated in the program, donations were made to St. Paul's on the Hill and Clarington East Food Bank – these donations go a long way in supporting those in need in our communities.

Ontario Power Generation Launching Centre for Canadian Nuclear Sustainability: Ontario Power Generation (OPG) is launching the Centre for Canadian Nuclear Sustainability in Pickering, a world class facility that will attract skilled jobs, innovative businesses and economic development to the Durham region as well as advance solutions for minimizing nuclear materials and recycling clean materials.

"The Centre will integrate collaboration and research to identify innovative solutions in the nuclear sector while also supporting the work underway to prepare for decommissioning the Pickering Nuclear Generating Station" said Carla Carmichael, Vice President of Nuclear Decommissioning Strategies for OPG.

As owner of the largest CANDU reactor fleet in Canada, OPG has a unique ability to harness and consolidate activities across the nuclear industry to provide sustainable solutions for the industry, environment, community and Ontario ratepayers."
